# TABLE OF CONTENTS

2018-19 Catalog ................................................................. 12
Governance ................................................................. 13
  Member Institutions ..................................................... 13
  Office of the President ................................................ 13
Deans ............................................................................. 13
Accreditation ................................................................. 13
Mission Statement .......................................................... 15
Colleges and Schools ....................................................... 16
  College of Computing ................................................... 16
    Research Centers ....................................................... 16
    School of Computational Science and Engineering ........... 17
      Graduate Study in Computational Science and Engineering ..................................................... 18
    School of Computer Science ....................................... 18
    Graduate Study in Computer Science ............................... 19
    School of Interactive Computing .................................... 19
    Graduate Study in Interactive Computing .......................... 20
    Undergraduate Study in Interactive Computing .................. 20
  College of Design .......................................................... 20
    School of Architecture ............................................... 20
      Graduate Study in Architecture .................................. 21
      Undergraduate Study in Architecture ............................. 22
    School of Building Construction ..................................... 22
      Graduate Study in Building Construction ......................... 23
      Undergraduate Study in Building Construction .................. 24
    School of City and Regional Planning .............................. 24
      Graduate Study in City and Regional Planning .................. 24
      Undergraduate Study in City and Regional Planning .......... 25
    School of Industrial Design ......................................... 25
      Graduate Study in Industrial Design ............................... 26
      Undergraduate Study in Industrial Design ....................... 26
    School of Music ......................................................... 26
      Undergraduate Study in Music Technology ...................... 28
      Graduate Study in Music Technology ............................ 28
      School of Music Humanities Credit Information ............... 28
Vocal and Instrumental Ensembles .................................... 28
College of Engineering .................................................... 28
  College of Engineering Accreditation .............................. 29
  Guggenheim School of Aerospace Engineering .................... 29
  Graduate Study in Aerospace Engineering .......................... 29
  Undergraduate Study in Aerospace Engineering ................... 29
  H. Milton Stewart School of Industrial and Systems Engineering .................................................. 30
    Graduate Study in Industrial & Systems Engineering .......... 30
    Undergraduate Study in Industrial & Systems Engineering .... 31
  Multidisciplinary Activities and Programs ........................ 31
  School of Chemical and Biomolecular Engineering .............. 32
    Graduate Study in Chemical and Biomolecular Engineering .... 33
    Undergraduate Study in Chemical and Biomolecular Engineering ............................................. 33
  School of Civil and Environmental Engineering .................. 35
    Graduate Study in Civil and Environmental Engineering .... 35
    Undergraduate Study in Civil and Environmental Engineering ............................................. 35
  School of Electrical and Computer Engineering .................. 36
    Graduate Study in Electrical and Computer Engineering .. 36
    Undergraduate Study in Electrical and Computer Engineering ............................................. 37
  School of Materials Science and Engineering ..................... 37
    Graduate Study in Materials Science and Engineering ........ 38
    Undergraduate Study in Materials Science and Engineering ............................................. 39
  Transfer Programs in the College of Engineering .................. 40
    Wallace H. Coulter Department of Biomedical Engineering at Georgia Tech and Emory University ................. 40
      Graduate Study in Biomedical Engineering ..................... 40
      Undergraduate Study in Biomedical Engineering .......... 41
    Woodruff School of Mechanical Engineering .................... 41
      Graduate Study in Mechanical Engineering .................... 42
      Distance Learning Programs ........................................ 43
      Georgia Tech-Lorraine ............................................. 43
      Multidisciplinary Programs ....................................... 43
      Undergraduate Study in Mechanical Engineering ............ 44
  College of Sciences .................................................... 44
    School of Biological Sciences ..................................... 45
      Graduate Study in Biological Sciences ......................... 45
      Undergraduate Study in Biological Sciences .................. 46
    School of Chemistry and Biochemistry ............................ 48
      Graduate Study in Chemistry and Biochemistry ............... 48
      Undergraduate Study in Chemistry and Biochemistry ........ 49
    School of Earth and Atmospheric Sciences ........................ 49
Graduate Study in Earth and Atmospheric Sciences ............ 49
Undergraduate Study in Earth and Atmospheric Sciences ....................................................... 50
School of Mathematics .................................................. 50
Graduate Study in Mathematics ........................................ 51
Undergraduate Study in Mathematics .................................. 51
School of Physics .......................................................... 51
Graduate Study in Physics ................................................ 52
Undergraduate Study in Physics ......................................... 52
School of Psychology ...................................................... 52
Graduate Study in Psychology .......................................... 52
Undergraduate Study in Psychology .................................... 52
Ivan Allen College of Liberal Arts ....................................... 53
Department of Air Force Aerospace Studies ......................... 53
Air Force ROTC Cross Registration .................................... 54
Air Force ROTC Program Overview .................................... 54
Air Force ROTC Scholarship Program .................................. 55
Department of Military Science/Army ROTC ......................... 55
Army ROTC - Additional Training Offered ........................... 56
Army ROTC - Program Overview ....................................... 56
Army ROTC - Scholarship Programs .................................... 57
Army ROTC - Student Advisory Services ............................. 57
Department of Naval Science / NROTC ............................... 58
NROTC - College Program Students ................................... 58
NROTC - Program Overview ............................................ 58
NROTC - Scholarship Students ......................................... 58
NROTC - Two-Year Scholarship Program .............................. 59
School of Economics ....................................................... 59
Graduate Study in Economics .......................................... 59
Undergraduate Study in Economics ..................................... 60
School of History and Sociology ......................................... 60
Graduate Study in History and Sociology .............................. 60
Undergraduate Study in History and Sociology ....................... 61
School of Literature, Media, and Communication .................... 61
Graduate Study in Literature, Media, and Communication .................. 62
Undergraduate Study in Literature, Media, and Communication .......... 62
School of Modern Languages ............................................. 63
Undergraduate Study in Modern Languages .......................... 63
School of Public Policy .................................................... 66
Graduate Study in Public Policy ......................................... 67
Undergraduate Study in Public Policy ................................. 68
The Sam Nunn School of International Affairs ....................... 69
Graduate Study in International Affairs ................................. 69
Undergraduate Study in International Affairs .......................... 69
Scheller College of Business ............................................. 70
Graduate Study in Business .............................................. 71
Undergraduate Study in Business ....................................... 71
Academics .................................................................... 72
Academic Resources .......................................................... 72
Colleges and Schools ........................................................ 72
Courses ..................................................................... 72
Distance Learning and International Sites ............................... 72
Graduate Academics .......................................................... 72
Graduate Policies and Regulations ....................................... 73
Graduate Student Work Loads ............................................ 74
Expectations of Advisors and Advisees ................................. 74
Doctoral Degree Programs ............................................... 180
Requirements for the Doctoral Degree ................................. 75
Master's Degree Programs ............................................... 180
Requirements for the Master's Degree ................................. 77
Professional Education ...................................................... 78
Community Outreach ....................................................... 79
English as a Second Language .......................................... 79
Professional Education Degree Programs .............................. 79
Professional Education Short Programs ................................. 79
Research Support Facilities ............................................... 79
Advanced Technology Development Center (ATDC) .................. 80
Georgia Tech Research Corporation .................................... 80
Georgia Tech Research Institute ......................................... 80
Joint CNRS Research Laboratory ....................................... 80
Logistics Innovation Centers ............................................ 81
Oak Ridge Associated Universities ..................................... 81
Skidaway Institute of Oceanography ................................... 81
VentureLab ................................................................. 81
Special Academic Programs ............................................... 82
Academic Common Market ............................................... 82
BS/MS Degree Programs .................................................. 82
Center for Teaching and Learning (CTL) ............................... 82
Experiential Education ...................................................... 83
Center for Career Discovery and Development ....................... 83
Graduate Cooperative Plan ............................................... 83
Paid and Unpaid Internships .............................................. 84
Georgia Tech Honors Program ........................................... 84
Georgia Tech-Lorraine ........................................ 84
Dual Enrollment Program for High School Students .......... 84
Learning Support Policies ........................................ 84
Living Learning Communities .................................... 85
Preprofessional Programs ........................................ 85
President's Scholarship Program ................................... 85
ROTC .......................................................... 86
Summer Language Programs ...................................... 86
The International Plan .............................................. 86
Transfer Programs .................................................. 89
Dual Degree Program .............................................. 90
Regents' Engineering Transfer Program ......................... 90
Undergraduate Research Opportunities Program ............... 90
Undergraduate Academics ........................................ 91
Bachelor's Degree Programs ...................................... 180
BS/MS Degree Programs ........................................... 91
Cooperative Agreements .......................................... 91
Core Curriculum .................................................. 91
  Constitution and History ....................................... 92
  Core Area A1 .................................................. 92
  Core Area A2 .................................................. 92
  Core Area B ................................................... 93
  Core Area C ................................................... 93
  Core Area D ................................................... 97
  Core Area E ................................................... 97
  Core Area F ................................................... 100
Ethics .............................................................. 100
Global Perspectives ................................................. 101
U.S. Perspectives .................................................. 101
Wellness ............................................................. 101
Credit/Tests & Scores ............................................. 101
  Advanced Levels (A-Levesl) ................................... 101
  Advanced Placement Exams ................................... 101
  Advanced Standing ............................................. 103
  Departmental Exams ......................................... 103
  French Baccalauréat .......................................... 103
  German Language Exams (DSO) ............................... 103
  International Baccalaureate Exams ............................ 103
  ROTC Credit .................................................. 104
  Regents' Testing Program .................................... 104
  SAT II Subject Tests ......................................... 104
  Transfer Courses with 'X' Numbers ............................ 105
Transfer Credit .................................................... 105
Undergraduate Students Taking Graduate Courses .......... 106
New Sequence of Math Core Courses ............................ 106
Undergraduate Minors ............................................. 107
Admissions .......................................................... 113
  Graduate Admissions .......................................... 113
  Admissions Information ....................................... 113
  Graduate Record Examinations (GRE) ......................... 113
  Orientation - New Students .................................. 113
  Reactivation of Application .................................. 113
  Readmission ................................................... 113
  TOEFL for International Students ............................ 113
  Transfer of Credit ............................................. 114
  Types of Standing ............................................. 114
Undergraduate Admissions ........................................ 114
  Freshmen Admission .......................................... 115
    Academic Advising .......................................... 115
    Policy on the Competitive Admission of Freshman Applicants ........................................ 115
    Required Computer Ownership ............................. 115
    International Students ..................................... 116
    FASET (New Student Orientation) .......................... 116
    Regents' Testing Program ................................ 116
    Wreck Camp ................................................ 116
    Transfer Admissions ........................................ 116
      Policy on the Competitive Admission of Transfer Applicants ........................................ 116
      Academic Advising ......................................... 117
      Required Computer Ownership ............................. 117
      International Students ..................................... 117
      FASET (New Student Orientation) .......................... 117
      Regents' Testing Program ................................ 117
      Sophomore Programs ...................................... 118
      Transfer Credit ............................................ 118
    Readmission ................................................ 119
      Academic Advising ......................................... 119
      Readmission Immunization Requirements ................ 119
      Regents' Testing Program ................................ 120
      Transfer Credit ............................................ 120
    Financial ..................................................... 122
      Assistance .................................................. 122
      Graduate Financial Assistance ............................ 122

Bachelor of Science in Literature, Media, and Communication - Thread: Media & Science, Technology and Culture ........................................ 417
Bachelor of Science in Literature, Media, and Communication - Thread: Media & Social Justice ........................................ 419
Bachelor of Science in Literature, Media, and Communication - Thread: Social Justice and Science, Technology, and Culture ........................................ 422
Bachelor of Science in Materials Science and Engineering ........................................ 424
Bachelor of Science in Materials Science and Engineering - Biomaterials ........................................ 425
Bachelor of Science in Materials Science and Engineering - Polymer and Fiber Materials ........................................ 427
Bachelor of Science in Materials Science and Engineering - Structural and Functional Materials ........................................ 429
Bachelor of Science in Mathematics ........................................ 432
Bachelor of Science in Mathematics - Applied Mathematics ........................................ 432
Bachelor of Science in Mathematics - Business Option ........................................ 433
Bachelor of Science in Mathematics - Discrete Mathematics ........................................ 435
Bachelor of Science in Mathematics - General ........................................ 436
Bachelor of Science in Mathematics - Probability and Statistics ........................................ 437
Bachelor of Science in Mathematics - Pure Mathematics ........................................ 438
Bachelor of Science in Mechanical Engineering ........................................ 439
Bachelor of Science in Mechanical Engineering - Automation and Robotic Systems ........................................ 440
Bachelor of Science in Mechanical Engineering - Automotive ........................................ 442
Bachelor of Science in Mechanical Engineering - Design ........................................ 444
Bachelor of Science in Mechanical Engineering - General ........................................ 446
Bachelor of Science in Mechanical Engineering - Manufacturing ........................................ 448
Bachelor of Science in Mechanical Engineering - Mechanics of Materials ........................................ 450
Bachelor of Science in Mechanical Engineering - Micro- and Nanoengineering ........................................ 452
Bachelor of Science in Mechanical Engineering - Nuclear Engineering ........................................ 455
Bachelor of Science in Mechanical Engineering - Thermal, Fluid, & Energy Systems ........................................ 457
Bachelor of Science in Music Technology ........................................ 459
Bachelor of Science in Music Technology - Electrical and Computer Engineering: Signal Processing ........................................ 459
Bachelor of Science in Music Technology - General ........................................ 460
Bachelor of Science in Music Technology - Mechanical Engineering: Acoustics and Vibrations ........................................ 461
Bachelor of Science in Music Technology - Mechanical Engineering: Controls and Robotics ........................................ 462
Bachelor of Science in Neuroscience ........................................ 463
Bachelor of Science in Nuclear and Radiological Engineering ........................................ 464
Bachelor of Science in Nuclear and Radiological Engineering - Nuclear Energy concentration ........................................ 465
Bachelor of Science in Nuclear and Radiological Engineering - Nuclear Engineering Concentration ........................................ 467
Bachelor of Science in Nuclear and Radiological Engineering - Radiological Science and Engineering concentration ........................................ 469
Bachelor of Science in Physics ........................................ 471
Bachelor of Science in Physics - Business Option ........................................ 471
Bachelor of Science in Physics - General ................................................. 473
Bachelor of Science in Psychology ....................................................... 474
Bachelor of Science in Psychology - Business Option .......................... 475
Bachelor of Science in Psychology - General ........................................ 476
Bachelor of Science in Public Policy ..................................................... 477
Doctor of Philosophy with a Major in Aerospace Engineering .............. 479
Doctor of Philosophy with a Major in Algorithms, Combinatorics, and Optimization ................................................................. 480
Doctor of Philosophy with a Major in Applied Physiology .................... 480
Doctor of Philosophy with a Major in Architecture .............................. 480
Doctor of Philosophy with a Major in Bioengineering .......................... 482
Doctor of Philosophy with a Major in Bioinformatics .......................... 482
Doctor of Philosophy with a Major in Biology ...................................... 482
Doctor of Philosophy with a Major in Biomedical Engineering ............ 483
Doctor of Philosophy with a Major in Building Construction ............... 483
Doctor of Philosophy with a Major in Chemical Engineering .............. 484
Doctor of Philosophy with a Major in Chemistry .................................. 484
Doctor of Philosophy with a Major in City and Regional Planning .......... 484
Doctor of Philosophy with a Major in Civil Engineering ....................... 485
Doctor of Philosophy with a Major in Computational Science and Engineering .............................................................. 485
Doctor of Philosophy with a Major in Computer Science ..................... 486
Doctor of Philosophy with a Major in Digital Media .......................... 486
Doctor of Philosophy with a Major in Earth and Atmospheric Sciences .... 487
Doctor of Philosophy with a Major in Economics ................................ 487
Doctor of Philosophy with a Major in Electrical and Computer Engineering .............................................................. 488
Doctor of Philosophy with a Major in Engineering Science and Mechanics .......................................................... 488
Doctor of Philosophy with a Major in Environmental Engineering ......... 488
Doctor of Philosophy with a Major in History and Sociology of Technology and Science .................................................. 488
Doctor of Philosophy with a Major in Human-Centered Computing ........ 489
Doctor of Philosophy with a Major in Industrial Engineering - System Informatics & Control Track ............................................. 489
Doctor of Philosophy with a Major in International Affairs, Science and Technology .......................................................... 490
Doctor of Philosophy with a Major in Machine Learning .................... 491
Doctor of Philosophy with a Major in Management ............................ 494
Doctor of Philosophy with a Major in Materials Science and Engineering ........................................................... 494
Doctor of Philosophy with a Major in Mathematics .............................. 494
Doctor of Philosophy with a Major in Mechanical Engineering ............ 494
Doctor of Philosophy with a Major in Music Technology ...................... 494
Doctor of Philosophy with a Major in Nuclear Engineering .................. 495
Doctor of Philosophy with a Major in Nuclear Engineering - Medical Physics Option ................................................................. 495
Doctor of Philosophy with a Major in Nuclear Engineering - Nuclear Enterprise Management Option .............................................. 495
Doctor of Philosophy with a Major in Ocean Science and Engineering .... 495
Doctor of Philosophy with a Major in Operations Research .................. 496
Doctor of Philosophy with a Major in Paper Science and Engineering .... 496
Doctor of Philosophy with a Major in Physics ....................................... 496
Doctor of Philosophy with a Major in Public Policy .............................. 497
Doctor of Philosophy with a Major in Public Policy (Joint Degree with Georgia State University) .................................................. 498
Doctor of Philosophy with a Major in Quantitative BioSciences ............. 498
Doctor of Philosophy with a Major in Robotics .................................... 499
Doctor of Philosophy with a major in Industrial Engineering ............... 499
Doctor of Philosophy with a major in Psychology ................................ 500
Dual Degree MCRP/JD in Planning Law (Cooperative Program with Georgia State University) .................................................. 500
Dual Degree MCRP/MSCE ................................................................. 501
Dual Degree MCRP/Master of Science in Public Policy ....................... 501
Dual MS Program in ECE GT Lorraine and European Partner Universities .......................................................... 501
Dual MS Program in ECE Georgia Tech & Korea Advanced Institute of Science and Technology .................................................. 501
Dual MS Program in ECE with the Politecnico di Torino (Italy) ............ 502
Graduate Certificate in Remote Sensing ................................................. 502
Joint Doctor of Philosophy with a Major in Electrical and Computer Engineering with the Politecnico Di Milano ................................ 502
Joint Doctor of Philosophy with a Major in Electrical and Computer Engineering with the Politecnico di Torino (Italy) ..................... 502
M.Arch/MCRP Dual Degree ................................................................. 502
M.D./Ph.D. Program ............................................................................ 502
Master of Architecture (M.Arch.) ....................................................... 502
Master of Biomedical Innovation and Development ............................ 503
Master of Business Administration (MBA) .......................................... 503
Master of Business Administration - Global Business ......................... 504
Master of Business Administration in Management of Technology ......... 505
Master of City and Regional Planning ............................................... 506
Master of Industrial Design (MID) ....................................................... 507
Master of Science in Medical Physics ................................. 507
Master of Science (Undesignated) ...................................... 508
Master of Science in Aerospace Engineering ........................ 508
Master of Science in Analytics ......................................... 509
Master of Science in Architecture ..................................... 510
Master of Science in Architecture - Advanced Production .... 510
Master of Science in Architecture - Building Information Systems ... 511
Master of Science in Architecture - Design Computation ....... 511
Master of Science in Architecture - Health & Design ............. 511
Master of Science in Architecture - High Performance Building ... 512
Master of Science in Bioengineering .................................. 512
Master of Science in Bioinformatics .................................. 512
Master of Science in Biotechnology .................................. 513
Master of Science in Biomedical Engineering ....................... 513
Master of Science in Building Construction and Facility Management ... 513
Master of Science in Chemical Engineering ......................... 515
Master of Science in Chemistry ....................................... 515
Master of Science in Civil Engineering ............................... 515
Master of Science in Computational Science and Engineering ... 516
Master of Science in Computer Science .............................. 516
Master of Science in Cybersecurity ................................... 521
Master of Science in Digital Media ................................... 522
Master of Science in Earth and Atmospheric Sciences .......... 522
Master of Science in Economics ...................................... 522
Master of Science in Electrical and Computer Engineering ..... 523
Master of Science in Engineering Science and Mechanics ....... 523
Master of Science in Environmental Engineering ................. 523
Master of Science in Geographic Information Science and Technology ... 524

2018-19 CATALOG

The statements set forth in the Catalog are for informational purposes only and should not be construed as the basis of a contract between a student and the Institute.

While the provisions of the Catalog will ordinarily be applied as stated, Georgia Tech reserves the right to change any provision listed in the Catalog, including but not limited to academic requirements for graduation, without actual notice to individual students. Every effort will be made to keep students advised of any such changes. Information regarding any changes will be available through the Office of the Registrar, the Office of the Vice President for Student Life and Dean of Students, and the Schools and Colleges. It is especially important for each student to note that it is her or his own responsibility to be aware of current requirements for a chosen degree program.

This edition of the Catalog takes effect in Summer Session 2018 and shall remain in effect through Spring Semester 2019.
GOVERNANCE

- University System of Georgia (USG) Member Institutions (p. 13)
- Office of the President (p. 13)
- Deans (p. 13)

Accreditation

The Georgia Institute of Technology is accredited by the Southern Association of Colleges and Schools Commission on Colleges to award bachelor’s, master’s, and doctoral degrees. Contact the Southern Association of Colleges and Schools Commission on Colleges for answers to questions about Georgia Tech’s accreditation.

Southern Association of Colleges and Schools, Commission on Colleges (http://www.sacscoc.org)
Additionally, many Colleges, units, and programs are individually accredited by the appropriate agencies specific to them.

College of Architecture
In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (http://www.naab.org/home) (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture.

A program may be granted a 6-year, 3-year, or 2-year term of accreditation, depending on the extent of its conformance with established educational standards.

The Doctor of Architecture and Master of Architecture degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree that, when earned sequentially, constitute an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree.

The School of Architecture at Georgia Tech offers the following NAAB-accredited degree programs:

- Master of Architecture, 2-year track (pre-professional degree in Architecture + 60 credits required)
- Master of Architecture, 3-year track (non-pre-professional degree + 108 credits required)

The Bachelor of Science in Building Construction is accredited by the American Council for Construction Education (http://www.acce-hq.org) (ACCE). The Master of Science in Building Construction and Facility Management is accredited by the International Facility Management Association (https://www.ifma.org) (IFMA). The School of Building Construction has also received international recognition by the Royal Institute of Chartered Surveyors (http://www.rics.org/us) (RICS).

The Master of City and Regional Planning program is fully accredited by the Planning Accreditation Board (http://www.planningaccreditationboard.org) (PAB).

The Bachelor of Science in Industrial Design and the Master of Industrial Design degree programs have been accredited by the National Association of Schools in Art and Design (http://nasad.arts-accredit.org) (NASAD) and are recognized by the Industrial Designers Society of America.

College of Computing
The following undergraduate computing programs are accredited by the Computing Accreditation Commission of the Accreditation Board for Engineering and Technology (http://www.abet.org) (ABET).

- Bachelor of Science in Computer Science
- Bachelor of Science in Computational Media

College of Engineering
The following undergraduate engineering programs are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (http://www.abet.org) (ABET).

- Bachelor of Science in Aerospace Engineering
- Bachelor of Science in Biomedical Engineering
- Bachelor of Science in Chemical and Biomolecular Engineering
- Bachelor of Science in Civil Engineering
- Bachelor of Science in Computer Engineering
- Bachelor of Science in Electrical Engineering
- Bachelor of Science in Environmental Engineering
- Bachelor of Science in Industrial Engineering
- Bachelor of Science in Materials Science and Engineering
- Bachelor of Science in Mechanical Engineering
- Bachelor of Science in Nuclear and Radiological Engineering

The Bachelor of Science in Nuclear Engineering and the PhD with a major in Nuclear Engineering - Medical Physics Option programs are accredited by the Commission on Accreditation of Medical Physics Educational Programs (http://www.campep.org/campeplstgrad.asp) (CAMPEP).

College of Sciences
The American Chemical Society (http://www.acs.org/content/acs/en.html) has certified the curriculum leading to the Bachelor of Science in Chemistry.

The Human Factors and Ergonomics Society (https://hfes.org/web/Default.aspx) has accredited the curriculum leading to the Doctor of Philosophy with a major in Psychology, concentration in Engineering Psychology.

Scheller College of Business
The Scheller College of Business and all of its degrees are accredited by the Association to Advance Collegiate Schools of Business (http://www.aacsb.edu) (AACSB International).

Division of Student Affairs
The Counseling Center is accredited by the International Association of Counseling Services (http://www.iacscinc.org/home.html) (IACS), which is the accrediting body for counseling services provided by college and university counseling centers. The Counseling Center sponsors pre-doctoral internship training program in psychology for doctoral students in counseling and clinical psychology programs. The internship training program is accredited by the American Psychological Association (http://www.apa.org) (APA).

Georgia Tech Language Institute
The Language Institute's Intensive English Program is accredited by the Commission on English Language Program Accreditation (http://www.cea-accredit.org) (CEA) and thus meets the CEA Standards for English Programs and Institutions.

Accreditation Board for Engineering and Technology (ABET) (http://www.abet.org)

College of Computing

The founding of the College of Computing in 1990 as a focal point for the interdisciplinary advancement of computing caps a history that began in 1963 with the establishment of the School of Information Science. In 1972, this school was succeeded by the School of Information and Computer Science, the immediate predecessor of the current College of Computing. The College of Computing at Georgia Tech is one of the first college-level units devoted to the study of computing in the country.

Computer science is an important basis for many activities and is a natural and powerful partner with a variety of other disciplines. The College offers instructional and research programs in many areas, including algorithms and data structures, intelligent systems and robotics, computer architecture, cognitive science, databases, distributed and parallel systems, educational technology, graphics and visualization, human-computer interaction, information security, information systems, networking and telecommunications, operating systems, parallel architectures, programming languages, software engineering, and theories of automata and computation.

Beginning in fall 2006, the undergraduate program was organized around the Threads™ program developed by College of Computing faculty. A Thread™ is an intuitive, flexible, and mutually strengthening set of courses that allows students to craft a distinctive future in any computing-related field. Based on their particular interests, students will choose two Threads™ consisting of computing combined with modeling and simulation, devices, theory, information internetworks, intelligence, media, people, or platforms in order to weave a technical degree with a broad collection of skills and learning experiences they need to thrive in a globally competitive world. This approach allows the computing program to retain its strong computer science foundations yet encourages partnerships with the multitude of disciplines affected by computing and technology.

The College conducts an increasing number of interdisciplinary research and instructional programs jointly with other campus units and operates three centers of interdisciplinary research for the campus:

- The Center for Experimental Research in Computer Systems (CERCS);
- The Graphics, Visualization, and Usability (GVU) Center; and
- The Georgia Tech Information Security Center (GTISC).

The College's operations are housed in parts of five separate buildings on campus, including the College of Computing building.

The College awards:

- bachelor's degrees in computer science (CS),
- bachelor's degrees in computational media (jointly with the School of Literature, Media, and Communication),
- master's degrees in computer science,
- master's degrees in information security, and
- doctoral degrees in computer science and human-centered computing.

The College offers an undergraduate CS minor. The College also offers the Master's degree in human-computer interaction in collaboration with the School of Literature, Media, and Communication and the School of Psychology. The College is a sponsor of a multidisciplinary program in Algorithms, Combinatorics, and Optimization, an approved doctoral degree program at Georgia Tech. Master's and doctoral degrees in bioengineering can be pursued through the College as one of the units participating in the Institute-wide interdisciplinary Bioengineering Program. A doctoral degree in bioinformatics can also be pursued through the College in conjunction with the School of Biology.

The following undergraduate computing programs are accredited by the Computing Accreditation Commission of ABET, www.abet.org (http://www.abet.org):

- Bachelor of Science in Computer Science (p. 272)
- Bachelor of Science in Computational Media (p. 247)
- Algorithms, Combinatorics, and Optimization. PhD (p. 480)
- Analytics. MS (p. 509)
- Bioengineering. MS (p. 512), PhD (p. 482)
- Bioinformatics. MS (p. 512), PhD (p. 482)
- Computational Media. BS (p. 247)
- Computational Science and Engineering. MS (p. 516), PhD (p. 485)
- Computer Science. BS (p. 272), MS (p. 516), PhD (p. 486)
- Computing and Business. Minor (p. 544)
- Computing and Devices. Minor (p. 545)
- Computing and Information Internetworks. Minor (p. 544)
- Computing and Intelligence. Minor (p. 545)
- Computing and People. Minor (p. 546)
- Computing & Systems and Architecture. Minor (p. 547)
- Computing and Theory. Minor (p. 548)
- Cybersecurity. MS (p. 521)
- Human-Computer Interaction. MS (p. 526)
- Human-Centered Computing. PhD (p. 489)
- Machine Learning. PhD (p. 491)
- Robotics. PhD (p. 499)

Research Centers

Georgia Tech Information Security Center (GTISC)

The Georgia Tech Information Security Center, a National Center of Academic Excellence in Information Assurance Education, is an interdisciplinary center involving faculty from the College of Computing, School of Electrical and Computer Engineering, Georgia Tech Research Institute (GTRI), the Sam Nunn School of International Affairs, and the School of Public Policy. www.gtisc.gatech.edu (http://www.gtisc.gatech.edu)
Robotic Systems at Georgia Tech (RIM@GT)

The Center for Robotics and Intelligent Machines (RIM@Georgia Tech) leverages the strengths and resources of Georgia Tech in robotics education, research, and leadership by reaching across traditional boundaries to embrace a multidisciplinary approach. The College of Computing, College of Engineering, and the Georgia Tech Research Institute play key complementary roles through Tech’s traditional expertise in interactive and intelligent computing, control, and mechanical engineering. Emphasizing personal and everyday robotics as well as the future of automation, faculty involved with RIM@Georgia Tech help students understand and define the future role of robotics in society. www.robotics.gatech.edu (http://www.robotics.gatech.edu)

Algorithms and Randomness Center and ThinkTank (ARC ThinkTank)

The ARC ThinkTank brings together faculty from the College of Computing, the School of Mathematics, and the School of Industrial Systems Engineering at Georgia Tech to find algorithms and algorithmic models for real-world problems across the sciences and, in the process, seeking new directions and techniques for the emerging theory of algorithms. www.arc.gatech.edu/ (http://www.arc.gatech.edu)

GVU Center at Georgia Tech

The GVU Center at Georgia Tech is an interdisciplinary research center encompassing a number of individual colleges at Georgia Tech as well as external collaborators. GVU focuses on unlocking and amplifying human potential through technical innovation in computing technologies. The faculty and students associated with GVU bring expertise ranging from computer science and engineering to the humanities and design. It is through deep collaboration between these diverse domains that the GVU Center is able to engage in research that would otherwise be difficult to tackle in traditional academic and industrial settings. www.gvu.gatech.edu (http://www.gvu.gatech.edu)

Center for Experimental Research in Computer Systems (CERCS)

CERCS is one of the largest experimental systems programs in the U.S. focusing on complex hardware, communications, and system-level software, and applications that lead the innovation of new information and computing technologies. www.cercs.gatech.edu/ (http://www.cercs.gatech.edu)

School of Computational Science and Engineering

The School of Computational Science and Engineering (CSE) was established in 2005 to strengthen and better reflect the critical role that computation plays in the science and engineering disciplines at Georgia Tech and the broader technology community. At Georgia Tech, CSE is the academic discipline devoted to the systematic study and application of computer-based models of natural and engineered systems. This definition contains two significant elements. First, it acknowledges the essential role that computing and data play in scientific discovery and design and innovation in engineering. Secondly, by referring to CSE as a discipline, it recognizes that CSE has its own distinct body of knowledge.

As a school in the College of Computing, CSE supports interdisciplinary research and education in computer science, data science, and applied mathematics. CSE is designed to innovate and create new expertise, technologies, and practitioners.

CSE bridges the gap between traditional computer science (CS) and computational research. The division is currently developing programs that immerse students in computing with real-world computational problems and applications. Developing solutions to difficult computational problems that allow all the richness, subtleties, and requirements of the domain to be adequately considered or addressed is crucial.

CSE is concerned with those technologies that lie at the boundary between computer science, data science, and science and engineering. Some of these areas include:

- combinatorial optimization
- cybersecurity
- data analysis
- high performance computing
- large-scale analytics
- machine learning
- modeling and simulation
- numeric and geometric methods
- visualization

CSE involves deep collaboration with scientists and engineers, as well as traditional computer scientists. Therefore, school faculty team up with researchers and educators working in high impact areas both at Georgia Tech and at peer research organizations, such as national laboratories and industry research labs. Current projects span the following areas:

- aerospace engineering
- chemistry
- computational biology and genomics
- civil and environmental engineering
- data science
- healthcare informatics
- industrial and systems engineering
- materials science
- mechanical engineering
- national security and homeland defense

Master’s Degrees

- Master of Science in Analytics (p. 509)
- Master of Science in Bioengineering (p. 512)
- Master of Science in Computational Science and Engineering (p. 516)
- Master of Science in Computer Science (p. 516)

Doctoral Degrees

- Doctor of Philosophy with a Major in Bioengineering (p. 482)
- Doctor of Philosophy with a Major in Bioinformatics (p. 482)
- Doctor of Philosophy with a Major in Computational Science and Engineering (p. 485)
- Doctor of Philosophy with a Major in Computer Science (p. 486)
- Doctor of Philosophy with a Major in Machine Learning (p. 491)
Graduate Study in Computational Science and Engineering

Master's Degrees
- Master of Science in Computational Science and Engineering (p. 516)
- Master of Science in Computer Science (p. 516)
- Master of Science in Analytics (p. 509)
- Master of Science in Bioengineering (p. 512)

Doctoral Degrees
- Doctor of Philosophy with a Major in Computational Science and Engineering (p. 485)
- Doctor of Philosophy with a Major in Computer Science (p. 486)
- Doctor of Philosophy with a Major in Machine Learning (p. 491)
- Doctor of Philosophy with a Major in Bioengineering (p. 482)
- Doctor of Philosophy with a Major in Bioinformatics (p. 482)

Bioengineering Programs
In response to the increased need for engineers and medical scientists with advanced training in bioengineering, Georgia Tech now offers master's and PhD degrees in bioengineering. The purpose of bioengineering as a research discipline is

- to develop new and better physical and mathematical concepts and techniques that may be applied to problems in medicine and biology,
- to the development of new medical technologies, and
- to the organization and delivery of cost-effective healthcare.

Interdisciplinary graduate programs in Bioengineering are offered by the College of Computing in conjunction with the Bioengineering Center in the Office of Interdisciplinary Programs, the College of Engineering, and the College of Sciences. The student's home unit will be the College of Computing, which, upon completion of the student's requirements, will recommend the degree. This interdisciplinary approach has been approved by the faculty in the Schools of Aerospace Engineering, Chemical and Biomolecular Engineering, Electrical and Computer Engineering, Materials Science and Engineering, Mechanical Engineering, and Polymer, Textile and Fiber Engineering, and by the deans of the Colleges of Computing, Engineering, and Sciences.

The program is for computer science or engineering graduates who wish to pursue a degree in bioengineering rather than in a traditional field of computing or engineering, or who have done bioengineering research in other disciplines. In addition, those interested students with non-engineering backgrounds (with degrees in such fields as physics, chemistry, biology, or mathematics) who meet the admission requirements will be admitted to the program. Applications from physicians with undergraduate degrees in engineering or the physical sciences will also be considered. All applications will be processed through the Bioengineering Center.

Additional information is available at www.bme.gatech.edu (http://www.bme.gatech.edu).

Master of Science in Bioengineering (p. 512)
Doctor of Philosophy with a Major in Bioengineering (p. 482)

Graduate Cooperative Programs
The Graduate Cooperative Education Program provides master's and doctoral degree students majoring in any discipline at Georgia Tech the opportunity to supplement their graduate studies with specialized work experience. Graduate co-op students gain experience with top employers, earn competitive salaries to help defray educational expenses, and expand post-graduation career options while on semester-long work assignments.

The Graduate Co-op Program is available to enrolled Georgia Tech students and is based upon academic achievement. Internships related to a student's field of study can receive academic approval as a graduate cooperative work assignment allowing students to work summer, fall, or spring semesters, full-time or part-time.

There are no fees associated with the Graduate Co-op Program and students are provided full-time enrollment status through their registration in a Graduate Co-op course. This permits students to retain all privileges of full-time enrolled students while on work assignments.

To participate in the Graduate Co-op Program, a student must

- have a 3.0 or better GPA,
- complete an online orientation session, and
- obtain a program participation letter from his or her major school.

Students normally identify their own job opportunities, but the Graduate Co-op Office provides access to a job posting database and can assist with career guidance, job searches, resumes, and cover letters. Graduate students accepting a graduate co-op/internship opportunity should see a Graduate Co-op Program advisor regarding offer letters, required academic approvals, registration permits, and any necessary work authorizations. Enrollment in a 6000-level co-op course, a noncredit/no-cost audit course with no student or Institute fees attached, is also required.

International students are eligible to participate, but F-1 visa holders must be enrolled for a minimum of nine months before being able to work off campus. All international students on F-1, J-1, and other appropriate visas must work with the Office of International Education (http://www.oie.gatech.edu) to secure work authorization documentation.

For more information on the Georgia Tech Graduate Co-op and Internship Program, visit: www.gradcoop.gatech.edu (http://www.gradcoop.gatech.edu).

School of Computer Science
Georgia Tech's School of Computer Science is home to a group of faculty and researchers with breadth and strength in all aspects of the computational process—from the algorithms to the architecture, from security to networking, from system design to the programming environments to databases.

Mission
The SCS mission is produce the people, tools, and ideas to power computation into the future: "We turn imagination into reality."

Bachelor's Degrees
- Bachelor of Science in Computer Science (p. 272)
Master’s Degrees
- Master of Science in Computer Science (p. 516)

- to the development of new medical technologies, and
- to the organization and delivery of cost-effective healthcare.

Interdisciplinary graduate programs in Bioengineering are offered by the College of Computing in conjunction with the Bioengineering Center in the Office of Interdisciplinary Programs, the College of Engineering, and the College of Sciences. The student’s home unit will be the College of Computing, which, upon completion of the student’s requirements, will recommend the degree. This interdisciplinary approach has been approved by the faculty in the Schools of Aerospace Engineering, Chemical and Biomolecular Engineering, Electrical and Computer Engineering, Materials Science and Engineering, Mechanical Engineering, and Polymer, Textile and Fiber Engineering, and by the deans of the Colleges of Computing, Engineering, and Sciences.

The program is for computer science or engineering graduates who wish to pursue a degree in bioengineering rather than in a traditional field of computing or engineering, or who have done bioengineering research in other disciplines. In addition, those interested students with non-engineering backgrounds (with degrees in such fields as physics, chemistry, biology, or mathematics) who meet the admission requirements will be admitted to the program. Applications from physicians with undergraduate degrees in engineering or the physical sciences will also be considered. All applications will be processed through the Bioengineering Center.

Additional information is available at www.bme.gatech.edu (http://www.bme.gatech.edu).

Master of Science in Bioengineering (p. 512)

Doctor of Philosophy with a Major in Bioengineering (p. 482)

Graduate Cooperative Programs
The Graduate Cooperative Education Program provides master’s and doctoral degree students majoring in any discipline at Georgia Tech the opportunity to supplement their graduate studies with specialized work experience. Graduate co-op students gain experience with top employers, earn competitive salaries to help defray educational expenses, and expand post-graduation career options while on semester-long work assignments.

The Graduate Co-op Program is available to enrolled Georgia Tech students and is based upon academic achievement. Internships related to a student’s field of study can receive academic approval as a graduate cooperative work assignment allowing students to work summer, fall, or spring semesters, full-time or part-time.

There are no fees associated with the Graduate Co-op Program and students are provided full-time enrollment status through their registration in a Graduate Co-op course. This permits students to retain all privileges of full-time enrolled students while on work assignments.

To participate in the Graduate Co-op Program, a student must
- have a 3.0 or better GPA,
- complete an online orientation session, and
- obtain a program participation letter from his or her major school.

Students normally identify their own job opportunities, but the Graduate Co-op Office provides access to a job posting database and can assist with career guidance, job searches, resumes, and cover letters. Graduate students accepting a graduate co-op/internship opportunity should see a Graduate Co-op Program advisor regarding offer letters, required academic approvals, registration permits, and any necessary work authorizations. Enrollment in a 6000-level co-op course, a noncredit/no-cost audit course with no student or Institute fees attached, is also required.

International students are eligible to participate, but F-1 visa holders must be enrolled for a minimum of nine months before being able to work off campus. All international students on F-1, J-1, and other appropriate visas must work with the Office of International Education (http://www.oie.gatech.edu) to secure work authorization documentation.

For more information on the Georgia Tech Graduate Co-op and Internship Program, visit: www.gradcoop.gatech.edu (http://www.gradcoop.gatech.edu).

School of Interactive Computing
Interactive and intelligent computing is an emerging discipline on the frontier of ways computation impacts the external world. The School of Interactive Computing advances computing-mediated interactions by encompassing fields ranging from artificial intelligence and machine learning to graphics and computer vision to interface design and...
empirical methods. We don’t just evaluate technology, we create technology that makes interactions better. Much of the research within the School of Interactive Computing produces new artifacts that embody new capabilities or methods. Examples include:

- Individuals working with traditional computers
- Groups of people using ubiquitous computing capabilities throughout various environments
- Researchers visualizing scientific data
- Students developing and altering middle school physics simulations
- Automated intelligent surveillance systems monitoring airport tarmacs
- Robots delivering pharmaceuticals to patients in hospitals

Whether an advance is in robotics, augmented reality, or ubiquitous computing, it is developed in the context of a prototype. School of Interactive Computing students become proficient in many areas such as mechanical or electrical engineering, and industrial design. The School of Interactive Computing develops practitioners, future innovators and researchers by offering numerous degree programs.

At the undergraduate-level, the School of Interactive Computing is an integral part of the College’s BS in Computer Science, and oversees aspects of Computational Media’s Bachelor’s degree-offered jointly with the School of Literature, Communication and Culture (LMC). The School of Interactive Computing also administers the interdisciplinary Master’s in Human Computer Interaction (HCI) program in which students from the School of Interactive Computing, LMC, and Psychology participate. At the graduate-level the School of Interactive Computing students can pursue Master’s and PhD degrees in Computer Science, or a PhD in Human-Centric Computing—the first of its kind in the nation. The School of Interactive Computing is also developing a Robotics PhD to be offered in conjunction with schools from the College of Engineering.

Bachelor’s Degrees
- Bachelor of Science in Computational Media (p. 247)

Master’s Degrees
- Master of Science in Computer Science (p. 516)
- Master of Science in Human-Computer Interaction (p. 526)

Doctoral Degrees
- Doctor of Philosophy with a Major in Computer Science (p. 486)
- Doctor of Philosophy with a Major in Human-Computer Interaction (p. 489)
- Doctor of Philosophy with a Major in Machine Learning (p. 491)
- Doctor of Philosophy with a Major in Robotics (p. 499)

Graduate Study in Interactive Computing

Master’s Degrees
- Master of Science in Computer Science (p. 516)
- Master of Science in Human-Computer Interaction (p. 526)

Doctoral Degrees
- Doctor of Philosophy with a Major in Computer Science (p. 486)

Graduate Cooperative Programs

The Graduate Cooperative Education Program provides master’s and doctoral degree students majoring in any discipline at Georgia Tech the opportunity to supplement their graduate studies with specialized work experience. Graduate co-op students gain experience with top employers, earn competitive salaries to help defray educational expenses, and expand post-graduation career options while on semester-long work assignments.

The Graduate Co-op Program is available to enrolled Georgia Tech students and is based upon academic achievement. Internships related to a student’s field of study can receive academic approval as a graduate cooperative work assignment allowing students to work summer, fall, or spring semesters, full-time or part-time.

There are no fees associated with the Graduate Co-op Program and students are provided full-time enrollment status through their registration in a Graduate Co-op course. This permits students to retain all privileges of full-time enrolled students while on work assignments.

To participate in the Graduate Co-op Program, a student must

- have a 3.0 or better GPA,
- complete an online orientation session, and
- obtain a program participation letter from his or her major school.

Students normally identify their own job opportunities, but the Graduate Co-op Office provides access to a job posting database and can assist with career guidance, job searches, resumes, and cover letters. Graduate students accepting a graduate co-op/internship opportunity should see a Graduate Co-op Program advisor regarding offer letters, required academic approvals, registration permits, and any necessary work authorizations. Enrollment in a 6000-level co-op course, a noncredit/no-cost audit course with no student or Institute fees attached, is also required.

International students are eligible to participate, but F-1 visa holders must be enrolled for a minimum of nine months before being able to work off campus. All international students on F-1, J-1, and other appropriate visas must work with the Office of International Education (http://www.oie.gatech.edu) to secure work authorization documentation.

Undergraduate Study in Interactive Computing

Bachelor’s Degrees
- Bachelor of Science in Computational Media (p. 247)

School of Architecture

Location:
East Architecture Building
Architecture was established as a discipline at Georgia Tech in 1908, and the graduates of the program have helped shape the growth and physical climate of Atlanta, the region and the world. As the largest of the five units in the College of Design, the School of Architecture has several distinct degree programs, a reflection of its multiple missions. The undergraduate program, the Bachelor of Science in Architecture, advances Georgia Tech’s general education mission through a studio-based design curriculum providing a thorough grounding in liberal and technological knowledge.

At the core of the School is the professional program in architecture, the Master of Architecture, one requirement leading to licensure as a practicing architect. In addition, advanced study and research programs, including the Master of Science with a major in Architecture, the Master of Science in Urban Design, and the Doctor of Philosophy with a major in Architecture, build linkages with practice and industry and exploit the creative tensions between research and design that drives innovation in the field.

Resources such as the Digital Building Laboratory, the Digital Fabrication Laboratory, and the SimTigrate Lab for health and design, support a culture of research focused on building performance and innovation in the field.

All work produced in the College of Design as part of a degree program becomes the property of the College; it may be retained or returned at the discretion of the faculty. The faculty also reserves the right to refuse for credit any project executed outside the precincts of the College or otherwise produced without proper coordination with the faculty.

In the United States, most registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit professional degree programs in architecture offered by institutions with U.S. regional accreditation, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted an eight-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Doctor of Architecture and Master of Architecture degree programs may require a preprofessional undergraduate degree in architecture for admission. However, the preprofessional degree is not, by itself, recognized as an accredited degree.

The Georgia Institute of Technology, School of Architecture, offers the following NAAB-accredited degree programs:

- M.Arch. (preprofessional degree in Architecture + 60 graduate credits)
- M.Arch. (non-preprofessional degree + 102 credits)

Next accreditation visit for all programs: 2022
courses that engage particular aspects of architectural knowledge and practice.

Within the School of Architecture, the PhD with a major in Architecture develops knowledge and technologies that

- enhances design imagination, design evaluation, and the design process;
- articulates design choices and predicts the consequences of design decisions;
- helps to learn from precedents;
- supports better building performance; and
- situates the practice of architecture within a critical understanding of culture, history, and the profession.

Our program includes research emphases in

- Design Computation;
- Evidence-Based Design;
- Building Technology;
- History and Culture; and
- Organizational and Cognitive Performance.

In each of these research areas, we intersect the perspectives of architectural design, science, technology, and the humanities even as we expect individual research projects to rigorously pursue specific disciplinary agendas.

For more information about graduate programs in the School of Architecture, please contact

Academic Advisor
School of Architecture
Georgia Institute of Technology
Atlanta, Georgia 30332-0155
phone: 404.894.3476
website: www.arch.gatech.edu (http://www.arch.gatech.edu)

The School of Architecture encourages foreign study for all students to prepare them professionally and personally for successful lives in the global environment of the twenty-first century. Students may participate in an immersive experience at another institution or participate in a Georgia Tech faculty-led program.

The School of Architecture sponsors several international programs organized and led by its own faculty:

- Modern Architecture and the Modern City
- Greece-Italy Study Abroad Program
- Tongji University-Georgia Tech Exchange Program
- Design Develop Build Program in Africa
- International Urban Design Studio

For current offerings, visit https://arch.gatech.edu/international-education

Undergraduate Study in Architecture

Minors
- Minor in Architectural History (p. 539)
- Minor in Architecture (p. 540)

Bachelor’s Degrees
- Bachelor of Science in Architecture (p. 206)

The School of Architecture offers three certificate programs for which undergraduate students may apply:

1. Architecture and Society – provides an opportunity to explore the technological and formal innovations of architecture and infrastructure within their socio-political and cultural contexts. Students will learn not only about buildings' technical systems — and their material, structural and climatic performance — but also about their formal order, siting, use, funding/patronage, relation to nature or the city, decoration, and multiple interpretive contexts.

2. Sustainable Architecture – provides undergraduate students the opportunity to specialize in design and technical innovations that will increase building energy performance, reduce emissions, use eco-friendly materials, and thereby increase the durable societal value of the built environment.

3. Computational Design – prepares students to develop a skill set in computer-aided design and fabrication built upon an integrated application of design research, architectural geometry, digital theory and digital design technologies in contemporary architectural practice and research.

Certificates will be granted only to students who, in addition to the certificate program requirements, have satisfied requirements for a Georgia Tech degree. Each certificate requires a minimum of twelve credit hours, at least nine of which are at the 3000 level or higher in the designated area. Courses required by a student’s program of study may not be credited by that student toward a certificate. Courses counting toward a certificate must be taken on a letter-grade basis, and a "C" or better must be received in each course.

Interested students should consult http://www.arch.gatech.edu/architecture-minor-certificates and consult with an academic advisor for more details.

The School of Architecture encourages foreign study for all students to prepare them professionally and personally for successful lives in the global environment of the twenty-first century. Students may participate in an immersive experience at another institution or participate in a Georgia Tech faculty-led program.

The School of Architecture currently runs the following faculty-led programs:

- Summer Study in Greece and Italy (open to students of all majors)
- Undergraduate International Studio (restricted to students in the B.S in Architecture program)
- Design Develop Build Program in Africa (restricted to students majoring in Architecture)
- International Urban Design Studio (restricted to students majoring in Architecture)
- Barcelona Study Abroad Program in Spain (open to students of all majors)

School of Building Construction

The construction industry is among the largest in the United States, employing nearly seven million people and contributing 5 percent...
of the United States gross national product. The School of Building Construction (BC) at Georgia Tech offers one of the nation’s leading academic programs in building construction and is at the forefront of research in the built environment. The School’s mission is to be the hub of excellence for construction teaching, research, and service by promoting the development of an adaptive knowledge-based, sustainability-conscious industry framework. Supported by the pillars of project delivery, construction management, and facility management, the aim is to advance emerging construction practices, technology innovation, and integrated delivery systems. The School’s vision is to be a global leader in innovation and delivery of technological and methodological sustainability-focused advances for the construction and facility management industry through relevant, applied, and fundamental research. With a problem-focused approach to global outreach, the School will lead an expansion of our global footprint and influence to ensure that we are graduating good global citizens, and to ensure that our fundamental and applied construction research remains relevant at the local, regional, national, and international levels.

Employment prospects for BC students are excellent. Students are recruited by general contractors, residential home builders, project management firms, cost value and consulting firms, real estate and property development companies, building material suppliers, and local, state, and federal government agencies. The School offers a certificate in Construction Management for undergraduate students. The average starting salary for the BC graduate is among the highest for Georgia Tech alumni and ranks at the top of the industry. The School offers master’s degrees in Building Construction and Facility Management, Occupational Safety and Health, and Real Estate Development.

Students in the School of Building Construction learn the basic principles and practices of construction management, real estate development, science, and technology. BC students are educated on how to manage the functions and processes of every aspect of the construction industry. The business climate in Atlanta is vibrant and provides an excellent laboratory opportunity for students to observe various construction sites and activities. The construction companies in the Atlanta area also provide many internships and part-time jobs for students during their study in the BC program.

The Master of Science in Building Construction and Facility Management is accredited by the International Facility Management Association (IFMA) Foundation. The accreditation ensures the School continues to meet the standards set by the IFMA Foundation for quality facility management education.

Master’s Degree

- Master of Science in Building Construction and Facility Management (p. 513)
- Master of Real Estate Development (p. 507)
- Professional Master's in Occupational Safety and Health (p. 592)

Doctoral Degree

- Doctor of Philosophy with a Major in Building Construction (p. 483)

Certificate Programs

The School of Building Construction offers a certificate in Construction Management, which is available to students in all majors at Georgia Tech. The certificate is designed to provide a specialized education in evolving integrated management approaches to the delivery of built environment, from concept to implementation. The certificate exposes students to the multi-disciplinary nature of construction project development and management and introduces them to the latest technologies and processes developed to enhance interdisciplinary collaboration and integration.

Certificates will be granted only to students who, in addition to the certificate program requirements, have satisfied requirements for a Georgia Tech degree. Each certificate requires a minimum of twelve credit hours, at least nine of which are at the 3000 level or higher in the designated area. Courses required by a student’s program of study may not be credited by that student toward a certificate. Courses counting toward a certificate must be taken on a letter-grade basis, and a C or better must be received in each course.

Interested students should consult http://www.bc.gatech.edu/content/undergraduate-certificate and consult with an academic advisor for more details.

Rules and Regulations

The Catalog is the authoritative source of Rules and Regulations (p. 151) and other Policies (p. 138) for Georgia Tech students.

Approved Electives

Students have several options to customize their graduate study through professional electives. Graduate students may select their approved electives from the core of the other Building Construction concentrations,
from a rotating list of BC electives, and from other academic area including: City Planning, Public Policy, Management, Architecture, and Engineering.

**Undergraduate Study in Building Construction**

**Bachelor’s Degree**
- Bachelor of Science in Building Construction (p. 219)

**School of City and Regional Planning**

Founded in 1952, Georgia Tech's planning school is one of the oldest professional planning programs in the United States, with more than 1,500 alumni. Graduates are employed in public, private, and third sectors, including all levels of government, real estate development firms, planning consultancies, banks, public utilities, community development corporations, universities, research organizations, and public interest groups. The School's Master of City and Regional Planning program is fully accredited by the Planning Accreditation Board.

Our institutional setting within the College of Design and one of the world's premiere technology universities enables students to acquire expertise in every area of the urban development process, including planning, design, construction/engineering, and management. The School of City and Regional Planning is home to four research centers:

- Georgia Center for Quality Growth and Regional Development (https://cqgrd.gatech.edu)
- Center for Spatial Planning Analytics and Visualization (http://cspav.gatech.edu)
- Sino-U.S. Eco-urban Lab (http://www.ecourbanlab.org)
- Urban Climate Lab (http://www.urbanclimate.gatech.edu)

These centers plus Georgia Tech's Economic Innovation Institute, Georgia Transportation Institute, Brook Byers Institute for Sustainable Systems, and renowned co-op program, provide hands-on practice and research experience for many of our graduate students.

The Master of City and Regional Planning (MCRP) program offered by the School of City and Regional Planning is fully accredited by the Planning Accreditation Board, a joint accrediting body of the American Institute of Certified Planners, the American Planning Association, and the Association of Collegiate Schools of Planning.

The MCRP degree is the recognized basis for a career as a professional planner.

**Minors**
- Minor in Sustainable Cities (p. 589)

**Master's Degrees**
- Master of City and Regional Planning (p. 506)
- Master of Science in Geographic Information Science and Technology (p. 524)

**Doctoral Degree**
- Doctor of Philosophy with a Major in City and Regional Planning (p. 484)

**Dual Degrees**
- Master of City and Regional Planning & Master of Architecture (p. 502)
- Master of City and Regional Planning & Master of Science in Civil Engineering (p. 501)
- Master of City and Regional Planning & Master of Science in Public Policy (p. 501)

**Certificate in Real Estate Development**

Georgia Tech undergraduates in good standing may complete a Certificate in Real Estate Development offered by the School of City and Regional Planning in collaboration with the School of Building Construction and the Scheller College of Business. The certificate is designed to provide specialized education in land real estate development making our students more competitive in securing employment and in advancing to graduate education. Students must complete twelve credit hours in required and restricted elective courses, and maintain a minimum grade point average of 2.7. The certificate is awarded upon graduation or the next semester after graduation.

Certificate in Real Estate Development (http://www.planning.gatech.edu/undergraduate-certificate-and-courses)

**Certificate in Geographic Information Systems**

The Certificate in Geographic Information Systems is open to both MCRP students and students from other programs. The certificate is structured around three sets of courses, including a foundational course in GIS, two skills related courses, and one policy context course. For City and Regional Planning graduate students, coursework for this certificate can be counted toward the MCRP or PhD degree. Students must complete twelve credit hours in required and restricted elective courses taken on letter-grade basis, and completed with a minimum grade point average of 3.0 or higher. The certificate is awarded upon graduation or the next semester after graduation.

Certificate in Geographic Information Systems (https://planning.gatech.edu/graduate-certificates)

**Graduate Study in City and Regional Planning**

**Graduate Programs**
- Master of City and Regional Planning (MCRP) (p. 506)
- Master of Science in Geographic Information Science and Technology (p. 524)
- Doctor of Philosophy with a Major in City and Regional Planning (p. 484)

**Dual Degree Programs**
- Master of City and Regional Planning & Master of Architecture (p. 502)
- Master of City and Regional Planning & Master of Science in Civil Engineering (p. 501)
- Master of City and Regional Planning & Master of Science in Public Policy (p. 501)

Rules and Regulations
The Catalog is the authoritative source of Rules and Regulations (p. 151) and other Policies (p. 138) for Georgia Tech students.

Dual Degrees
The School of City and Regional Planning offers several dual degree programs pairing the Master of City and Regional Planning with allied professional studies. By enrolling in a dual degree program, students are able to obtain two degrees in less time than it would take if the degrees were being pursued separately. Both degrees are awarded simultaneously upon completion of the program of study. Dual degrees position graduates to tackle urban and regional policy problems that would benefit from a multidisciplinary perspective. Dual degrees also position graduates to be competitive for work settings that traditionally involve professionals from multiple fields.

Candidates seeking dual degree program admission should apply to each of the two degree programs separately, indicating in their statements that they are seeking dual degree admission. The two schools involved will each make their decisions independently so that the applicant will have the option to pursue only one degree if not admitted to both degree programs. Please refer to the catalog listings of both degree programs involved, as admissions requirements and deadlines may differ.

- Dual Degree Information (http://www.planning.gatech.edu/academics/dualdegrees/overview)

Graduate Certificate Program in Historic Preservation
MCRP students in good standing may cross-enroll at Georgia State University to earn a certificate in heritage preservation with an emphasis on historic preservation. Coursework may be counted toward the MCRP degree.

- Graduate Certificate in Historic Preservation (http://www.planning.gatech.edu/undergraduate-certificate-and-courses)

Graduate Certificate in Geographic Information Systems
The certificate in Geographic Information Systems is open to both MCRP students and students from other graduate programs on campus. The certificate is structured around three sets of courses, including a foundation course in GIS, two skills related courses, and one policy context course. For City and Regional Planning graduate students, coursework for this certificate can be counted toward the MCRP or PhD degree.

- Graduate Certificate in Geographic Information Systems (http://www.planning.gatech.edu/graduate-certificates)

Graduate Certificate in Remote Sensing
Students completing the master's or doctoral degree requirements of the School may earn a Remote Sensing Certificate through the School of Earth and Atmospheric Sciences.

School of Industrial Design
Industrial design is the professional service of creating and developing concepts and specifications that optimize the function, value, and appearance of products and systems for the mutual benefit of both user and manufacturer. An industrial designer's work touches all of our lives in the form of home products and furnishings, communication devices, healthcare equipment, rehabilitation technologies, and a myriad of other
consumer and industrial products and services. While giving form to the
efforts of industry, an industrial designer is at the same time a consumer
advocate, providing the humanizing link between technology and people.
As such, an industrial designer’s central responsibilities include fitting the
artifact, system, or service to the person through considering appropriate
aesthetics and ergonomics, technical processes, requirements for
manufacture, marketing opportunities, and economic constraints.
The Georgia Tech School of Industrial Design offers a well-rounded
course of study with early emphasis on basic design and design
skills. Design projects stress realistic design situations. The program
efforts of industry, an industrial designer is at the same time a consumer
advocate, providing the humanizing link between technology and people.

Resources such as the Interactive Product Design Lab, the Body Scan
Lab, the Human Machine Interaction Transportation Lab and the Digital
Fabrication Lab support a culture of research-focused teaching and
learning.

All work executed in the College of Design becomes the property of
the College and will be retained or returned at the discretion of the
faculty. The faculty also reserves the right to refuse credit for any project
executed outside the precincts of the College or otherwise executed
without proper coordination with the instructor.

The Bachelor of Science in Industrial Design and the Master of Industrial
Design degree programs offered by the School of Industrial Design are
accredited by the National Association of Schools in Art and Design
(NASAD). Georgia Tech is recognized by the Industrial Designers Society
of America (IDSA) as a NASAD-accredited institution.

Minors
• Minor in Industrial Design (p. 564)

Bachelor’s Degrees
• Bachelor of Science in Industrial Design (p. 359)

Master’s Degrees
• Master of Industrial Design (p. 507)
• Master of Science in Human-Computer Interaction (p. 526)

Graduate Study in Industrial Design
Master’s Degrees
The School of Industrial Design at Georgia Tech offers two graduate
degree programs.
• Master of Industrial Design (p. 507)
• Master of Science in Human-Computer Interaction (p. 526)

Georgia Tech’s Master’s of Industrial Design (MID) focuses on an
inclusive design approach that is dedicated to the creation and
development of products, systems, services and environments that are
usable by all segments of the population. With the growing diversity
of the population, inclusive design is becoming increasingly important
to designers of tomorrow to ensure that design is responsive to the
individual and collective needs of all people.

The interdisciplinary Master of Science in Human-Computer Interaction
(HCI) degree program is a cooperative effort of the School of Interactive
Computing, the School of Literature, Media and Communication; the
School of Industrial Design, and the School of Psychology. The program
provides students with the practical and interdisciplinary skills and
theoretical understanding they will need to become leaders in the design,
implementation, and evaluation of the computer interfaces of the future.

School of Music
As champions of one of the oldest traditions of the Institute, the School
of Music provides a creative cultural outlet for Georgia Tech’s many
musically minded students. The School has evolved to include premier
academic programs in Music Technology. The School of Music offers a
Bachelor of Science, Master of Science, and Ph.D. in Music Technology,
where students can combine musical expertise with the scientific,
engineering, and technical training that Georgia Tech is known for. In
these academic programs, students gain proficiency in music theory,
performance, composition, and/or analysis; music information retrieval;
digital signal processing and synthesis; interactive music systems
design; and music cognition.

Students across campus can participate in the School of Music’s vocal
and instrumental ensembles, including the Marching Band or Orchestra.
Also, they can pursue a minor within the School of Music, and earn
free elective credit for all ensembles and classroom courses, and/or
Humanities credit for ensemble courses carrying the Humanities
attribute.

Research in the School of Music is focused in the Center for Music
Technology. This research center pairs faculty and students to conduct
creative and technological research in a range of areas, including acoustics, music informatics, sonification, and robotic musicianship.

**Minors**
- Minor in Music (General) (http://catalog.gatech.edu/programs/minor-music)
- Minor in Music Technology (p. 576)
- Minor in Music Performance (http://catalog.gatech.edu/programs/minor-music-performance)

**Bachelor's Degree**
- Bachelor of Science in Music Technology (p. 459)

**Master's Degree**
- Master of Science in Music Technology (p. 533)

**Doctoral Degree**
- Doctor of Philosophy with a Major in Music Technology (p. 494)

A Certificate in Fine Arts-Music can be earned by Georgia Tech students upon completion of thirteen hours of coursework in music as approved by the Chair of the School of Music. Students following certificate guidelines will be exposed to an introduction to fine arts, including the development of personal aesthetic and critical skills, and will go on to more in-depth study in music analysis and history. A core component of this program involves sustained performance in one of Georgia Tech's instrumental or vocal ensembles.

At least nine hours must be at the 3000 level or higher. All other Undergraduate Certificate Academic Requirements, as they appear in the Undergraduate Certificate Program Guidelines, must be met. Courses must be taken on a letter-grade basis, and a C or better must be received in order to obtain course credit toward the Certificate. This Certificate Program is designed mainly for students with an interest in gaining an in-depth knowledge of music within the context of a technical undergraduate education. Required and elective courses are as follows:

School of Music Humanities Credit Information

Core Area C

For more information, see "Core Curriculum, Core C, General Education" (p. 93) in this Catalog.

Humanities Credit for Ensemble Participation

Students can earn Humanities credit for participation in one or more specified School of Music ensembles. Each ensemble course is repeatable for credit and the following ensembles carry the humanities attribute:

- MUSI 3121 Concert Band 1
- MUSI 3131 Symphonic Band 1
- MUSI 3231 Chamber Choir 1
- MUSI 3241 Chorale 1
- MUSI 3251 Glee Club 1
- MUSI 3261 Women's Choir 1
- MUSI 3311 Jazz Ensemble 1
- MUSI 3511 Percussion Ensemble 1
- MUSI 3531 New Music Ensemble 1
- MUSI 3551 Rock and Pop Ensemble 1
- MUSI 3611 Symphony Orchestra 1

Vocal and Instrumental Ensembles

The Chamber Choir

The Chamber Choir is an elite vocal ensemble chosen by audition and performs on campus and community concerts throughout the academic year. The choir rehearse and performs challenging choral music literature written especially for smaller choirs.

The Chorale

A mixed ensemble focused upon the rehearsal, study and performance of choral music. Repertoire may include accompanied and unaccompanied works from all style eras and genres, modern music, world music, and performances of multiple mediums. Choral music experience is recommended. No audition is required.

Men's Glee Club

The Men's Glee Club was organized in 1906 and is the oldest student organization on campus. The Glee Club performs frequently on and off campus. Repertoire includes traditional men's chorus music, contemporary vocal percussion, and original compositions.

Electronic Percussion Ensemble

This ensemble performs a variety of student-designed and arranged music. All pieces are performed on student-designed and built instruments, as well as the latest in commercial controllers and interfaces. The use of multimedia is also encouraged in each arrangement.

Jazz Program

The Georgia Tech Jazz Program provides a great opportunity to study one of America's greatest and most unique art forms. The Jazz Ensembles explore music from the late 1920's through the present day, including works by composers such as Duke Ellington, Bill Holman, Sammy Nestico, Charles Mingus and Pat Metheny. Emphasis in these groups is focused on ensemble playing and the art of improvisation, an essential element in jazz tradition. Typically, two large jazz ensembles are offered each semester, as well as the opportunity to perform in small jazz
combos. Each ensemble presents several concerts during an academic
semester, in addition to numerous on and off-campus events throughout
the year. The Jazz Program also strives to bring professional artists to
campus on a regular basis, and students will often have the opportunity
to perform with these musicians and clinicians in concert during the year.

Percussion Ensemble
The percussion ensembles meet in the Fall and Spring and focus
on traditional and contemporary ensemble literature as well as
transcriptions of popular music. These ensembles are offered to students
with prior percussion background. Interested students should contact
Chris Moore (chris.moore@music.gatech.edu) for permission.

Athletic Bands
The Yellow Jacket Marching Band and Basketball Pep Bands are
elements of the Georgia Tech Band Program. The Marching Band and
Pep Bands perform at all home games and travel to several out-of-state
events, including the ACC Tournament, NCAA Tournament, football
games, and bowl appearances. These trips are financed by the Georgia
Tech Athletic Association. Tryouts for the auxiliary units are held each
spring. Wind and percussion auditions occur at the mandatory band
camp held the week before the start of fall classes.

Symphonic Band and Concert Band
The Symphonic Band and Concert Band perform masterworks as well
as contemporary wind literature designed for the rich sonorities of
an expanded instrumentation. The Concert Band provides ensemble
performance experiences in a wide range of musical styles and periods
for all students at GT. Symphonic Band performs the latest contemporary
music as well as standards of the repertoire. Symphonic Band has been
involved in commissions of new music from many composers, including
Andy Akiho, James David, Steven Bryant, and Julie Giroux. The music
performed in these organizations varies from semester to semester and
is selected to provide a challenging opportunity for musical growth. By
rehearsing and performing at the highest possible level of artistry, each
student will be challenged to improve his/her individual musicianship and
ensemble skills. The highest quality repertoire for wind instruments will
be the core of the curriculum, allowing for a wide variety in the musical,
educational, and philosophical foundations of the course. Auditions are
required and take place on the first Tuesday of each semester.

More information:
- Georgia Tech Bands and Orchestra (http://gtband.net)

Orchestra
The Georgia Tech Orchestra was founded in 1993 and has grown to full
orchestration including brass, woodwinds, and percussion. The group
performs a balance of classical, romantic, contemporary, and popular
literature. The Orchestra performs during Parent’s Weekend, the Music of
the Season concert, and many other community appearances. Auditions
are scheduled by appointment during the first two days of class.

Guggenheim School of Aerospace
Engineering
The Guggenheim School of Aerospace Engineering prepares students
at the bachelor’s, master’s, and doctoral levels for a career in vehicle
engineering with primary emphasis on flight vehicles. A combined BS/
MS honors program is also offered, preparing students for graduate
studies and research (www.ae.gatech.edu (http://www.ae.gatech.edu)).

In addition, the School offers a minor in aerospace engineering, and
interdisciplinary minors in the fields of energy systems and scientific
and engineering computing. The School is housed in five buildings with
a total of approximately 122,000 square feet, most of which is devoted
to instructional and research laboratories. Additional information may be
found at http://www.ae.gatech.edu/academics/undergraduate

Minor
- Minor in Aerospace Engineering (p. 539)

In partnership with other units on campus, the School also offers
interdisciplinary minors in the areas of energy systems, and scientific and
engineering computing.

Bachelor’s Degree
- Bachelor of Science in Aerospace Engineering (p. 191)

Master’s Degrees
- Master of Science in Aerospace Engineering (p. 508)
- Master of Science in Computational Science and Engineering
  (p. 516)

Doctoral Degrees
- Doctor of Philosophy with a Major in Aerospace Engineering
  (p. 479)
- Doctor of Philosophy with a Major in Computational Science and
  Engineering (p. 485)
- Doctor of Philosophy with a Major in Robotics (p. 499)

Graduate Study in Aerospace
Engineering
Graduate Programs
- Master of Science in Aerospace Engineering (p. 508)
- Master of Science in Computational Science and Engineering
  (p. 516)
- Doctor of Philosophy with a Major in Aerospace Engineering
  (p. 479)
- Doctor of Philosophy with a Major in Computational Science and
  Engineering (p. 485)
- Doctor of Philosophy with a Major in Robotics (p. 499)

Departmental Resources
- Aerospace Engineering web site (http://www.ae.gatech.edu/
  academics/graduate)
The methodologies involved in industrial engineering are probability, technical, economic, and social factors for all types of organizations. It involves designing and analyzing complex systems that integrate, including human beings, around the world. Industrial engineering uses technology to manage resources of all kinds, improves systems and processes to enhance efficiency and productivity.

Industrial engineering is a branch of engineering that designs and optimizes, capital investment analysis, statistics, and computer science. The important application domains are supply-chain systems, manufacturing, planning, quality control, economics, and financial systems, among others. Graduates can be found in a host of settings including transportation, telecommunications, hospitals, banking, environmental systems, retailing, government, and consulting.

Bachelor’s Degree
- Bachelor of Science in Industrial Engineering (p. 360)

Master’s Degrees
- Master of Science in Analytics (p. 509)
- Master of Science in Computational Science and Engineering (p. 516)
- Master of Science in Health Systems (p. 525)
- Master of Science in Industrial Engineering (p. 529)
- Master of Science in International Logistics (p. 530)
- Master of Science in Operations Research (p. 534)
- Master of Science in Quantitative and Computational Finance (p. 536)
- Master of Science in Statistics (p. 536)
- Master of Science in Supply Chain Engineering (p. 537)

Doctoral Degrees
- Doctor of Philosophy with a Major in Algorithms, Combinatorics, and Optimization (p. 480)
- Doctor of Philosophy with a Major in Bioinformatics (p. 482)
- Doctor of Philosophy with a Major in Computational Science and Engineering (p. 485)
- Doctor of Philosophy with a Major in Industrial Engineering (p. 499)
- Doctor of Philosophy with a Major in Machine Learning (p. 491)
- Doctor of Philosophy with a Major in Operations Research (p. 496)

Undergraduate Study in Aerospace Engineering

Undergraduate Programs
- Minor in Aerospace Engineering (p. 539)

Rules and Regulations
The Catalog is the authoritative source of Rules and Regulations (p. 151) and other Policies (p. 138) for Georgia Tech students.

H. Milton Stewart School of Industrial and Systems Engineering
Industrial engineering is a branch of engineering that designs and improves systems and processes to enhance efficiency and productivity. The field uses technology to properly manage resources of all kinds, including human beings, around the world. Industrial engineering involves designing and analyzing complex systems that integrate technical, economic, and social factors for all types of organizations. The methodologies involved in industrial engineering are probability, optimization, capital investment analysis, statistics, and computer science. The important application domains are supply-chain systems, manufacturing, planning, quality control, economics, and financial systems, among others. Graduates can be found in a host of settings including transportation, telecommunications, hospitals, banking, environmental systems, retailing, government, and consulting.
Doctoral Study in Industrial Engineering
The PhD Program in Industrial Engineering is intended for qualified individuals for whom past accomplishments and evaluation indicate a high potential for successful completion of the program requirements and a subsequent creative intellectual contribution to the field. Admitted students may pursue their work in various concentrations related to common themes associated with industrial engineering:

- supply chain logistics and manufacturing,
- economic decision analysis,
- applied statistics, and
- human-integrated systems.

Admission is dependent upon student qualification rather than educational background in any specified discipline. Consideration for admission is based largely upon performance in prior academic work, the Graduate Record Examination (GRE), and credible letters of reference.

Distance Learning
The School of Industrial and Systems Engineering offers off-campus working professionals the opportunity to enroll in many of its graduate courses through video technologies. Qualified individuals can complete the requirements for the MS IE or MS OR utilizing the video-based delivery system. Admission as a degree-seeking student in the video program is based upon the same criteria as for regular students. See Distance Learning and Professional Education (http://www.cdl.gatech.edu/dl/servlet/DLHome) for more information.

Financial Aid
Financial aid for PhD study is available in the form of traineeships, fellowships, sponsored externships, and research and teaching assistantships.

Undergraduate Study in Industrial & Systems Engineering
Bachelor's Degree
- Bachelor of Science in Industrial Engineering (p. 360)

Exceptional Students Options
Program activities and options are available to encourage and reward students with superior records and abilities. Participation in these programs requires demonstrated scholastic excellence and prior arrangement with the student's advisor and/or the Associate Chair for Undergraduate Studies.

Graduate-Level Courses
With approval, students with a cumulative grade-point average of 3.0 or above may take up to 9 credit hours of graduate-level courses. Students who would get both BS and MS in ISYE may use up to 6 credit hours of graduate-level course for both degrees. To take a graduate-level course for both degrees, the grade-point average must be 3.5 or higher.

Honors Courses
When faculty resources permit, the School offers honors versions of some of the required courses for the BS IE Students with a cumulative grade-point average of at least 3.3 are allowed to enroll in these courses and use them as replacements for the analogous course requirements in the curriculum.

Visiting Scholar/Practitioner Offerings
Occasionally, the School brings to campus selected individuals of unique accomplishment for course offerings built around their special areas of activity, thus making available a broader range of course materials than regularly provided. Prominent in this regard is the James C. Edenfield Executive-in-Residence program, which brings highly successful executives to the School. Participating much like visiting faculty, these executives bring to a classroom setting, both graduate and undergraduate, the benefit of their work experiences as they support the ISYE curriculum.

The Bachelor of Science in Industrial Engineering is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org).

Multidisciplinary Activities and Programs
The College of Engineering encourages cross-unit collaboration within the College and supports the interdisciplinary culture of Georgia Tech and the merging of disciplines that is the trait of modern technology development. Engineering faculty provide leadership for such activities through their involvement in more than thirty research centers and institutes on campus.

The College also provides opportunities for engineering students to participate in interdisciplinary activities by working with faculty in the centers as research assistants, by taking part in interdisciplinary design projects and competitions, and by completing one or more of the College's multidisciplinary certificate programs.

Any student in good academic standing who is pursuing a degree in one of the participating schools of the College of Engineering or a participating school in any of the other colleges may select elective courses and the subjects of special problems to satisfy simultaneously both the requirements of his or her major degree program and those of a specialized multidisciplinary program. Upon graduation, the student receives both the degree in the major field of study and a certificate attesting to successful completion of the particular related multidisciplinary program.

The following table shows available program offerings and the degree levels of the programs:

General Requirements of Undergraduate Multidisciplinary Programs

The specific design of the multidisciplinary program of any participating undergraduate student, while individualized, must meet certain general requirements as well as requirements that are specific to that multidisciplinary area. The general (minimum) undergraduate multidisciplinary requirements are as follows:

1. The program must relate the student’s major area to the given multidisciplinary area.
2. Courses must be taken under more than one academic unit.
3. At least twelve credit hours (not required by name and number in the student’s major) must be taken in a coherent program.
4. At least nine credit hours must be at the 3000 level or higher.
5. At least three credit hours must be outside the major field. (Cross-listed courses may be counted outside the student’s major)
6. Courses must be taken on a letter-grade basis, and a C or better must be earned in each course counting toward a multidisciplinary certificate.

General Requirements of Graduate Multidisciplinary Programs

The specific design of the multidisciplinary program of any participating graduate student, while individualized, must meet certain general requirements as well as requirements that are specific to that multidisciplinary area. The general (minimum) graduate multidisciplinary requirements are the same as those listed previously for the undergraduate programs, with the following exceptions:

1. At least three of the coherent multidisciplinary program courses as well as nine credit hours must be at the 6000 level or higher
2. Students at the doctoral level must, on an individual basis, meet additional requirements specified by the student’s doctoral committee, consistent with a program beyond the master’s level that has as it’s objective the development of a doctoral-level multidisciplinary program.

Interested students may obtain detailed information on the various undergraduate-level and graduate-level multidisciplinary programs from the main office of their academic advisors and from the links below.

Certificate Procedures

Petitions for multidisciplinary program certificates are processed as follows:

1. During the semester in which the student expects to graduate, the student completes a Petition for Multidisciplinary Certificate form and obtains the signature of the chair of the certificate program.
2. When complete, the petition is forwarded to the Office of the Dean of Engineering.
3. At the end of the semester in which all graduation requirements have been met, the certificate will be signed by the dean of the College of Engineering and mailed to the student.

School of Chemical and Biomolecular Engineering

Chemical and Biomolecular Engineering is a branch of engineering that prepares students for an enormously varied set of career paths. Graduates have become corporate executives, plant engineers, professors, inventors, lawyers, researchers, physicians, consultants, and financial officers. They have found employment with oil, chemical, biomedical, pharmaceutical, microelectronics, environmental, pulp and paper, food, textile, fertilizer, fragrance, and automobile companies, and with academia, government, banks, and brokerages. Chemical and biomolecular engineers have led the development of biomedicine and biotechnology, and they have been crucial to the materials revolution, especially in computer chip manufacturing, nanotechnology, and plastics and fibers. Additionally, they are essential in addressing the energy needs of the nation. Chemical and biomolecular engineering emphasizes environmentally benign manufacturing and sustainable development. (www.chemicalengineering.org (http://www.chemicalengineering.org))

The Chemical Engineers in Action (http://www.chemicalengineering.org) site celebrates the many significant advancements that chemical engineers have made to our world. Explore the site to learn more about chemical engineering’s great achievements, bold innovators, and new frontiers in the fields of energy (http://www.chemicalengineering.org/energy), the environment (http://www.chemicalengineering.org/enviro), biomedicine (http://www.chemicalengineering.org/biomed), electronics (http://www.chemicalengineering.org/electronics), food production (http://www.chemicalengineering.org/food), and materials (http://www.chemicalengineering.org/materials).

The undergraduate curriculum leads to a Bachelor of Science in Chemical and Biomolecular Engineering. Chemical and biomolecular engineering principles are taught as the foundation of that degree, but students are also expected to develop an ability to solve all kinds of problems, to view systems in their entirety, and to formulate and test solutions irrespective of the framework of the problem. Completion of the BS degree prepares students for entry into the workforce, for advanced study in chemical and biomolecular engineering, and for countless other graduate programs.

The curriculum has two options.

1. The Standard Option provides the basics of chemical and biomolecular engineering but allows flexibility for the student
to complete additional study in a variety of areas, including microelectronics, materials, and the environment.

2. The Biotechnology Option is for students who wish to focus their education on the biomolecular aspects of chemical and biomolecular engineering. This option includes the core chemical engineering courses, specialized biomolecular engineering courses, biochemistry, and technical electives focused in the biotechnology area.

Both curriculum tracks offer special opportunities for students wishing to pursue minors or certificates in fields of particular interest, and students are encouraged to explore the frontiers of knowledge through involvement in faculty-directed research.

In addition to the BS, the School of Chemical and Biomolecular Engineering offers programs leading to the MS and the PhD. Students should check the School website for detailed curriculum information and recent updates.

The Georgia Institute of Technology is accredited by the Southern Association of Colleges and Schools Commission on Colleges to award baccalaureate, masters, and doctoral degrees.

Rules and Regulations

The Catalog is the authoritative source of Rules and Regulations (p. 151) and other Policies (p. 138) for Georgia Tech students.

Undergraduate Study in Chemical and Biomolecular Engineering

Chemical engineering is a discipline that traditionally has been based in the application of chemistry as an enabling science. The strength of that foundation has resulted in enormous advances in the chemical, petroleum, and related industries that have relied on chemical engineering to provide much of the intellectual capital on which they depend. Over time, and with increasing speed, the discipline has expanded so that biological sciences and chemistry now fill the position once uniquely held by chemistry. Georgia Tech’s School of Chemical & Biomolecular Engineering is a national leader in restructuring its curriculum and research initiatives to reflect that evolution.

The chemical and biomolecular engineering undergraduate curriculum leads to a Bachelor of Science in Chemical and Biomolecular Engineering.
Chemical and biomolecular engineering principles are taught as the foundation of that degree but students also are expected to develop an ability to solve all kinds of problems, to view systems in their entirety, and to formulate and test solutions irrespective of the framework of the problem. Completion of the BS degree prepares students for entry into the workforce, for advanced study in chemical and biomolecular engineering, or for countless other graduate programs.

Mission

The mission of the School of Chemical & Biomolecular Engineering is to provide students with the intellectual basis to be educated citizens, to prepare them for successful professional careers, and to advance the science and technology that form the basis of chemical and biomolecular engineering. In pursuit of this mission, the School has adopted the following:

Program Educational Objectives

- Graduates will demonstrate proficiency in the principles and methods essential to modern chemical and biomolecular engineering.
- Graduates will demonstrate broadened perspectives regarding social issues and responsibilities, ethics, and professionalism.
- Graduates will be recognized for excellence and leadership and selected for high-quality industrial, academic, government, and other professional positions.
- Graduates will demonstrate an understanding of the global nature of engineering practice and business activities.
- Graduates will understand the importance of further professional growth through continuing education and research.

Program Outcomes

In pursuit of its educational objectives, the School has adopted the following program outcomes:

- Students will demonstrate the ability to apply knowledge of mathematics, science, and engineering.
- Students will demonstrate the ability to design and conduct experiments, as well as to analyze and interpret data.
- Students will demonstrate the ability to design a system, component, product, and/or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- Students will demonstrate an ability to lead and function on multidisciplinary teams.
- Students will demonstrate an ability to identify, formulate, and solve engineering problems.
- Students will demonstrate an understanding of professional and ethical responsibility.
- Students will demonstrate the ability to communicate effectively.
- Students will demonstrate a breadth in education that facilitates understanding the impact of engineering solutions in a global, economic, environmental, and societal context.
- Students will demonstrate recognition of the need for and an ability to engage in lifelong learning.
- Students will demonstrate knowledge of contemporary issues, especially as related to chemical engineering practice.
- Students will demonstrate the ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- Students will have an understanding of the chemical engineering profession as obtained through professional organizations, cooperative education, internships, undergraduate research, and/or required laboratory courses.
- Students will have a thorough grounding in the basic sciences including chemistry, physics, and biology appropriate to the program objectives.
- Students will demonstrate knowledge in the applications of these basic sciences to enable graduates to design, analyze, and control physical, chemical, and biological processes consistent with the program’s educational objectives.

In pursuit of these objectives, the following curriculum is designed to provide coverage of core areas of chemical and biomolecular engineering, and to allow students opportunities to explore the breadth of the discipline. The curriculum requires a total of 132 credit hours for the BS degree. The biotechnology option allows the student to focus intensely in this rapidly emerging area of chemical engineering. The standard option provides the flexibility to explore other areas of chemical engineering practice while providing an understanding of the biomolecular aspects of modern chemical engineering. The standard program will also allow chemical and biomolecular engineering students to tailor their educations to their particular interests and plans for their professional careers. Students are encouraged to use the required elective hours to earn a minor or certificate, or at least to focus their electives in an area of particular interest.

Many graduates have found international experience obtained as a student to be valuable later in their careers. The School is developing special initiatives to facilitate such experiences, and it has a longstanding six-week summer program at University College London in which students receive six credit hours of elective credit and credit for CHBE 4200.

Finally, although the focus of the curriculum is development of technical skills, it has elements geared to enhance communication, teamwork, and business skills.

Minors

Special opportunities exist for students wishing to pursue minors or certificates in fields of particular interest, and students are encouraged to explore the frontiers of knowledge through involvement in faculty-directed research.

Visit our website at www.chbe.gatech.edu (http://www.chbe.gatech.edu) for more information.

Minor Program of Study & Guidelines (p. 107)

Bachelor’s Degrees

- Bachelor of Science in Chemical and Biomolecular Engineering (p. 232)

  Bachelor of Science in Chemical and Biomolecular Engineering - Biotechnology Option (p. 234)

Transfer Students

Due to the sequence of courses and the order in which they must be taken, students who transfer into the school of Chemical and Biomolecular Engineering (ChBE) from another university should expect to be enrolled for a minimum of six terms (a term is a semester or a
summer session). If, for financial aid purposes, insurance, etc., students are required to be full-time, they should transfer to Georgia Tech having sufficient non-chemical and biomolecular engineering courses remaining to enroll full-time for six terms. All prerequisites and co-requisites must be followed.

The BS in Chemical and Biomolecular Engineering program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org).

**School of Civil and Environmental Engineering**

The School of Civil and Environmental Engineering offers courses in civil engineering, environmental engineering, and engineering science and mechanics, as well as programs leading to the following degrees:

- Bachelor of Science in Civil Engineering,
- Bachelor of Science in Environmental Engineering,
- Master of Science in Civil Engineering,
- Master of Science in Environmental Engineering, and
- Master of Science in Engineering Science and Mechanics,
- Master of Science in Engineering Science and Mechanics,
- Doctor of Philosophy.

The School participates in the interdisciplinary graduate programs in Bioengineering, Computational Science & Engineering, and Ocean Science and Engineering. The School also offers a dual program leading to the following degrees:

- Master of Science in Civil Engineering, with a concentration in transportation systems engineering, and
- Master of City Planning.

**Minor**

- Minor in Leadership Studies (p. 569)

**Bachelor's Degrees**

- Bachelor of Science in Civil Engineering (p. 244)
- Bachelor of Science in Environmental Engineering (p. 343)

**Master's Degrees**

- Master of Science in Bioengineering (p. 512)
- Master of Science in Civil Engineering (p. 515)
- Master of Science in Computational Science and Engineering (p. 516)
- Master of Science in Environmental Engineering (p. 523)
- Master of Science in Engineering Science and Mechanics (p. 523)
- Dual Degree - Master of City and Regional Planning/Master of Science in Civil Engineering (p. 501)

**Doctoral Degrees**

- Doctor of Philosophy with a Major in Bioengineering (p. 482)
- Doctor of Philosophy with a Major in Civil Engineering (p. 485)
- Doctor of Philosophy with a Major in Computational Science and Engineering (p. 485)
- Doctor of Philosophy with a Major in Engineering Science and Mechanics (p. 488)
- Doctor of Philosophy with a Major in Environmental Engineering (p. 488)
- Doctor of Philosophy with a Major in Ocean Science & Engineering (http://www.catalog.gatech.edu/programs/ocean-science-engineering-phd)

**Graduate Study in Civil and Environmental Engineering**

**Graduate Programs**

- Master of Science in Bioengineering (p. 512)
- Master of Science in Civil Engineering (p. 515)
- Master of Science in Computational Science and Engineering (p. 516)
- Master of Science in Engineering Science and Mechanics (p. 523)
- Master of Science in Environmental Engineering (p. 523)
- Dual Degree - Master of City and Regional Planning/Master of Science in Civil Engineering (p. 501)
- Doctor of Philosophy with a Major in Bioengineering (p. 482)
- Doctor of Philosophy with a Major in Civil Engineering (p. 485)
- Doctor of Philosophy with a Major in Computational Science and Engineering (p. 485)
- Doctor of Philosophy with a Major in Engineering Science and Mechanics (p. 488)
- Doctor of Philosophy with a Major in Environmental Engineering (p. 488)
- Doctor of Philosophy with a Major in Ocean Science & Engineering

**Graduate Certificate in Remote Sensing**

Students completing the master's or doctoral degree requirements of the School may earn a Graduate Certificate in Remote Sensing.

- Graduate Certificate in Remote Sensing (http://www.gatech.edu)

**Undergraduate Study in Civil and Environmental Engineering**

**Minor**

- Minor in Leadership Studies (p. 569)

**Bachelor's Degrees**

- Bachelor of Science in Civil Engineering (p. 244)

The following undergraduate engineering programs are accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org).
• Bachelor of Science in Civil Engineering
• Bachelor of Science in Environmental Engineering

School of Electrical and Computer Engineering

Electrical engineers have defined, shaped, and driven the information technology revolution that we are experiencing today. Building on the fundamental cornerstones of electrical engineering—the control of information and electric power—electrical engineers have been responsible for innovations and technological breakthroughs that have altered the fabric and face of modern life. Cell phones, tablets, modern hearing aids, the Internet, digital cameras, global positioning systems, and hybrid cars all are based on electrical engineering. Georgia Tech’s School of Electrical and Computer Engineering (ECE) is consistently ranked nationally among the top ten of all electrical engineering programs, and its graduates are pioneering such life-altering innovations as biomedical devices that save lives, and improve everyday living for disabled people, as well as environmentally friendly technologies such as solar energy and wind power. The electrical engineering program encompasses all major areas of this dynamic field, including analog electronics, bioengineering, digital signal processing, electric power, electromagnetics, microelectronics and microsystems, nanosystems, optics and photonics, systems and controls, and telecommunications.

Combining the study of computer systems with traditional aspects of electrical engineering, computer engineering is one of the fastest growing fields in the country, with projected demand over the next decade expected to grow by as much as 150 percent. The computer engineering program in ECE is at the forefront of this new and dynamic field, with national rankings consistently in the top ten. Rapid advances in underlying technologies have resulted in ever smaller, less costly, and higher-performance computer systems, making computers omnipresent in our everyday lives and fueling exciting developments in areas like robotics, wired and wireless networking, embedded processing, network security, and data storage. It is this ever-expanding capacity of computers that empowers us to communicate, learn, transact business, receive medical treatment, and explore space in new ways.

The School of Electrical and Computer Engineering (ECE) provides undergraduate and graduate programs that prepare students to participate in a broad range of career opportunities. Modern facilities and laboratories support experimental and theoretical programs of instruction and research. Additional information about the School is available at www.ece.gatech.edu (http://www.ece.gatech.edu) or upon request by calling 404.894.2901.

Bachelor’s Degrees
• Bachelor of Science in Computer Engineering (p. 270)
• Bachelor of Science in Electrical Engineering (p. 341)

Master’s Degrees
• Bachelor of Science/Master of Science in Electrical and Computer Engineering (p. 186)
• Dual MS Program in ECE GT Lorraine and European Partner Universities (p. 501)
• Dual MS Program in ECE GT and Korean Advanced Institute of Science and Technology (p. 501)
• Dual MS Program in ECE with the Politecnico di Torino (Italy) (p. 502)
• Master of Science in Bioengineering (p. 512)
• Master of Science in Electrical and Computer Engineering (p. 523)
• Professional Master’s in Sustainable Electrical Energy (PMSEE) (p. 593)

Doctoral Degrees
• Doctor of Philosophy with a Major in Bioengineering (p. 482)
• Doctor of Philosophy with a Major in Electrical and Computer Engineering (p. 488)
• Doctor of Philosophy with a Major in Machine Learning (p. 491)
• Doctor of Philosophy with a Major in Robotics (p. 499)
• Joint Doctor of Philosophy with a Major in Electrical and Computer Engineering with the Politecnico di Milano (p. 502)
• Joint Doctor of Philosophy with a Major in Electrical and Computer Engineering with the Politecnico di Torino (Italy) (p. 502)

Graduate Study in Electrical and Computer Engineering

Master’s Degrees
• Bachelor of Science/Master of Science in Electrical and Computer Engineering (p. 186)
• Dual MS Program in ECE GT Lorraine and European Partner Universities (p. 501)

Certificate Program in Remote Sensing

Remote sensing refers to a means of investigating the properties of a target using measurements made at some distance from the target. Applications range from astronomy and environmental applications to medical radiography and automotive collision avoidance radars, as well as security-enhancing sensors. In the last three decades, sensing of the Earth and its atmosphere has increased very substantially because of climate change and global pollution concerns and because of the need
for measurements to support the increasingly sophisticated weather and earthquake forecasting and oil and gas surveying capabilities.

Students completing the master’s or doctoral degree requirements of the Schools listed below may be awarded a Remote Sensing Certificate. The primary administration of the certificate is through Dr. Irina Sokolik of the School of Earth and Atmospheric Sciences. Departmental contacts are listed below:

Aerospace Engineering: Dr. Robert Braun
Electrical and Computer Engineering: Dr. Manos Tentzeris
Earth and Atmospheric Sciences: Dr. Irina Sokolik
Civil and Environmental Engineering: Dr. Michael Bergin
Chemistry and Biochemistry: Dr. Thomas Orlando
City Planning: Dr. Steven French

The courses that would be used to satisfy the requirements of this certificate have been divided into two areas:

1. First, a group of core courses that cover both fundamentals and applications of remote sensing;
2. Second, elective courses that cover a range of courses that cover fundamental physics, data analysis methods, and application areas.

A total of twelve credit hours are required to obtain the certificate, including at least two core courses. Nine of the credit hours must be at the 6000 level or above.

### Courses in Development

- **AE/EAS 4XXX:** Designing a UAV for Remote Sensing Applications - This course is currently being planned and EAS recently received a NASA grant to provide education in this subject area.
- **EAS 6XXX:** Earth Science/Geological Applications of Remote Sensing - A new faculty member in EAS geodetic remote sensing will be creating this course. It probably will include Global Positioning System (GPS) applications

Other new courses on remote sensing may qualify as electives for this certificate with approval by the Remote Sensing Certificate, Dr. Irina Sokolik.

### GT-Lorraine

Students may choose to pursue graduate degrees in Electrical and Computer Engineering at Georgia Tech-Lorraine, the European campus of the Georgia Institute of Technology, located in Metz, France. Undergraduate programs are also offered in the fall, spring, and summer terms at Georgia Tech-Lorraine. In addition to courses taught in English by regular Georgia Tech faculty, students also may participate in courses and academic programs offered by partner French universities.

ECE Website ([http://www.ece.gatech.edu](http://www.ece.gatech.edu))

### GT-Shenzhen

Students may choose to pursue a Master's degree in Electrical and Computer Engineering at Georgia Tech-Shenzhen, an instructional site of the Georgia Institute of Technology, located in Shenzhen, China. Courses are taught in English by regular Georgia Tech faculty during the fall, spring, and summer terms at Georgia Tech-Shenzhen.

gtshenzhen@ece.gatech.edu

### Undergraduate Study in Electrical and Computer Engineering

#### Bachelor's Degrees

- Bachelor of Science in Computer Engineering (p. 270)
- Bachelor of Science in Electrical Engineering (p. 341)

The following undergraduate engineering programs are accredited by the Engineering Accreditation Commission of ABET, [www.abet.org](http://www.abet.org).

- Bachelor of Science in Computer Engineering
- Bachelor of Science in Electrical Engineering

### School of Materials Science and Engineering

Established in 1985
(School of Textile Engineering established in 1897)
(School of Ceramic Engineering established in 1924)
General Information

The School of Materials Science and Engineering provides high-quality academic programs focused on developing a fundamental understanding of all forms of materials and the creation of new materials for the next generation of engineering applications. A discipline on the forefront of innovations in both science and engineering, the BSMSE degree offers students three separate concentrations:

- Polymer and Fiber materials;
- Structural and Functional materials, and
- Biomaterials.

These concentrations view engineering materials, such as metals, ceramics, polymers, fibers, textiles, composites, biomaterials, nanomaterials and electronic materials, from a fundamental point of view, emphasizing the relationships between the atomic- and micro-scale structure, with the processing, properties, and performance of the materials.

Completion of the BS degree prepares students for entry into the workforce, or for advanced study in materials science and engineering, or for other graduate programs. Materials scientists and engineers have many career options available, such as aerospace, automotive, biomedical, chemical, defense, electronics, materials processing, textiles, consumer products, and recreational equipment industries, as well as in universities, government, and industrial laboratories, and even legal, business, and medical disciplines.

Research and instruction in the School of Materials Science and Engineering at Georgia Tech spans the following areas:

1. Synthesis and processing focusing on development of advanced and traditional materials with novel compositions and tailored microstructures;
2. Characterization and evaluation of structure and properties using advanced techniques and state-of-the-art instrumentation; and
3. Computational modeling of processing-structure-property-performance relationships emphasizing correlation of properties with the structure across nano-, micro-, meso-, and macro-length scales.
4. Design of materials through fundamental theoretical and experimental understanding of materials behavior.

MSE faculty participate in collaborative research projects with faculty from other schools in the Colleges of Engineering and Sciences, and the Georgia Tech Research Institute. Several interdisciplinary centers are led by MSE faculty. The external sponsored research funding brought in by the FTE faculty in the School of Materials Science and Engineering exceeds $11 million per year and comes from a wide variety of sources including industry, private foundations, and federal agencies including AFOSR, ARO, DARPA, DoE, DTRA, NSF, NIH, and ONR. A significant number of materials specialists are required to meet the present and future opportunities and challenges of this field, which makes MSE graduates sought after in practically every aspect of technological advancement.

The school offers a Bachelor of Science in Materials Science and Engineering degree. An undergraduate minor in materials science and engineering is available for non-MSE majors. Graduate degrees (MS and PhD) are offered in materials science and engineering, paper science and engineering, and in the interdisciplinary bioengineering program.

Minor

- Minor in Material Science and Engineering (p. 571)

Bachelor's Degree

- Bachelor of Science in Materials Science and Engineering (p. 424)

Master's Degrees

- Bachelor of Science/Master of Science in Materials Science and Engineering (p. 188)
- Master of Science in Bioengineering (p. 512)
- Master of Science in Materials Science and Engineering (p. 531)
- Master of Science in Paper Science and Engineering (p. 534)

Doctoral Degrees

- Doctor of Philosophy with a Major in Bioengineering (p. 482)
- Doctor of Philosophy with a Major in Materials Science and Engineering (p. 494)
- Doctor of Philosophy with a Major in Materials Science and Engineering (Joint Degree with Peking University) (http://www.catalog.gatech.edu/programs/materials-science-phd-joint-peking)
- Doctor of Philosophy with a Major in Paper Science and Engineering (p. 496)

Graduate Study in Materials Science and Engineering

Materials graduates are essential to the economic growth of the country. They contribute to the development, selection, and use of materials in all engineering and scientific applications. Master's and doctoral degrees in materials science and engineering are offered. An excellent selection of undergraduate courses is also offered in preparation and support of graduate studies. Course offerings and research activities cover a diversity of subjects in the broad field of materials. Subjects include biomaterials, nanotechnology, computational materials science, physical metallurgy, mechanical properties, fracture mechanics, corrosion phenomena, processing, thermodynamics and phase equilibria, non-destructive testing, X-ray analysis, phase transformations, glass science, electronic/technical ceramics, thin-film semiconductors, electronic and optical microscopy, dispersions and rheology, refractories, surface analysis, fiber science, polymerization reaction engineering, polymer process simulation, mechanical properties of polymers, and process-structure-property characterization of polymers. State-of-the-art research facilities in the School of Materials Science and Engineering contribute to the strength of both the academic and research programs.

MSE graduates find employment with manufacturing firms in light and heavy industry, in research laboratories of private firms and federal agencies, and in academic institutions. Several recent graduates have filled positions of high responsibility in these areas and have been instrumental in advancing the level of materials engineering practice in the United States. The MSE faculty participate in numerous multidisciplinary programs including manufacturing engineering, surface science technology, microelectronics, electronic packaging, and composites.
The Master's Degree

MSE offers graduate work leading to the degrees of Master of Science in Materials Science and Engineering, Master of Science in Paper Science and Engineering, and Master of Science with a major in Materials Science and Engineering. The student admitted for graduate work will normally have completed an undergraduate program in materials, ceramics, metallurgy, or polymers. However, students with undergraduate degrees or backgrounds in other fields (e.g., physics, chemistry, geology, and chemical, mechanical, nuclear, or geological engineering) may qualify by taking certain minimum prerequisites during the early part of their graduate studies. To assure a smooth transition into the graduate program, the student should select appropriate electives during his or her undergraduate studies.

Students in the MS program must complete a core of graduate materials courses and prepare an individualized program of study for this degree in consultation with their graduate advisors. The proposed program must receive the approval of the graduate coordinator and the School chair. Thesis, non-thesis, and industrial internship options are available. The minimum credit hour requirements for the MS degree with include eighteen credit hours of courses and a minimum of twelve credit hours of thesis research, with a total minimum of 30 credit hours, or 30 credit hours of courses, or twenty-five hours of courses and six hours of project work conducted as part of an industrial internship. A total of twelve course hours must be in the major, and twelve course hours must be at the 6000 level or higher. A minimum GPA of 2.7 is required for graduation.

The Doctoral Degree

The Doctor of Philosophy degree is directed to attain proficiency in the pursuit of independent scholarly work. The degree comprises coursework in the general principles of materials, with emphasis on metallurgy, polymers, ceramics, paper science and engineering, or electronic materials. Additional requirements include specialized core courses and elective courses both in the area of the doctoral thesis and in one or two other areas, passing comprehensive examinations, and an independent research investigation.

Candidates for the doctoral degree are required to complete at least sixteen credit hours of graduate-level coursework beyond the MS degree, with a minimum GPA of 3.0, and pass the PhD qualification examination. Each student must also earn 9 credit hours in a coherent minor field, chosen in consultation with the advisor, to satisfy the School of Material Science and Engineering's core course requirements. Students should commence participation in the School's research programs early in their graduate careers.

Financial Aid

A number of fellowships and research assistantships from outside sources and industry are available to provide financial assistance for qualified graduate students. In addition, a limited number of presidential fellowships, as well as research assistantships, are available from the Institute. Further information can be obtained by contacting the director of graduate programs in the School of Materials Science and Engineering.

Mechanical Properties Research Laboratory

The Mechanical Properties Research Laboratory (MPRL) is an interdisciplinary College of Engineering laboratory that supports education and research with emphasis on structural materials. Its principal activities are directed toward the measurement and modeling of the mechanical properties of engineering materials, primarily related to deformation, fatigue, and fracture. The MPRL has an international reputation for excellence in areas of:

- fatigue and fracture studies of structural materials, structures and joints
- development of constitutive equations for deformation and damage, incorporating these advances into life prediction methodologies
- characterization and quantitative analysis of microstructure and damage in engineering materials such as structural alloys, composites, metal foams, biomaterials and nanostructured materials and alloys
- development of improved constitutive models for material deformation, fatigue and fracture behaviors
- multiscale simulation of materials and microstructure-sensitive fatigue and fracture approaches
- durability and degradation of aging materials and structures

Master's Degrees

- Bachelor of Science/Master of Science in Materials Science and Engineering (p. 188)
- Bachelor of Science in Bioengineering (p. 512)
- Master of Science in Materials Science and Engineering (p. 531)
- Master of Science in Paper Science and Engineering (p. 534)

Doctoral Degrees

- Doctor of Philosophy with a Major in Bioengineering (p. 482)
- Doctor of Philosophy with a Major in Materials Science and Engineering (p. 494)
- Doctor of Philosophy with a Major in Materials Science and Engineering (Joint Degree with Peking University) (http://www.catalog.gatech.edu/programs/materials-science-phd-joint-pekling)
- Doctor of Philosophy with a Major in Paper Science and Engineering (p. 496)

Undergraduate Study in Materials Science and Engineering

Minor

- Minor in Material Science and Engineering (p. 571)

Bachelor's Degree

- Bachelor of Science in Materials Science and Engineering (p. 424)

The BS in Materials Science and Engineering program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org).

Certificate in Biomaterials

The School of Materials Science and Engineering offers certificates in biomaterials (jointly with BME), polymers, composites, and nanomaterials. Students may fulfill the certificate requirements by taking twelve credit hours of approved courses. By appropriate choice of technical and free electives, only one course outside of those required for the BS MSE degree is required for any certificate and up to 3 hours
of related undergraduate research credit may be applied towards a
certificate. Contact the Associate Chair for Undergraduate Programs
or visit www.mse.gatech.edu/Academics/Certificate_Programs/
certificate_programs.html for eligibility
requirements and a updated list of approved courses.

1 BIOL 1510 is required for the Biomaterials certificate. Since this is
a four-credit hour course, thirteen hours are often taken by MSE
students who obtain this certificate.

Transfer Programs in the College of Engineering

To encourage and accommodate students who desire to study
engineering but may prefer to attend a community college, a Historically
Black College and University (HBCU), or a gender specific college, the
College of Engineering offers the opportunity to transfer to Georgia
Tech via the Dual Degree Engineering Program (DDEP) or the Regents’
Engineering Pathway Program (REPP).

For further information concerning these programs, please access the
following sections of the College of Engineering website:

Dual Degree Engineering Program (http://ceed.gatech.edu/ddep) (DDEP)
Regents’ Engineering Pathway Program (http://ceed.gatech.edu/REPP)
(REPP)

Wallace H. Coulter Department of
Biomedical Engineering at Georgia
Tech and Emory University

Established in 1997

Biomedical engineering is a highly interdisciplinary field integrating
engineering and the life sciences to support the prevention, diagnosis,
and treatment of disease. The role of the biomedical engineer is to
provide answers to problems arising from the study of living systems by
employing the methodology and principles of engineering. Biomedical
engineers often serve as integrators in multidisciplinary teams of
engineers, scientists, and healthcare professionals in the medical device
and biotechnology industries as well as government regulatory agencies.
Our program challenges students with practical, hands-on problem-
solving and design experiences throughout the curriculum. Graduates of
our program have obtained the strong foundation necessary to address
the complex healthcare challenges of the twenty-first century.

The Wallace H. Coulter Department of Biomedical Engineering at
Georgia Tech and Emory University (the Coulter Department) is a unique
partnership between a public institution and a private university—Georgia
Tech’s College of Engineering and Emory’s School of Medicine. The
formation of the Department in 1997 was the culmination of collaborative
efforts in the field of biomedical engineering that dates back to the
1980s. In 2000, the Department assumed the name of Wallace H. Couler,
who was recognized as one of the most influential engineers in the
twentieth century through his entrepreneurial efforts in shaping the fields
of automated cell analysis and hematology.

Research in the Coulter Department encompasses long-range
fundamental research and direct clinical applications through
translational research. The department has identified six thrust areas in
which to focus research and educational programs:

• biomaterials and regenerative medicine,
• cardiovascular biology and biomechanics,
• cellular and biomolecular engineering,
• integrative biosystems,
• medical imaging, and
• neuroengineering.

Research initiatives in these areas are resulting in major breakthroughs in
medicine, basic science, and applied technology.

The Coulter Department offers both undergraduate and graduate
degree programs that attract outstanding students who wish to have
an education that prepares them to be the leaders in this field in the
twenty-first century. Additionally, to meet the needs of a rapidly changing
society and global economy, the Coulter Department has forged a new
partnership with Peking University to offer a joint doctoral degree in
biomedical engineering. The program offers a unique means for U.S. and
Chinese students who want to learn and work in a global economy and in
global health settings.

Rules and Regulations
The Catalog is the authoritative source of Rules and Regulations (p. 151) and other Policies (p. 138) for Georgia Tech students.

Undergraduate Study in Biomedical Engineering
The BS in Biomedical Engineering program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org).

The Department of Biomedical Engineering participates in an undergraduate Multidisciplinary Certificate in "Biomaterials".

See http://www.mse.gatech.edu/undergraduate-program/bio-cert for more details.

Woodruff School of Mechanical Engineering
Established in 1885

Mechanical Engineering (ME) was the first academic program established at Georgia Tech. On September 20, 1985, the School of Mechanical Engineering celebrated its centennial by assuming the name of one of its most distinguished alumni, Atlanta businessman and philanthropist George W. Woodruff (Class of 1917).

Today, the Woodruff School offers undergraduate degrees in mechanical engineering and nuclear and radiological engineering, and graduate degrees in mechanical engineering, nuclear and radiological engineering, medical physics, bioengineering, robotics, paper science and engineering.

Mechanical engineering embraces the generation, conversion, transmission, and utilization of thermal and mechanical energy; the design and production of tools and machines and their products; the consideration of fundamental characteristics of materials as applied to design; and the synthesis and analysis of mechanical, thermal, and fluid systems, including the automation of such systems.

Design, production, manufacture, operation, administration, economics, and research are functional aspects of mechanical engineering.

The undergraduate program in ME allows 15 credit hours of free electives, thereby allowing students to elect one of six concentration areas within in ME or any of the Institute's approved minors.

ME concentrations include:
- Automation and Robotics
- Thermal, Fluid, and Energy Systems
- Micro and Nano Engineering
- Mechanics of Materials
- Manufacturing
- Nuclear Energy

The Nuclear & Radiological Engineering (NRE) and Medical Physics (MP) programs are within the George W. Woodruff School of Mechanical Engineering. NRE and MP are based on a symbiotic group of related areas of knowledge of a common set of science, engineering, and mathematical disciplines and their applications to the development of nuclear power and the utilization of radiation in industry and medicine.

Nuclear engineering field is broad with a unique nuclear core that includes physics of neutron chain (fission) and fusion reactors, radiation production, transport, and interaction with matter; radiation damage of materials, nuclear fuel and structural materials, large-scale numerical modeling, and simulation of nuclear systems. Radiological engineering is the application of the radiation related disciplines to radiation safety (protection), medical application (medical physics), security and detection of nuclear material. The multidisciplinary aspects of nuclear engineering includes topics in
- ChBE (separation/processing),
- ECE (electronics, instrumentation, electromagnetics),
- ME (heat transfer, fluids, thermodynamics),
- MSE (mechanics and properties of material), and
- physics (nuclear, atomic, and radiation).

Medical physics encompasses the therapeutic and diagnostic applications of radiation in medicine. It involves the application of physical principles to medicine, particularly in the diagnosis and treatment of human diseases. Medical physics includes diagnostic radiology, the diagnosis of disease with X-rays, ultrasound, and magnetic resonance imaging; health physics, the study of radiation hazards and radiation protection; nuclear medicine, the diagnosis and treatment of diseases with injected radio-pharmaceuticals; and radiation oncology, the treatment of cancer by ionizing radiation.

School Facilities
The Woodruff School is housed in a multi-building classroom/research complex. Included in this complex are modern classrooms and seminar conference rooms that serve the entire Institute.
The School has many types of specialized instruments and other equipment associated with its laboratories in mechanical engineering for the study of acoustics and dynamics; automation and mechatronics; bioengineering; computer-aided engineering and design; fluid mechanics; heat transfer, combustion, and energy systems; manufacturing; mechanics of materials; micro and nano engineering; and tribology. The Nuclear and Radiological Engineering Program has special facilities for the study of computational reactor physics; fast reactors; fusion; medical physics; and radiation detection.

Modern facilities and laboratories support experimental and theoretical programs of instruction and research. Special facilities in the Woodruff School include:

- Automation and Robotics
- Thermal, Fluid, and Energy Systems
- Micro and Nano Engineering
- Mechanics of Materials
- Manufacturing
- Nuclear Energy

The Georgia Tech Invention Studio is also housed in the Woodruff School. It is a design-build-play space open to all Georgia Tech students, faculty, and staff, regardless of year, major, or prior experience. It is staffed by the University Lab Instructors, student volunteers who are always on hand to provide machine training and help with projects.

The facilities available for the nuclear and radiological engineering and medical physics programs include the

- Radiological Science and Engineering Laboratory (RSEL),
- AREVAL Radiation Detection Laboratory,
- Varian Computational Treatment Planning Laboratory,
- Microchannel Test Facility, and
- Plasma-facing Components Thermal-hydraulic Test Facility.

The RSEL houses the Variant Clinical Accelerator (VCLA) Laboratory, Southern Nuclear Radiation Physics Laboratory which houses a graphite subcritical assembly, a neutron reference field laboratory, a thermoluminescent detector laboratory, a radiation sources laboratory housing various radioisotopes generating neutrons and photons, a nuclear materials laboratory, and a vault which houses a neutron generator.

Minors

- Minor in Energy Systems (p. 552)
- Minor in Engineering and Business (p. 559)
- Minor in Global Development (p. 562)
- Minor in Nuclear and Radiological Engineering (p. 577)

Bachelor’s Degrees

- Bachelor of Science in Mechanical Engineering (p. 439)
- Bachelor of Science in Nuclear and Radiological Engineering (p. 464)

Master’s Degrees

- Master of Science in Bioengineering (p. 512)
- Master of Science in Mechanical Engineering (p. 532)
- Master of Science in Medical Physics (p. 533)
- Master of Science in Nuclear Engineering (p. 533)
- Master of Science in Paper Science and Engineering (p. 534)
- Master of Science - Undesignated (p. 508)

Doctoral Degrees

- Doctor of Philosophy with a Major in Bioengineering (p. 482)
- Doctor of Philosophy with a Major in Mechanical Engineering (p. 494)
- Doctor of Philosophy with a Major in Nuclear Engineering (p. 495)
- Doctor of Philosophy with a Major in Paper Science and Engineering (p. 496)
- Doctor of Philosophy with a Major in Robotics (p. 499)

Graduate Study in Mechanical Engineering

The graduate program in mechanical engineering offers advanced study and research in the areas of acoustics and dynamics; automation and mechatronics; bioengineering; computer-aided engineering and design; fluid mechanics; heat transfer, combustion, and energy systems; manufacturing; mechanics of materials; microelectromechanical systems; and tribology. The graduate programs lead to the degrees of

- Master of Science in Mechanical Engineering,
- Master of Science,
- Master of Science in Bioengineering,
- Master of Science in Paper Science and Engineering, and
- Doctor of Philosophy for qualified graduates having backgrounds in engineering, mechanics, mathematics, the physical sciences, or the biological sciences.

The master’s degree requires a minimum of thirty approved credit hours. Students may elect to earn nine of these hours by writing a thesis, or they may earn all credit toward the degree through coursework. Six hours of credit for graduate courses taken as an undergraduate at Georgia Tech and used for credit toward the BS ME may be included in the MS program of study if the student graduated with an undergraduate grade-point average of at least 3.5. Students must earn a graduate grade-point average of at least 3.0 and satisfy all remaining requirements to be certified for the master’s degree.

Candidates for the Doctor of Philosophy degree must earn a graduate grade-point average of at least 3.3. Students may obtain additional information about the programs by viewing the Woodruff School Handbook for Graduate Students. Every student enrolled must consult this source of information with respect to special rules and degree requirements.

The graduate program in nuclear and radiological engineering/medical physics leads to the degrees of

- Master of Science in Nuclear Engineering,
- Master of Science in Medical Physics,
- Master of Science, and
- Doctor of Philosophy.

In nuclear and radiological engineering, students with a bachelor’s degree in engineering pursue the Master of Science in Nuclear Engineering degree, while students with a Bachelor of Science degree in other fields enroll for the Master of Science degree. Depending on the career objectives of the student, the Woodruff School may encourage a thesis
as part of the Master of Science program. Nuclear and radiological engineering students must earn a graduate grade-point average of at least 3.0 and satisfy all remaining requirements to be certified for the master’s degree.

The doctoral program is designed with great latitude to capitalize on variations in experience and interests of individual students. Candidates for the Doctor of Philosophy degree must earn a graduate grade-point average of at least 3.3.

**Master's Degrees**
- Master of Science in Bioengineering (p. 512)
- Master of Science in Mechanical Engineering (p. 532)
- Master of Science in Medical Physics (p. 533)
- Master of Science in Nuclear Engineering (p. 533)
- Master of Science in Paper Science and Engineering (p. 534)
- Master of Science - Undesignated (p. 508)

**Doctoral Degrees**
- Doctor of Philosophy with a Major in Bioengineering (p. 482)
- Doctor of Philosophy with a Major in Mechanical Engineering (p. 494)
- Doctor of Philosophy with a Major in Nuclear Engineering (p. 495)
- Doctor of Philosophy with a Major in Nuclear Engineering - Medical Physics Option (p. 495)
- Doctor of Philosophy with a Major in Nuclear Engineering - Nuclear Enterprise Management Option (p. 495)
- Doctor of Philosophy with a Major in Paper Science and Engineering (p. 496)
- Doctor of Philosophy with a Major in Robotics (p. 499)

**Educational Objectives**
The educational objectives of the doctoral programs in the Woodruff School are:
- to prepare students for successful careers in industry and/or academia and to promote and instill an ethic for lifelong learning;
- to educate students in methods of advanced analysis, including the mathematical, computational, and experimental skills appropriate for professionals to use when solving problems;
- to provide a substantial depth of knowledge in a particular field or subfield of study that allows the student to be recognized as an expert;
- to provide a breadth of knowledge in a minor field of study that fosters an awareness of and skill in interdisciplinary approaches to problem solving;
- to develop the skills pertinent to the research process, including the students’ ability to formulate problems, to synthesize and integrate information, to work collaboratively, to communicate effectively, and to publish the results of their research; and
- to promote a sense of scholarship, leadership, and service among our graduates.

The educational objectives of the master’s degree programs in the Woodruff School are:
- to prepare students for successful careers in industry and to promote and instill an ethic for lifelong learning;
- to educate students in methods of advanced analysis appropriate for professionals to use when solving problems;
- to provide a depth of knowledge in a particular field of study that allows the student to apply innovative techniques to solve problems;
- to provide a breadth of knowledge that fosters an awareness of and skill in interdisciplinary approaches to problem solving; and
- to develop the skills pertinent to the research process, including the students’ ability to formulate problems, to synthesize and integrate information, to work collaboratively, to communicate effectively, and to publish the results of their research (MS thesis students).

The M.S. in Medical Physics and the Ph.D. in Nuclear and Radiological Engineering-Medical Physics Option programs are accredited by the Commission on Accreditation of Medical Physics Educational Programs, CAMPEP, www.campep.org/campeplstgrad.asp (http://www.campep.org/campeplstgrad.asp).

**Distance Learning Programs**
The Woodruff School offers working professionals the opportunity to enroll in many of its graduate courses through video, CD-ROM, or Internet technologies. The distance-learning program has the same admission, course, and degree requirements as those for graduate students attending classes at the Atlanta campus or at Georgia Tech-Lorraine. Qualified individuals may complete the requirements for the master’s degrees in mechanical engineering (MS ME) and medical physics (MS MP) by utilizing the distance-learning mode.

Distance Learning & Professional Education (https://pe.gatech.edu/degrees/online-masters-degrees/mechanical-engineering)

**Georgia Tech-Lorraine**
The Woodruff School’s program at Georgia Tech-Lorraine in Metz, France has a number of components. In addition to the master’s of science degree in mechanical engineering (MS ME) there is also a doctoral program, which has grown as a result of major funding from CNRS and Georgia Tech; a new fall/spring semester undergraduate program; and the undergraduate summer program. Most graduate students focus on the MS ME French students from partner institutions, such as ENSAM and the Ecole des Mines, take courses at Georgia Tech-Lorraine, typically for two semesters, before coming to the Atlanta campus to finish their master’s degree. U.S. students take classes at GTL as well as at ENSAM for three semesters and receive both the MS ME and the Master Professionel of ENSAM. Students must also complete an internship in France during the summer. The mechanical engineering programs offered at GTL have the same admission, course, and degree requirements as those for graduate students in mechanical engineering attending classes on the Atlanta campus or through the distance-learning program. ENSAM is a leading institution for the study of mechanical and industrial engineering with eight campuses across France, including one in Metz. For more information on the Georgia Tech-Lorraine program, view www.georgiatech-metz.fr (http://www.georgiatech-metz.fr).

**Multidisciplinary Programs**
Mechanical engineering students may plan electives that satisfy simultaneously the requirements of the degree program and a designated multidisciplinary field within the College of Engineering, thus earning both a graduate degree and a certificate indicating expertise in a related...
specialty. For a complete description of these and other multidisciplinary programs, contact the School.

**Undergraduate Study in Mechanical Engineering**

**Minors**
- Minor in Energy Systems (p. 552)
- Minor in Engineering and Business (p. 559)
- Minor in Global Development (p. 562)
- Minor in Nuclear and Radiological Engineering (p. 577)

**Bachelor’s Degrees**
- Bachelor of Science in Mechanical Engineering (p. 439)
- Bachelor of Science in Nuclear and Radiological Engineering (p. 464)

**Undergraduate Research**

Georgia Tech encourages undergraduate students to participate in quality and substantive research. There are several options in the Woodruff School for both mechanical engineering and nuclear and radiological engineering majors to do special problem courses or undergraduate research courses. Students can do a non-research special problem course. This is usually a design course and it might be combined with the capstone design class for a two-semester design problem. There are two types of undergraduate research courses; an ME or NRE class; and research internships, where students are paid for working on a project either part time or full time. For both options, the course appears on the transcript. In all cases, the student must find a faculty member to work with. Each special problem and research course requires a written final report, which is to be submitted to the faculty advisor for grading. All special problems courses taken for credit receive a letter grade and appear on the transcript. Funding opportunities are available through the President’s Undergraduate Research Awards.

For more information on undergraduate research at Georgia Tech, visit [www.undergradresearch.gatech.edu](http://www.undergradresearch.gatech.edu) and for specific ME/NRE program information, visit [www.me.gatech.edu](http://www.me.gatech.edu).

The following undergraduate engineering programs are accredited by the Engineering Accreditation Commission of ABET, [www.abet.org](http://www.abet.org):
- Bachelor of Science in Mechanical Engineering
- Bachelor of Science in Nuclear and Radiological Engineering

**College of Sciences**

College established in 1990
First Science Program in 1888

The College of Sciences comprises six schools
- Biological Sciences,
- Chemistry and Biochemistry,
- Earth and Atmospheric Sciences,
- Mathematics,
- Physics, and
- Psychology.

All schools offer BS, MS, and PhD degree programs.

In addition, the College of Sciences offers a BS program in Neuroscience.

The Center for Education Integrating Science, Mathematics, and Computing (CEISMC), which works with K-12 schools and teachers in the state of Georgia to improve science and mathematics education, is also a unit of the College of Sciences.

The College of Sciences provides the courses in mathematics and the natural sciences that are necessary for all Tech undergraduates to acquire skills and basic principles for their majors. A detailed description of each degree program in the College of Sciences is located under the appropriate school heading, as are descriptions of the courses offered. The College of Sciences’ courses required or recommended by degree programs in the other five colleges at Georgia Tech are listed under the curricula for those degrees.

The American Chemical Society has certified the curriculum leading to the Bachelor of Science in Chemistry.

The Human Factors and Ergonomics Society has accredited the curriculum leading to the PhD in Engineering Psychology.

The Master of Science in Prosthetics and Orthotics (MSPO) program is accredited by the Commission on Accreditation of Allied Health Education Programs (CAAAHEP) upon the recommendation of the National Commission on Orthotic and Prosthetic Education (NCOPE). Accreditation for the MSPO program is effective 2010 to 2015.

- Quantitative Biosciences. PhD (p. 498)
- Quantitative and Computational Finance. MS (p. 536)
The College of Sciences currently offers minors in biology, earth and atmospheric sciences, and mathematics, along with a number of certificate programs that provide similar opportunities for students to develop their expertise or acquire skills or information in specific areas in addition to their major area. Students who satisfactorily complete a certificate program will receive a certificate of recognition from the department that offers the program. Certificate programs available in the College of Sciences are as follows: (Certificate programs offered by the other colleges at Georgia Tech are also available to students in the College of Sciences.)

**Certificate Programs in the College of Sciences**

**Biological Science**
- Applied Physiology
- Biologically Inspired Design
- Biomedical Science
- Biomolecular Technology
- Computational & Quantitative Biology
- Environmental Science
- Integrative Biology
- Marine Science

**Physics**
- Astrophysics

**Psychology**
- Biopsychology
- Cognitive Psychology
- Engineering Psychology
- Experimental Psychology
- Industrial/Organizational Psychology
- Social/Personality Psychology

**School of Biological Sciences**

Programs of study offered by the School of Biological Sciences allow students to gain competence in several different areas of modern biological sciences. The curricula in all degree programs in the School encourage breadth by incorporating course selections from other schools and departments. The Institute, with its strengths in science, computing, mathematics, and engineering, provides unique opportunities for careers in the biological sciences and related areas.

The Bachelor of Science degree program consists of a combination of requirements and electives that ensure a balanced background in the fundamental areas of biology, while providing an opportunity to emphasize an area of interest in the junior and senior years. The School also offers graduate programs leading to MS and PhD degrees. The degree programs include coursework, faculty and student seminars, and independent research. Faculty members are actively engaged in research fields such as bioinformatics, biophysics, ecology, evolutionary biology, genetics, mathematical biology, marine science, microbiology, and molecular cell biology.

The Master of Science Degree Program in Prosthetics and Orthotics is accredited by the Commission on Accreditation of Allied Health Education Programs (www.caahep.org) upon the recommendation of the National Commission of Orthotic and Prosthetic Education (NCOPE).

Rules and Regulations

The Catalog is the authoritative source of Rules and Regulations (p. 151) and other Policies (p. 138) for Georgia Tech students.

Health Sciences Requirement

All Georgia Tech students must satisfactorily complete the health and wellness requirement for graduation.

The requirement can be satisfied by completing one of two course options in Applied Physiology: APPH 1040 or APPH 1050. APPH 1040 is a two-credit-hour lecture-based course. APPH 1050 is a lecture and physical activity course that meets once per week for 1.5 credit hours of lecture and once per week at the Campus Recreations Center for 1.5 credit hours of structured physical activity. A $35 course fee is required to take APPH 1050. The School may grant credit to transfer students for comparable courses completed at other institutions. For more information, contact Applied Physiology's administrative office.

Students who have completed their health and wellness requirement are also encouraged to consider additional elective courses in Applied Physiology's Health Sciences Certificate program. In addition, other Applied Physiology (APPH) courses may be used as free electives or technical electives, if approved by the major school. Individual schools may allow up to 3 credit hours of courses to be counted toward the degree requirements. Students should check the curricula of their individual schools to determine the number of hours they may apply toward the degree.

Requesting an Overload for HPS 1040

Overload requests for APPH 1040 or APPH 1050 should be made via the online registration system. Students should contact the Office of the Registrar (http://www.registrar.gatech.edu/registration) for information about how to request a permit/overload. Please note, no overloads are given during early registration. Overload requests will be reviewed the week before classes begin. Permits will be given at that time based upon classroom space and class status, with juniors and seniors having priority.

Certificates

Each certificate requires twelve credit hours of coursework, including at least nine credit hours at the 3000+ level. Courses required by name and number for a student’s major program of study may not count towards a certificate. Students may not double-count courses towards more than one certificate or minor. Non-Biology majors will be required to include at least nine credit hours of BIOL coursework within their certificate. Students should choose twelve credit hours from the lists below for each of the six new certificates:

1 As long as these courses are not required for the major program of study, and only up to three credit hours of courses at the 1xxx-2xxx level can count.

At least nine credits of BIOL coursework are required for each certificate.
The School of Earth and Atmospheric Sciences (EAS) is an interdisciplinary program that studies Earth’s physical and chemical environment. EAS takes an integrated Earth system science approach in which all components of Earth’s system are studied and analyzed as parts of the larger coupled system. The curriculum is designed to provide its graduates with the intellectual insights needed to understand the evolution of Earth’s environment and its possible future changes. This integrated approach provides the context for professional training in environmental science and meteorology, as well as specialization for research careers in atmospheric chemistry, aerosols, and clouds; dynamics of weather and climate; geochemistry; geophysics; oceanography; paleoclimate; planetary science; and remote sensing.

Financial Aid
Financial support is available for graduate study in the School of Chemistry and Biochemistry. The usual form of financial aid for first-year students is the teaching assistantship. Most students beyond the first year are appointed as research assistants. Both teaching and research assistants receive full tuition waivers. Additional information on the graduate program is available by writing:

Graduate Coordinator
School of Chemistry and Biochemistry
Georgia Institute of Technology
Atlanta, Georgia 30332-0400
or by visiting www.chemistry.gatech.edu (http://www.chemistry.gatech.edu).

Graduate Certificate in Remote Sensing (p. 502)
Students completing the master’s or doctoral degree requirements of the School may earn a Graduate Certificate in Remote Sensing.

Graduate Certificate in Geohydrology
Students completing the master’s or doctoral degree requirements of the School may be awarded a Multidisciplinary Geohydrology Certificate if their program of study satisfies the requirements of the Multidisciplinary Geohydrology program. Additional details can be found in this catalog under Multidisciplinary Certificate Programs in Engineering (p. 31).

Graduate Certificate in Remote Sensing
Remote sensing refers to a means of investigating the properties of a target using measurements made at some distance from the target. Applications range from astronomy and environmental applications to medical radiography and automotive collision avoidance radars, as well as security-enhancing sensors. In the last three decades, sensing of the Earth and its atmosphere has increased very substantially because of climate change and global pollution concerns and because of the need for measurements to support the increasingly sophisticated weather and earthquake forecasting and oil and gas surveying capabilities.

Students completing the master’s or doctoral degree requirements of the Schools listed below may be awarded a Remote Sensing Certificate. The primary administration of the certificate is through Dr. Irina Sokolik of the...
School of Earth and Atmospheric Sciences. Departmental contacts are listed below:

Aerospace Engineering: Dr. Robert Braun
Electrical and Computer Engineering: Dr. Manos Tentzeris
Earth and Atmospheric Sciences: Dr. Irina Sokolik
Civil and Environmental Engineering: Dr. Michael Bergin
Chemistry and Biochemistry: Dr. Thomas Orlando
City Planning: Dr. Steven French

The courses that would be used to satisfy the requirements of this certificate have been divided into two areas:

1. First, a group of core courses that cover both fundamentals and applications of remote sensing;
2. Second, elective courses that cover a range of courses that cover fundamental physics, data analysis methods, and application areas.

A total of twelve credit hours are required to obtain the certificate, including at least two core courses. Nine of the credit hours must be at the 6000 level or above.

### Courses in Development

AE/EAS 4XXX: Designing a UAV for Remote Sensing Applications - This course is currently being planned and EAS recently received a NASA grant to provide education in this subject area.

EAS 6XXX: Earth Science/Geological Applications of Remote Sensing - A new faculty member in EAS geodetic remote sensing will be creating this course. It probably will include Global Positioning System (GPS) applications

Other new courses on remote sensing may qualify as electives for this certificate with approval by the Remote Sensing Certificate, Dr. Irina Sokolik.

**School of Mathematics**

Established in 1952

Mathematics forms an integral part of the curricula of most students at Georgia Tech. Consequently, the School of Mathematics offers a wide range of courses serving students in the various engineering, science, and management disciplines. The School offers programs of study leading to bachelor’s, master’s, and doctoral degrees in mathematics. Such programs of study serve as preparation for mathematics careers, professional schools, and graduate studies.

In addition to basic courses in mathematics, the School offers a variety of specialized courses at the undergraduate and graduate levels, emphasizing areas related to the research activities of the faculty. These include mathematical analysis, applied mathematics, differential equations and partial differential equations, geometry, scientific computing, probability, statistics, combinatorics, mathematical physics, topology, and algebra.

The School of Mathematics has excellent computer facilities that are used in conjunction with an increasing number of courses and programs of study. A cooperative plan for students who wish to combine practical experience with academic work is available for mathematics majors.

• Doctor of Philosophy with a Major in Mathematics (p. 494)
• Doctor of Philosophy with a Major in Quantitative Biosciences (p. 498)

Undergraduate Study in Mathematics

The School of Mathematics offers a Bachelor of Science degree in Mathematics. Students have the option of completing the BS in Mathematics or completing the BS in Mathematics with a concentration in one of four areas:
• Applied Mathematics
• Discrete Mathematics
• Probability and Statistics
• Pure Mathematics.

The BS in Mathematics program emphasizes the study of core mathematics, as well as its application. It provides and excellent preparation for employment, as well as for graduate study in mathematics and related fields.

School of Physics
Established in 1939

Physics involves the study of matter and radiation from the subatomic to the cosmological scale. Revolutionary 20th century advances in quantum physics led to technological breakthroughs including the transistor and laser. Physics has become increasingly important as a fundamental basis for interdisciplinary research in engineering, biophysics, materials science and information. In an increasingly technically oriented society, a physics degree provides an important foundation for a range of careers.

The School of Physics offers basic service courses to freshmen and sophomores, some advanced service courses for students in other units of the Institute, and advanced studies leading to the bachelor’s, master’s, and PhD degrees in physics. The School seeks to provide elective freedom in its degree programs in order to enable students with a wide variety of goals to construct programs of study suitable for them.

In addition to offering courses in the fundamentals of physics, the School provides numerous specialized courses at all levels, particularly in those areas related to the research interests of the faculty. These areas of research currently include:
• astrophysics (including cosmology, and particle and gravitational astrophysics);
• atomic, molecular, and optical physics;
• condensed matter physics (experimental, theoretical, and computational);
• nonlinear physics and chaos;
• soft matter physics;
• physics education;
• and physics of living systems.

Opportunities exist in all these areas and in other areas through collaboration with faculty of other schools and colleges for Special Problems courses, master’s theses, and doctoral dissertations.

Supplementary program planning is available from the School of Physics. Opportunities for graduate study and research are also available at www.physics.gatech.edu (http://www.physics.gatech.edu).

School of Psychology

Established in 1959

The School of Psychology offers programs of study leading to the Bachelor of Science in Psychology, Master of Science in Psychology, and Doctor of Philosophy with a major in Psychology. It also offers training in the basic and applied aspects of the science of behavior for the student majoring in architecture, engineering, management, and natural sciences. The undergraduate curriculum provides a broad-based natural science approach to the study of psychology. Courses in mathematics, biology, and chemistry, for instance, complement the psychology courses. The curriculum also stresses methodological issues so that students learn the fundamentals for carrying out solid research.

Graduate Study in Psychology

Doctoral candidates take a core curriculum in general psychology and quantitative methods. Doctoral candidates will complete all requirements for the master's degree, which includes writing a research thesis.

The doctoral program provides the student with an opportunity for advanced study in cognitive aging, cognition and brain science, engineering, industrial-organizational, or quantitative psychology. Each of these curricula consists of additional courses and programs of individual study and research beyond the core curriculum, which contribute to a strong background in general experimental psychology and the student's area of specialization. The doctoral program will ordinarily require at least four years for students who enter immediately after obtaining a bachelor's degree.

Admission to graduate study in psychology with full graduate standing in the School of Psychology requires the equivalent of an undergraduate major in psychology or a related field with courses in general and experimental psychology, as well as psychological statistics. All applicants should submit scores from the Graduate Record Examination.

The psychology faculty will consider admissions applications from competent students who have majored in subjects other than psychology.

PSYC: Graduate Information (http://psychology.gatech.edu/graduate/graduate-programs)

Master's Degrees

- Master of Science in Human-Computer Interaction (p. 526)
- Master of Science in Psychology (p. 535)

**Ivan Allen College of Liberal Arts**

Established in 1990

The Ivan Allen College (IAC), named after a visionary leader who served as mayor of Atlanta during a time associated with the creation of the "New South," is a unique configuration of six schools as well as Georgia Tech's three ROTC departments. The College was established in 1990 in order to broaden the range of majors available to Tech students. The degree programs are unique in the ways they link the study of the social sciences and humanities to the world of technology and science. IAC majors prepare students for a wide range of professional careers, including leadership in government, business, and technology.

Study in these fields also prepares students for advanced study in professional programs in law, medicine, international affairs, public policy, and new media as well as graduate study in the humanities and social sciences. The success of these new programs has resulted in a realization of the close connections between service and progress expressed in Georgia Tech's motto.

The Ivan Allen College offers nine undergraduate degrees, six master's degrees, and four doctoral degrees. Detailed descriptions of these programs can be found under the appropriate school headings. In addition to its degree programs, the Ivan Allen College provides all Tech students with instruction in the humanities and social sciences. The College's course offerings and its certificate and minor programs enable students, regardless of their major, to broaden their educational experience and to better understand the cultural underpinnings of their professional and personal lives and the international context in which they live and work.

Public Policy Joint Degree with Georgia State University. PhD (p. 498)

**Department of Air Force Aerospace Studies**

Established in 1946

The Air Force Reserve Officer Training Corps, Air Force ROTC, is a three- or four-year educational program designed to give men and women the opportunity to become Air Force officers while completing a degree. It involves an elective curriculum taken along with required college classes. Students participating in the program will attend Air Force ROTC classes on Tuesdays and Thursdays. Students earn a college degree and an officer's commission in the U.S. Air Force at the same time.

Air Force ROTC offers competitive four, three and a half, three, two and a half, and two year college scholarships to qualified college students based on merit. Non-competitive scholarships are also available based on major, including certain foreign languages and engineering specialties. Scholarships vary from $3,000, $9,000, $15,000, all the way up to full tuition and required fees. Scholarship winners also receive a stipend of up to $500 for each academic month, in addition to a $900 allowance for books and other educational items. Non-scholarship students also
receive the stipend and book allowance as Professional Officer Course cadets in the program.

The curriculum is divided into two courses:

- a General Military Course open to all freshmen and sophomores, and
- a Professional Officer Course for qualified juniors, seniors, and graduate students.

Students undecided about pursuing a commission can participate in the General Military Course without incurring a military obligation.

Successful completion of the General Military Course, a minimum 2.0 GPA, and the appropriate physical and medical qualifications are prerequisites for enrollment in the Professional Officer Course. Successful completion of both courses with the award of a bachelor’s degree allows students to become commissioned second lieutenants in the United States Air Force.

**Air Force ROTC Cross Registration**

Cross Registration is available to students from ARCHE participating schools. As a cross-town cadets students will participate in Air Force ROTC activities at Georgia Tech every Tuesday and Thursday. Scholarship opportunities are available to students with Air Force Education Service Agreements. Stipends and other incentives are available to all students. Students graduating with a degree from their home institution will receive a commission in the United States Air Force. Contact the Detachment 165 Unit Admissions Officer at 404.894.4175 for more information. For more information on the cross registration process and ARCHE participating schools, visit [www.atlantahighered.org](http://www.atlantahighered.org).

**Air Force ROTC Program Overview**

Students entering the program enroll in Air Force ROTC courses in the same manner in which they register for other undergraduate courses. A formal application is not required. Students enrolled in the General Military Course (GMC) incur no military obligation unless they are on an Air Force ROTC scholarship. Those students desiring to become commissioned officers in the Air Force must complete for entry into the Professional Officer course (POC), which is normally the last two years of college. In the summer between the sophomore and junior years, cadets attend a four- or six-week field training session conducted at an Air Force base.

**Field Training**

Field Training is, in most cases, a cadet’s first exposure to a working Air Force environment. The program is designed to develop military leadership and discipline, and to provide Air Force officer orientation and motivation. At the same time, the Air Force evaluates each cadet’s potential as an officer. Field training includes Air Force professional development orientation, marksmanship training, junior officer training, physical fitness, and survival training.

**General Military Course (GMC)**

Courses are offered during fall and spring semesters with two credit hours awarded for each freshman and sophomore course, and 3 credit hours for each junior and senior course. Four hours of basic ROTC courses may be applied as elective credits toward degree requirements at the school. Classes normally meet two hours a week. A one-hour leadership laboratory and participation in physical conditioning training are also required.

Students in the GMC do not incur military obligation unless they have received an ROTC scholarship.

**AS 1000 Level Class Schedule for Freshman Year**

A survey course designed to introduce students to United States Air Force and Air Force Reserve Officer Training Corps.

**Leadership Laboratory**

Leadership Laboratory is a separate course requiring two hours per week throughout the cadet’s enrollment in Air Force ROTC. It involves a study of Air Force customs and courtesies, drill and ceremony, professional development opportunities in the Air Force, and the life and work of an Air Force junior officer. Students develop their leadership potential in a practical, supervised laboratory that may include field trips to Air Force installations and presentations by Air Force personnel. Physical Training (PT) is a key part of officer development. Cadets are expected to PT twice per week.

**Professional Officer Course (POC)**

Courses are offered during fall and spring semesters with 3 credit hours for each junior and senior course. Classes normally meet 3 hours a week. A one-hour leadership laboratory and participation in physical conditioning training are also required.

Air Force ROTC Website (http://www.afrotc.gatech.edu)

Air Force ROTC Scholarship Program
Air Force ROTC can help students with the high cost of getting a degree. As an Air Force ROTC cadet, students are entitled to many benefits.

- Up to $15,000 per academic year to cover tuition, lab, and incidental fees;
- $750 for textbooks; and $250-$400 a month tax-free allowance
- Free Air Force uniforms and textbooks
- Management training and opportunities to apply leadership principles
- At most schools, academic credit for Air Force ROTC classes
- Travel on military aircraft on a space-available basis for students on Air Force ROTC scholarships or in the Professional Officer course

In-College Scholarship Program (ICSP)
The Air Force ROTC In-College Scholarship Program (ICSP) is a highly competitive scholarship program aimed primarily at college freshmen and sophomores in ANY MAJOR. Detachment commanders nominate and rank/order cadets in their program using the ‘whole-person’ concept. All ICSP scholarships activate the following fall term.

Historically Black Colleges and Universities (HBCU)
Scholarships are available for any Clark Atlanta, Morehouse, or Spelman student. The objective of the HBCU scholarship program is to encourage outstanding HBCU students to enroll in the Air Force ROTC program. To compete for the scholarship, students must:

- be full-time,
- be physically and medically qualified,
- have at least a 2.5 GPA, and

- meet all other eligibility criteria.

Depending on the situation, HBCU scholarships can be activated in the same term.

Foreign Language Express Scholarship
Foreign Language Express scholarships provide preapproved scholarships to individuals in certain areas of study for which the United States Air Force projects a critical need in a few years. Scholarships in these areas are guaranteed if students meet all minimum requirements. Air Force ROTC provides an outstanding opportunity for students to receive a three- or two-year scholarship. Depending on the situation, Foreign Language scholarships can be activated in the same term. In order to receive an Express Scholarship students must be in one of the areas of study: Arabic, Chinese, Persian-Iranian/Persian-Afghan, Hindi, Indonesian, Japanese, Pashtu, Russian, Turkish, Urdu/Punjabi, Azerbaijani, Bengali, Cambodian, Hausa, Kazakh, Kurdish, Malay, Serbo-Croatian, Swahili, Thai, Uighur, Uzbek, or Vietnamese.

Nursing Scholarships
Air Force ROTC offers a variety of scholarships for nursing students that cover most tuition, books, and lab fees. The goal of the Nursing scholarships is to allow nursing students to complete their degree debt-free, while acquiring valuable resource knowledge about the Air Force and become part of the Air Force’s medical staff. Air Force nurses may enter in any number of different nursing fields including clinical nurse, operating room nurse, flight nurse, or nurse anesthetist. Depending on the situation, Nursing scholarships can be activated in the same term.

Pre-Health Professions and Armed Forces Health Professions Program
A Pre-Health Professions Program designation is offered to encourage students to earn commissions through Air Force ROTC and continue their education in medical or osteopathic school. You must apply before the end of the sophomore year. The Armed Forces Health Professions Scholarship Program provides up to four years of medical school and it covers tuition and fees, textbooks. It also pays the student a taxable monthly allowance of $938. Students accepted to the graduate-level health professions school, will be granted the scholarship and transferred into the Air Force Medical Corps. Armed Forces Health Professions scholarship participants incur an additional active-duty service commitment.

ROTC Credit (p. 104)
Air Force ROTC Website (http://www.afrotc.gatech.edu)

Department of Military Science/Army ROTC
Established in 1917

The purpose of the Army ROTC is to prepare students for commissioning as officers in the Active Army, Army Reserve, or Army National Guard. The overall program is designed to aid students in developing the abilities and attitudes that will make them academically successful and to develop well-educated junior officers.

The curriculum is divided into two courses:

- a basic course that is open to all freshmen and sophomores and
• an advanced course for qualified juniors, seniors, and graduate students.

Students who are undecided about pursuing a commission have the option of participating in the basic course without incurring a military obligation. Successful completion of the basic course (or commensurate training), a minimum 2.0 cumulative grade-point average, and the appropriate medical and physical qualifications are prerequisites for enrollment in the advanced course. Successful completion of both courses and the award of a bachelor’s degree constitute the normal progression to gaining a commission as a second lieutenant. Courses are available to both men and women.

The overall Army ROTC curriculum prepares students to become effective leaders and managers in a variety of responsible and challenging commissioned officer fields, thus facilitating early middle-management career development and progression.

Army ROTC - Additional Training Offered

Leadership Training Course (LTC)

Those academically qualified students who are unable to fulfill the requirements of the Basic Course during their freshman and sophomore years may qualify for admission to the Advanced Course by successfully completing the Leadership Training Course (LTC). This option is primarily designed to meet the needs of transfer students, those completing the sophomore year, and others, including graduate students, who have four semesters remaining at the Institute. This option provides a two-year program in lieu of the standard four-year curriculum. The LTC option consists of a four-week training period conducted at Fort Knox, Kentucky, during the summer months. During each summer, various cycles will be available to meet student needs. Students choosing this option are required to submit a formal application and pass a physical examination.

Students selected to attend the LTC training program will receive approximately $800 in addition to travel expenses to and from the LTC. Uniforms, housing, medical care, and meals are furnished by the government during the training. Interested students should contact the Military Science Department.

Cadet Professional Development Training (CPDT) Program

The CPDT program supplements campus training with practical leader development experiences and some additional skill identifier awarding courses. Cadets train in Army schools and with Active and Reserve units. CPDT consists of two subprograms, Cadet Troop Leader Training (CTLT) and Cadet Practical Field Training (CPFT).

Basic Airborne School (BAC)

The Basic Airborne Course is a three-week training program conducted by the Airborne Department, USAIC, Fort Benning, Georgia that trains students in the use of the parachute as a means of combat deployment. Successful completion qualifies cadets to wear the Parachutist Badge.

Air Assault School (AAS)

Located at Ft. Campbell, Kentucky, the AAS is a 10 day course of instruction that trains cadets on Combat Assault Operations involving associated equipment and U.S. Army rotary-wing aircraft. Successful completion qualifies cadets to wear the Air Assault Badge. This eleven day course is very demanding both physically and mentally, involving obstacle courses and several long ruck marches. You will learn the basics of aircraft familiarization and recognition, slingload operations, and rappelling.

Mountain Warfare School (MWS)

This is a two-week program conducted at the Ethan Allen Firing Range in Jericho, Vermont. The course teaches cadets the skills needed to operate in a mountainous environment during the summer and fall. Mountain Warfare introduces you to the techniques and tactics required to operate in a mountainous environment under hostile conditions. The emphasis is on field exercises where you learn mountain-related skills.

Cadet Troop Leadership Training (CTLT)

Cadet Troop Leadership Training (CTLT) offers the MS III cadet the opportunity to perform the duties of a Second Lieutenant for up to one month with an active duty unit. MS III graduates of the ROTC Advanced Camp may attend CTLT for 3 to 4 weeks immediately following attendance at the Leadership Development and Assessment Course (LDAC) in the summer following their MS III year. Actual duties performed will vary by branch and unit but will generally be those duties expected of a Second Lieutenant in that unit. Many cadets will serve as either platoon leaders or assistant platoon leaders.

ROTC Credit (p. 104)

Army ROTC Website (http://www.armyrotc.gatech.edu)

Army ROTC - Program Overview

The Basic Course Curriculum

The Basic Course consists of a four-semester block of instruction taken during the freshman and sophomore years. Successful completion of all four semesters satisfies the military science requirements for progression to the Advanced Course. These courses provide a foundation in basic military subjects such as customs and traditions, history, leadership, and map reading. They round out a student’s academic life, provide a challenge, foster confidence, and facilitate personal growth and development.

Courses are offered during fall and spring semesters with 3 credit hours awarded for each freshman and sophomore course and four credit hours for each junior and senior course. Four hours of basic ROTC courses may be applied as elective credits toward degree requirements at the school. Courses normally meet two hours a week. A one-hour leadership laboratory and participation in physical conditioning training are also required for contracted cadets.

Students in the Basic Course do not incur military obligation unless they have received an ROTC scholarship. Scholarship cadets are required to participate in a field training exercise twice per school year. They are issued uniforms and may participate in other ROTC-related events and training, such as Airborne School, Air Assault School, and Northern Warfare Training.

The Basic Course consists of the following:

| First Year | MSL 1001 Leadership&Personal Dev 3 |
| Second Year | MSL 1002 Intr Tactical Leadership 3 |
The Advanced Course Curriculum

The Advanced Course is designed to fully develop a cadet’s leadership and management potential, physical stamina, and self-confidence, as well as those Army values required of an Army officer. The objective is to produce the highest caliber junior officers fully capable of discharging a wide spectrum of command and management responsibilities in the modern Army and in the business world.

The Advanced Course consists of four semesters of instruction normally taken during the junior and senior years. Successful completion of the four courses fulfills the military science academic requirements for award of an officer’s commission. Each student must also participate in a regular physical conditioning program and successfully pass the Army Physical Fitness Test. All Advanced Course students must participate in field training exercises twice a school year. Twelve credit hours are earned, six of which may be applied as elective credits toward any degree at the Institute. Advanced Course students receive a subsistence allowance up to $500 a month. Service veterans and service academy cadets may qualify for direct entry into the Advanced Course. Certain Advanced Course students are eligible to participate in the Simultaneous Membership Program with the Army Reserve or Army National Guard. Students in this program affiliate with an Army unit as officer trainees.

Students enrolled in the Advanced Course are also required to complete a five-week Advanced Camp at Fort Lewis, Washington, to become eligible for commissioning. Attendance at Advanced Camp normally occurs during the summer between the junior and senior years. Students may also participate in additional voluntary training, such as Airborne School or Cadet Troop Leader Training. In addition to completing the military science academic requirements of both the Basic and Advanced Courses, the student must complete at least one undergraduate course from each of five designated fields of study:

- Written Communications: Select any course offered by the Institute in English composition or creative writing.
- Human Behavior: Select any course offered by the Institute in psychology, sociology, anthropology, or ethics.
- Military History/National Security Studies: Select INTA 3520, INTA 3510, or another similar course approved by the Professor of Military Science.
- Computer Literacy: Select any course offered by the College of Computing except CS 1000 (Information and Society).
- Mathematics Reasoning: Select any course offered by the School of Mathematics.

Students who successfully complete the Army ROTC curriculum and earn a bachelor’s degree can be commissioned as second lieutenants. Subsequent military service may be on active duty or with the Army Reserve or Army National Guard. The following courses constitute the Advanced Course:

ROTC Credit (p. 104)
Army ROTC Website (http://www.armyrotc.gatech.edu)

Army ROTC - Scholarship Programs

Each year, the Army offers a variety of full scholarship programs to those young men and women who have demonstrated outstanding academic scholarship and leadership potential. Four-, three-, and two-year scholarships are available to qualified students. Scholarships are competitive and awarded based on the student’s merit. The Professor of Military Science receives an allocation of scholarships each year.

Scholarships provide full tuition/fees or room/board to both resident and out-of-state students, $1,200 allowance for textbooks and supplies, and a $300 to $500-a-month tax-free stipend. Scholarship students serve either on active duty, in the Army reserves, or Army National Guard.

Options

Students who wish to obtain a commission as an officer but do not want to serve on active duty may request a Guaranteed Reserve Forces Duty (GRFD) scholarship. Reserve Forces Duty scholarships are available, but are limited in number. Affiliation with an Army Reserve or Army National Guard unit is required to participate in either the scholarship or nonscholarship program. In this program, students are guaranteed in writing that they will not be placed on active duty and can fulfill their entire commitment in the Army Reserve or Army National Guard.

ROTC Credit (p. 104)
Army ROTC Website (http://www.armyrotc.gatech.edu)

Army ROTC - Student Advisory Services

Faculty members are available throughout the academic year and during each summer orientation session in the Department of Military Science for academic counseling, schedule planning, and career guidance. Students and their parents are encouraged to seek advice on the overall Army ROTC program, scholarship opportunities, and officer career development. Appointments may be made in person, by calling 404.894.4760/9938, or by e-mail via the ROTC home page, www.armyrotc.gatech.edu (http://www.armyrotc.gatech.edu). Students should also check the homepage for the latest updates on course requirements and other important information.

Academic Mentorship Program

The Academic Mentorship program aims to sustain an atmosphere where all cadets recognize the importance of academic success for commissioning, obtaining their degrees, and other future endeavors. Every cadet should have the resources and encouragement to succeed in the classroom through an established mentorship support system. An aggressive attitude toward meeting the academic standard is highly encouraged. Academic Mentorship also offers a Study Hall program which offers additional mentorship opportunities by offering students hands on academic instruction and tutelage.

ROTC Credit (p. 104)
Army ROTC Website (http://www.armyrotc.gatech.edu)
Department of Naval Science / NROTC

Established in 1926

The NROTC program offers students the opportunity to qualify for service as commissioned officers in the United States Navy or Marine Corps. The program's objectives are to provide students with an understanding of the basic concepts and principles of naval science, associated professional knowledge, and the requirements for national security. NROTC students receive an educational background that allows them to later undertake advanced education in the naval service.

The NROTC program is an officer accession program for the unrestricted line communities (Surface Warfare, Submarines, Aviation, Marine Corps). Upon graduation, the student is commissioned as an officer in the Navy or Marine Corps. Naval officers are ordered to active duty in submarines, surface combatants, or the aviation community. Marines undergo training leading to a variety of specialties. NROTC students are enrolled in one of the following three categories: three-year or four-year scholarship students, college programmers, or two-year scholarship students.

The NROTC Program was established to develop midshipmen mentally, morally and physically and to imbue them with the highest ideals of duty, and loyalty, and with the core values of honor, courage and commitment in order to commission college graduates as naval officers who possess a basic professional background, are motivated toward careers in the naval service, and have a potential for future development in mind and character so as to assume the highest responsibilities of command, citizenship and government.

NROTC - College Program Students

Non-scholarship students may seek a naval commission through the NROTC College Program. Interested students may apply at the NROTC unit in the O'Keefe building on campus. The process includes a review of previous academic performance and interviews with staff personnel. Students accepted into the College Program must complete the naval science curriculum and take a summer assignment between the junior and senior years.

The Navy provides naval science texts. Students who enter advanced standing in the junior year receive a subsistence allowance of $350-$400 per month. College program students are eligible to compete for scholarships ranging from one to three years. Selection criteria are based on academic performance at Georgia Tech and military performance as high school academic performance, and extracurricular activities. Selection criteria include SAT or ACT scores, high school academic performance, and extracurricular activities. The selection process is administered by the chief of Naval Education and Training; however, the NROTC unit will provide guidance and information to applicants. An online application is available at http://www.nrotc.navy.mil.

One term of INTA (contact NROTC unit for required class)

One term of a cultures studies course (contact NROTC unit for required class)

All students must attend weekly Drill Periods in addition to above courses.

**Marine Option**

Marine Option students must only take the previously listed international affairs and cultural studies courses or their equivalent as approved by the professor of naval science.

Any additional requirements are based on whether or not the student is in a technical or nontechnical major, a Navy Option or Marine Option student, and a scholarship or nonscholarship recipient. Each student must obtain from the NROTC Department a complete description of program requirements since the above statement is only a general outline. Students may apply a maximum of 4 credit hours in basic ROTC courses and six credit hours in advanced ROTC courses toward meeting the free elective requirements for any degree.

ROTC Credit (p. 104)
Navy ROTC Website (http://nrotc.gatech.edu)

NROTC - Scholarship Students

Four-year and three-year scholarship students are selected through nationwide competition. Selection criteria include SAT or ACT scores, high school academic performance, and extracurricular activities. The selection process is administered by the chief of Naval Education and Training; however, the NROTC unit will provide guidance and information to applicants. An online application is available at http://www.nrotc.navy.mil.

The NROTC scholarship pays for tuition (and applicable fees) and textbooks. The Navy also provides uniforms and a $250-$400 per month subsistence allowance. The Naval Science Department conducts an orientation program (INFORM) for all new NROTC scholarship students during the week prior to the start of the fall semester. Scholarship students must complete the naval science curriculum and also...
participate in summer assignments from four to six weeks during the summers between academic years.

ROTC Credit (p. 104)
Navy ROTC Website (http://nrotc.gatech.edu)

**NROTC - Two-Year Scholarship Program**

Sophomores may apply and compete nationally for two-year NROTC scholarships. Those selected attend six weeks of training in Newport, Rhode Island, during the summer between the sophomore and junior years. Upon successful completion, the student joins the NROTC program on an equal footing with other students in the junior year naval science classes. Interested students should contact the Naval Science Department.

ROTC Credit (p. 104)
Navy ROTC Website (http://nrotc.gatech.edu)

**School of Economics**

Established in 1990

The School of Economics provides high-quality programs of study leading to a Bachelor of Science in economics or a minor or certificate in economics for students in other disciplines. The school also participates in the International Plan (http://www.internationalplan.gatech.edu) and the Research Option (http://www.undergradresearch.gatech.edu/research-option) for undergraduate students. The program focuses on skills and knowledge critical for a life of learning and leads to careers in academics, management, banking, the public sector, and other professional fields. A degree in economics is especially appropriate for students intending to pursue advanced degrees in the social sciences and in professional schools of management, law, and public administration.

Modern economics is analytically rigorous, requiring a background in mathematics and statistics. At the same time, it is critically linked with the other social sciences and humanities, as well as to applied management and policy studies. The undergraduate curriculum provides a strong, in-depth understanding of economic thought and policy and is intended to prepare students for productive careers, for useful roles in society, and for satisfying personal lives in a technologically complex, culturally diverse world.

The School of Economics offers

- a Bachelor of Science in Global Economics and Modern Languages in cooperation with the School of Modern Languages and
- a Bachelor of Science in Economics and International Affairs in cooperation with the Sam Nunn School of International Affairs.
- a Bachelor of Science in Global Economics and Modern Languages in cooperation with the School of Modern Languages.

These programs provide students an opportunity to broaden their educational experience and to enhance their marketability in these areas.

The School of Economics also offers graduate courses leading to a Master of Science in Economics degree and in support of PhD programs in management, public policy, industrial and systems engineering, and city and regional planning.

**Minors**
- Minor in Economics (p. 551)
- Minor in Health, Medicine, and Society (p. 563)

**Bachelor’s Degrees**
- Bachelor of Science in Economics (p. 339)
- Bachelor of Science in Economics and International Affairs (p. 340)
- Bachelor of Science in Global Economics and Modern Languages (p. 346)

**Master’s Degree**
- Master of Science in Economics (p. 522)

**Doctoral Degree**
- Doctor of Philosophy with a Major in Economics (p. 487)

**Graduate Study in Economics**

**Master’s Degree**
- Master of Science in Economics (p. 522)

**Doctoral Degree**
- Doctor of Philosophy with a Major in Economics (p. 487)

**Graduate Certificate in Science, Technology, and Society**

The Graduate Certificate in Science, Technology, and Society Graduate is designed for students already enrolled in a graduate degree program at Georgia Tech. This certificate is for graduate students who would like to demonstrate additional competence in some aspect of STS or special competence in STS in their home discipline. The certificate is open to students in good standing in any graduate program at Georgia Tech.

The 12-credit hour certificate program helps students to:

- Understand the social, cultural, and epistemic dynamics of science and technology
- Explore these dynamics across world societies and cultures
- Develop sensitivity to issues of gender, race, and justice across areas of knowledge, including: engineering, medicine, environment, cognition, security, innovation, design
- Employ STS approaches as scholars or practitioners (e.g. engineers, scientists, or policy makers)

**Program of Study**

School of History and Sociology

Established in 1990

The School of History and Sociology, dedicated to the ideal of a well-rounded education at a technological university, provides instruction in the social sciences to every student at Georgia Tech. The School offers courses in history and sociology leading to three degrees:

- Bachelor of Science in History, Technology, and Society (BS-HTS);
- Master of Science in History and Sociology of Technology and Science (MS-HSTS); and
- Doctor of Philosophy in History and Sociology of Technology and Science (PHD-HSTS).

The School of History and Sociology also offers minors or participates in interdisciplinary minors in:

- History;
- Sociology;
- Health, Medicine, and Society;
- Science, Technology, and Society;
- Social Justice;
- Sports, Society, and Technology; and
- Women, Science, and Technology.

The School of History and Sociology also offers several certificate programs (http://www.hsoc.gatech.edu/undergraduate/certificates) for students in other undergraduate majors. In addition, the School of History and Sociology participates in the International Plan (http://www.hts.gatech.edu/undergraduate/opportunities/global) and Research Option (https://hts.gatech.edu/undergraduate/opportunities/research).

Minors

- Minor in History (p. 564)
- Minor in Sociology (p. 587)
- Minor in Health, Medicine, and Society (p. 563)
- Minor in Science, Technology and Society (http://catalog.gatech.edu/programs/minor-science-technology-society)
- Minor in Social Justice (p. 586)
- Minor in Sports, Society, and Technology (p. 588)
- Minor in Women, Science, and Technology (p. 590)

Bachelor's Degree

- Bachelor of Science in History, Technology, and Society (p. 356)

Master's Degree

- Master of Science in History and Sociology of Technology and Science (p. 525)

Doctoral Degree

- Doctor of Philosophy with a Major in History and Sociology of Technology and Science (p. 488)

Graduate Study in History and Sociology

Master's Degree

- Master of Science in History and Sociology of Technology and Science (p. 525)

Doctoral Degree

- Doctor of Philosophy with a Major in History and Sociology of Technology and Science (p. 488)

Graduate Certificate in Science, Technology, and Society

The Graduate Certificate in Science, Technology, and Society is designed for students already enrolled in a graduate degree program at Georgia Tech. This certificate is for graduate students who would like to demonstrate additional competence in some aspect of STS or special competence in STS in their home discipline. The certificate is open to students in good standing in any graduate program at Georgia Tech. The 12-credit certificate program helps students to:

- Understand the social, cultural, and epistemic dynamics of science and technology
- Explore these dynamics across world societies and cultures
- Develop sensitivity to issues of gender, race, and justice across areas of knowledge, including: engineering, medicine, environment, cognition, security, innovation, design
• Employ STS approaches as scholars or practitioners (e.g. engineers, scientists, or policy makers)

Elective
Elective 1

Total Credit Hours 6

1 Select up to one other elective, subject to student interest and STS Coordinator approval. Many appropriate courses are offered across the Ivan Allen College and the Institute, for example: CS 8893.

Undergraduate Study in History and Sociology

Minors
• Minor in History (p. 564)
• Minor in Sociology (p. 587)
• Minor in Health, Medicine, and Society (p. 563)
• Minor in Science, Technology and Society (http://catalog.gatech.edu/programs/ Minor-science-technology-society)
• Minor in Sports, Society, and Technology (p. 588)
• Minor in Social Justice (p. 586)
• Minor in Women, Science, and Technology (p. 590)

Bachelor's Degree
• Bachelor of Science in History, Technology, and Society (p. 356)

Certificate Programs
Alone or in conjunction with other units of the Ivan Allen College, the School of History and Sociology offers certificates in five fields:

• African American Studies
• Asian Affairs
• European Affairs
• History
• Sociology

For more information on the certificate programs, go to http://www.hts.gatech.edu/undergraduate/certificates.

School of Literature, Media, and Communication

Established in 1990

The School of Literature, Media, and Communication (LMC) is engaged in rethinking the role of humanities education in an increasingly technological and global environment. The faculty is committed to generating humanistic perspectives on a technological world through interdisciplinary research in cultural studies and new media studies at both theoretical and applied levels. In providing humanities and communication courses for all Georgia Tech undergraduates, LMC's curriculum focuses on the scientific and technologically oriented aspects of the humanities, as well as on the incorporation of new electronic media (visual, aural, and textual) into humanities and communication education.

LMC offers a BS in Literature, Media, and Communication (LMC), a BS in Computational Media (CM) jointly administered with the College of Computing; and an MS and a PhD in Digital Media (DM). The School also participates in the interdisciplinary MS in Human-Computing Interaction (HCI), in conjunction with the Schools of Interactive Computing, Industrial Design, and Psychology. Graduates from LMC's undergraduate and graduate programs are positioned to assume important roles in the exciting new fields developing in the interface between technology and culture.

The BS in LMC (formerly the BS Science, Technology, and Culture) is the oldest undergraduate degree program in the Ivan Allen College for the Liberal Arts at Georgia Tech. This program offers a thorough education in the different modes of representation that structure our increasingly technological and global world. Program graduates will have both significant theoretical and hands-on experience with novels, films, games, comic books, web pages, and scientific documents. By learning the modes of communication common to science, technology, and the humanities, LMC graduates are prepared to become leaders in education, business, and the arts.

CM is one of Georgia Tech's fastest-growing programs, going from three students in 2004 to 230 today. The BSCM curriculum gives students a grasp of the computer as a medium: the technical, the historical-critical, and the applied. Students gain significant hands-on and theoretical knowledge of computing, as well as an understanding of visual design and the history of media. CM graduates are uniquely positioned to plan, create, and critique new digital media forms for entertainment, education, and business.

The DM program provides students with a foundational, theoretical background in digital media and the opportunity to practice what is learned in the classroom through active participation in labs and research. MS DM students follow a studio-based curriculum with three core themes (Creativity & Knowledge, Arts & Entertainment, and Civic Media) that prepare students for professional careers in digital media, including: interaction and information design, game design and production, and interactive media design. The PhD program educates research-oriented theorists/practitioners who bring the traditions of the humanities and arts to the design of digital media. Graduates of the program are prepared to work in industry, public service, and universities, shaping the emerging digital genres and expanding our understanding and mastery of the representational power of the computer.
The MS HCI degree program is a cooperative effort of the School of Interactive Computing; the School of Literature, Media and Communication; the School of Industrial Design, and the School of Psychology. The program provides students with the practical and interdisciplinary skills and theoretical understanding they will need to become leaders in the design, implementation, and evaluation of the computer interfaces of the future.

Minors
- Minor in Film and Media Studies (p. 560)
- Minor in Performance Studies (p. 578)
- Minor in Science Fiction Studies (p. 583)

Bachelor’s Degrees
- Bachelor of Science in Computational Media (p. 247)
- Bachelor of Science in Literature, Media, and Communication (p. 389)

Writing and Communication Intensive Courses
A number of majors require students to complete writing intensive and communication intensive courses. Several LMC classes may be counted
toward this requirement. Consult course offerings each semester to determine which courses may be counted toward this requirement.

**Advanced Placement**

- Students with a score of 4 or 5 on the College Board Advanced Placement Exam (taken in conjunction with high school classes) in Composition and Literature or Language and Composition receive credit for ENGL 1101.
- Students with a score of 750 or higher on the SAT II Subject Test in English receive credit for ENGL 1101.
- Students with a score of four or higher on the International Baccalaureate Exam receive credit for ENGL 1101.
- Advanced placement credit is not ordinarily given for ENGL 1102.

More Adv Placement Information (p. 101)

**Certificate Programs**

LMC sponsors a series of certificate programs in

- American Literature and Culture,
- Film Studies, and
- Literary and Cultural Studies.

Students should consult the LMC director of undergraduate studies for detailed information on requirements. The courses for these certificates are among those listed in "Courses of Instruction," and all fulfill humanities requirements.

LMC and the School of History and Sociology also cooperate in providing a certificate in African American Studies. Students should consult either school for detailed information concerning requirements. Courses for this certificate are selected from among those listed in "Courses of Instruction" and from the list offered by.

**School of Modern Languages**

Established in 1904

The School of Modern Languages collaborates as an interdisciplinary partner with other units in the Ivan Allen College and across campus to prepare future participants in the global workforce through applied studies in foreign languages that are designed to develop advanced communication skills, creative thinking, and professional competency in the language. The School is building bridges between the languages it teaches and the engineering and technology units at Georgia Tech by integrating into its programs the kind of professional and social language students expect to use after entering the workforce. At the same time, the School offers an opportunity to develop a broad understanding of culture, media and the arts, and daily life in the countries whose languages are taught.

**Minors**

- Minor in Chinese (p. 543)
- Minor in East Asian Studies (p. 550)
- Minor in French (p. 561)
- Minor in German (p. 561)
- Minor in Japanese (p. 568)
- Minor in Korean (p. 568)
- Minor in Linguistics (p. 571)
- Minor in Middle Eastern and North African Studies (http://www.catalog.gatech.edu/programs/minor-menas)
- Minor in Russian Studies (p. 583)
- Minor in Spanish (p. 587)
- Minor in Spanish (p. 587)

**Bachelor's Degrees**

- Bachelor of Science in Applied Language & Intercultural Studies (p. 192)
- Bachelor of Science in Global Economics and Modern Languages (p. 346)
- Bachelor of Science in International Affairs and Modern Language (p. 376)

**Undergraduate Study in Modern Languages**

**Minors**

- Minor in Chinese (p. 543)
- Minor in East Asian Studies (p. 550)
- Minor in French (p. 561)
- Minor in German (p. 561)
- Minor in International Business, Language, and Culture (http://www.catalog.gatech.edu/programs/minor-iblc)
- Minor in Japanese (p. 568)
- Minor in Korean (p. 568)
- Minor in Linguistics (p. 571)
- Minor in Middle Eastern and North African Studies (http://www.catalog.gatech.edu/programs/minor-menas)
- Minor in Russian Studies (p. 583)
- Minor in Spanish (p. 587)

**Bachelor's Degrees**

- Bachelor of Science in Applied Language & Intercultural Studies (p. 192)
- Bachelor of Science in Global Economics and Modern Languages (p. 346)
- Bachelor of Science in International Affairs and Modern Language (p. 376)

**College Credit for High School Study**

Modern Languages will grant 6 to 8 hours of credit in any language taught by the School for high school study in that language, provided the student has two or more years of high school credit in the language in question and has completed six credit hours at the 2000, 3000, or 4000 level with an average grade of C or higher. To have the credit entered on their records, students must submit the Modern Languages Proficiency Credit (Advanced Standing) form http://www.registrar.gatech.edu/docs/pdf/advstanding-ml.pdf to the School of Modern Languages for its approval, and pay $90 for each 3 or 4 hours of credit. No grade is attached to this credit, but the credit can fulfill the humanities requirement for graduation.

- Students submitting a score of four or five on the Advanced Placement (AP) Examination in French, German, or Spanish "Language Level III" or "Literature Level III" may receive six hours of credit for courses numbered 2001-2 in the respective language.
- For the Japanese AP exam, students who receive
  - a score of three can earn three hours of credit for JAPN 2002;
• a score of four can earn six hours of credit for JAPN 2002 and JAPN 3001;
• a score of five can earn six hours of credit for JAPN 3001 and JAPN 3002.

For the Chinese exam, students who receive
• a score of three can earn three hours of credit for CHIN 2002;
• a score of four can earn six hours of credit for CHIN 2002 and CHIN 3003;
• a score of five can earn six hours of credit for CHIN 3003 and CHIN 3004.

Students who submit language scores of five or above for courses taken at the higher level from a certified high school International Baccalaureate program may also receive credit for courses numbered 2001-2 in French, German, or Spanish, for 3001-2 in Japanese, and for 3003-4 in Chinese.

Official scores should be sent to the Registrar’s office for processing.

The School will not grant credit for high school study in a foreign language to students who have taken 1000 level courses in that language or the equivalent at Georgia Tech, or at other college-level institutions for which they have received transfer credit.

Graduate Course Option

Under the Graduate Course Option, undergraduate students with a final grade-point average of 3.5 or higher may count six credit hours of their undergraduate credits toward a master’s degree at Georgia Tech in the same field. This means that qualified IAML students could complete the Master of Science in International Affairs with thirty additional credit hours rather than 36 credit hours if they chose to further their study in International Affairs; likewise, qualified GEML students could complete the MS in Economics with thirty additional credit hours in ECON courses.

Graduate Course Option Information (http://www.catalog.gatech.edu/academics/graduate/masters-degrees/graduate-course-option)

Humanities Credits

Each course is essentially a unit in itself, but beginning students are encouraged to pursue at least the elementary two-semester sequence (1001 and 1002) in order to achieve a minimum level of proficiency and to receive humanities credit for both courses. Humanities credit is awarded for Modern Languages 1001 classes upon successful completion of the corresponding 1002 classes. Humanities credit is awarded for SPAN 1101 only upon the successful completion of SPAN 1102. In some instances, students may complete a Modern Languages course at 1001 and then be placed at the second-semester level and complete the 2001 level course. Therefore, the sequence that will warrant HUM credit for Modern Languages courses may be either the 1001-1002 or the 1001-2001 sequence. Students may not enroll in or receive advanced standing for 1000 level courses after the successful completion of any 2000, 3000 or 4000 level course; nor can credit be earned for 2000 level courses after successful completion of any 3000 or 4000 level course. Courses at the 3000 and 4000 level do not have to be taken in chronological order, provided prerequisites are fulfilled.

With minor exceptions, students can fulfill their humanities requirement for graduation by taking courses in the School of Modern Languages, including linguistics courses and courses taught as ML courses (courses in a language not yet included in the General Catalog). Students should consult the Catalog course descriptions and the section of this catalog titled "Humanities and Social Sciences Requirements (p. 93)" in order to determine which courses are classified as humanities in their respective colleges. With the approval of their major schools, students may take any course offered by the School of Modern Languages on a pass/fail basis.

Humanities Information (p. 93)

Minor Programs

The School of Modern Languages offers minors in Chinese, French, German, Japanese, Korean, and Spanish as well as in Russian Studies. This program is designed for students who wish to develop their language skills to at least an intermediate level and to provide themselves with a greater depth than possible with a certificate program.

1. Students must earn 15 credit hours of language electives in a single language beyond the 2002 course.
   a. Students may include the 2002 course for CHIN/JAPN/KOR/ RUSS (or the 2011 course in CHIN)
   b. All 15 hours of 3/4000-level courses for FREN/GRMN/SPAN
   c. Students pursuing a minor in Russian Studies should take their electives in at least two different departments/schools (Modern Languages, International Affairs, and/or Literature, Media, and Communication)

2. A maximum of 9 semester hours of transfer credit is allowed in each minor. All courses counting toward a minor must be taken on a letter-grade basis, and a grade of C or better must be received in each course.

Students wishing to pursue one or more of these minors should declare the minor by filling out the minor change form (http://www.registrar.gatech.edu/students/formlanding/changeminor.php) with the Director of Undergraduate Studies in Modern Languages

Minor Program of Study & Guidelines (p. 107)

Modern Language Minor Information (http://www.modlangs.gatech.edu/degrees/minors-certificate)

Study Abroad

The School of Modern Languages offers special summer immersion programs in China, France, Senegal, Germany, Japan, Korea, Russia, Ecuador, Mexico, Peru, and Spain. These intensive programs in Languages for Business and Technology (LBAT) consist of six to eight weeks of study abroad in which classroom lessons in business, culture, and technology are combined with field work, cultural events, excursions, and visits to area businesses — all conducted in the target language. The LBAT experience offers a unique opportunity for rapid growth in proficiency, to build a deeper appreciation for the cultures and lifestyle patterns of other peoples, and to make lifelong social and professional contacts. Students will earn nine to fifteen credit hours (depending on the language program and the options available) at the 3000 level; in some programs, lower-division language courses are offered. These credits count toward a certificate, a minor, or the joint majors with International Affairs and Economics or ALIS degree. Program costs vary according to the country visited and the length of the program.

Study Abroad Information (http://www.modlangs.gatech.edu/study-abroad)
Study Abroad and Internships

In collaboration with the Colleges of Engineering and Computing, the School of Modern Languages has initiated a Study Abroad and International Internship program that incorporates intensive applied language acquisition and cultural study. Students who participate in this program can expect to become versed in a foreign culture, fluent in a second language on professional and social levels, and gain advanced practical experience in their field. This program will prepare students for leadership positions in the global workforce in business, industry, and government.

Modern Languages works with international companies and with the Georgia Tech Center for Career Discovery and Development to establish internships and jobs abroad. Programs generally include one semester of study followed by a six month internship with a global company (some limitations as to language and field of study exist). The LBAT summer immersion course or equivalent is recommended, since students will need to take classes in the language spoken. HOPE scholarships and other financial aid apply. Additional language classes are available abroad. Students retain regular status at Georgia Tech by enrolling in FS 4000 during the semester of study and in INTN 3011, INTN 3015, INTN 3018, and in the Modern Language or Co-op International Internship (INTN 3011 or COOP 3011) during the internship. Students participating in this program are encouraged to contact their academic advisors, the International Division in the Center for Career Discovery and Development, the Office of International Education, and Modern Languages advisors. See www.modlangs.gatech.edu (http://www.modlangs.gatech.edu) for more information.

Study Abroad Information (http://www.modlangs.gatech.edu/study-abroad)

Suggested Placement

Students who have never completed any course for high school or college credit in the language should begin in a 1001 course. Students with previous study in Chinese, French, German, Japanese, Russian, and Spanish should take the placement test found at www.modlangs.gatech.edu (http://www.modlangs.gatech.edu) in order to determine their optimal beginning placement. Students interested in any of the other languages should consult with a language advisor for beginning placement. See www.modlangs.gatech.edu (http://www.modlangs.gatech.edu) for more information.

Linguistics Certificate

The Linguistics Certificate consists of 12 credit hours.

Track A: General Linguistics

Required Course
LING 2100 Intro to Linguistics 3

Additional Courses
Select nine credit hours from the following: 9
LING Special Topics 1
3813/4813
SPAN 4170 Span Applied Linguistics
PSYC/LING Human Language Process 2760
PSYC 3011 Cognitive Psychology
PSYC 3790 Intro-Cognitive Science
PSYC 4200 Adv Topics-Cognitive Psy

Track B: Language Processing

Track B: Language Processing is a joint collaboration between the School of Modern Languages and the College of Computing. This certificate is designed with computer science majors in mind who have an interest in linguistics and natural language processing.

Required Course
LING 2100 Intro to Linguistics 3

Additional Courses
Select nine credit hours from the following: 9
CS 3240 Languages and Computation
CS 3600 Intro-Artificial Intell
CS/PSYC 3790 Intro-Cognitive Science

CS 3803 Special Topics 1
or CS 4803/ LING 381

CS 4641 Machine Learning
CS 4650 Natural Language
LING/ Course LING 2760 Not Found
PSYC 2760

Total Credit Hours 12

1 Three credit hours maximum; must be approved by Linguistics advisor

For Track B students, other courses listed under the AI thread or in Linguistics may also count with prior approval from the linguistics advisor.

All courses counting towards a LING certificate must be taken on a letter grade basis and a grade of C or better must be received in each course.

Other information:

1. The School of Modern Languages may also accept one linguistics course on the 3000- or 4000-level taken at other accredited universities for either Track A or Track B. Students wanting to take such a course need to clear its acceptability with the LING advisor at Georgia Tech.
2. A 2000-level course may be accepted by the LING advisor if its contents are based upon examples from another language, given the possible difficulty involved in having enough command of the language to deal with more complex materials.
3. Students who wish to use a course taken abroad to obtain credit towards the LING certificate must submit a copy of the syllabus of the course and petition to obtain approved form the LING advisor prior to travelling abroad.
4. Some CS and ML courses may have language prerequisites.

Certificate Information (http://www.modlangs.gatech.edu/degrees/minors-certiﬁcates)

School of Public Policy

Established in 1990

The School of Public Policy is a research intensive, globally engaged school offering BS, MS, and PhD degrees to those intrigued by complex problem-solving in the public interest.

The School houses one of the world’s top programs in the field of science and technology (S&T) policy. We host a major international conference on S&T policy that brings participants from every continent. Because nearly every policy area is intertwined with S&T issues (such as the environment, communications, transportation, biotechnology and health, regional development, workforce and education) the School is at the center of a wide range of important international, national, and state policy questions. Governance of the Internet, stem education and careers, climate change policy, national and international innovation policy, economic development, risk analysis and management, renewable energy, smart growth, conflict resolution, and business-government relationships – these are a few of the topics addressed in our courses and research projects.

Our faculty members are research oriented, with more than $6 million in externally-funded research underway. Our degrees are analytically oriented, developing skills increasingly in demand in the policy world as data and powerful software become more readily available and policy challenges grow more complex. The School conducts rigorous analyses of policy problems, bringing sophisticated methodologies to bear on research questions. At the same time, we are unusual among policy schools in having an active research program at the intersection of philosophy, ethics, and policy. Our location at Georgia Tech allows for a wide array of collaborative opportunities with faculty and students in science, engineering, business, computing, and city planning.

Students at all levels routinely become involved in research, from undergraduate students helping on faculty research projects or pursuing their own questions, to the opportunities our MS and PhD students have to present or publish their work in scholarly settings. Internships in Atlanta, Washington, and other locales allow students to explore their interests in the public, nonprofit, and business sectors.

Public Policy students are taught by award-winning teachers. They experience policy development in internships, research projects, and capstone projects that use our location in Atlanta as a source of real-world policy problems and contacts. There are numerous opportunities for national and international engagement, with research conducted jointly with partners around the world, by internationally oriented faculty and students, and with opportunities for international exchange in undergraduate and graduate programs. We offer a unique and forward-looking environment.

Minors

- Minor in Public Policy (p. 582)
- Minor in Health, Medicine, and Society (p. 563)
- Minor in Law, Science, and Technology (p. 568)
- Minor in Leadership Studies (p. 569)
- Minor in Philosophy (p. 578)
- Minor in Political Science (p. 580)
- Minor in Women, Science, and Technology (p. 590)

Bachelor’s Degree

- Bachelor of Science in Public Policy (p. 477)

Master’s Degree

- Dual Degree - MCRP/Master of Science in Public Policy (p. 501)
- Master of Science in Public Policy (p. 535)

Doctoral Degrees

- Doctor of Philosophy with a Major in Public Policy (p. 497)
- Doctor of Philosophy with a Major in Public Policy (Joint Degree with Georgia State University) (p. 498)

Pre-law Certificate

The School of Public Policy is home to Georgia Tech’s Law, Science, and Technology/Pre-Law Program. This program offers a wide range of curricular opportunities as well as pre-law advising and support services for students considering law school and careers in law.

The program introduces students to selected areas of law that they are likely to study in law school. Students will begin to develop the skills that they will need to succeed in law school and in law practice. Some of the courses are taught by full-time faculty, while others are taught by attorneys from the Atlanta area, thereby exposing students to academic and practical perspectives on the practice of law.

The program welcomes students from every college and major. Students majoring in the sciences and engineering may be surprised to learn that their undergraduate background gives them a strong start toward specializations such as intellectual property law, products liability law, and construction law. The pre-law program can supplement a student’s scientific or engineering background by developing the reading and writing skills that are fundamental to a successful legal career.

Program of Study

Required Courses

Select one of the following: 3
- PUBP 3000 US Constitutional Issues
- PUBP 3016 Judicial Process
- PUBP 3610 Pre-Law Seminar
- PUBP 4609 Legal Practice

Electives

Select elective PUBP courses to fulfill 12 credit hour requirement. 9

Total Credit Hours 12

1 See Pre-Law website for list of approved electives options.

For additional curricular requirements or any other information, see the pre-law section of the website www.prelaw.gatech.edu (http://www.prelaw.gatech.edu), or contact the pre-law program director (contact information listed at website).

Intellectual Property Certificate

The School of Public Policy is home to Georgia Tech’s Intellectual Property Program. This program offers a wide range of curricular
opportunities as well as networking opportunities for students considering a career in intellectual property or in other areas where knowledge of intellectual property would be helpful.

While earning the certificate, students will have the opportunity to learn about the protections and the limits on those protections of intellectual property including patents, copyrights, trademarks and other forms of intellectual property. Taking an interdisciplinary approach, the certificate in IP will teach students about law, business strategies, and public policies affecting intellectual property. Some of the courses are taught by full-time faculty, while others are taught by attorneys from the Atlanta area, thereby exposing students to academic and practical perspectives on the practice of law.

Graduate Study in Public Policy

Master's Degree

- Dual Degree - MCRP/Master of Science in Public Policy (p. 501)
- Master of Science in Public Policy (p. 535)

Doctoral Degrees

- Doctor of Philosophy with a Major in Public Policy (p. 497)
- Doctor of Philosophy with a Major in Public Policy (Joint Degree with Georgia State University) (p. 498)

Graduate Certificate in Public Policy

The School of Public Policy offers a certificate in public policy to PhD students from other Schools around campus. The goal of the certificate program is to provide a basic but well-rounded introduction to public policy thinking to Georgia Tech graduate students. The program is designed to address the needs of scientists, engineers, management scholars and others who seek to be more aware of policy, regulatory, ethical, and societal implications of science, technology and innovation. The program will provide breadth and context for those entering employment in any sector. The courses in the program explore the processes through which policy is made.

Although this certificate is not available to policy students, the courses are open to all graduate students, creating an opportunity for students to gain value from divergent perspectives. Students who complete this certificate are eligible to participate in the School’s PRIME international graduate student exchange program.

Eligibility

Graduate students from all programs may take the courses offered as part of this certificate. The certificate will be awarded by the School of Public Policy to any non-public policy graduate student who successfully complete the program requirements and earns a graduate degree from one of Georgia Tech’s degree granting academic units. The requirements for the Graduate Certificate in Public Policy will typically satisfy the minor requirements for the Georgia Tech PhD degree.

Please contact Diana Hicks at dhicks@gatech.edu with any questions.

Certificate Requirements

Students are required to earn at least a B in every course that counts toward the certificate. The credit requirements for the Certificate in Public Policy are 12 credit hours.

¹ Three electives are required for the certificate. These electives can be chosen from the list below or from graduate-level special topics offered by the public policy faculty with the agreement of the certificate advisor. The electives are organized by broad area of interest to guide students in choosing electives that best suits their interests. Students are not required to choose all electives from the same grouping.

Public Policy Graduate Certificate (http://www.spp.gatech.edu/graduate/certificates/pubp)

Graduate Certificate in Science, Technology and Society
The Science, Technology and Society Graduate Certificate is designed for students already enrolled in a graduate degree program at Georgia Tech. This certificate is for graduate students who would like to demonstrate additional competence in some aspect of STS or special competence in STS in their home discipline. The certificate is open to students in good standing in any graduate program at Georgia Tech.

The 12-credit hour certificate program helps students to:

• Understand the social, cultural, and epistemic dynamics of science and technology
• Explore these dynamics across world societies and cultures
• Develop sensitivity to issues of gender, race, and justice across areas of knowledge, including: engineering, medicine, environment, cognition, security, innovation, design
• Employ STS approaches as scholars or practitioners (e.g. engineers, scientists, or policy makers)

Undergraduate Study in Public Policy

Minors
• Minor in Public Policy (p. 582)
• Minor in Health, Medicine, and Society (p. 563)
• Minor in Law, Science, and Technology/Pre-Law (p. 568)
• Minor in Leadership Studies (p. 569)
• Minor in Philosophy (p. 580)
• Minor in Political Science (p. 580)
• Minor in Women, Science, and Technology (p. 590)

Bachelor’s Degree
• Bachelor of Science in Public Policy (p. 477)

The School of Public Policy offers undergraduate certificates and minors in five areas:

• Public Policy: featuring courses on government and business decision processes, especially those involving science, technology, environment, or regional development.
• Law, Science, and Technology/Pre-Law: preparing students to make informed decisions about law school and careers in law through selected courses in public policy, business administration, international affairs, history, and other fields.
• Leadership studies: providing students with an in-depth knowledge of leadership theory, skills, experience, and application through a rigorous program of study that is multi-disciplinary in nature
• Philosophy: providing broad perspectives and critical thinking about science and technology, emphasizing values and ethics.
• Political Science: focusing on how government works, from the local to the national level.
• Women, Science, and Technology: Links science and technology issues with those issues associated with the study of women and gender in society.

The certificates enrich any Georgia Tech degree and particularly serve students who are planning graduate studies in law, medicine, business, or the social sciences. All the certificates require a minimum of twelve semester hours of concentration.

Minors are for students wishing a concentration outside their major that provides greater depth than the certificate programs. Each minor requires a minimum of fifteen hours of credit (twelve semester hours at the 3000
level or higher with a C or better in each. Completion of a minor will be recognized on the student's final university transcript.

Students interested in planning a certificate or minor program in one of the five areas should contact the School of Public Policy for further information. A faculty advisor assists each student in planning a program of study to meet his or her needs and interests.

Minor Program of Study & Guidelines (p. 107)

The Sam Nunn School of International Affairs

Established in 1990

The Sam Nunn School of International Affairs offers educational programs that provide an enhanced understanding of the factors that shape the world in which we live and work in the twenty-first century. The programs of study equip students with the quantitative and qualitative skills needed to engage in strategic planning and analysis in an international context. A unique interdisciplinary curriculum provides students with an understanding of the increasing importance of technology in a borderless world. Many graduates assume professional positions within business, government, and international organizations. Other graduates pursue postgraduate or professional education in a range of disciplines that includes law, business, international affairs, public administration, and economics.

The Sam Nunn School of International Affairs is the only one of its kind at a leading technological institute. The educational programs administered by the Sam Nunn School at Georgia Tech are designed to equip students with the skills, values, and experience to build bridges between the world of science and technology and the world of international relations.

Minors

• Minor in International Affairs (p. 565)
• Minor in Global Development (p. 562)

Bachelor's Degrees

Scheller College of Business

Established in 1913 as the School of Commerce, the school now known as the Scheller College of Business has a distinguished history as a part of a world-renowned technical research university. Scheller College of Business offers a full range of undergraduate and graduate programs. The undergraduate program in business administration leads to the Bachelor of Science in Business Administration degree. The College also offers several Master’s degree programs:

- the Master of Business Administration (MBA), which can be completed in two years as a full-time program or in two to three years as a part-time evening program;
- the Master of Business Administration in Management of Technology, which is offered in a weekend format and can be completed in less than two years;
- the Master of Business Administration in Global Business, which is offered in a weekend format and can be completed in less than two years;
- the Master of Science in Analytics;
- the Master of Science in Quantitative and Computational Finance; and
- an undesignated Master of Science degree.

The College also offers a doctoral program that leads to a PhD in Management.

Students admitted to the graduate programs are admitted only on a degree-seeking basis. The College is accredited by the Association to Advance Collegiate Schools of Business (AACSB) International.

Scheller College is a recognized leader in developing business leaders to succeed in today’s high-tech business world. Programs combine excellence in the functional areas of business education with the multidisciplinary focus on management of technology, international business, and entrepreneurial and innovative processes for a global economy. Students learn to create value that will make a social and economic difference in the lives of individuals, groups, communities, and societies. With a curriculum that emphasizes collaborative learning based on real-world experience, the College offers the resources of centers focusing on business analytics, sustainability, leadership, and entrepreneurship to foster research, teaching excellence, and discussion across the major functional areas of business.

The College of Business and all of its degrees are accredited by the Association to Advance Collegiate Schools of Business (AACSB) International.

Transfer Credit Policy for Undergraduate Students

Students may transfer business and management courses taken at another accredited institution if the courses are passed with a "C" or better and are deemed by the College of Business to be equivalent to a Georgia Tech course. Such courses will be transferred for the same number of credits as the corresponding College of Business courses, provided they are equal to three or more semester hours of credit. Transfer credits will be accepted from newly-formed institutions of the University System of Georgia prior to accreditation.

Senior- or junior-level courses with three or more semester hours of credit that have no corresponding College of Business course may transfer as electives in management if they are approved by the College of Business.

Because of the difference in the intellectual level of various courses, freshman- or sophomore-level courses taken at other institutions may only be transferred for equivalent freshman- or sophomore-level courses offered at Georgia Tech. Before taking courses at other institutions, students should refer to the Georgia Tech transfer credit policies at www.registrar.gatech.edu/students/transfercredit.php (http://www.registrar.gatech.edu/students/transfercredit.php). Business students considering taking courses at other institutions should keep in mind Georgia Tech's 36-hour Residency Rule, which states that "no student may be considered a candidate for a degree unless the final 36 credit hours required for the degree are earned in residence at Georgia Tech and approved by the major school."

In addition to its degree programs, the College of Business offers students in good standing an opportunity to broaden their areas of expertise or acquire skills or information beyond their major degree requirements. Students who satisfactorily complete this special program will receive a certificate of recognition. Certificates are only available to degree-seeking Georgia Tech undergraduates. Certificates are awarded upon graduation from a Georgia Tech undergraduate program. For certificate requirements, please see the College of Business Website: www.scheller.gatech.edu (http://www.scheller.gatech.edu)

The following certificate programs are available for undergraduate students:

• Accounting
• Business Analytics
• Business Law and Ethics
• Entrepreneurship
• Finance
• Information Technology Management
• International Business
• Leadership and Organizational Change
• Marketing
• Operations and Supply Chain Management
• Strategy and Innovation

Distance Learning and International Sites

Academic content delivered through distance learning is in accordance with the course descriptions as approved by the Institute Curriculum Committee. All courses require approval by the Institute Curriculum Committee and the Academic Senate. All offerings for academic credit delivered through the Division of Professional Education have been approved in this manner.

Academic content delivered at our international sites, such as GT-Lorraine and GT-Shenzhen, is in accordance with the course descriptions as approved by the Institute Curriculum Committee. All courses require approval by the Institute Curriculum Committee and the Academic Senate regardless of where they are delivered. All Study Abroad Programs are approved on a yearly basis by the Institute Undergraduate Curriculum Committee as recommended by the Study Abroad Subcommittee.

Graduate Academics

The faculty of Georgia Tech grants advanced degrees in engineering, science, business, computing, architecture, city and regional planning, public policy, and other technology-related areas. The goals for graduate
studies and research are to establish an educational environment that will strengthen students’ personal and professional development, to encourage students and faculty to pursue the discovery and generation of new knowledge through research, to investigate ways of applying such knowledge for the benefit of society and humanity, and to foster the development of new tools, objects, and ideas.

Students whose interests and aptitudes lead them beyond the limits of the traditional undergraduate curriculum may broaden their knowledge of a given field and pursue independent inquiry through graduate study. A graduate education is of particular benefit to students interested in careers in research, management, development, design, or consulting; to those who aspire to formulate and administer policy; and to those who desire careers in higher education.

• Graduate Policies and Regulations (p. 73)
• Graduate Student Work Loads (p. 74)
• Doctoral Degree Programs (p. 180)
• Requirements for the Doctoral Degree (p. 75)
• Master’s Degree Programs (p. 180)
• Requirements for the Master’s Degree (p. 77)

Graduate Policies and Regulations

The Institute Graduate Curriculum Committee, with the approval of the Academic Faculty Senate, is responsible for establishing academic policy for the graduate programs; however, final authority rests with the Senate. This committee reserves the right to change requirements for degrees as may be appropriate. Students enrolled at the time such changes appear in the Catalog have the privilege of following either the requirements stated in the Catalog effective the semester in which they enrolled or the requirements in the Catalog that records the change.

This catalog records the institute-wide policies and regulations that govern the graduate programs. Schools may make additional rules concerning their programs and the pursuit of their degrees, but such rules may not contradict Institute policies and regulations.

Transfer Credit

A student may not apply for transfer credit until after matriculation at Georgia Tech. The courses to be transferred would typically be those appearing on the approved program of study form for the masters degree. A doctoral student normally does not request transfer credit. The rules relative to and the process for obtaining transfer of credit for graduate-level courses are as follows:

1. Student’s in a master’s degree program requiring fewer than 33 semester credit hours may receive up to six hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree. This ensures completion of at least one-third of the courses for a degree in residence at Georgia Tech (applies to programs that are face-to-face and online format). The student must supply a current transcript for this evaluation.

2. To obtain transfer of credit, the student must complete the following procedure:
   a. The student will confer with the graduate advisor to ascertain whether the courses to be transferred are a logical part of the student’s graduate program;
   b. If the courses are appropriate, the student will deliver to the school that teaches such courses a copy of the current transcript, necessary descriptive materials including catalog descriptions, and textbooks used for evaluation. The faculty of the appropriate school will determine the equivalent Georgia Tech course and the number of credit hours accepted. The faculty member who prepares the transfer credit form should have the school chair cosign it. The school should then send the form directly to the registrar with a copy of the student’s Approved Program of Study attached;
   c. If the student wishes to transfer more than the number of hours permitted in item one listed above, a petition must be submitted to the Institute Graduate Curriculum Committee that includes statements of possible justification for the granting of such a petition, transfer credit forms, and the recommendation of the student’s school chair.

3. A joint enrollment student may receive graduate credit for up to one-third of the hours required for the degree for graduate courses taken at Emory University or Georgia State University provided that the following is true:
   a. Georgia Tech does not offer such courses;
   b. The student’s advisor and school chair approve the courses in advance and in writing;
   c. The student passes the courses with a C or better. Advance approval is satisfied when the courses appear on the student’s proposed Program of Study.

4. A student may not receive transfer credit from universities outside the United States and Canada unless the courses were taken at a foreign institution or university that is accredited by a Canadian or U.S. regional accrediting board or has a signed partner agreement with Georgia Tech. In any other case, an international student can obtain credit for courses previously taken but not applied toward another degree by filling out an Examination for Advanced Standing Authorization Request Form, paying the appropriate fee at the Bursar’s Office, and passing the examination for advanced standing. The school or college that normally teaches the equivalent course will administer any necessary examinations.

Double Counting Credit between Master’s Degrees

Students who are pursuing two Master’s degrees at Georgia Tech may double count a maximum of 6 hours of credit for both degrees. This ensures that each degree involves a minimum of 24 hours of coursework completed at Tech that is not double counted.

The six-hour limit may be exceeded when specifically allowed as a component of an approved degree program.
Staff Members
No staff member beyond the rank of instructor in a school may work for a master’s degree in that school. No new staff member with the rank of assistant professor in a school may work for a doctoral degree in that school.

General
A student who wishes to withdraw her/his name from the rolls of degree candidates must formally withdraw the Online Application for Graduation before the end of the seventh week of the semester (or fourth week of the summer term). This privilege will be extended to a degree candidate only once.

Graduate Student Work Loads
Full-time students must be enrolled for at least 12 credit hours on a letter grade or pass/fail basis. As an exception, the advisor and school chair may allow up to three hours out of the minimum 12 to be taken on an audit basis in fall and spring semesters; in summer semesters, the advisor and school chair may allow up to six hours out of the 12 minimum to be taken on an audit basis. (This exception is not applicable for students on immigrant visas or certain fellowships requiring them to enroll in at least 12 credit hours on a letter grade or Pass/Fail basis each academic term.) Hours in excess of the required 12 may be taken on any basis. Full-time students working exclusively on thesis research should be registered for 18 or more hours of 7000 or 9000 level courses (master’s or doctoral thesis courses) in fall and spring semesters, and for up to 16 hours during summer semesters.

The maximum load for graduate students in good standing is 21 hours in fall/spring and 16 hours in summer. The minimum load is three hours, except for the semester of graduation. During the semester of graduation, a student is permitted to register for only one hour of master’s or doctoral thesis courses (7000 or 9000). This exception may be used only once for each degree.

Students with fellowships, graduate research or teaching assistantships, traineeships, tuition waivers, or student visas, and those assigned to the Institute by the armed forces for the purpose of pursuing a degree are required to enroll full time. Part-time doctoral students engaged in research for their Ph.D.s should meet the minimum enrollment requirement and register for the number of 9000 level hours consistent with the time they and their faculty advisors spend on the dissertation research.

Expectations of Advisors and Advisees
The relationship between advisor and advisee is central to the experience of students in research-based graduate programs. Both partners in this relationship must contribute for it to succeed. Successful advisor-advisee relationships enhance the careers of both partners. The relationship can take on three forms: advisor-advisee; supervisor-employee; and mentor-mentee. In the best cases, the three forms work together. This document articulates key contributions from each partner to an advisor-advisee relationship that leads to mutual benefit.

The Advisor
Advising graduate students in research-based programs is part of the job expectation for almost all Georgia Tech faculty members. Graduate students build the faculty member’s research record and reputation by contributing to the advisor’s research program. This situation carries an inherent tension. Although the faculty member’s success depends at least in part on the student’s success, the faculty member may also be responsible to outside sponsors, whose goals may not directly match those of the student. As an educator, the advisor must always protect the student’s interests as well as the sponsor’s and his or her own in the research relationship.

The Advisee
The student’s motivation is to earn a degree, which requires the acquisition of scholarly knowledge and research competence. Participation in the research process is an essential requirement for all Georgia Tech doctoral students and many master’s degree students. In this part of their education, the student’s duty is to put a best faith effort into his or her assigned contribution to the research process. At the same time, Graduate Research Assistants (GRAs) are also employees who help the advisor and research group meet the requirements of a contract or grant; while, Graduate Teaching Assistants (GTAs) and Graders are also employees of the school or program who help the school or program meet their educational requirements. As such they are employees with a set of job responsibilities that may not align with their research objectives or those of their advisors. As with the faculty advisor, this situation sets up an inherent tension between the student’s educational goals and his or her employment responsibilities.

Mutual Expectations
Students Expect from their Advisor:

Respect
- Respect as a person, student, and professional employee
- Recognition and respect for differences in culture, ethnicity, gender, and other dimensions of diversity
- Commitment of time, effort, and financial support; advising only as many students as resources permit
- Ability to communicate and express concerns without the fear of retribution
- Understanding of the student’s commitments to course work and GRA/GTA/Grader responsibilities

Open and clear communications
- Mutually agreed upon expectations for frequency and format of communication
- Clear communication about project timelines, availability and nature of funding, level of effort and research expectations
- Timely review and feedback on the student’s research and academic progress
- Notification of and appropriate resolution of issues that arise within the program, be they academic, research, financial or interpersonal in nature

Guidance on research and degree completion
- Guidance on planning and managing research projects from conception to publication
- Reasonable, mutually agreed upon expectations of the time frame necessary to produce results and complete the dissertation/thesis
- Proper training and resources to successfully complete research projects
• Guidance on professional and ethical standards

Guidance on career

• Advice on advancing professional goals in the direction most desired by the individual student
• Opportunities to participate in career development activities
• Help building professional networks

Advisors Expect from Advisee:

Respect

• Respect both as professor and person; recognizing the value of their time and their responsibilities within and outside the Institute
• Understanding that mentoring is tailored for each individual student and adjusted for progress in the degree program

Open and clear communications

• Mutually agreed upon expectations for frequency and format of communications
• Regular progress reports including what the student has and has not done, including set-backs
• Reasonable, mutually agreed upon expectations of the timeframe necessary to give feedback and review results
• Discussion of difficulties with advisor first, before turning to other means for conflict resolution
• Notification as soon as possible if planning to leave program or advisor sooner than expected

Commitment & Productivity

• Understanding of the expectations of the degree program, advisor and research team, and GRA/GTA/Grader responsibilities
• Learning and progress through the program, with progressively more independence as the student advances
• Commitment and steady effort to make progress towards mutually agreed upon results and deliverables; adhering to timelines and deadlines

Responsibility

• Safe, ethical, and efficient use of resources
• Abiding by professional and safety standards
• Taking feedback seriously and revising in response
• Maintaining good records and documentation that would allow replication of results
• When graduating or leaving the team, leaving behind the organized research materials

Teamwork

• Working well with others; supporting and mentoring others in the team
• Carrying a fair share of the responsibility
• Understanding the common intellectual property principles involved in teamwork
• Meeting deadlines
• Thoughtfully reviewing the work of others, including the advisor

Requirements for the Doctoral Degree

The Doctoral Degree (p. 75)
Admission to Candidacy (p. 75)
Comprehensive Exams (p. 75)
Thesis Topic (p. 75)
Time Limit for Degree Completion (p. 76)
Dissertation (p. 76)
Doctoral Examination (p. 76)
Minor Field of Study (p. 76)
Other Requirements (p. 76)
Enrollment Requirements (p. 76)
Additional Graduation Requirements (p. 76)
Language Requirements (p. 77)
Responsible Conduct for Research (RCR) (p. 77)

The Doctoral Degree

The degree of Doctor of Philosophy recognizes demonstrated proficiency and high achievement in research. After adequate preparation, the candidate must successfully complete both comprehensive examinations in his or her academic field and a searching and authoritative investigation of a special area in the chosen field, culminating in a written dissertation.

Admission to Candidacy

Doctoral students customarily apply for degree candidacy after completing at least three semesters of coursework beyond the bachelor’s degree.

To qualify for candidacy, students must do the following:
1. Complete the requirements for training in Responsible Conduct for Research (RCR) (http://rcr.gatech.edu).
2. Complete all course requirements (except the minor).
3. Achieve a satisfactory scholastic record.
4. Pass the comprehensive examination.
5. Submit a formal statement naming the dissertation reading committee and delineating the research topic for approval to the school chair and Graduate Students (on behalf of the Vice Provost for Graduate Education and Faculty Affairs).

Upon satisfactory completion of these requirements, the Office of Graduate Studies will formally admit the applicant to candidacy for the degree on behalf of the Vice Provost for Graduate Education and Faculty Development.

Comprehensive Exams

The comprehensive examination assesses both general knowledge of the degree area and specialized knowledge of the student’s chosen research field. Each program is responsible for scheduling comprehensive examinations at least once a year and for providing students information regarding exam formats, rules, and scope. Exam retakes are to occur no later than the end of the student’s second full term (Fall, Spring, or Summer) in residence following the failed attempt.

Thesis Topic

Before a student becomes a candidate, he or she should present a formal statement for the approval of the school chair or college dean and Graduate Studies that outlines the student’s dissertation advisor, the
topic selected for investigation, the objectives, and the steps by which the student proposes to achieve them. (Note that individual programs may have additional requirements for approving the dissertation prospectus or proposal before approval by the chair/dean and Graduate Studies.) The dissertation topic must give promise of being either a genuine addition to the fundamental knowledge of the field or a new and better interpretation of facts already known.

**Time Limit for Degree Completion**
Students must complete all degree requirements within seven years from the end of the term in which they pass the comprehensive examination.

**Dissertation**
The dissertation must demonstrate that the candidate possesses powers of original thought, talent for research, and ability to organize and present findings. Dissertations must be submitted electronically via the Electronic Thesis and Dissertation website.

The format of the dissertation (in general appearance) must meet the criteria published in the Manual for Graduate Theses. For other format or style questions, students should refer to style manuals appropriate to their disciplines.

**Doctoral Examination**
If the dissertation advisory committee finds the dissertation satisfactory, it schedules the candidate for an oral examination on the subject matter of the dissertation and the field in which it lies. An examining committee approved by Graduate Studies on behalf of the Vice Provost for Graduate Education and Faculty Development will conduct the examination. The candidate's academic unit should forward the announcement of the oral examination, including the names of the examining committee members, to Graduate Studies at least 10 working days prior to the exam.

If a candidate should fail to pass the final oral examination, the examining committee may recommend permission for one additional examination. In the case of failure, the Registrar does not receive a report of the examination results.

**Minor Field of Study**
In addition to an adequate knowledge of the major field of intended research, the student must demonstrate mastery of another smaller body of knowledge—the minor field—preferably outside the student's school. The purpose of the minor is to encourage a wider interest on the part of the student and to provide a broader basis for the evaluation of the student's capabilities.

The minor will normally consist of at least nine semester hours of work in related courses, selected by the student in consultation with a guidance committee and approved by the Graduate Studies (on behalf of the Vice Provost for Graduate Education and Faculty Development). These courses should be at the 6000 level or above, but the use of certain 4000 level courses may also be approved. The student must receive a letter grade within the minor comprising an overall GPA of 3.0 (B) or higher. (Courses that are taken as pass/fail are not eligible to count toward the doctoral minor). Courses taken at other institutions may be included in the minor. Once the student has satisfactorily completed the minor, the school chair will send a confirmation, accompanied by course grades, to Graduate Studies for final approval and recording.

Although the student need not complete the minor as a prerequisite to become a candidate, the minor must be completed and approved in order to be cleared for graduation.

**Other Requirements**

**Enrollment Requirements**
The matriculation requirements for doctoral students are similar to those outlined for the master's degree with the addition of the residency requirement: doctoral students should spend at least two full-time semesters in residence at Georgia Tech and should complete research for their dissertation while in residence. Under special circumstances, candidates who have met the residency requirement may receive permission to pursue their research in absentia, provided the chair of the appropriate school approves and a faculty member directs the project. Although doctoral students working full-time on thesis research should normally be registered for a full course load of 9000-level dissertation hours each semester, this requirement is at the discretion of the advisor and the department. No minimum number of 9000-level dissertation hours is required for the doctoral degree. Doctoral students must be registered in the semester of graduation.

While no fixed-course requirements apply for the doctoral degree, the student's thesis advisory committee may recommend graduate coursework in both a major and a minor field of study. Doctoral students must be registered in the semester of graduation.

If a student has completed all degree requirements and will no longer require any of the Institute's facilities or faculty time, the student may request an enrollment waiver (http://www.grad.gatech.edu/theses-dissertations-forms).

**Additional Graduation Requirements**
In addition to the requirements listed elsewhere, the candidate is required to complete the following:

1. Complete an Online Application for Graduation (http://www.registrar.gatech.edu/students/deginfo/oag.php) to petition for the degree to the Registrar's Office (http://www.registrar.gatech.edu/students/deginfo/degcandfaq.php) during the term preceding the anticipated final term of work.
2. Have an overall GPA of at least 3.0.
3. Register for a minimum of one hour of dissertation in the term of graduation. This reduction from the normal minimum course load of three hours may be used only once. If all requirements for graduation, including submission of the final approved dissertation, have been completed prior to the last day of registration and the student was registered for the preceding term, the student may apply for a waiver of the enrollment (http://www.grad.gatech.edu/theses-dissertations-forms) requirement.
5. Complete any language requirements.

If both the dissertation and the examination are satisfactory, and the candidate has completed the requirements of residence, minor field, and any additional school requirements, Graduate Studies will certify the candidate as qualified to receive the degree of Doctor of Philosophy.
Language Requirements
The student’s school may require a reading knowledge of one or more foreign languages.

Responsible Conduct for Research (RCR)
All Georgia Tech doctoral students who have an admit date of fall 2011 or later are required to complete Responsible Conduct of Research (RCR) training, which includes an online training component and in-person training. This requirement also applies to students who have transitioned to a doctoral program after enrolling in a master’s program at Georgia Tech in Fall 2011 or later. Beginning in Fall 2014, all master’s students completing a thesis are also required to do RCR training. See www.rcr.gatech.edu (http://www.rcr.gatech.edu) for more information.

Requirements for the Master’s Degree

Graduate Course Option (p. 77)
Enrollment Requirements (p. 77)
Program of Study (p. 77)
Master’s Thesis (p. 77)
Requirements for the Award of the Master’s Degree (p. 78)

Graduate Course Option
Students completing both a bachelor’s and master’s in the same discipline at Georgia Tech may use up to six credit hours of graduate-level coursework in the major discipline for both degrees. Recognizing that some master’s degree programs do not have a unique undergraduate counterpart program and that some master’s programs are offered by several schools, the term “discipline” in the prior sentence will be broadly interpreted in such cases. To qualify for this option, students must complete the undergraduate degree with a cumulative GPA of 3.5 or higher and complete the master’s degree within a two-year period from the award date of the bachelor’s degree.

Enrollment Requirements
While students may enroll in a master’s degree program upon admission with either full or conditional standing, all conditions must be met and the student’s status changed to “full” in order to graduate with a master’s degree. Students enrolled in a master’s degree program must register for at least one semester per year in order for the original requirements for their degree to remain unchanged. In other cases, the school may reevaluate the student’s credentials and impose additional degree requirements.

Students who have completed all coursework and are planning to submit a thesis in partial fulfillment of the requirements for a master’s degree should register for research hours (MAJR 7000) consistent with a realistic appraisal of the amount of remaining thesis work and required faculty involvement. Students are not eligible to receive thesis guidance during any term for which they are not registered.

Students must normally enroll for a minimum of three hours each semester. Thesis students may enroll for one hour of thesis only in the semester of graduation; this option may be used only once. The Institute has no residency requirements for the master’s degree.

If a student has completed all degree requirements and will no longer require any of the Institute’s facilities or faculty time, the student may request an enrollment waiver (http://grad.gatech.edu/theses-dissertations-forms).

Program of Study
The student, in consultation with the faculty advisor, should prepare a program of study for the master’s degree as a guide for planning an academic schedule. In some cases, the student’s school may require that the proposed program be submitted to the chair of that school for approval.

The program of study must be completed satisfactorily within six consecutive calendar years and must include, at a minimum, 30 approved credit hours distributed as follows:

<table>
<thead>
<tr>
<th>Type of Program</th>
<th>Required Minimum Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>With thesis</td>
<td>30 credit hours</td>
</tr>
<tr>
<td>Without thesis</td>
<td>30 credit hours</td>
</tr>
</tbody>
</table>

With thesis: (must have approval of school chair)
1. Minimum course credit hours in major field (a basic field of knowledge, not a department of specialization): 12
2. Minimum course credit hours at 6000 to 9000 level: 12
3. Minimum course credit hours for degree: 18
4. Minimum Thesis hours (7000): 6
5. Total credit hours: 30

Without thesis: (must have approval of school chair)
1. Minimum course credit hours in major field (a basic field of knowledge, not a department of specialization): 18
2. Minimum course credit hours at 6000 to 9000 level: 21
3. Total credit hours: 30

Some schools require more than the minimum credit hours. Refer to specific academic program descriptions for more detailed information.

Other than thesis hours, the student may use only three hours under the pass/fail designation (p. 160) in the approved program of study.

Students who are pursuing two Master’s degrees at Georgia Tech may double count a maximum of 6 hours of credit for both degrees. This ensures that each degree involves a minimum of 24 hours of coursework completed at Tech that is not double counted. Students should consult with their advisors on sharing coursework among Master’s degrees.

Students may be eligible to utilize the Graduate Course Option or participate in an approved BS/MS program. Students should refer to the Catalog for requirements for the Graduate Course Option and for BS/MS program requirements (http://catalog.gatech.edu/academics/special-academic-programs/bs-ms-programs).

Master’s Thesis
To complete the requirements for the master’s degree, the student must submit a master’s thesis unless the school chair determines that additional coursework is of more importance in meeting approved objectives.

Students who meet the requirements for the master’s degree by completing a combination of coursework and thesis must register for a minimum of six hours of thesis credit.

A candidate whose program includes a thesis must present a treatise in which the results of an investigation directed by a member of the faculty of the Institute are set forth in a clear, articulate form. The purpose of the thesis is to further educational development by requiring the
student to plan, conduct, and report an organized and systematic study of importance.

The Manual for Graduate Theses specifies the formatting requirements for the thesis. Information regarding electronic thesis/dissertation submission can also be found on the Graduate Studies (http://grad.gatech.edu/theses-dissertations) website.

**Requirements for the Award of the Master's Degree**

For a student to receive a master's degree from Georgia Tech, the following requirements should be met:

1. During the semester prior to the anticipated final semester of work, students should petition to graduate. This can be done by completing the Online Application for Graduation (http://www.registrar.gatech.edu/students/deginfo/oag.php).

2. The Approved Program of Study (which is listed on the petition for degree application) should show that course requirements for the master's degree will be satisfied before or during the final semester. The Approved Program of Study (http://catalog.gatech.edu/academics/graduate/masters-degree-info/#program-of-study) should be completed within a period of no more than six consecutive calendar years.

3. Students should have an overall GPA of at least 2.70 and satisfy all school academic requirements. (Some schools may require a higher overall GPA, and some programs may have different GPA requirements for certain segments of the program requirements, such as for core classes. If so, this must be reported to the Institute Graduate Curriculum Committee through the initial proposal or as a curriculum change and will be considered an informational item on the agenda. These requirements will be enforced at graduation.)

4. Students should earn a grade of at least D on coursework for it to be considered completed. (Some individual programs may require a grade of C or higher. These requirements must be reported to the Institute Graduate Curriculum Committee either as part of the initial proposal or as part of a curriculum change and will be considered an informational item on the agenda. These requirements will be enforced at graduation.)

5. Students may take three hours on a pass/fail basis, per Institute policy. (However, individual programs may not allow pass/fail grades at all or may restrict them to only specific portions of the degree such as electives. These restrictions must be reported to the Institute Graduate Curriculum Committee as part of the initial proposal or as part of a curriculum change and will be considered an informational item on the agenda. These requirements will be enforced at graduation.)

6. Students should be registered for a minimum of three credit hours at all times. However, thesis students are permitted to enroll for one hour of MAJR 7000 in the semester of graduation. This reduction may be used only once. Students who have met all requirements for graduation before the last day of registration for the graduation term and who were registered the preceding semester may be eligible for a waiver of enrollment.

7. Coursework at the 1000 or 2000 level may not be used for a master's degree. In most cases, coursework at the 3000 level may not be used for a master's degree. But individual programs may allow a reasonable number of 3000-level courses in special circumstances, such as in a program that requires language proficiency. Individual programs may include 4000-level coursework, but this must be reported to the Institute Graduate Curriculum Committee as either part of the initial proposal or clearly stated when revising a program. These rules will be enforced at graduation.

8. Students should have completed satisfactorily any language requirement imposed by the major school.

9. Thesis students must complete the requirements for training in Responsible Conduct for Research (RCR) (http://rcr.gatech.edu).

10. Students should have passed any qualifying or comprehensive examinations required by their school.

11. Students should have completed any required coursework outlined at the time of matriculation.

12. Students should ensure that all requirements for the degree are completed and certified by the Office of the Registrar no later than 48 hours after final grades for the term are due. If a candidate for a degree is not certified by the appropriate deadline, the degree will not be awarded. It is the responsibility of the student to reactivate the degree petition for the following semester.

13. The diploma of a candidate for a degree shall bear the date of the latest commencement ceremony for the term in which the degree is awarded with the exception of summer graduation diplomas, which will bear the date of the official end of term.

**Additional Requirements for Master's Thesis Students**

1. Students should submit the thesis topic and committee form to Graduate Studies for approval and make satisfactory progress on the thesis.

2. Students should complete the requirements for training in Responsible Conduct for Research (RCR) (http://rcr.gatech.edu).

3. Students should submit the thesis electronically to the Electronic Thesis and Dissertation (http://thesis.gatech.edu) website and receive final acceptance from Graduate Studies.

**Language Requirement**

The student's school may require a reading knowledge of one appropriate language other than English.

**Professional Education**

Georgia Tech Professional Education is an academic division of Georgia Tech providing innovative, comprehensive education and training. Professional Education gives participants a world-class learning experience promoting professional and personal success. It comprises the following:

- Degree Programs
- Short Programs
- English as a Second Language
- Community Outreach
- Learning and Meeting Facilities

This year, Professional Education and its programs reached more than 13,000 individuals and 3,100 companies in various locations.

**Atlanta:** The Georgia Tech Global Learning Center is designed, staffed, and equipped with the technology and service to foster the relationship between people and ideas and learning and working. Many courses and programs are hosted at the Center in addition to its being a corporate and professional meeting venue.

**Georgia Tech-Savannah:** The Savannah campus is currently transitioning from a campus offering four undergraduate and graduate degrees to a destination for professional education, including professional master's
degrees and specialized training programs targeting industry and the military.

**Around the World:** Courses are held in multiple cities throughout the Southeast and around the globe including nearly thirty different course locations from Alabama to Singapore.

**Any Location:** Various courses and programs are offered online, via videoconference, or customized and delivered directly to a company.

Learn more about Georgia Tech Professional Education at [www.gtpe.gatech.edu](http://www.gtpe.gatech.edu).

**Community Outreach**

As a flagship institution within the University System of Georgia, the Georgia Institute of Technology is acclaimed, not only in its home state and nation, but, increasingly, around the globe. An important aspect of Georgia Tech's culture of service includes the work of the Center for Education Integrating Science, Mathematics, and Computing (CEISMC).

From educational partnerships and research to fun programs for students, CEISMC advocates and participates in efforts for systemic changes that lead to improved appreciation and performance in STEM for all students at the level of K-12, especially those under represented in science, technology, engineering and mathematics. With a presence at Georgia Tech-Savannah, CEISMC brings its expertise to the people and schools of southeast Georgia.

More information about CEISMC's programs:

- K-12 ([https://pe.gatech.edu/savannah-campusoutreach](https://pe.gatech.edu/savannah-campusoutreach))
- NASA ePDN ([https://pe.gatech.edu](https://pe.gatech.edu))
- Distance Calculus ([https://pe.gatech.edu/subjects/k-12-programs/high-school-math](https://pe.gatech.edu/subjects/k-12-programs/high-school-math))
- Georgia's Race to the Top ([https://ceismc.gatech.edu/rt3](https://ceismc.gatech.edu/rt3))

**English as a Second Language**

The Georgia Tech Language Institute has delivered high-quality, practical English language training for more than fifty years. It serves a spectrum of learners: students preparing for academic work in the United States; professionals looking for career improvement through better language skills; and people who want to increase their English proficiency for social reasons.

Through full- and part-time programs, in daytime and evening classes, our excellent instructors and support staff aim to make learning a productive and enjoyable experience. Students also have access to numerous extracurricular activities, including a conversation partner program, day trips, and volunteer work.

Course options include:

- Intensive English Program (IEP)
- Summer Short Courses
- Summer Graduate Prep Workshops
- Summer Pre-MBA Program

Learn more at [www.esl.gatech.edu](http://www.esl.gatech.edu).

**Professional Education Degree Programs**

Rise to the next level of competitive expertise with graduate programs available through distance learning. A valuable service of Georgia Tech Professional Education for more than thirty-four years, these programs are open to the public and also to corporate sponsors.

In annual rankings from *U.S. News & World Report*, Georgia Tech graduate programs consistently rank in the top ten. The proven excellence of Georgia Tech graduate degrees and the convenience of online delivery make them a compelling choice for working professionals.

The following Master of Science degrees are available online:

- **Engineering** - Aerospace Engineering, Electrical and Computer Engineering, Industrial Engineering, Mechanical Engineering, Medical Physics (with Emory University), and Operations Research
- **Computing** – Computer Science, Computational Science and Engineering, and Information Security

Click here ([http://www.dlpe.gatech.edu/dl/degrees](http://www.dlpe.gatech.edu/dl/degrees)) for more information about an online Master of Science degree.

- **Professional Master’s in Applied Systems Engineering**

Click here ([http://www.pmase.gatech.edu](http://www.pmase.gatech.edu)) for more information about the Professional Master’s in Applied Systems Engineering (PMASE). This hybrid-format degree offers the convenience that a practicing engineer will appreciate and the skills and knowledge that an employer values.

**Professional Education Short Programs**

Georgia Tech Professional Education provides education and training for working professionals and industry partners. These short courses and programs vary in length from one to eight days and help professionals keep pace with the latest development in their fields – defense technology, economic development, engineering, executive education, information technology, OSHA, power systems, and supply chain and logistics.

Taught by Georgia Tech faculty and industry-experienced instructors, our short programs are available in flexible formats whether that is in the classroom, online, or a combination of both.

Professional Education offers thirty-eight programs through which participants can earn a professional certificate by taking several short courses within a sequence. In addition, participants may earn Continuing Education Units (CEUs).

Learn more at [www.pe.gatech.edu](http://www.pe.gatech.edu).

**Research Support Facilities**

- **Advanced Technology Development Center (ATDC)** (p. 80)
- **Georgia Tech Research Corporation** (p. 80)
- **Georgia Tech Research Institute** (p. 80)
- **Joint CNRS Research Laboratory** (p. 80)
- **Logistics Innovation Centers** (p. 81)
- **Oak Ridge Associated Universities** (p. 81)
Advanced Technology Development Center (ATDC)

The Advanced Technology Development Center (ATDC) is the oldest and most experienced university-affiliated technology incubator in the country. It was formed in 1980 by the Governor and General Assembly to increase the technology business base in Georgia. ATDC fulfills this mission by assisting in the formation and growth of advanced technology start-up companies, supporting technology commercialization, and attracting technology companies to the state. In 2004, ATDC received the "Excellence in Technology-led Economic Development" award from the United States Department of Commerce.

ATDC is headquartered in Technology Square and also operates the ATDC Biosciences Center in the Ford Environmental Science and Technology Building. ATDC also has facilities in Columbus, Georgia; Savannah, Georgia; and Warner Robins, Georgia. At these locations, early-stage companies benefit from a strong entrepreneurial working environment, access to professional business consulting, contact with university research faculty, and modern office and laboratory facilities. The ATDC also provides companies with access to facilities, personnel, and students in the University System of Georgia.

- The Advanced Technology Development Center (ATDC) (http://atdc.org)

Georgia Tech Research Corporation

Founded in 1937, the Georgia Tech Research Corporation (GTRC) is a state-chartered, not-for-profit corporation serving Georgia Tech as a University System of Georgia-approved cooperative organization. By charter, GTRC "...shall be operated exclusively for scientific, literary, and educational purposes...conduct laboratories, engage in scientific research, and distribute and disseminate information resulting from research..." GTRC is an IRS section 501(c)(3) not-for-profit organization and serves as the contracting agency for all of the sponsored research activities at Georgia Tech. It also licenses all intellectual property (patents, software, trade secrets, etc.) created at Georgia Tech. Additionally, GTRC assists Georgia Tech in obtaining quality research space, enters into long-term leases for specialized research equipment, and conducts other research support programs as requested by the Institute. All funds collected by GTRC are used to support various Georgia Tech research programs requested by the Institute and as approved by the twelve-member board of trustees. GTRC is located on campus at 505 Tenth Street.

- GTRC Website (http://www.gtrc.gatech.edu)
- Office of Sponsored Programs (http://www.osp.gatech.edu)

Georgia Tech Research Institute

The Georgia Tech Research Institute (GTRI) is one of the world’s leading applied research and development organizations. GTRI’s world-class engineers and scientists solve some of the toughest problems facing government and industry across the nation and around the globe. For more than seventy-seven years GTRI has been uniquely positioned within the Georgia Institute of Technology, one of America’s top research universities.

GTRI is over 1,600 people strong, including some of the world’s top scientists and engineers who conduct more than $248 million in sponsored research each year. Many of GTRI’s experts are recognized worldwide as leaders in a vast array of research domains. GTRI’s core research areas include complex and agile systems engineering, sensor design and integration, information management and cybersecurity, and defense technology development.

Chartered by the Georgia legislature in 1919 and activated in 1934, the GTRI mission is to serve the university, the state, the nation, and the world by maturing selected technologies and developing innovative engineering solutions to important and challenging problems of society.

GTRI’s employees work in eight research laboratories and support units, that are housed on campus, at the Cobb County Research Facility, and in Huntsville, Alabama. GTRI also has field offices located at:

- Huntsville, Alabama;
- Tucson, Arizona;
- San Diego, California;
- Panama City, Florida;
- Orlando, Florida;
- Warner Robins, Georgia;
- Pearl City, Hawaii;
- Aberdeen, Maryland;
- Dayton, Ohio;
- San Antonio, Texas;
- Hampton Roads, Virginia;
- Washington, D.C.; and
- Quantico, Virginia.

One of GTRI’s goals is to support economic and technological development in Georgia. GTRI promotes economic growth in the state and the southeast through mutual programs with the Georgia Tech Enterprise Innovation Institute. GTRI operates strong technology transfer programs and GTRI researchers teach more than half of all courses offered through Georgia Tech’s Distance Learning and Professional Education program. The newest offering is a Professional Master’s Degree in Applied Systems Engineering, which was developed jointly by GTRI and the Georgia Tech College of Engineering. GTRI is also home to the state’s Agricultural Research Technology Program, which conducts research and technology transfer for the poultry industry, one of Georgia’s leading industries and employers.

For additional information, contact the Office of the Vice President and Director GTRI 250 14th Street Atlanta, Georgia 30332-0801 or call 404.407.7400, or visit www.gtri.gatech.edu (http://www.gtri.gatech.edu).

Joint CNRS Research Laboratory

As the result of a strategic alliance between the Georgia Institute of Technology and the French Centre National de la Recherche Scientifique (CNRS), a joint research laboratory, GT-CNRS UMI 2958 was established
Logistics Innovation Centers

Due to an increasing need for the comprehensive examination of trade-chains and in light of the success of the Supply Chain and Logistics Institute (https://www.scl.gatech.edu) in partnering with the National University of Singapore and various agencies of the government of Singapore, a global network of Trade-chain Innovation & Production (TIP) Centers has developed. This network of centers enables a comprehensive program focused on (1) developing insights, strategies, and methodologies to improve the productivity of existing trade-chains, (2) promoting innovation for identifying and enabling new trade-chain opportunities, and (3) providing education related to trade-chain infrastructure, innovation, and productivity.

Oak Ridge Associated Universities

Since 1946, students and faculty of the Georgia Institute of Technology have benefited from its membership in Oak Ridge Associated Universities (ORAU). ORAU is a consortium of ninety-one colleges and universities and a contractor for the United States Department of Energy (DOE) located in Oak Ridge, Tennessee. ORAU works with its member institutions to help their students and faculty gain access to federal research facilities throughout the country; to keep its members informed about opportunities for fellowship, scholarship, and research appointments; and to organize research alliances among its members.

Through the Oak Ridge Institute for Science and Education (ORISE), the DOE facility that ORAU operates, undergraduates, graduates, postgraduates, and faculty enjoy access to a multitude of opportunities for study and research. Students can participate in programs covering a wide variety of disciplines, including business, earth sciences, epidemiology, engineering, physics, geological sciences, pharmacology, ocean sciences, biomedical sciences, nuclear chemistry, and mathematics. Appointment and program length range from one month to four years. Many of these programs are especially designed to increase the numbers of underrepresented minority students pursuing degrees in science- and engineering-related disciplines. A comprehensive listing of these programs and other opportunities, their disciplines, and details on locations and benefits can be found in the ORISE Catalog of Education and Training Programs, which is available at www.orau.gov/orise/educ.htm, or by calling either of the contacts below.

ORAU's Office of Partnership Development seeks opportunities for partnerships and alliances among ORAU's members, private industry, and major federal facilities. Activities include faculty development programs, such as the Ralph E. Powe Junior Faculty Enhancement Awards, the Visiting Industrial Scholars Program, consortium research funding initiatives, faculty research and support programs, as well as services to chief research officers. For more information about ORAU and its programs, contact:

Charles L. Liotta
Vice Provost for Research and Dean of Graduate Studies
ORAU Councilor for Georgia Institute of Technology
Monnie E. Champion
ORAU Corporate Secretary

Skidaway Institute of Oceanography

Located on Skidaway Island near Savannah, Georgia, the Skidaway Institute of Oceanography (SkIO) provides a complex of coastal- and ocean-related educational and research opportunities. School of Biology faculty have laboratory facilities at the institute. Many SkIO faculty hold adjunct appointments with Georgia Tech schools, including Civil and Environmental Engineering, Earth and Atmospheric Sciences, and Biology, and actively participate in graduate research and education. SkIO maintains small boats for local studies and the 92-foot R/V Savannah for conducting ocean research. Other unique coastal research facilities include the Bioremediation and Environmental Research Mesocosms (BERM) facility, the Saltmarsh Ecosystem Research Facility (SERF), a large recirculating flume, and the SkIO library, which is the largest in the state devoted almost exclusively to marine sciences. Areas of faculty expertise at SkIO include chemical, physical, and biological oceanography, marine ecology, and marine geology. Visitor and graduate student housing is available on site, providing convenient access to these facilities.

• Skidaway Institute of Oceanography (SkIO) (http://www.skio.uga.edu)
• School of Biology (http://www.biology.gatech.edu)

VentureLab

The Georgia Tech VentureLab program helps faculty members and students to commercialize technology developed as part of the Institute's research programs. VentureLab evaluates the commercial potential of innovations and matches faculty with experienced entrepreneurs who can help form new ventures.

More details are available on the VentureLab web site (http://venturelab.gatech.edu).

Academic Common Market

Undergraduate Programs

At the undergraduate level, Georgia Tech has withdrawn its programs from the Academic Common Market (ACM). This policy went into effect in the Summer 2011 semester.

Graduate Programs

At the graduate level only, Georgia Tech participates in the Academic Common Market (ACM), which is a program managed by the Southern Regional Education Board. ACM is an interstate agreement for sharing educational programs and facilities. It allows students to participate in selected programs not offered in their home states without having to pay out-of-state tuition charges.

The main purpose of the Academic Common Market is to assist states in offering together what they cannot offer alone. Residents of the participating states who qualify for admission and gain the approval of their state coordinators may enroll on an in-state tuition basis. Programs are added to and removed from the Market on an annual basis in order to reflect the changing needs of participating states. The State of Georgia currently makes program changes once annually during the spring.

These states currently participate: Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

- Southern Regional Education Board (http://www.sreb.org/page/1304/academic_common_market.html)

BS/MS Degree Programs

Many schools at Georgia Tech offer BS/MS degree programs that, like the Graduate Course Option, allow eligible students to use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees. The BS/MS programs typically include research and mentoring components and have their own GPA requirements.

Center for Teaching and Learning (CTL)

The Center for Teaching and Learning (CTL) was founded in 1986 with a mission to lead Georgia Tech to a teaching and learning standard of excellence.

CTL’s undergraduate course offerings include:

- Undergraduate Teaching Assistant Preparation,
- Fundamentals of Peer Tutoring, and
- Residence Life Seminar.

CTL offers a graduate-level course in Graduate Teaching Assistant preparation and courses to prepare graduate students for faculty positions.

- Graduate Teaching Assistant Preparation,
- Fundamentals of Teaching and Learning in Higher Education,
Experiential Education

- Center for Career Discovery and Development (p. 83)
- Graduate Cooperative Plan (p. 83)
- Paid and Unpaid Internships (p. 84)

Center for Career Discovery and Development

Georgia Tech believes that obtaining relevant, academically related experience outside of the classroom is an integral part of the educational process. The Center for Career Discovery and Development ("C2D2") offers opportunities to obtain such experience through cooperative education and internships.

The Undergraduate Cooperative Plan (Co-op) has been offered at Georgia Tech since 1912. It offers students the opportunity to integrate practical experience with theory learned in the classroom. More than 600 students participate each semester, working full time on alternate semesters, for a total of three semesters, for employers throughout the United States and the world. Accredited by the Accreditation Council for Cooperative Education, it is the largest optional co-op program in the country and one of the highest ranked programs among public universities.

The Undergraduate Co-op Plan is available for students in all majors with the exception of architecture and building construction. Co-op students remain on the school rolls while on work periods by registering for the appropriate co-op courses. The Graduate Co-op Program is described in greater detail in another section in this catalog.

The work experience received is a valuable asset to graduates starting out in their chosen professions. Neither college laboratory experience nor employment during vacations can take the place of organized co-op training. The plan provides, to a substantial degree, the experience most companies require of their employees before promoting them to positions of higher responsibility. Work experience may also assist students who are undecided about their future plans in determining early in their college careers whether they wish to continue in a particular field.

Moreover, daily contact with diverse groups among their fellow employees offers students practical insight into sociology, psychology, economics, and ethics that no textbook can supply. Finally, students receive compensation for their services from the employer. Typically, co-op students can save enough from their earnings to pay for a substantial part of their school expenses.

Internships provide practical experience for students who choose not to follow the Undergraduate Co-op Plan. Internships, the majority of which are paid positions, are an extremely viable way to obtain out-of-classroom experience. Similar to cooperative education, the jobs and the students' performance are monitored by the Center for Career Discovery and Development to ensure maximum benefit by all parties.

Students in all majors may participate in the internship program and may work any term during the academic year. There are also part-time internships available for those who wish to work while attending classes.

The Center for Career Discovery and Development also works with students to customize their experiential education path, with the option to combine co-op and internship experiences.

For more information on any programs offered through the Center for Career Discovery and Development, visit our website at careerdiscovery.gatech.edu (http://www.careerdiscovery.gatech.edu) or call C2D2 at 404-894-3320.

Graduate Cooperative Plan

The Graduate Cooperative Education Program provides master's and doctoral degree students majoring in any discipline at Georgia Tech the opportunity to supplement their graduate studies with specialized work experience. Graduate co-op students gain experience with top employers, earn competitive salaries to help defray educational expenses, and expand post-graduation career options while on semester-long work assignments.

The Graduate Co-op Program is available to enrolled Georgia Tech students and is based upon academic achievement. Internships related to a student's field of study can receive academic approval as a graduate cooperative work assignment allowing students to work summer, fall, or spring semesters, full-time or part-time.

There are no fees associated with the Graduate Co-op Program and students are provided full-time enrollment status through their registration in a Graduate Co-op course. This permits students to retain all privileges of full-time enrolled students while on work assignments.

To participate in the Graduate Co-op Program, a student must

- have a 3.0 or better GPA,
- complete an online orientation session, and
- obtain a program participation letter from her or his major school.

Students normally identify their own job opportunities, but the Graduate Co-op Office provides access to a job posting database and can assist with career guidance, job searches, resumes, and cover letters. Graduate students accepting a graduate co-op/internship opportunity should see a Graduate Co-op Program advisor regarding offer letters, required academic approvals, registration permits, and any necessary work authorizations. Enrollment in a 6000-level co-op course, a noncredit/no-cost audit course with no student or Institute fees attached, is also required.

International students are eligible to participate, but F-1 visa holders must be enrolled for a minimum of two full-time semesters, excluding Summer sessions, before being able to work off campus. All international students on F-1, J-1, and other appropriate visas must work with the
Office of International Education (http://www.oie.gatech.edu) to secure work authorization documentation.

For more information on the Georgia Tech Graduate Co-op and Internship Program, visit: www.gradcoop.gatech.edu (http://www.gradcoop.gatech.edu).

**Paid and Unpaid Internships**

In addition to the internship and cooperative programs administered through the Division of Professional Practice, students may participate in internships through the academic units. These internships are either paid or unpaid.

Students who receive pay for the internship may not also receive academic credit for it. Students who receive academic credit for an internship may not also receive pay for it. There may be rare exceptions to this policy, such as the legislative internship that is part of the program in Public Policy. Exceptions have to be approved by the curriculum committee.

When students request enrollment in a departmental internship, they must (for credit or pay) complete a departmental approval form. Departmental internship sections are set up by permit only, and the student is permitted for the appropriate section to register for it.

Academic units are strongly encouraged to use the following standard numbering system for internships that they offer for pay or credit. Schools that wish to add an internship course will need to submit a new course proposal form to the curriculum committee and request course numbers under their subject codes.

**Course Numbering**

**Freshmen and Sophomores**

XXXX 2694: Undergraduate Internship for Pay (Audit only)

XXXX 2695: Undergraduate Internship for Credit

**Juniors and Seniors**

XXXX 4694: Undergraduate Internship for Pay (Audit only)

XXXX 4695: Undergraduate Internship for Credit

**Contact Us**

**Georgia Tech-Lorraine**

Georgia Tech-Lorraine (GTL) was established as the Institute's first international campus in 1990 in Metz, France, a city recently named by the New York Times (http://www.nytimes.com/interactive/2009/01/11/travel/20090111_DESTINATIONS.html) as one of the top 44 places to see in the world. Centrally located in eastern France along the Luxembourg and German borders, GTL is less than 90 minutes by train from Paris. A highly innovative institution offering year-round undergraduate, Masters and PhD programs, GTL is also home to a strong sponsored research program that fosters the flow of new ideas, creates new opportunities, and develops highly valuable qualities in our students, such as global leadership and innovative thinking.

GTL affords students the opportunity to pursue their Georgia Tech degree while being immersed in the rich culture of Europe. At GTL, students from around the world get the opportunity to study in the heart of Europe and take courses taught in English by Georgia Tech faculty. As a faculty-led program, Georgia Tech-Lorraine offers a balance of engineering, computer science, humanities, French language, management, and social science courses from the Georgia Tech course catalog. Courses are specifically designed to fulfill the student's major and International Plan requirements and students may also take advantage of undergraduate research and international internship opportunities. GTL also provides tremendous value. Out-of-state students save, on average, several thousand dollars in tuition when studying at GTL versus studying on the Atlanta campus and in-state students may take advantage of the HOPE scholarship to study at GTL.

Georgia Tech-Lorraine offers an extensive graduate program encompassing a broad range of study in the areas of mechanical engineering, electrical and computer engineering, as well as computer science. Programs leading to the Master's or PhD degree from the Georgia Tech are available. GTL is home to the Unité Mixte Internationale GT-CNRS UMI 2958, a joint research laboratory with the Centre National de la Recherche Scientifique, the largest scientific research organization in Europe. The UMI has state-of-the-art research facilities and a well-funded research program. Cooperative agreements with local partner institutions enable GTL graduate students to pursue double degrees in engineering and sciences in addition to degrees from Georgia Tech. Upon successful completion of these highly innovative and integrated programs, students are awarded a Master's degree from the Georgia Tech and a Master's degree from a partner institution.

For more information, visit the Georgia Tech-Lorraine website (http://lorraine.gatech.edu) or call 404.385.1865.

**Dual Enrollment Program for High School Students**

Georgia Tech partners with high school and home study programs to enroll students in advanced courses. Our program intends to enrich the high school experience, not replace it. Students who take classes at Georgia Tech usually continue taking classes and participating in activities and organizations in their high school communities.

Admission for Dual Enrollment is available for fall semester only. If you are admitted for fall semester, you may enroll in spring semester courses pending satisfactory academic performance in the fall. Summer courses are not available.

The admission process is selective and a prospective student should have a profile like students in the top quarter of our freshman class to be competitive. Visit the Office of Undergraduate Admission website (http://admission.gatech.edu/dual-enrollment) for more details.

**Learning Support Policies**

The Office of the Vice Provost for Undergraduate Education (OUE) administers the Learning Support (LS) Program. College preparatory courses (for non-academic credit) are offered in mathematics and English for students who need further preparation to be successful in English, mathematics, and related courses.

Georgia Tech uses benchmark scores earned via the SAT (Critical Reading and Math) or ACT (English and Math) to determine placement in Learning Support. Students who score below a 24 on the SAT Reading Test (or 17 on the ACT English) will be required to complete the LS program for English. Students who score below a 26.5 on the SAT Math Test (or 21 on the ACT Math) will be required to complete the LS program
for Math. Students may be required to complete the LS program for both English and Math. Georgia Tech will consider the higher of the SAT and ACT scores when determining LS placement.

Students who are required by the Institute to take courses in the Learning Support Program will be notified in writing. They must then register for a co-requisite class to a college level course. Students placing into learning support for English will be required to take ENGL 0999 in conjunction with ENGL 1101. Students

Students placing into learning support for English will be required to take ENGL 0999, a three-hour (non-academic credit), course designed to reinforce critical reading and communications concepts concurrently with ENGL 1101, a three-hour course.

Students placing into learning support for math will be required to take MATH 0999, a two-hour (non-academic credit), course designed to reinforce basic mathematical concepts, concurrently with MATH 1111, College Algebra, a four-hour course.

MATH 0999 and ENGL 0999 are not college level classes and cannot be applied to degree requirements, including free electives.

Students will have completed their learning support requirement when they have passed the college level course ENGL 1101 or MATH 1111 with a grade of D or better. Students who do not pass ENGL 1101 or MATH 1111 will be required to take the co-requisite class ENGL 0999 or MATH 0999 as well. Students will continue to take the combination of courses until they have passed the college level course, ENGL 1101 or MATH 1111. There is no limit to the number of times these classes and the corresponding co-requisite may be attempted.

The learning support requirements program should be completed as soon as possible after matriculation to Georgia Tech. Students should work with advisors to determine the best timing for these requirements.

Contact Us.

Living Learning Communities

Living Learning Communities are an academic strategy that link academics to on-campus living. Each Georgia Tech community is an integrated experience that promotes interactions between faculty and students, fosters collaboration among students, improves student GPA, enhances campus and civic engagement, increases retention, and eases both the academic and social transition to college.

As an entering first-year student, students admitted to Georgia Tech are invited to apply to:

- Global Leadership Living Learning Community
- Grand Challenges Living Learning Community
- Honors Program Living Learning Community
- Science and Math Research Training (SMaRT) Living Learning Community
- Science, Health, and Related Professions (SHaRP) Living Learning Community
- iGniTe Summer Programs Living Learning Community (Summer)

While each of these communities offers a different focus, they all have required academic coursework, a first year living requirement, and the option to continue living with members of the community in nearby apartments as upper-level students.

Rising second-year students are invited to apply to:

- Women, Science, and Technology (WST) Living Learning Community
- International House (I-House) Living Learning Community

WST and I-House require students to participate in community activities and events and offer optional coursework.

http://enrichment.gatech.edu/llc

Preprofessional Programs

Georgia Tech offers Pre-professional programs and advising in the following areas:

- Pre-Health (http://www.prehealth.gatech.edu) (includes all health professions, including pre-med, pre-dentistry, pre-pharmacy, and more)
- Pre-law (http://www.prelaw.gatech.edu)
- Pre-teaching (http://www.preteaching.gatech.edu) (K-12)

Students can look these advisors up on the Advising Web page (http://www.advising.gatech.edu).

Professional schools typically admit students with strong academic credentials, a well-balanced education, good communication skills, and a broad range of experiences. With the appropriate selection of elective courses, most majors at Georgia Tech provide suitable preparation for professional schools in any area.

The best choice of a major is usually the one in which the student has the greatest inherent interest. No specific major offers an obvious competitive advantage in assuring admission to professional schools.

Georgia Tech has elected not to have majors designated as pre-medicine, pre-dentistry, or pre-law. This approach to pre-professional education has two major advantages. First, students who elect not to enter professional school upon graduation are prepared for alternative careers immediately. Second, students who do continue on to professional school have backgrounds that often provide them with unique opportunities within their selected professions. Examples include medical research, development of medical devices and apparatus, patent law, or the legal aspects of design and construction.

President’s Scholarship Program

The Stamps President’s Scholars Program is Georgia Tech’s premier merit-based scholarship. Recipients are selected from the top applicants for admission to Georgia Tech based on demonstrated excellence in scholarship, leadership, progress, and service as described on the Stamps President's Scholars Program (http://stampps.gatech.edu) web page. From the applicant pool, students selected as semi-finalists submit a one-page resume before being interviewed. The top semi-finalists are named finalists and invited, with their parents, to campus for additional interviews and an information weekend in March.

Transfer students are not eligible for the four-year award. Recipients must be US Citizens, US Permanent Residents, or UK Citizens.

Each year, 40 incoming freshmen receive the Stamps President’s Scholarship, which is renewable for up to four academic years or eight semesters, contingent upon honors-level performance and continued leadership development as evidenced by involvement in program, campus, and community activities. Scholarships are "full ride," including
tuition and mandatory fees, room and board, books, and personal expenses. See the website below for more information on stipends.

To ensure consideration, a student must apply as an incoming freshman, and submit the Georgia Tech Application for Freshman Admission, along with the application fee by the early action deadline of October 15th.

More information:

- Stamps President’s Scholars Program (http://stampsp.s.gatech.edu)

**ROTC**

Georgia Tech offers three voluntary ROTC programs: Army, Navy, and Air Force.

Depending on the student’s major, Basic and Advanced ROTC classes count as a portion of elective credit. (Students may apply a maximum of 4 credit hours in Basic ROTC courses and six credit hours in Advanced ROTC courses toward meeting the elective requirements for any degree at the discretion of the school.) Consult specific colleges to determine the amount of hours that will count toward a degree. After earning a baccalaureate degree and completing the Advanced ROTC courses for any of the three services, a student may receive a commission as an officer in either the reserve or active forces.

Students accepted into the program earn more than just money for a college degree. Cadets and midshipmen receive training and experience in the one quality which is always in great demand: Leadership.

Students may apply a maximum of 4 credit hours in basic (1000-2000 level courses) ROTC courses and six hours in advanced (3000-4000 level) ROTC courses toward meeting the free elective requirements for any degree. Students should begin taking basic ROTC courses during the first term they are enrolled. For further information, see individual curricula for the schools. Please note some departments may have stricter guidelines regarding ROTC courses.

Airforce ROTC Information (http://www.catalog.gatech.edu/colleges/cola/air-force-aerospace-studies)

**Summer Language Programs**

**Languages for Business and Technology (LBAT)**

The School of Modern Languages offers special summer immersion programs in the countries/regions related to our areas of language study: Chinese, French, German, Japanese, Korean, Russian, and Spanish. These intensive programs in Languages for Business and Technology (LBAT) consist of study abroad in which classroom lessons in business, culture, and technology are combined with fieldwork, cultural events, excursions, and visits to area businesses, government agencies, and social concerns, all conducted in the target language. The professional visits provide students with firsthand experience of business life, the protocols and strategies of business and technology interactions, and a heightened awareness of the current economic and social issues facing the host country. The LBAT experience offers a unique opportunity for rapid growth in proficiency, for building a deeper appreciation for the cultures and lifestyle patterns of other peoples, and for making lifelong social and professional contacts.

Depending on the particular program, students will spend 6-8 weeks abroad and earn 9-15 semester hours at the 3000 level (with some programs including offerings at the 1000 or 2000 level); these credits often can count toward a certificate, a minor, or the joint majors offered by the School of Modern Languages. Program costs vary according to the country visited and the length of the program. The HOPE scholarship applies. See the School of Modern Languages "LBAT Programs (http://www.modlangs.gatech.edu/study-abroad)" web page for more information.

**The International Plan**

In today’s economy, employers are expecting to hire college graduates with international experience, global perspectives, intercultural communication skills, and the ability to work in diverse teams. In response to this need, Georgia Tech developed the International Plan, a globally-focused degree designation.

The International Plan is a challenging undergraduate academic program aimed at developing a student’s global competence within the context of his or her major. It is an optional degree-long program that integrates overseas experiences, language proficiency, and globally-focused coursework into any participating major at Georgia Tech. It builds on existing undergraduate degree requirements and international opportunities and is intended to be completed within the normal time frame of a four-year undergraduate degree. Completion of the International Plan is recognized by a designation on the student’s diploma indicating a commitment to developing global competence as part of the degree, e.g., “B.S. in Electrical Engineering: International Plan.”

A defining feature of the International Plan is coherence, which refers to the relationship between the destination(s) chosen to complete the international experiences, the language chosen to satisfy the language requirement, and the appropriateness to the student’s discipline. While some students’ plans are inherently coherent though language and culture, other students may choose to structure their plan with an intellectually coherent approach. The program is designed to give students a deep understanding of another culture so that they develop strong intercultural skills that will help them function effectively in a global environment. Students are encouraged to think strategically about their academic and international experience choices with the guidance of their advisors.

In order to earn the International Plan designation in a participating major, students will complete the following components:

1. Globally-focused coursework: complete three courses, to include one from each of the following categories:
   a. International relations
   b. A course about the country or region of the overseas experience
c. Global economics

2. International Experience: Two terms abroad (at least twenty-six weeks) engaged in any combination of study abroad, research, and/or internship. International Experiences for the International Plan must be approved by the International Plan staff as well as the major IP faculty representative.

3. Second language proficiency: At a minimum, students in the program are expected to demonstrate proficiency equivalent to two years of college-level language study. An optional Language Proficiency Distinction is available to students who demonstrate more advanced oral proficiency skills.

4. Culminating Course: A capstone course in the major designed to tie the international studies and experiences together with the student's discipline.

5. Maintain a cumulative GPA of at least 2.7

For additional information about the International Plan visit https://oie.gatech.edu/content/international-plan.

Transfer Programs

Dual Degree Program

Under the Dual Degree Program, students attend the participating Dual Degree school for three years and then come to Georgia Tech for approximately two years. Students participating in the Dual Degree Program may seek a degree from any undergraduate degree-granting program in the College of Engineering. Upon completion of the program, the student receives a bachelor’s degree from the first school and a bachelor’s degree in one of the engineering disciplines at Georgia Tech.

Participating in the Dual Degree Program are many of the schools in the University System of Georgia, including Morehouse College, Spelman College, Clark Atlanta University, and other historically black colleges and universities (HBCU) and predominantly women’s colleges in the southeast. For additional information on either of these programs, contact the College of Engineering at Georgia Tech or the Regents’ Engineering Transfer Program (RETP) or Dual Degree coordinator at a participating RETP or Dual Degree institution.

Regents’ Engineering Transfer Program

The Regents’ Engineering Transfer Program (RETP) is a cooperative program between Georgia Tech and colleges in the University System of Georgia.

For the first two years, students in this program attend one of the participating institutions, where they take all of the mathematics and science and many of the engineering courses required in the first two years of the Georgia Tech engineering curricula. Upon successful completion of the RETP requirements at the RETP institution, students are admitted to Georgia Tech to work toward completion of a Bachelor of Science in Engineering degree.

By enrolling in RETP students may attend a college close to home, thereby decreasing the cost of their education and easing the adjustment to college life. At the same time, RETP students enjoy many of the advantages of Tech students: they have equal access to engineering
majors at Tech, they can participate in the co-op program, and they are invited to the Tech campus once a year for campus tours, information sessions, and meetings with advisors in their engineering majors.

RETP Information (http://www.coe.gatech.edu/content/regents-engineering-transfer-program-retp)
RETP Transfers - Admissions (http://www.admission.gatech.edu/transfer/#RETP)

Dual Degree Program

Under the Dual Degree Program, students attend the participating Dual Degree school for three years and then come to Georgia Tech for approximately two years. Students participating in the Dual Degree Program may seek a degree from any undergraduate degree-granting program in the College of Engineering. Upon completion of the program, the student receives a bachelor's degree from the first school and a bachelor's degree in one of the engineering disciplines at Georgia Tech.

Participating in the Dual Degree Program are many of the schools in the University System of Georgia, including Morehouse College, Spelman College, Clark Atlanta University, and other historically black colleges and universities (HBCU) and predominantly women's colleges in the southeast. For additional information on either of these programs, contact the College of Engineering at Georgia Tech or the Regents' Engineering Transfer Program (RETP) or Dual Degree coordinator at a participating RETP or Dual Degree institution.

Regents' Engineering Transfer Program

The Regents' Engineering Transfer Program (RETP) is a cooperative program between Georgia Tech and colleges in the University System of Georgia.

For the first two years in this program, students attend one of the participating institutions, where they take all of the mathematics and science and many of the engineering courses required in the first two years of the Georgia Tech Engineering curricula. Upon successful completion of the RETP requirements at the partnering institution, students are admitted to Georgia Tech to work toward completion of a Bachelor of Science in Engineering degree.

By enrolling in RETP, students may attend a college close to home, thereby decreasing the cost of their education and easing the adjustment to college life. At the same time, RETP students enjoy many of the advantages of Georgia Tech students: they have equal access to engineering majors at Tech, they can participate in the co-op program, and they are invited to the Georgia Tech campus once a year for campus tours, information sessions, and meetings with advisors in their engineering majors.

- Transfer Admission (http://admission.gatech.edu/transfer/#RETP)

Undergraduate Research Opportunities Program

Undergraduate research offers students a unique opportunity to apply knowledge in a meaningful, real-world context to solve problems and explore issues no one has ever addressed before. Students doing undergraduate research also have the chance to develop deeper relationships with faculty and graduate students and to add résumé items that will make them stand out to graduate schools and potential employers.

The Undergraduate Research Opportunities Program (UROP) facilitates research experiences for undergraduates across all disciplines. UROP creates initiatives to encourage students to participate in knowledge creation and research enterprise with Georgia Tech's world-class faculty. Students may participate in laboratory, scientific, or computing research, or they may be involved in new discoveries in literature, social sciences, architecture, or business. Undergraduate students can participate in part-time or full-time research for course credit or pay. Opportunities are available Institute-wide, within specific colleges and schools, or in interdisciplinary settings.

UROP is also charged with providing support and leadership in the area of student innovation. We assist students in finding practical applications for their work and promote the importance of moving research and innovation into society to solve the world's problems. The InVenture Prize, one of the largest invention competitions in the United States, seeks students with an entrepreneurial and inventive interest to apply their skills and see the world as endless opportunities.

Additional opportunities include the President's Undergraduate Research Awards (PURA), the Research Option, spring symposia, and workshops and training sessions promoting good research practices. Students may also be interested in participating in the Georgia Tech's Undergraduate Research Journal, The Tower. Students may also reach out to the Undergraduate Research Ambassadors (http://urop.gatech.edu/content/undergraduate-research-ambassadors) regarding any of the UROP programs or for assistance in finding research opportunities at Georgia Tech.

More information is available on the Undergraduate Research (http://urop.gatech.edu) web page.

The Research Option

The Research Option offers students the opportunity for an in-depth, long-term research experience that culminates in a final paper or thesis. While the exact requirements for a research option vary by academic unit, students typically take the following steps:

1. Write a research proposal.
2. Complete at least nine units of undergraduate research. At least six of the nine required hours should be on the same project. This research must be done with an approved Georgia Tech faculty member.
3. a. Over at least two, preferably three, terms
   b. Research may be for either pay or credit (specific option plans differ by department).
      i. For research for-pay to count towards the Research Option, you must register for an audit-only class (2698 or 4698 in most but not all academic units).
4. Take the sequence of two one-hour courses:
   a. LMC 4701 (typically taken during the first or second term of research in order to help students complete their required proposal), and
b. LMC 4702 (taken during the term in which the thesis is completed). 

5. Write an undergraduate thesis/report of research on their findings.

6. Submit the Certification Form for their participating school into the Undergraduate Research Opportunities Program office prior to graduation. The forms may be found here (http://urop.gatech.edu/research-option). This form must be signed by two faculty readers (one being the primary faculty mentor), the undergraduate coordinator for the participating school and the student.

For more information on specific plans and a list of participating schools, visit the Research Option (http://urop.gatech.edu/research-option) web page.

**Undergraduate Academics**

- Bachelor’s Degree Programs (p. 180)
- BS/MS Degree Programs (p. 91)
- Cooperative Agreements (p. 91)
- Core Curriculum (p. 91)
- Credit/Tests Scores (p. 101)
- New Sequence of Math Core Courses (p. 106)
- Undergraduate-Level Courses (http://www.catalog.gatech.edu/courses-undergrad)

**BS/MS Degree Programs**

Many schools at Georgia Tech offer BS/MS degree programs that, like the Graduate Course Option, allow eligible students to use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees. The BS/MS programs typically include research and mentoring components and have their own GPA requirements.

**Core Curriculum**

**Important Note:**

On March 9, 2016, the Board of Regents of the University System of Georgia approved a revision to system-wide policies related to the Core Curriculum.

1. Institutions in the University System of Georgia will not be required to identify or track overlay requirements related to US Perspectives, Global Perspectives, and Critical Thinking.
2. Students will not be required to complete the overlay requirements from this point forward.
3. Students who are scheduled to graduate in the Spring 2016 Semester and who have not completed the overlays may graduate without fulfilling this requirement.
University System of Georgia Core Curriculum Requirements

The following describe the core requirements, effective in Fall 2011 and reflecting an important change in March 2016.

The courses that can be used to satisfy the various area requirements are subject to change, and will be updated as soon as possible. Students and advisors are encouraged to check this section of the Catalog regularly to obtain the most current information.

Any courses completed that were listed in prior catalogs as satisfying the Humanities/Social Science Requirement and were completed while that edition of the Catalog was in effect may also be used to satisfy that requirement.

More information about the University System of Georgia’s Core Curriculum policies is available on the USG web site.

Core Curriculum Requirements:

- Constitution and History (p. 92)
- Core Area A1 (p. 92)
- Core Area A2 (p. 92)
- Core Area B (p. 93)
- Core Area C (p. 93)
- Core Area D (p. 97)
- Core Area E (p. 97)
- Core Area F (p. 100)
- Ethics (p. 100)
- Global Perspectives (p. 101)*
- U.S. Perspectives (p. 101)*
- Wellness (p. 101)

Constitution and History

Important Note:

On March 9, 2016, the Board of Regents of the University System of Georgia approved a revision to system-wide policies related to the Core Curriculum.

1. Institutions in the University System of Georgia will not be required to identify or track overlay requirements related to US Perspectives, Global Perspectives, and Critical Thinking.
2. Students will not be required to complete the overlay requirements from this point forward.
3. Students who are scheduled to graduate in the Spring 2016 Semester and who have not completed the overlays may graduate without fulfilling this requirement.

Constitution and History Requirements

The Georgia law, as amended March 4, 1953, requires that before receiving an undergraduate degree all students pass an examination or a comparable course in United States and Georgia history/constitution.

Courses that fulfill the United States and Georgia History/Constitution Requirement are:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>HIST 2111</td>
<td>United States to 1877</td>
<td>3</td>
</tr>
<tr>
<td>HIST 2112</td>
<td>United States since 1877</td>
<td>3</td>
</tr>
<tr>
<td>POL 1101</td>
<td>Government of the U.S.</td>
<td>3</td>
</tr>
<tr>
<td>PUBP 3000</td>
<td>US Constitutional Issues</td>
<td>3</td>
</tr>
<tr>
<td>INTA 1200</td>
<td>American Government</td>
<td>3</td>
</tr>
</tbody>
</table>

Courses that carry the Social Science (p. 97) attribute and that appear on the list above can serve both purposes.

Core Area A1

Core Area A1: Communication Outcomes

Area A1 is satisfied by completion of 6 credit hours as follows.

Required for all majors:

**Effective Fall 2010**, for freshmen entering the USG system Fall 2010, students who have earned 60 hours but have not completed Area A1 must enroll in the next course necessary to make progress toward completing this Area in every semester in which they take classes.

**Effective Fall 2011**, this hour limit is lowered to 45 hours for freshmen entering the USG system Fall 2011, Spring 2012, and Summer 2012.

**Effective Fall 2012**, the hour limit is lowered to 30 hours for freshmen entering the USG system Fall 2012 and thereafter.

- ENGL 1101 English Composition I 3
- ENGL 1102 English Composition II 3

Core Area A2

Core Area A2: Quantitative Outcomes

Required of all students majoring in the College of Architecture, College of Computing, College of Engineering, College of Sciences:

Area A2 is satisfied by completion of 4 semester hours as follows:

- MATH 1552 Integral Calculus 4

Required of all other majors. Select one of the following:

- MATH 1712 Survey of Calculus 4
  or MATH 1552 Integral Calculus

1. In the case of a degree (major) that is jointly offered and the Colleges’ requirements in this area are different, the student must complete the course that is specified in the curriculum for the degree, regardless of which college is the declared “home” of the student. This area of the Core Curriculum is driven by the requirements of the specific degree program, not by the general requirements of the College, if a degree is jointly offered.

**Effective Fall 2010**, for freshmen entering the USG system Fall 2010, students who have earned 60 hours but have not completed Area A2 must enroll in the next course necessary to make progress toward completing this Area in every semester in which they take classes.
**Effective Fall 2011**, this hour limit is lowered to 45 hours for freshmen entering the USG system Fall 2011, Spring 2012, and Summer 2012.

**Effective Fall 2012**, freshmen entering the USG system Fall 2012 and thereafter, the hour limit is lowered to 30 hours.

### Core Area B

**Core Area B: Institutional Options**

Area B is satisfied by students completing the following:

CS 1301    Intro to Computing  

1 Or another CS class designated by the School

### Core Area C

**Core Area C: Humanities, Fine Arts, and Ethics**

Core Area C is satisfied by completion of 6 semester hours in courses that carry the HUM (Humanities) attribute. Fine Arts and some ethics related courses are included under Humanities at Georgia Tech. Courses that carry both the HUM and ETHS attribute can serve both purposes.

**Notice:**

On March 9, 2016 the Board of Regents approved a revision to Board of Regents policies related to the Core Curriculum.

**Effective immediately:**

1. Institutions will not be required to identify or track overlay requirements related to US Perspectives, Global Perspectives, and Critical Thinking.
2. Students will not be required to complete the overlay requirements from this point forward.
3. Students who are scheduled to graduate this semester and who have not completed the overlays may graduate without fulfilling this requirement.

**Note:**

1. Any courses completed that were listed in prior catalogs as satisfying the humanities or ethics requirement and were completed while that catalog was in effect may also be used to satisfy this requirement.
2. Humanities credit is awarded for Modern Languages 1001 classes upon successful completion of the corresponding 1002 classes. Humanities credit is awarded for SPAN 1101 only upon the successful completion of SPAN 1102. In some instances, students may complete a Modern Languages course at 1001 and then be placed at the second-semester level and complete the 2001 level course. Therefore, the sequence that will warrant HUM credit for Modern Languages courses may be either the 1001-1002 or the 1001-2001 sequence.
3. Undergraduate Research courses numbered 2698, 2699, 4698, and 4699 cannot be used to fulfill requirements for humanities.
4. Additional information on Music courses: Students can earn humanities credit for participation in ensembles.
5. **Humanities Credit for Ensemble Participation**

Students can earn Humanities credit for participation in one or more specified School of Music ensembles. Each ensemble course is repeatable for credit and the following ensembles carry the humanities attribute:

- MUSI 3121 Concert Band
- MUSI 3131 Symphonic Band
- MUSI 3231 Chamber Choir
- MUSI 3241 Chorale
- MUSI 3251 Glee Club
- MUSI 3261 Women’s Choir
- MUSI 3311 Jazz Ensemble
- MUSI 3511 Percussion Ensemble
- MUSI 3531 New Music Ensemble
- MUSI 3551 Rock and Pop Ensemble
- MUSI 3611 Symphony Orchestra

6. **Transfer Students:**

   Please be aware that when you see courses on your GT record that are listed with an “X” in the number (ECON 3XXX or JAPN 10X2, for example) it means that these are transfer courses and although they were not equated exactly with a GT course, they may have been accepted to meet a Core area such as Humanities and Social Science.

   If you review your records in DegreeWorks (http://www.degreeworks.gatech.edu), you will be able to see how your transfer credit applies to your GT degree program. Refer to your academic advisor for more information.

### Humanities Courses

- **ARBC 1002** Elementary Arabic II  
- **ARBC 1501** Understand Arab Culture  
- **ARBC 2001** Intermediate Arabic I  
- **ARBC 2002** Intermediate Arabic II  
- **ARBC 2301** Arts Sci Tech Thru Hist  
- **ARBC 3001** Advanced Arabic I  
- **ARBC 3002** Advanced Arabic II  
- **ARBC 3501** Men-Women In Islam  
- **ARBC 3691** Intensive Advanced ARBC  
- **ARBC 3692** Arabic Business & Tech I  
- **ARBC 3693** Arabic Business &Tech II  
- **ARCH 2111** History of Arch I  
- **ARCH 2112** History of Arch II  
- **ARCH 2115** Modern Arch & Art  
- **ARCH 4109** Arch and Minimalism  
- **ARCH 4110** Public Space  
- **ARCH 4113** Renaissance&Manner Arch  
- **ARCH 4114** Medieval Architecture  
- **ARCH 4117** Arts and Crafts Arch  
- **ARCH 4118** American Academic Arch

96  Core Area C  

96  Core Area C
Core Area D

Core Area D: Natural Sciences, Math, and Technology

Core Area D is satisfied by students completing 8 semester hours from the science list and 4 semester hours from the Mathematics list.

Science

8 semester hours

- CHEM 1211K Chemical Principles I 4
- CHEM 1212K Chemical Principles II 4
- CHEM 1310 General Chemistry 4
- BIOL 1220 Biology of Sex & Death 4
- BIOL 1510 Biological Principles 4
- BIOL 1520 Intro to Organismal Biol 4
- EAS 1600 Intro-Environmental Sci 4
- EAS 1601 Habitable Planet 4
- EAS 2600 Earth Processes 4
- PHYS 2211 Intro Physics I 4
- PHYS 2212 Intro Physics II 4

Mathematics

4-6 semester hours

All students with majors in the Colleges of Architecture, Engineering, and Science

- MATH 1551 Differential Calculus 2
- MATH 1553 Intro to Linear Algebra 2

All students with majors in the College of Computing

- MATH 1551 Differential Calculus 2
- MATH 1554 Linear Algebra 4

All other majors 1

Select one of the following:

- MATH 1711 Finite Mathematics 4

or MATH 1551 Differential Calculus & MATH 1553 Intro to Linear Algebra 4

Honors versions of the above courses are also accepted.

1 In the case of a degree (major) that is jointly offered and the Colleges' requirements in this area are different, the student must complete the course that is specified in the curriculum for the degree, regardless of which college is the declared "home" of the student. This area of the Core Curriculum is driven by the requirements of the specific degree program, not by the general requirements of the College, if a degree is jointly offered.

Core Area E

Core Area E: Social Sciences

Area E is satisfied by completion of 12 credit hours as follows:

Select one of the following:

- HIST 2111 United States to 1877

HIST 2112 United States since 1877
- POL 1101 Government of the U.S.
- INTA 1200 American Government
- PUBP 3000 US Constitutional Issues

Select 9 credit hours from the following list.

Total Credit Hours 12

Some social science courses also carry the ethics attribute. Those courses (p. 100) may be used to satisfy both the SOC SCI and the Ethics (p. 100) requirements. Credit not awarded for both POL 1101 and INTA 1200.

Any courses completed that were listed in prior catalogs as satisfying the humanities/social science requirement and were completed while that catalog was in effect may also be used to satisfy this requirement.

Students can receive three credit hours for any one of:

Select one of the following:

- ECON 2100 Economics and Policy
- ECON 2101 The Global Economy
- ECON 2105 Prin of Macroeconomics
- ECON 2106 Prin of Microeconomics

Total Credit Hours 3

The only combination for which students can receive six credit hours is ECON 2105 together with ECON 2106.

Undergraduate Research courses numbered 2698, 2699, 4698, and 4699 cannot be used to fulfill requirements for Social Sciences.

Transfer Students: Please be aware that when you see courses on your GT record that are listed with an "X" in the number (ECON 3XXX or JAPN 10X2, for example) it means that these are transfer courses and although there were not equated exactly with a GT course, they may have been accepted to meet a Core area such as Humanities and Social Science. If you review your records in DegreeWorks (http://www.degreewoks.gatech.edu), you will be able to see how your transfer credit applies to your GT degree program. Refer to your academic advisor for more information.

Social Sciences Courses

- ARCH 3135 City Literacy 3
- ARCH 4107 Intro to Historic Preser 3
- ARCH 4126 Paris Urban History 3
- ARCH 4137 Postwar Arch & Urbanism 3
- ARCH 4335 Social Practice of Arch 3
- ARCH 4770 Environmental Design 3

Georgia Institute of Technology - DRAFT COPY 99
Core Area F

Core Area F - Lower-Division Major Requirements

Core Area F requirements vary with degree and major. It is expected that there will be 18 credit hours of lower division requirements in each major.

Ethics

The courses listed below carry the Georgia Tech-specific Ethics attribute. While some courses (as designated) meet Humanities (p. 93) or Social Science (p. 97) requirements, not all of the courses listed below will meet Core requirements. Additionally, some programs may require certain ethics courses to fulfill their degree requirements. Check with the major school accordingly.

Global Perspectives

Important Note:

On March 9, 2016, the Board of Regents of the University System of Georgia approved a revision to system-wide policies related to the Core Curriculum.

1. Institutions in the University System of Georgia will not be required to identify or track overlay requirements related to US Perspectives, Global Perspectives, and Critical Thinking.
2. Students will not be required to complete the overlay requirements from this point forward.
3. Students who are scheduled to graduate in the Spring 2016 Semester and who have not completed the overlays may graduate without fulfilling this requirement.

U.S. Perspectives

Important Note:

On March 9, 2016, the Board of Regents of the University System of Georgia approved a revision to system-wide policies related to the Core Curriculum.

1. Institutions in the University System of Georgia will not be required to identify or track overlay requirements related to US Perspectives, Global Perspectives, and Critical Thinking.
2. Students will not be required to complete the overlay requirements from this point forward.
3. Students who are scheduled to graduate in the Spring 2016 Semester and who have not completed the overlays may graduate without fulfilling this requirement.

Wellness

Wellness Requirement

All undergraduate students attending Georgia Tech must satisfactorily complete a wellness requirement.

APPH 1040 Sci Foundation of Health 1
APPH 1050 Sci of Phys Act & Health 2

1 Previously offered as HPS 1040 (Health).

Credit/Tests & Scores

- Advanced Levels (A-Levels) (p. 101)
- Advanced Placement Exams (p. 101)
- Advanced Standing (p. 103)
- Departmental Exams (p. 103)
- French Baccalaureate (p. 103)
- German Language Exams (DSD) (p. 103)
- International Baccalaureate Exams (p. 103)
- ROTC Credit (p. 104)
- Regents’ Testing Program (p. 104)
- SAT II Subject Tests (p. 104)
- Transfer Courses with ‘X’ Numbers (p. 105)
- Transfer Credit (p. 105)
- Undergraduate Students Taking Graduate Courses (p. 106)

Advanced Placement Exams

Students entering Georgia Tech may receive college credit based upon their scores on the College Board Advanced Placement (AP) Exams taken in conjunction with designated high school advanced placement classes, SAT II Subject Tests, The International Baccalaureate, or A-Level Examinations for credit. All examinations must be completed prior to the student’s enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an Examination for Advanced Standing.

</table>

1. With a score of 4 or 5 in both macroeconomics and microeconomics, a student could instead elect to receive 3 semester hours of credit for ECON 2100.
2. HTS 1XXX represents a 1000 level elective course.
3. Students cannot receive credit for both INTA 1200 and POL 1101.
4. Students who receive a score of 4 will be contacted by the School of Physics after the AP scores are received (early in August each year) with information about taking a placement test to validate the credit. If students pass the test, they will be awarded credit.

SAT II Subject Tests (p. 104)

International Baccalaureate (p. 103)
Advanced Standing

Examinations for Advanced Standing
1. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination. Such an examination is called an "Examination for Advanced Standing."
2. Examinations for advanced standing require the recommendation of the department in instruction in which the course is offered, payment of the appropriate fee to the Office of the Bursar, and authorization by the Office of the Registrar.
3. Examinations for Advanced Standing will usually be offered during the Final Examination Period.
4. A student will not be allowed to take an Examination for Advanced Standing in a given course more than twice.
5. Students will not be allowed to take an Examination for Advanced Standing in a course for which any prerequisite has not been met, except with the consent of the school offering the course.
6. An Examination for Advanced Standing will be reported with an "S" or "U" grade. Neither grade will be included in the calculation of grade-point average (GPA).
7. Advanced standing is not allowed for laboratory or studio classes, except with the consent of the school offering the course.
8. Students may not use more than nine credits of advanced standing to meet degree requirements.
9. Students may submit the Advanced Standing Application and Fee to obtain six to eight hours of proficiency credit for foreign language at the 1001 or 1002 levels upon completion of two classes in the same language at the 2000 level or higher with a minimum grade of "C."

Advanced Standing Form (http://www.registrar.gatech.edu/students/formlanding/advstanding.php)

Departmental Exams

Advanced Placement in Mathematics
The School of Mathematics will offer optional GT advanced placement mathematics examinations to incoming freshmen who wish to test out of MATH 1113, MATH 1551 (Differential Calculus), MATH 1552 (Integral Calculus) and/or MATH 1553 (Intro to Lineal Algebra).

If a student already has GT credit for MATH 1551 the student does not have to take the optional GT Advanced Placement exam for MATH 1551. Such a student may elect to take the optional GT Advanced Placement exam for MATH 1552.

French Baccalaureat
Students entering Georgia Tech may receive college credit based upon their scores on the College Board Advanced Placement (AP) Exams taken in conjunction with designated high school advanced placement classes, SAT II Subject Tests, The International Baccalaureate, Advanced Levels (A-Levels), and/or Georgia Tech Departmental Exams.

Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate, or A-Level Examinations for credit. All examinations must be completed prior to the student’s enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an Examination for Advanced Standing.

Georgia Tech offers three voluntary ROTC programs: Army, Navy, and Air Force.

Depending on the student’s major, Basic and Advanced ROTC classes count as a portion of elective credit. (Students may apply a maximum of 4 credit hours in Basic ROTC courses and six credit hours in Advanced ROTC courses toward meeting the elective requirements for any degree at the discretion of the school.) Consult specific colleges to determine the amount of hours that will count toward a degree. After earning a baccalaureate degree and completing the Advanced ROTC courses for any of the three services, a student may receive a commission as an officer in either the reserve or active forces.

Students accepted into the program earn more than just money for a college degree. Cadets and midshipmen receive training and experience in the one quality which is always in great demand: Leadership.

Students may apply a maximum of 4 credit hours in basic (1000-2000 level courses) ROTC courses and six hours in advanced (3000-4000 level) ROTC courses toward meeting the free elective requirements for any degree. Students should begin taking basic ROTC courses during the first term they are enrolled. For further information, see individual curricula for the schools. Please note some departments may have stricter guidelines regarding ROTC courses.

**Regents’ Testing Program**

**Effective Spring 2010**

The Regents’ exam is no longer required at Georgia Tech as a result of a recent decision by The Board of Regents’.

**SAT II Subject Tests**

Students entering Georgia Tech may receive college credit based upon their scores on the College Board Advanced Placement (AP) Exams taken in conjunction with designated high school advanced placement classes, SAT II Subject Tests, The International Baccalaureate, and/or Georgia Tech Departmental Exams.

Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate, or A-Level Examinations for credit. All examinations must be completed prior to the student’s enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an Examination for Advanced Standing.

Policy on Transfer Credit

Transfer Credit Policy

In domestic and international situations, students may attend another institution as a transient student during terms when not enrolled at Georgia Tech. Students should discuss their course selection with their academic advisor to ensure transferability and terms when not enrolled at Georgia Tech. Students should discuss their course selection with their academic advisor to ensure transferability and terms when not enrolled at Georgia Tech. Students should seek advisement from their academic unit regarding the use of these courses toward fulfilling degree requirements.

Transfer Credit

The basic policy regarding the acceptance of courses by transfer is to allow credit for courses completed with satisfactory grades (C or better) at other accredited colleges and universities in the United States and Canada, provided the courses correspond in time and content to courses offered at Georgia Tech. The Institute will not accept credit for courses successfully completed at another institution but previously taken at Georgia Tech unless the final grade received at Georgia Tech is a "W." The student must request and file an official transcript of transfer courses before the Institute can award credit. Coursework completed at colleges and universities outside the United States and Canada will be evaluated on a case-by-case basis. Transfer credit is not calculated in the Georgia Tech grade-point average.

Students may attend another institution as a transient student during terms when not enrolled at Georgia Tech. Students should discuss their course selection with their academic advisor to ensure transferability and applicability toward their degree programs. With the exception of officially sanctioned cross-enrolled programs, students are not to be enrolled at Georgia Tech and another institution during the same term without the prior approval of the Institute Undergraduate Curriculum Committee or Institute Graduate Curriculum Committee, as appropriate.

Transfer Credit Policy

Policy on Transfer Credit

A. Only official transcripts from other schools may be used to evaluate and/or award credit.
   • New students must request that an official transcript from all previously attended colleges and universities be mailed to the Admissions Office.
   • Georgia Institute of Technology
     Undergraduate Admissions Office
     Atlanta, GA 30332-0320
   • Current or previously enrolled Georgia Tech students must have an official transcript from all other colleges and universities mailed to:
     • Georgia Institute of Technology
       Office of the Registrar

B. The basic policy regarding the acceptance of courses by transfer is to allow credit for courses completed with satisfactory grades (C or better) in other accredited colleges provided the courses correspond in time and content to courses offered at the Georgia Institute of Technology. Georgia Tech assumes responsibility for the academic quality of any work or credit recorded on the institution's transcript. Transfer credits will be accepted from newly-formed institutions of the University System of Georgia prior to accreditation.

C. Georgia Tech will not award credit for courses successfully completed at another institution which were previously taken at Georgia Tech.

D. A petition to the faculty must be approved to use course work more than ten years old.

E. Georgia Tech reserves the right to test the proficiency of any student in course work transferred from other institutions and to disallow credit in courses in which the student cannot demonstrate acceptable proficiency.

Transfer Credit for Online Courses

A. Currently, online versions of all Lab Science courses, International Affairs, Psychology, Economics and courses equivalent to HIST 2111 and HIST 2112 are not eligible for transfer credit consideration. In most cases Mathematics courses are not eligible for consideration unless sufficient documentation is provided to show the course exams are proctored. Students interested in taking the online versions of any Mathematics courses that meet this requirement, or have questions regarding this policy, the Office of the Registrar via email: comments@registrar.gatech.edu.

Requesting Transfer Credit for Courses Not Previously Evaluated

A. Check the online equivalency database (https://oscar.gatech.edu/pls/bprod/wwsktrna.P_find_location) for updates. New evaluations are posted daily.

B. Notify the Office of the Registrar’s Transfer Credit Department of any not-awarded credit. Send an email to comments@registrar.gatech.edu

C. Using the Transfer Credit web site (https://transfercredit.gatech.edu), submit courses for evaluation.

About Transfer Credit

A. Georgia Tech does not offer correspondence courses and does not grant credit for correspondence courses taken at other institutions. Academic units reserve the right to take such things as delivery method into consideration. For example, on-line courses and computer-instructed courses may not be accepted by some academic units for credit.

B. Georgia Tech does not grant credit for the College Level General Educational Development Tests, CLEP USAFI courses, or courses completed at any United States armed services, with the exception of the military academies and schools with full accreditation by a regional accrediting body.

C. Georgia Tech does not grant credit for professional certificate programs.

D. The following items are among other circumstances in which non-resident credit is not granted:
Undergraduate Students Taking Graduate Courses

- Courses previously completed at Georgia Tech.
- College courses taken to meet freshman admissions requirements.
- Remedial courses.
- Courses basically secondary school or pre-college level.
- Courses with essentially non-academic content.
- Vocational courses.
- Learning support courses.

E. Non-resident credit is not computed as a part of the student's grade point average at Georgia Tech.

Transfer Credit for Online Courses

A. Currently, online versions of all Lab Science courses, International Affairs, Psychology, Economics and courses equivalent to HIST 2111 and HIST 2112 are not eligible for transfer credit consideration. In most cases Mathematics courses are not eligible for consideration unless sufficient documentation is provided to show the course exams are proctored. Students interested in taking the online versions of any Mathematics courses that meet this requirement, or have questions regarding this policy, the Office of the Registrar via email: comments@registrar.gatech.edu.

Advanced Placement (AP) and International Baccalaureate (IB)

A. Follow the steps below to view AP or IB equivalencies.
   1. Go to https://oscar.gatech.edu
   2. Select the "Transfer Equivalencies" icon
   3. Select the asterisk (*) from the pull down menu
   4. Click "Continue" button
   5. Select your option from the pull down menu
   6. Click "Get Courses" button

B. Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate or A-Level Examinations for credit. All examinations must be completed prior the student's enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an "Examination for Advanced Standing (p. 103)."

Transfer Equivalency Catalog (https://oscar.gatech.edu/pls/bprod/wwsktrna.P_find_location)

Undergraduate Students Taking Graduate Courses

A senior with a grade-point average (GPA) of at least 2.7 may enroll in a graduate course if she/he obtains permission from the school or department offering the course.

1. Up to twelve credit hours earned as an undergraduate student may count toward earning a master's degree if the following conditions are satisfied.
   a. The student was in residence at Georgia Tech for at least two semesters before registering for the course(s).
   b. The student did not apply credit for the course toward a bachelor's degree. Special exceptions may apply in certain schools, as described below.
      i. If student pursues both a bachelor's and master's at Georgia Tech, and if both degrees are in the same discipline, she/he may apply up to six credit hours of graduate-level credit in the major discipline to satisfying the requirements for both degrees. Because some master's degree programs do not have any unique undergraduate counterpart program, and because some master's programs are offered by several schools, the definition of "discipline" will be broadly interpreted in such cases. To qualify for this option, a student must complete the bachelor's degree with a cumulative grade-point average (GPA) of 3.5 or higher, and she/he must complete the master's degree within a two-year period following the award date of the bachelor's degree.

Graduate Course Option

Students completing both a bachelor's and master's in the same discipline at Georgia Tech may use up to six credit hours of graduate-level coursework in the major discipline for both degrees. Recognizing that some master's degree programs do not have a unique undergraduate counterpart program and that some master's programs are offered by several schools, the term "discipline" in the prior sentence will be broadly interpreted in such cases. To qualify for this option, students must complete the undergraduate degree with a cumulative GPA of 3.5 or higher and complete the master's degree within a two-year period from the award date of the bachelor's degree.

See BS/MS Programs (http://catalog.gatech.edu/academics/special-academic-programs/bs-ms-programs) for more information.

New Sequence of Math Core Courses

Disclaimer: New Math Courses in Fall 2015

The School of Mathematics is announcing a new sequence of math core courses starting Fall 2015. The change involves two primary goals which are:

1. to separate the calculus and the linear algebra sequences and
2. to improve the cutting points in the calculus sequence.

The old core sequence of calculus and linear algebra involved MATH 1501, MATH 1502, MATH 1551, and MATH 1552. However, a large portion of MATH 1502 was material from linear algebra.

In the new math core, the calculus material will be covered in MATH 1551, and MATH 1552. The linear algebra material can be covered in one of three equivalent courses:

<table>
<thead>
<tr>
<th>Course Number</th>
<th>Title</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 1553</td>
<td>Intro to Linear Algebra</td>
<td>2</td>
</tr>
<tr>
<td>MATH 1554</td>
<td>Linear Algebra</td>
<td>4</td>
</tr>
<tr>
<td>MATH 1564</td>
<td>LinAlg w Abstract Vec Sp</td>
<td>4</td>
</tr>
</tbody>
</table>

A description of the new courses can be found at: http://www.math.gatech.edu/academics/undergraduate/new-core-courses-starting-fall-2015.

The Advanced Placement credit obtained from AP exams of the College Board, International Baccalaureate, and others can be found at: http://
Undergraduate Minors

An undergraduate minor is a defined program of study outside the student’s major field. Minors are intended to broaden the student’s education by encouraging and officially recognizing knowledge obtained by the student in fields other than their major.

Minors are typically offered by Schools which also offer a major. A program of study for the minor is outlined and it may include more than one option or “track”. Tracks allow students to focus on an aspect of the academic field that is of particular interest to them. It is expected that there will be depth of the program of study and that specific educational objectives will be met upon completion of the minor.

Other minors are offered where there is no undergraduate degree-granting program at Georgia Tech. These minors cover fields which are inherently multidisciplinary; i.e., ones that are covered in part by multiple degree granting academic programs. Multidisciplinary minors require particularly broad Programs of Study which include courses from multiple Schools and/or Colleges.

Program of Study

The program of study for each minor must satisfy the curricular requirements listed below. However, some minors, at the discretion of the offering academic unit(s), may be exempt from some of these requirements, may exceed some requirements, and/or add additional requirements. Consult the advisor for the minor program for the specific requirements of that minor.

Requirements for the Program of Study

1. A minor program of study must have at least 15 credit hours of coursework.
2. A minor program of study must include at least 9 credit hours of courses numbered 3000 or above.
3. Courses used to satisfy Core Areas A through E in a student’s major degree program cannot also be used to satisfy the course requirements for a minor.
4. Any free elective course used to satisfy the course requirements of the student’s major degree program may also be used to satisfy the course requirements for a minor.
5. All academic units may designate a block/blocks of courses outside of the student’s major field of study in which the same course can be used to satisfy the course requirements in the student’s major degree program and also be used to satisfy the course requirements for a minor.
6. A multidisciplinary or other minor may contain courses in a student’s major field of study. A maximum of 6 credit hours of such courses may be used to satisfy the course requirements for the minor, provided these courses are not also used to satisfy any course requirement in the student’s major degree program.
7. A maximum of 6 credit hours of Special Topics courses may be included in a minor program or the student may complete 3 credit hours of Special Topics and 3 credit hours of either Special Problems or Undergraduate Research. Students may not use 6 credit hours of either Special Problems or Undergraduate Research for a minor.
8. A maximum of 3 credit hours of transfer credit may be used to satisfy the course requirements for a minor. This includes courses taken at another institution or credit earned through the AP or IB program, assuming the scores meet Georgia Tech minimum standards.
9. A course may not be used to satisfy the requirements of more than one minor or certificate.
10. All courses counting toward the minor must be taken on a letter-grade basis.
11. All courses used to satisfy the course requirements for a minor must be completed with a grade of C (2.00) or better.

Other Guidelines

1. A student should select a minor in consultation with an advisor in their major field of study. The minor selected must be:
   a. outside of the student’s major, or
   b. a multidisciplinary minor that may include some courses in the student’s major field of study. (See requirement #6 above.)
2. The student should also consult with an advisor in the minor field of study who can inform and advise the student about the specific requirements of the minor. Some of these may be different than the requirements listed above.
3. Students can declare a minor at any time. However, it is recommended that students declare the minor as soon as they have made the decision so that they can monitor their progress using the online degree audit and with their advisor. Declaration of the minor also provides information to the relevant academic units that is helpful in planning courses. The minor declaration form is on the Registrar’s Office website at: http://www.registrar.gatech.edu/students/formlanding/changeminor.php.
4. The student must complete a minor program of study form at the same time the online application for graduation is completed, generally during the semester before the terminal one. Program of study forms for all minors can be found here (http://catalog.gatech.edu/academics/minors/#minorsofferedtext).
5. The minor is conferred at the same time the major degree is conferred. The major degree and minor will be recorded on the student’s transcript. The minor will not appear on the student’s diploma.
6. Minors will not be conferred retroactively upon students who have graduated.

Administrative Guidelines

1. All proposals for a minor must originate from the faculty of the academic unit(s) offering the minor. Minors may originate in several ways, such as:
   a. a minor in a field in which Georgia Tech offers a degree program through a single academic unit (College/School),
   b. a multidisciplinary minor, in which the subject matter is covered by multiple degree granting academic programs in multiple academic units (Colleges/Schools),
   c. a minor in a field in which there is no undergraduate degree-granting program at Georgia Tech. In this case, the proposed minor must be in a recognized academic field or discipline and
the offering academic unit(s) must have in place sufficient
courses, faculty, and facilities.

2. All proposals for a minor must include a statement of the educational
objectives of the minor and how the program of study is used to
satisfy these objectives.

3. The academic unit(s) offering the minor may choose to require an
admission process, set admission standards, and/or set enrollment
limits.

4. The academic units(s) offering the minor may request to be exempted
from some of the curricular requirements applied to the program of
study or add additional requirements if this is justified as essential to
meeting the stated educational objectives of the minor.

5. For a multidisciplinary or other minor, a maximum of 6 semester
hours of courses in the student’s major field of study may be used
to satisfy the course requirements for a minor when their inclusion
is justified as essential to meeting the stated educational objectives
of the minor. However, these courses cannot also be used to satisfy
any course requirement in the student’s major degree program unless
they belong to the special block of courses described in requirement
#5 of the Requirements for the Program of Study of the minor.

6. All proposals for a minor must include a plan for advising students
pursuing the minor and for approving a student’s completion of the
required program of study.

7. All proposals for a minor must be endorsed by the appropriate
College Dean(s) and by the Provost.

8. All undergraduate minors must be approved by the Institute
Undergraduate Curriculum Committee and by the Academic Senate.
Multidisciplinary minors must also be approved by the Chancellor of
the Board of Regents.

9. Information and relevant documents for proposing a new minor can
be found at http://www.icc.gatech.edu/submit/requirements.php?
type=101

ADMISSIONS

- Graduate Admissions (p. 113)
- Undergraduate Admissions (p. 114)

Graduate Admissions

Prospective students may obtain information and apply for admission via the Graduate Studies website (http://www.grad.gatech.edu). The site provides information regarding minimum admission standards and relevant deadlines for individual programs.

Applicants for Georgia Tech’s graduate programs should hold a bachelor’s degree from a regionally accredited institution and be able to demonstrate academic excellence. Students should also be able to demonstrate experience with their selected field of graduate studies such as an undergraduate degree in the field or work experience in a related job.

- Admissions Information (p. 113)
- Graduate Record Exam (GRE) (p. 113)
- Orientation - New Students (p. 113)
- Reactivation of Application (p. 113)
- Readmission (p. 113)
- TOEFL for Int’l Students (p. 113)
- Transfer of Credit (p. 114)
- Types of Standing (p. 114)

Admissions Information

Anyone who is qualified is welcome to seek admission to Georgia Tech, and anyone who applies for and accepts admission can be confident that the policy and regular practice of the Institute will not discriminate against him or her on the basis of race, religion, sex, or national origin.

Verification of credentials and certification of compliance with Institute admissions policies shall be the responsibility of the Office of Graduate Studies. Policies and procedures that are approved by the Office of the President, Board of Regents of the University System of Georgia, and the Academic Faculty Senate of the Institute shall be applied in determining eligibility. From those eligible candidates, final admission decisions shall be the responsibility of the admitting department. Satisfying minimal standard does not guarantee admission, since the number of eligible applicants generally far exceeds the number of places available. As a result, many well-qualified applicants cannot be accommodated.

The criteria used in determining each applicant’s eligibility for consideration shall include:

1. Evidence of award of a bachelor’s degree, its equivalent, or higher degree (prior to matriculation) from a regionally accredited institution; demonstrated academic excellence; and evidence of experience in the selected field of graduate study.
2. For international applicants, satisfactory scores on the Test of English as a Foreign Language (TOEFL).

Departments make final admission decisions from the pool of eligible candidates based on a combination of factors, including academic degrees and records, the statement of purpose, letters of recommendation, test scores, and relevant work experience. Departments may also consider the appropriateness of the applicant’s goals to the degree program in which they are interested and to the research interests of the program’s faculty. In addition, consideration may be given to how the applicant’s background and life experience would contribute significantly to an educationally beneficial mix of students.

Graduate Record Examinations (GRE)

Official GRE general test scores are required by most graduate programs, except those in the Scheller College of Business, which require official Graduate Management Admission Test (GMAT) scores. GRE subject test scores are required for some programs. Check the Graduate Studies (http://www.gradadmiss.gatech.edu/degree-programs) website for test requirements in specific programs.

Orientation - New Students

Each new graduate student should plan to attend one of the Institute’s orientation sessions. Information on these sessions will be posted on the Graduate Studies website at www.grad.gatech.edu (http://www.grad.gatech.edu). In some cases, individual programs will also hold program orientations. New students should plan to attend both the Institute and the program orientation as the same information is not covered in these separate sessions.

Reactivation of Application

Applicants to a Georgia Tech graduate program who do not enter in the term for which they originally applied, and subsequently wish to be considered for a later term, must reactivate their applications for the new term by written request to the program to which they originally applied. Since the Graduate Studies office keeps files on never-entered students for one academic year only, students who delay more than one academic year in the reactivation request must reapply and provide a new set of application materials. The number of reactivations per applicant is limited.

Readmission

Students who interrupt the continuity of their graduate programs by not registering for two or more consecutive terms must seek readmission by filing a completed Request for Readmission form with the Registrar. Individuals who have received a graduate degree from Georgia Tech and who wish to reenter to receive an additional graduate degree (at the same level or higher) must also request readmission through this process. (It is not necessary to file a new application.) Readmission forms are available from the Office of the Registrar (http://www.registrar.gatech.edu/students/readmission.php). For more information, see the policy for withdrawal and readmission (p. 157).

Students who have been out two or more terms will be required to meet health, lawful presence, and other certification requirements in effect at the time of readmission.

TOEFL for International Students

All international students from countries in which English is not the primary native language must take the Test of English as a Foreign Language (TOEFL), except international students who have attended a college or university in the United States for at least one academic year (two semesters or three quarters). No other language test may be substituted. The TOEFL is the only test accepted by Georgia Tech.
The minimum score for graduate admission required by Georgia Tech is:

- 577 (paper based), or
- 90 (Internet based) and minimum section scores of 19

Some academic programs require higher scores. (See the program(s) of choice in the degree program listing found at www.grad.gatech.edu (http://www.grad.gatech.edu) to determine the minimum scores required by each program.) Since the results of this test constitute part of the material reviewed for admission to graduate study at Georgia Tech, students must arrange to have the Educational Testing Service send their official scores to the Graduate Studies office as early as possible.

**Transfer of Credit**

A student may not apply for transfer credit until after matriculation at Georgia Tech. The courses to be transferred would typically be those appearing on the approved program of study form for the masters degree. A doctoral student normally does not request transfer credit. The rules relative to and the process for obtaining transfer of credit for graduate-level courses are as follows:

1. Student’s in a master’s degree program requiring fewer than 33 semester credit hours may receive up to six hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree.

   A student in a master’s degree program requiring 33 semester credit hours or more may receive up to nine hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree. The student must supply a current transcript for this evaluation.

2. To obtain transfer of credit, the student must complete the following procedure:
   a. The student will confer with the graduate advisor to ascertain whether the courses to be transferred are a logical part of the student’s graduate program;
   b. If the courses are appropriate, the student will deliver to the school that teaches such courses a copy of the current transcript, necessary descriptive materials including catalog descriptions, and textbooks used for evaluation. The faculty of the appropriate school will determine the equivalent Georgia Tech course and the number of credit hours accepted. The faculty member who prepares the transfer credit form should have the school chair cosign it. The school should then send the form directly to the registrar with a copy of the student’s Approved Program of Study attached;
   c. If the student wishes to transfer more than the number of hours permitted in item one listed above, a petition must be submitted to the Institute Graduate Curriculum Committee that includes statements of possible justification for the granting of such a petition, transfer credit forms, and the recommendation of the student’s school chair.

3. A joint enrollment student may receive graduate credit for up to one-third of the hours required for the degree for graduate courses taken at Emory University or Georgia State University provided that the following is true:
   a. Georgia Tech does not offer such courses;
   b. The student’s advisor and school chair approve the courses in advance and in writing;
   c. The student passes the courses with a C or better. Advance approval is satisfied when the courses appear on the student’s proposed Program of Study.

4. A student may not receive transfer credit from universities outside the United States and Canada unless the courses were taken at a foreign institution or university that is accredited by a Canadian or U.S. regional accrediting board or has a signed partner agreement with Georgia Tech. In any other case, an international student can obtain credit for courses previously taken but not applied toward another degree by filling out an Examination for Advanced Standing Authorization Request Form, paying the appropriate fee at the Bursar’s Office, and passing the examination for advanced standing. The school or college that normally teaches the equivalent course will administer any necessary examinations.

**Types of Standing**

Applicants holding a bachelor's degree in an appropriate field from a regionally accredited institution will be given full graduate standing upon acceptance and matriculation, provided their previous work is of sufficient quality to indicate immediate success in advanced study.

If the work of an applicant holding an approved bachelor’s degree is deficient in content or quality so that supplemental study or demonstrated ability is necessary, the applicant may be given conditional graduate standing upon acceptance.

Applicants who do not wish to qualify for an advanced degree at Georgia Tech, but demonstrate the potential benefits of their participation in advanced study, may gain admission as special non-degree graduate students. Students who are admitted with special non-degree standing for failure to submit official transcripts or for other administrative reasons may apply not more than 16 semester credit hours taken on special non-degree standing toward a degree.

Graduate students in good standing at other U.S. universities may enroll at Georgia Tech as transient graduate students by filing an application for admission and by providing a letter of verification of good standing status from the registrar of the institution at which they are currently enrolled. Work undertaken in transient standing will not apply toward a Georgia Tech degree.

Undergraduate Admissions, not Graduate Studies, will admit students working toward a second bachelor’s degree.

In addition to full, conditional, and special non-degree graduate standing, graduate students will be classified by academic standing according to their GPAs: good standing, warning, probation, or drop. (The graduate GPA includes the grades on all courses scheduled by the student after admission to graduate study.) For specific information, see the scholastic regulations (p. 119).

**Undergraduate Admissions**

- Freshmen (p. 115)
- Transfer (p. 116)
- Readmission (p. 119)
Freshmen Admission

General Information for First-Year Admission

First-year students may only apply for the summer or fall terms. A completed application for first-year admission includes a non-refundable application fee, high school transcript (or equivalent), and SAT I and/or ACT scores sent directly to the Office of Undergraduate Admission. International applicants and applicants who have been homeschooled may be required to submit additional information. We accept both the Coalition Application (https://www.mycoalition.org/public/info/gatech) and Common Application (https://www.commonapp.org/school/georgia-institute-technology) for first-year admission. We do not have a preference, and there is no advantage in the admission process to using one application or the other. Students should select the application they are most comfortable submitting.

It is the applicant's responsibility to ensure that all required elements, including the application, non-refundable application fee, high school transcript, and SAT I and/or ACT scores are submitted by stipulated deadlines. All elements must be received prior to the first-year application deadlines. More information regarding first-year application deadlines can be found at www.admission.gatech.edu/apply/freshman-application/application-dates (http://www.admission.gatech.edu/apply/freshman-application/application-dates).

The Office of Undergraduate Admission will consider all completed applications on file by the stated deadlines. For more information regarding first-year admission to the Georgia Institute of Technology, visit www.admission.gatech.edu (http://www.admission.gatech.edu), call 404.894.4154, or email admission@gatech.edu.

Academic Advising

The appointed academic advisor is the key source of information about the college. All entering students are assigned an academic advisor depending on their declared majors at Georgia Tech. To find the assigned advisor, visit the advising Web page (http://advising.gatech.edu). Students will meet their assigned advisors at orientation and at regular intervals during their college careers. Advisors welcome questions about different programs and areas.

Academic advisors are the guides through the college experience. They will help to identify the correct major, curriculum, minor, certificates, study abroad, internships, campus resources, and much more.

While the degree requirements are posted on the Registrar's Office web page (http://registrar.gatech.edu), it is essential to check in with the assigned advisor at least once a year (if not more) to ensure that requirements are being met and communication lines are open. Also, regular contact with the advisor will enhance each student's college experience and help them reach their future goals.

Academic Advising (http://www.advising.gatech.edu)

Policy on the Competitive Admission of Freshman Applicants

Georgia Tech is a top-ten public university determined to define the technological research university of the 21st century. Publicly funded and governed by the University System of Georgia, the Institute is committed to preparing students for global leadership, effectiveness, and innovation.

Consistent with its mission to improve the human condition in Georgia, the United States, and around the globe, Georgia Tech counts the diversity of its students among its greatest strengths and an integral component of its educational process and academic excellence.

The undergraduate admissions process, which reflects the Institute's educational mission and motto of "Progress and Service," seeks to identify those applicants, who as individuals and as a group, will benefit from the campus learning environment, and thus enrich the entire student body. The process is structured to build entering classes of students whose varied backgrounds and experiences provide substantial evidence of their potential to:

• Meet the Institute's requirements for academic success
• Embrace the diverse campus community
• Benefit substantially from the Institute's curriculum and scholarly pursuits
• Develop as leaders, innovators, global citizens, and engaged learners
• Contribute to the intellectual, cultural, social, and civic life of the Institute, state, and nation

Each year, Georgia Tech must make fine distinctions among large numbers of highly qualified applicants. The ability to assess consistently all information presented in the application becomes increasingly important. Therefore, the Office of Undergraduate Admission employs a rigorous review process in order to provide an individualized and holistic evaluation of every application. Each applicant is assessed on the basis of achievements and potential in a broad range of categories, viewed in the context of the opportunities and challenges the applicant faced. These categories include:

• Strength of educational performance, as measured by the nature and rigor of high school curriculum and academic achievements
• Potential for academic success, as evidenced by performance on nationally normed standardized tests
• Potential to contribute to the overall intellectual climate and make a positive contribution to campus and community life
• Demonstrated commitment to intellectual engagement

Appeals concerning individual admission decisions shall be addressed to the Director of the Office of Undergraduate Admission or the Vice Provost for Enrollment Services.

More information:

• Undergraduate Admission (http://admission.gatech.edu)

Required Computer Ownership

In an effort to foster equal access to computers and to make the most of the teaching and learning technology available at Georgia Tech, all undergraduate students entering Georgia Tech under this or subsequent catalogs are required to own or lease a computer. The minimum hardware and software requirements (as well as purchasing and financing options)
are sent each spring to students accepted for the summer and fall semesters, and in the fall to students accepted for spring semester.

Because computer ownership is mandatory, an average cost for the minimum hardware and software required can be included in computing a new student’s cost of education for the purpose of determining their eligibility for all forms of student financial aid. Students should contact the Office of Scholarships and Financial Aid for more information.

Student Computer Ownership Website (http://www.sco.gatech.edu)

International Students

International students should access further information regarding application policies and procedures and other basic information helpful to applicants from other countries by visiting www.admission.gatech.edu/international (http://www.admission.gatech.edu/international). International students will not receive financial aid or institutional scholarships.

For more information, email the Office of Undergraduate Admission at admission@gatech.edu.

Office of International Education (https://www.oie.gatech.edu)

Office of Undergraduate Admission (http://admission.gatech.edu)

FASET (New Student Orientation)

Familiarization and Adaptation to the Surroundings and Environ of Tech (FASET) is coordinated by The Office of New Student and Transition Programs.

FASET is Georgia Tech’s orientation program for incoming undergraduate students and their families.

• First-year students
• New transfer students
• New exchange students
• Parents, family members, and guests of these students

FASET has been a Georgia Tech tradition since 1972. Orientation sessions are offered at the start of each semester for transfer and exchange students and during the summer for incoming first-year students.

During FASET, new students receive academic advisement, register for their first semester of courses, and complete other business items. In addition, Georgia Tech faculty, staff, and administrators discuss important campus services, student organizations, the undergraduate curriculum, and academic programs. Most importantly, students, parents, and guests have the opportunity to meet and interact with current Georgia Tech students and to get to know other new students, parents, and guests.

For more information, call 404.894.6897 or visit www.transitionprograms.gatech.edu (http://www.nssp.gatech.edu).

Wreck Camp

Wreck Camp is facilitated by the Office of New Student and Sophomore Programs. It is an extended orientation experience for incoming students that brings together new and current students to jump-start the college experience in a fun “summer camp” setting. Wreck Camp assists students in their transitions to Georgia Tech by helping them develop diverse social networks and strengthening their ties to the Institute while introducing them to the Institute’s culture and traditions. For three days and two nights, incoming students go with current student leaders to an off-campus retreat center where they share experiences in which they learn more about Georgia Tech, its traditions, and one another.

The Office of New Student and Sophomore Programs (http://www.nssp.gatech.edu/content/611/wreck-camp) is part of the Division of Student Life.

Transfer Admissions

The Application for Transfer Admission is available online at www.admission.gatech.edu/apply (http://www.admission.gatech.edu/apply). To be eligible for admission, students must complete the application, submit the non-refundable application fee, and submit official transcripts from all United States colleges or universities ever attended. Students who have completed any coursework outside the United States will be required to submit additional information. All documents must be original and certified as appropriate.

The Office of Undergraduate Admission will consider all completed applications on file by the stated deadlines, provided spaces are available for the particular term or academic year for which the student applies. For more information including admission requirements and deadlines regarding transfer admission to the Georgia Tech, visit www.transfer.gatech.edu (http://www.transfer.gatech.edu) or call 404.894.4154.

More information:

• Undergraduate Admission | Transfer Admission (http://admission.gatech.edu/transfer)
• Office of the Registrar | Transfer Credit (http://www.registrar.gatech.edu/students/transfercredit.php)
• Office of the Registrar | Transfer Equivalency Catalog (https://oscar.gatech.edu/pls/bprod/wwsktrna.P_find_location)

Policy on the Competitive Admission of Transfer Applicants

All qualified persons are equally welcome to seek transfer admission to Georgia Tech, and all persons may apply for and accept admission confident that the policy and regular practice of the Institute will not discriminate against them on the basis of race, religion, sex, or national origin.

Projections of the number of transfer students to be admitted and enrolled in any year will be determined

1. by the capacity of the Institute and
2. by approved enrollment levels.
If the number of qualified applicants for admission exceeds the number of applicants who can be admitted and enrolled, those to be offered admission will be selected on the basis of

1. the Institute’s judgment of the applicant’s relative qualifications for satisfactory performance in the Institute and
2. recognition of the Institute’s special responsibilities to the residents of Georgia.

The policy of competitive admissions, set forth above, will not prevent the admission of selected applicants who give evidence of possessing special talents for the Institute’s programs requiring such special talents.

The admission of undergraduate students to pursue programs leading to a bachelor’s degree shall be the responsibility of the Office of Undergraduate Admission. That office will apply policies and procedures that are approved by the Office of the President and the Board of Regents of the University System of Georgia.

The criteria used in determining each transfer applicant’s qualifications for admission will include satisfactory evidence of scholastic promise based upon the applicant’s previous academic transfer record.

Appeals concerning individual admission decisions shall be addressed to the director of the Office of Undergraduate Admission.

**Regents’ Testing Program**

**Effective Spring 2010**

The Regents’ exam is no longer required at Georgia Tech as a result of a recent decision by The Board of Regents’.
Sophomore Programs

In collaboration with campus departments and academic units, the Office of New Student and Sophomore Programs provides programs and services to support sophomore success and meet the unique needs of students during this critical academic transition. The overall goals of these programs are to help sophomores in managing and succeeding with sophomore year courses, moving from exploration to decision-making about majors and careers, developing meaningful relationships on-campus and beyond, pursuing involvement and leadership opportunities, and creating a sophomore class identity. These goals are achieved through multiple programs, including:

- Sophomore Leadership Council
- Sophomore Leadership Forum
- Year 2 at Tech E-Newsletter (http://www.nssp.gatech.edu/content/737/year-2-at-tech)
- Sophomore Career Experience (http://www.nssp.gatech.edu/content/411/sophomore-career-experience)

More information is available from the Office of New Student and Sophomore Programs (http://nssp.gatech.edu).

Transfer Credit

The basic policy regarding the acceptance of courses by transfer is to allow credit for courses completed with satisfactory grades ("C" or better) at other accredited colleges and universities in the United States and Canada, provided the courses correspond in time and content to courses offered at Georgia Tech. The Institute will not accept credit for courses successfully completed at another institution but previously taken at Georgia Tech unless the final grade received at Georgia Tech is a "W." The student must request and file an official transcript from Georgia Tech does not award credit for professional certificate programs, courses offered at Georgia Tech. The Institute will not award credit for courses completed with satisfactory grades ("C" or better) at other accredited colleges and universities in the United States and Canada, provided the courses correspond in time and content to courses offered at Georgia Tech. Georgia Tech assumes responsibility for the academic quality of any work or credit recorded on the institution's transcript. Transfer credits will be accepted from newly-formed institutions of the University System of Georgia prior to accreditation.

B. The basic policy regarding the acceptance of the courses by transfer is to allow credit for courses completed with satisfactory grades ("C" or better) in other accredited colleges provided the courses correspond in time and content to courses offered at the Georgia Institute of Technology. Georgia Tech assumes responsibility for the academic quality of any work or credit recorded on the institution's transcript. Transfer credits will be accepted from newly-formed institutions of the University System of Georgia prior to accreditation.

C. Georgia Tech will not award credit for courses successfully completed at another institution which were previously taken at Georgia Tech.

D. A petition to the faculty must be approved to use course work more than ten years old.

E. Georgia Tech reserves the right to test the proficiency of any student in course work transferred from other institutions and to disallow credit in courses in which the student cannot demonstrate acceptable proficiency.

Transfer Credit for Online Courses

A. Currently, online versions of all Lab Science courses, International Affairs, Psychology, Economics and courses equivalent to HIST 2111 and HIST 2112 are not eligible for transfer credit consideration. In most cases Mathematics courses are not eligible for consideration unless sufficient documentation is provided to show the course exams are proctored. Students interested in taking the online versions of any Mathematics courses that meet this requirement, or have questions regarding this policy, the Office of the Registrar via email: comments@registrar.gatech.edu.

Requesting Transfer Credit for Courses Not Previously Evaluated

A. Check the online equivalency database (https://oscar.gatech.edu/pls/bprod/wvscktrna.P_find_location) for updates. New evaluations are posted daily.

B. Notify the Office of the Registrar’s Transfer Credit Department of any not-awarded credit. Send an email to comments@registrar.gatech.edu

C. Using the Transfer Credit web site (https://transfercredit.gatech.edu), submit courses for evaluation.

About Transfer Credit

A. Georgia Tech does not offer correspondence courses and does not grant credit for correspondence courses taken at other institutions. Academic units reserve the right to take such things as delivery method into consideration. For example, on-line courses and computer-instructed courses may not be accepted by some academic units for credit.

B. Georgia Tech does not grant credit for the College Level General Educational Development Tests, CLEP USAFI courses, or courses completed at any United States armed services, with the exception of the military academies and schools with full accreditation from a regional accrediting body.

C. Georgia Tech does not grant credit for professional certificate programs.
D. The following items are among other circumstances in which non-resident credit is not granted:
   - Courses previously completed at Georgia Tech.
   - College courses taken to meet freshman admissions requirements.
   - Remedial courses.
   - Courses basically secondary school or pre-college level.
   - Courses with essentially non-academic content.
   - Vocational courses.
   - Learning support courses.

E. Non-resident credit is not computed as a part of the student’s grade point average at Georgia Tech.

Transfer Credit for Online Courses

A. Currently, online versions of all Lab Science courses, International Affairs, Psychology, Economics and courses equivalent to HIST 2111 and HIST 2112 are not eligible for transfer credit consideration. In most cases Mathematics courses are not eligible for consideration unless sufficient documentation is provided to show the course exams are proctored. Students interested in taking the online versions of any Mathematics courses that meet this requirement, or have questions regarding this policy, the Office of the Registrar via email: comments@registrar.gatech.edu.

Advanced Placement (AP) and International Baccalaureate (IB)

A. Follow the steps below to view AP or IB equivalencies.
   1. Go to https://oscar.gatech.edu
   2. Select the "Transfer Equivalencies" icon
   3. Select the asterisk (*) from the pull down menu
   4. Click "Continue" button
   5. Select your option from the pull down menu
   6. Click "Get Courses" button

B. Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate or A-Level Examinations for credit. All examinations must be completed prior the student’s enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an "Examination for Advanced Standing (p. 103)."

More information:
Transfer Equivalency Catalog (https://oscar.gatech.edu/pls/bprod/wwsktrna.P_find_location)

Readmission

Any student who is not enrolled for two or more consecutive terms (counting Summer Session) must apply for readmission. The Application for Readmission, with all pertinent supporting information, must be submitted to the Office of the Registrar before the deadline for the term for which readmission is requested as listed below:

<table>
<thead>
<tr>
<th>Term Deadline 1</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fall</td>
<td>July 1st</td>
</tr>
</tbody>
</table>

Spring December 1st
Summer April 1st

1 Former students on drop or review status should apply at least two months prior to these deadlines in order to ensure sufficient time for the review process.

The "Rules and Regulations" section in this Catalog contains additional information on readmission.

Students who withdraw from the Institute (receiving all grades of "W") will not ordinarily be permitted to enroll the next succeeding term. If an exception is requested due to unusual circumstances, a Petition to the Faculty must be filed.

Students who have been out two or more terms will be required to meet health, lawful presence, and other certification requirements in effect at the time of readmission.

More information:
   - Withdrawal / Readmission Policies (p. 157)
   - Medical Regulations (p. 165)
   - Lawful Presence Requirement (https://registrar.gatech.edu/info/lawful-presence)

Academic Advising

The appointed academic advisor is the key source of information about the college. All entering students are assigned an academic advisor depending on their declared majors at Georgia Tech. To find the assigned advisor, visit the advising Web page (http://advising.gatech.edu). Assistance

- Graduate Financial Assistance (p. 122)
- Undergraduate Financial Assistance (p. 127)

Graduate Financial Assistance

The Institute offers financial aid from a variety of sources to assist students with the pursuit and completion of their degrees as rapidly as circumstances permit.

Students should address inquiries for financial assistance to the financial aid office of the school in which they plan to study. Graduate school applicants should also investigate national fellowships offered by various foundations, professional organizations, and government agencies; many are listed with the Fellowships Office (http://fellowships.gatech.edu). Educational loans are available for qualified applicants through the Office of Scholarships and Financial Aid. More information about Federal Loan programs and various alternative loan programs may be found at www.finaid.gatech.edu (http://www.finaid.gatech.edu).

- Fellowships (p. 122)
- Out-of-State Tuition Waivers (p. 123)
- Outside Sponsorships (p. 124)
- Veterans Services (p. 125)

Assistantships

Graduate Research Assistantships

Students receiving Graduate Research Assistantships must be registered for at least twelve total graduate credits with at least nine hours attempted for a letter grade or on a Pass/Fail basis and be employed at least one-third of the time by the Institute. Students receiving Graduate Research Assistantships are also eligible for a tuition waiver.

Graduate Teaching Assistantships

Students receiving Graduate Teaching Assistantships must be registered for at least twelve total graduate credits with at least nine hours attempted for a letter grade or on a Pass/Fail basis and be employed at least one-third of the time by the Institute. Students receiving Graduate Teaching Assistantships are also eligible for a tuition waiver.

Graduate Assistantship Schedule and Flexibility Policy

Source: Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/personal-services-reporting-using-plan-confirmation-system)

Policy Statement: The work duties of Graduate Research Assistants (GRAs) and Graduate Teaching Assistants (GTAs) encompass 4.5 calendar months for fall and spring terms and three calendar months for summer term. The fall term work period consists of half of August and all of September through December. The spring term work period consists of January through April and half of May. Summer term consists of half of May, all of June and July, and half of August. Supervisors are generally expected to employ a GRA or GTA for the full work period, providing continuous employment and pay throughout the year.

GRAs and GTAs are not required to work on official Institute holidays, which appear on the Human Resources web site. In addition, at the discretion of the student’s supervisor, a GRA or GTA may be permitted to average effort over several weeks or cluster research or teaching activities in order to spend one or more weeks away from campus during the semester or, more frequently, during periods when classes are not in session. Any time away requires the approval of the supervisor. This flexibility may be used to allow later start dates for students new to campus. Some work assignments may not permit this flexibility.

GRAs or GTAs appointed to sponsored research projects should monitor their appointments monthly in the Electronic Workload Assignment Form (EWAF), because they will be required to sign an Annual Statement of Reasonableness indicating that the effort they put into projects was correctly recorded. For more information, read the policy on Personal Services Reporting Using the Plan Confirmation System (http://www.policylibrary.gatech.edu/personal-services-reporting-using-plan-confirmation-system) in the Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/personal-services-reporting-using-plan-confirmation-system).

Fee Payment through Payroll Deduction

The Office of the Bursar maintains information regarding the GRA/GTA-Fee Payment Program which facilitates the payment of tuition and fees through payroll deductions for students who are employed at Georgia Tech as Graduate Research Assistants (GRAs) or Graduate Teaching Assistants (GTAs) and who are paid on a monthly basis. For more information, read the policy on Payroll Deduction for Tuition and Fees (http://www.bursar.gatech.edu/content/grahgtapayroll-deduction) on the Office of the Bursar’s web site (http://www.bursar.gatech.edu/content/gra-gta-payroll-deduction).

Fellowships

Georgia Tech awards a large number of individual fellowships. They vary in value from a few hundred dollars to $30,000 per year or more. Most of them are awarded by schools, not by the Office of Graduate Studies or the Office of Financial Aid. Even for programs where several schools are eligible, nominations come from within the programs, not directly from individual students.

The only Institute-level fellowship programs (http://www.finaid.gatech.edu/fellowships) are President’s Fellowships ($5,500 per year) and Institute Fellowships ($11,000 per year). These supplement assistantships or other fellowships. Programs nominate incoming students for these programs, and the Office of Graduate
Out-of-State Tuition Waivers

Georgia Tech has permission from the Board of Regents to award out-of-state tuition differential waivers and assess in-state tuition for certain nonresidents of Georgia for the following reasons and under the following conditions. The waivers processed in the Office of the Registrar are listed below.

- **University System Employees and Dependents**
  Full-time employees of the University System, their spouses, and their dependent children.
  [Download Application for USG Employess and Dependents](registrar.gatech.edu/docs/pdf/residency/usg.pdf)

- **Full-time School Employees**
  Full-time employees in the public schools of Georgia or the Technical College System of Georgia, their spouses, and their dependent children. Teachers employed full-time on military bases in Georgia shall also qualify for this waiver (BR Minutes, 1988-89, p. 43).
  [Download Application for Full-Time School Employees](registrar.gatech.edu/docs/pdf/residency/full_time_school_employees_waiver.pdf)

- **Career Consular Officials**
  Career consular officers, their spouses, and their dependent children who are citizens of the foreign nation that their Consulate office represents and who are stationed and living in Georgia under orders of their respective governments.
  [Download Application for Career Consular Officials](registrar.gatech.edu/docs/pdf/residency/career_consular_waiver.pdf)

- **Military**
  1. Active duty military personnel, their spouses, and their dependent children who meet one of the following:
     a. The military sponsor is currently stationed in or assigned to Georgia; or,
     b. The military sponsor previously stationed in or assigned to Georgia is reassigned outside of Georgia, and the student(s) remain (s) continuously enrolled in a Georgia school, Technical College System of Georgia institution, and/or a University System of Georgia institution; or,
     c. The military sponsor is reassigned outside of Georgia and the spouse and/or dependent children remain in Georgia; or,
     d. The military sponsor is stationed in a state contiguous to the Georgia border and resides in Georgia; or,
     e. Dependent children of a military sponsor, previously stationed in or assigned to Georgia within the previous five years, or the child completed at least one year of high school in Georgia; or,
     f. Any student utilizing VA educational benefits transferred from a currently serving military member is also eligible, even if the student is no longer a dependent of the transferor.
     g. Individuals stationed in or assigned to Georgia due to a NATO assignment (in the U.S. on a NATO visa and part of a NATO exchange program). Students must present their current U.S. military ID card showing they are active duty and a copy of their NATO orders showing they are assigned to Georgia. Dependent students and spouses are also eligible provided they submit documentation of their relationship to the individual assigned to Georgia on NATO orders in addition to the other documentation.
        - Download Application for Active Duty Military Personnel

  2. Active members of the Georgia National Guard stationed or assigned to Georgia or active members of a unit of the U.S. Military Reserves based in Georgia, and their spouses and their dependent children (BoR Minutes, October 2008).
     - Download Application for GA National Guard and Reservists

  3. Separated military members from a uniformed military service of the United States who meet one of the following (BoR Minutes, June 2004; October 2008; October 2013; March 2016; May 2017):
     a. Individuals who within thirty-six (36) months of separation from such service, enroll in an academic program and demonstrate intent to become domiciled in Georgia. This waiver may also be granted to their spouses and dependent children.
     b. Any separated service member or any student utilizing transferred VA educational benefits, and physically residing in the state, who enrolls within one hundred-twenty (120) months of separation is also eligible.
     d. Anyone using benefits under the Marine Gunnery Sergeant John David Fry Scholarship who lives in the state in which the institution is located (regardless of formal state residence).
        - Except...
          - Surviving spouses can use the Fry Scholarship for 15 years from the anniversary of the service member’s death or until they remarry.
          - Eligible children can use the Fry Scholarship between the ages of 18 and 33.
        - Download Application for Those Separated from the Military

- **Economic Advantage**
  As of the first day of classes for the term, an economic advantage waiver may be granted to a U.S. citizen or U.S. legal permanent resident who is a dependent or independent student and can provide clear evidence that the student or the student’s parent, spouse, or U.S. court-appointed legal guardian has relocated to the State of Georgia to accept full-time, self-sustaining employment and has established domicile in the State of Georgia. Relocation to the state must be for reasons other than enrolling in an institution of higher education. For U.S. citizens or U.S. legal permanent residents, this waiver will expire 12 months from the date the waiver was granted. As of the first day of classes for the term, an economic advantage waiver may be granted to an independent non-citizen possessing a valid employment-related visa status who can provide clear evidence of having relocated to the State of Georgia to accept full-

---

Graduate Financial Aid ([http://www.gradadmiss.gatech.edu/paying-for-grad-school](http://www.gradadmiss.gatech.edu/paying-for-grad-school))
time, self-sustaining employment. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Independent non-citizen students may continue to receive this waiver as long as they maintain a valid employment-related visa status and can demonstrate continued efforts to establish U.S. legal permanent residence and legal domicile in the State of Georgia. A dependent non-citizen student who can provide clear evidence that the student’s parent, spouse, or U.S. court-appointed legal guardian possesses a valid employment-related visa status and can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment is also eligible to receive this waiver. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Non-citizen students currently receiving a waiver who are dependents of a parent, spouse, or U.S. court-appointed legal guardian possessing a valid employment-related visa status may continue to receive this waiver as long as they can demonstrate that their parent, spouse, or U.S. court-appointed legal guardian is maintaining full-time, self-sustaining employment in Georgia and is continuing efforts to pursue an adjustment of status to U.S. legal permanent resident and the establishment of legal domicile in the State of Georgia. (BR Minutes, October 2008.)

Download Application for Economic Advantage (http://registrar.gatech.edu/docs/pdf/residency/economic_advantage_waiver.pdf)

• Non-Resident Students

As of the first day of classes for the term, a non-resident student can be considered for this waiver under the following conditions:

• Students under 24

  • If the parent, or United States court-appointed legal guardian has maintained domicile in Georgia for at least twelve (12) consecutive months and the student can provide clear and legal evidence showing the relationship to the parent or United States court-appointed legal guardian has existed for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. Under Georgia code, legal guardianship must be established prior to the student’s 18th birthday (BoR Minutes, October 2008, title amended February 2010); or
  
  • If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term (BoR Minutes, February 2010).

• Students 24 and Older

  • If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008, title amended February 2010).

This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008).

Download Application for Non-Resident Students (http://registrar.gatech.edu/docs/pdf/residency/non-residents_student.pdf)

• Senior Citizen Waiver

A student of the first day of classes for the term, a waiver of in-state tuition and fees may be granted to a legal resident of Georgia aged 62 and over. This waiver can remain in effect as long as the student is continuously enrolled.

Download Application for Senior Citizens (http://registrar.gatech.edu/docs/pdf/residency/senior_waiver.pdf)

Students who come to Georgia Tech from another state and work for companies in Georgia remain ineligible for in-state tuition in the absence of compelling evidence of intent to remain in Georgia permanently. Having Georgia voter registration, having employment in any position normally filled by a student (such as co-op, graduate research assistant, or graduate teaching assistant), having a lease of living quarters, having a Georgia automobile registration, and having Georgia driver’s license do not constitute sufficient evidence of domicile to affect classification as an in-state student under the Board of Regents’ policy.

For further information concerning residency, students should contact the Residency Office in Room 112 of TechTower, write to the Office of the Registrar, Residency, Georgia Tech, Atlanta, GA 30332-0315, or email (http://www.registrar.gatech.edu/residencyclassification). The Residency Office must receive an application for classification as a legal resident for fee payment purposes no later than one month prior to the academic registration date for the term in which the student seeks to pay fees as a resident of Georgia. Requests for tuition waivers must be received by the Office of the Registrar no later than the first day of classes for the term for which the out-of-state tuition is to be waived. See the official Academic Calendar (http://www.registrar.gatech.edu/students/calendar.php) for dates.

Outside Sponsorships

A student whose tuition and fees are to be paid by a corporate or government sponsor must notify the Bursar’s Office by submitting an authorization or voucher from the sponsor on original letterhead and signed by an official authorized to obligate payment by the organization per the specifics outlined here (http://www.bursar.gatech.edu/content/third-party-billing). Authorizations must be received before the fee payment deadline of each semester. Fee payment deadlines for upcoming terms are published on the Bursar’s Calendar (http://bursar.gatech.edu/content/bursar-calendar). As a courtesy to students, the Bursar’s Office will send a billing statement to the sponsor after the Registration Period ends. Students whose sponsor fails to pay the authorized charges will have their conditional credit reversed and will be responsible for the unpaid charges. A financial hold will be placed on the student’s account until the balance is paid in full. Students are encouraged to remain in contact with their sponsor until the terms of the billing authorization have been met.

Veterans Services

Veterans Services at Georgia Tech is not a division of the US Department of Veterans Affairs (DVA) but part of the Office of the Registrar. It serves as a liaison between veteran students and the DVA. Its primary purposes are to assist veteran students with the processing of forms for educational benefits, to advise veteran students about certain procedural requirements, and to certify enrollment of Georgia Tech veteran students to the Department of Veterans Affairs.

Because the US Department of Veterans Affairs (DVA) must receive certification of enrollment before issuing benefit payments, any student planning to enroll under any of the DVA’s programs should initiate the certification procedure through the Office of the Registrar as early as possible.

Veterans must apply to Georgia Tech through the regular admissions procedure. Eligibility for DVA benefits does not guarantee acceptance into the Institute, nor does acceptance signify eligibility for DVA benefits. The Institute serves only as a source of certification and information to the DVA; the student must carry out all financial transactions with the US Department of Veterans Affairs directly.

Starting Benefits

Before a student can use GI Bill education benefits, she/he must be formally admitted to Georgia Tech. Prospective students who need information about applying should see the Undergraduate Admissions web site. Individuals who intend to utilize GI Bill education benefits are admitted by the same standards as any other students.

Those who intend to utilize GI Bill education benefits for the first time should apply for these benefits least two months before the start of the first academic term in which they will be enrolled as students at Georgia Tech.

First-Time GI Bill Applicants

If the student has already applied for GI Bill Education Benefits

- After a student applies for education benefits, the US Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Eugenia Snead, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.

If the student need to apply for GI Bill Education Benefits

- If the student is the veteran herself/himself
  - Veterans enrolling at Georgia Tech must apply for benefits through the GI Bill web site.
  - After a student applies for education benefits, the US Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Eugenia Snead, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.

- If the student is the dependent or spouse of the veteran
  - A veteran may transfer Ch 33 Post 9/11 GI Bill benefits to a family member with the approval of the US Department of Defence (DoD). Information regarding transfer of benefits is available on the GI Bill web site (http://www.benefits.va.gov/gibill/post911_gibill.asp). Once the DoD approves transfer of benefits, the family member must submit Form 22-1990e, “Application for Family Member to Use Transferred Benefits,” online (https://www.ebenefits.va.gov/ebenefits/homepage) or by mailing the printable form (http://www.vba.va.gov/pubs/forms/VBA-22-1990e-ARE.pdf) to the address below:
    Department of Veterans Affairs
    Atlanta Regional Office
    P.O. Box 100026
    Decatur, GA 30037-7026

  - After family member applies for education benefits, the Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Eugenia Snead, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.

Transferring GI Bill Education Benefits to Georgia Tech

- A student who has used GI Bill Education Benefits at another college or university must complete Form 22-1995, “Request for Change of Program or Place of Training.” This form may be submitted online (https://www.ebenefits.va.gov/ebenefits/homepage) or by mailing the printable form (http://www.vba.va.gov/pubs/forms/VBA-22-1995-ARE.pdf) to the address below:
  Department of Veterans Affairs

Signing Up for Yellow Ribbon

- A formally admitted student who is eligible and who has already sent a copy of her/his Certificate of Eligibility (COE) letter to the School Certifying Official (SCO) may be added to either the Yellow Ribbon participant list or the waiting list. Yellow Ribbon is given on a first-come, first-served basis. If all 40 participant slots are taken when a student completes the Yellow Ribbon Participation Request Form (http://www.registrar.gatech.edu/docs/pdf/Yellow_Ribbon_Participation_Request_Form.pdf), the student will be placed on a waiting list until a slot becomes available.
- The Yellow Ribbon Participation Request Form is submitted only once. After student is given a participant slot for the Yellow Ribbon program, she/he is eligible to receive this benefit until she/he exhausts her/his Ch 33 benefits, graduates, or stops attending Georgia Tech (e.g., loses registration eligibility by absence or failure to participate in scheduled classes).

Types of Benefits

The Department of Veterans Affairs (DVA) administers a variety of education benefit programs. Many veterans and active duty personnel can qualify for education benefits. Currently, Georgia Tech participates in the following programs:

- Chapter 33 (http://www.benefits.va.gov/gibill/post911_gibill.asp), The Post-9/11 GI Bill (Yellow Ribbon)
- Chapter 30 (http://www.benefits.va.gov/gibill/montgomery_bill.asp), Montgomery GI Bill - Active Duty (MGIB-AD)
- Chapter 35 (http://www.benefits.va.gov/gibill/#DEA), Survivors' and Dependents' Educational Assistance Program (DEA)
- Chapter 35 (http://www.benefits.va.gov/gibill/#DEA), Survivors' and Dependents' Educational Assistance Program (DEA)
- Chapter 31 (http://www.benefits.va.gov/vocarehab), Vocational Rehabilitation Program

Certification Process

The School Certifying Official (SCO) releases an email to notify veteran students that initial enrollment certifications will be submitted 45 days before the start of the academic term. At this time, students may ask any questions or request to not be certified. Submitting the initial enrollment certification 45 days prior to the start of the semester ensures that students' first monthly stipend will be issued on time.

For students under Chapter 33 Post-9/11 GI Bill (Yellow Ribbon), this is the first of two certifications. The first certification reports a student's enrollment for her/his monthly stipend. The second certification reports tuition and mandatory student fees (and Yellow Ribbon funding if applicable) after the Phase 2 Registration Period ends.

The Office of the Bursar places a deferral on each Chapter 33 student’s account for the amount expected from the DVA. This deferral prevents the assessment of late fees or schedule cancellation due to the student’s account balance. Students should make plans to pay whatever balance is not covered by Chapter 33 (e.g., housing, parking, meal plan) before the regular payment deadlines.

Students' Responsibilities

Veteran students at Georgia Tech have ongoing responsibilities to the Department of Veterans Affairs. The DVA and the Veterans Services office at Georgia Tech closely monitor each veteran student's enrollment status and academic program. The student’s entitlement is based upon the number of credit hours for which a student is enrolled and any changes in academic program. To ensure that a student's enrollment is certified to the DVA accurately, the student must abide by the following requirements:

- Check the Georgia Tech Veterans Services web page for current news
- Read all notification emails from the School Certifying Official (SCO)
- Email the SCO if adjustments are made to class schedule during the Phase 2 Registration Period
- Email the SCO if adjustments need to be made to schedule after the Phase 2 Registration Period ends
- Email the SCO if changing address or academic major

Frequently Used Forms

Many of the US Department of Veterans Affairs’ forms can be submitted online (http://www.gibill.va.gov/resources/student_handouts). Below are the most frequently used printable forms. All other printable forms may be found in the Forms Library (http://www.va.gov/vaforms/search_action.asp) the DVA web site.

- Printable forms should be mailed to the DVA regional office in Atlanta. Department of Veterans Affairs
- Form 22-1990e (http://www.vba.va.gov/pubs/forms/VBA-22-1990e-ARE.pdf), Application for Family Member to Use Transferred Benefits
- Form 22-1995 (http://www.vba.va.gov/pubs/forms/VBA-22-1995-ARE.pdf), Request for Change of Program or Place of Training
- Form 22-5495 (http://www.vba.va.gov/pubs/forms/VBA-22-5495-ARE.pdf), Dependents' Request for Change of Program or Place of Training
- VA Course Withdrawal Form (http://www.registrar.gatech.edu/docs/pdf/Veterans_Drop.pdf)

- Yellow Ribbon Participation Request Form (http://www.registrar.gatech.edu/docs/pdf/Yellow_Ribbon_Participation_Request_Form.pdf)
- Mandatory Student Fee Waiver Form for Active Duty Military and Veterans (http://www.registrar.gatech.edu/docs/pdf/studentfeewaiver.pdf)

Additional Information

More information is available on the Office of the Registrar’s web site on the Veterans Services’ Frequently Asked Questions (http://www.registrar.gatech.edu/students/veterans) (FAQ) page.
Undergraduate Financial Assistance

The Office of Scholarships and Financial Aid (OSFA) is dedicated to helping current and prospective students and parents apply for financial aid and understand the options for meeting the cost of a college education at Georgia Tech. The OSFA awards federal, state, and Institute funds to students and directs students to other sources of aid. Additionally, the OSFA serves as the disbursement and delivery agent for all sources of assistance for students, including awards for Georgia Tech students from outside agencies.

All US Citizen and Permanent Resident undergraduate students, including transfer students, who are interested in scholarships, grants, loans, and/or work opportunities must submit the "Georgia Tech Application for Scholarships and Financial Aid" and the "Free Application for Federal Student Aid" (FAFSA). The priority application deadline for entering freshman students, returning undergraduate students, and transfer students is January 31st.

Additional information is available for the Office of Scholarships and Financial Aid (http://www.finaid.gatech.edu).

- Military

1. Active duty military personnel, their spouses, and their dependent children who meet one of the following:
   a. The military sponsor is currently stationed in or assigned to Georgia; or,
   b. The military sponsor previously stationed in or assigned to Georgia is reassigned outside of Georgia, and the student(s) remain(s) continuously enrolled in a Georgia school, Technical College System of Georgia institution, and/or a University System of Georgia institution; or,
   c. The military sponsor is reassigned outside of Georgia and the spouse and/or dependent children remain in Georgia; or,
   d. The military sponsor is stationed in a state contiguous to the Georgia border and resides in Georgia; or,
   e. Dependent children of a military sponsor, previously stationed in or assigned to Georgia within the previous five years, or the child completed at least one year of high school in Georgia; or,
   f. Any student utilizing VA educational benefits transferred from a currently serving military member is also eligible, even if the student is no longer a dependent of the transferor.

g. Individuals stationed in or assigned to Georgia due to a NATO assignment (in the U.S. on a NATO visa and part of a NATO exchange program). Students must present their current U.S. military ID card showing they are active duty and a copy of their NATO orders showing they are assigned to Georgia. Dependent students and spouses are also eligible provided they submit documentation of their relationship to the individual assigned to Georgia on NATO orders in addition to the other documentation.
   - Download Application for Active Duty Military Personnel (http://registrar.gatech.edu/docs/pdf/residency/Military-Personnel.pdf)

2. Active members of the Georgia National Guard stationed or assigned to Georgia or active members of a unit of the U.S. Military Reserves based in Georgia, and their spouses and their dependent children (BoR Minutes, October 2008).
   - Download Application for GA National Guard and Reservists (http://registrar.gatech.edu/docs/pdf/residency/GA-National-Guard-and-Reservists.pdf)

3. Separated military members from a uniformed military service of the United States who meet one of the following (BoR Minutes, June 2004; October 2008; October 2013: March 2016; May 2017):
   a. Individuals who within thirty-six (36) months of separation from such service, enroll in an academic program and demonstrate intent to become domiciled in Georgia. This waiver may also be granted to their spouses and dependent children.
   b. Any separated service member or any student utilizing transferred VA educational benefits, and physically residing in the state, who enrolls within one hundred-twenty (120) months of separation is also eligible.
   d. Anyone using benefits under the Marine Gunnery Sergeant John David Fry Scholarship who lives in the state in which the institution is located (regardless of formal state residence).
   • Except...
• Surviving spouses can use the Fry Scholarship for 15 years from the anniversary of the service member’s death or until they remarry.

• Eligible children can use the Fry Scholarship between the ages of 18 and 33.

• Download Application for Those Separated from the Military (http://registrar.gatech.edu/docs/pdf/residency/Recently-Separated-Military.pdf)

**Economic Advantage**

As of the first day of classes for the term, an economic advantage waiver may be granted to a U.S. citizen or U.S. legal permanent resident who is a dependent or independent student and can provide clear evidence that the student or the student’s parent, spouse, or U.S. court-appointed legal guardian has relocated to the State of Georgia to accept full-time, self-sustaining employment and has established domicile in the State of Georgia. Relocation to the state must be for reasons other than enrolling in an institution of higher education. For U.S. citizens or U.S. legal permanent residents, this waiver will expire 12 months from the date the waiver was granted. As of the first day of classes for the term, an economic advantage waiver may be granted to an independent non-citizen possessing a valid employment-related visa status who can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Independent non-citizen students may continue to receive this waiver as long as they maintain a valid employment-related visa status and can demonstrate continued efforts to establish U.S. legal permanent residence and legal domicile in the State of Georgia.

A dependent non-citizen student who can provide clear evidence that the student’s parent, spouse, or U.S. court-appointed legal guardian possesses a valid employment-related visa status and can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment is also eligible to receive this waiver. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Non-citizen students currently receiving a waiver who are dependents of a parent, spouse, or U.S. court-appointed legal guardian possessing a valid employment-related visa status may continue to receive this waiver as long as they can demonstrate that their parent, spouse, or U.S. court-appointed legal guardian is maintaining full-time, self-sustaining employment in Georgia and is continuing efforts to pursue an adjustment of status to U.S. legal permanent resident and the establishment of legal domicile in the State of Georgia. (BR Minutes, October 2008.)

Download Application for Economic Advantage (http://registrar.gatech.edu/docs/pdf/residency/economic_advantage_waiver.pdf)

**Non-Resident Students**

As of the first day of classes for the term, a non-resident student can be considered for this waiver under the following conditions:

• Students under 24.

  • If the parent, or United States court-appointed legal guardian has maintained domicile in Georgia for at least twelve (12) consecutive months and the student can provide clear and legal evidence showing the relationship to the parent or United States court-appointed legal guardian has existed for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. Under Georgia code, legal guardianship must be established prior to the student’s 18th birthday (BoR Minutes, October 2008, title amended February 2010); or

  • If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term (BoR Minutes, February 2010).

• Students 24 and Older.

  • If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008, title amended February 2010).

This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008).

Download Application for Non-Resident Students (http://registrar.gatech.edu/docs/pdf/residency/non-residents_student.pdf)

**Senior Citizen Waiver**

A waiver of in-state tuition and fees may be granted to a legal resident of Georgia aged 62 and over. This waiver can remain in effect as long as the student is continuously enrolled.

Download Application for Senior Citizens (http://registrar.gatech.edu/docs/pdf/residency/senior_waiver.pdf)

Students who come to Georgia Tech from another state and work for companies in Georgia remain ineligible for in-state tuition in the absence of compelling evidence of intent to remain in Georgia permanently. Having Georgia voter registration, having employment in any position normally filled by a student (such as co-op, graduate research assistant, or graduate teaching assistant), having a lease of living quarters, having a Georgia automobile registration, and having Georgia driver’s license do not constitute sufficient evidence of domicile to affect classification as an in-state student under the Board of Regents’ policy.

For further information concerning residency, students should contact the Residency Office in Room 112 of TechTower, write to the Office of the Registrar, Residency, Georgia Tech, Atlanta, GA 30332-0315, or email (http://www.registrar.gatech.edu/tuitionclassification). The Residency Office must receive an application for classification as a legal resident for fee payment purposes no later than one month prior to the academic registration date for the term in which the student seeks to pay fees as a resident of Georgia. Requests for tuition waivers must be received by the Office of the Registrar no later than the first day of classes for
the term for which the out-of-state tuition is to be waived. See the official Academic Calendar (http://www.registrar.gatech.edu/students/calendar.php) for dates.

**Outside Sponsorships**

A student whose tuition and fees are to be paid by a corporate or government sponsor must notify the Bursar’s Office by submitting an authorization or voucher from the sponsor on original letterhead and signed by an official authorized to obligate payment by the organization per the specifics outlined here (http://www.bursar.gatech.edu/content/third-party-billing). Authorizations must be received before the fee payment deadline of each semester. Fee payment deadlines for upcoming terms are published on the Bursar’s Calendar (http://bursar.gatech.edu/content/bursar-calendar). As a courtesy to students, the Bursar’s Office will send a billing statement to the sponsor after the Registration Period ends. Students whose sponsor fails to pay the authorized charges will have their conditional credit reversed and will be responsible for the unpaid charges. A financial hold will be placed on the student’s account until the balance is paid in full. Students are encouraged to remain in contact with their sponsor until the terms of the billing authorization have been met.

**President’s Scholarship Program**

The Stamps President’s Scholars Program is Georgia Tech's premier merit-based scholarship. Recipients are selected from the top applicants for admission to Georgia Tech based on demonstrated excellence in scholarship, leadership, progress, and service as described on the Stamps President’s Scholars Program (http://stampsps.gatech.edu) webpage. From the applicant pool, students selected as semi-finalists submit a one-page resume before being interviewed. The top semi-finalists are named finalists and invited, with their parents, to campus for additional interviews and an information weekend in March.

Transfer students are not eligible for the four-year award. Recipients must be US Citizens, US Permanent Residents, or UK Citizens.

Each year, 40 incoming freshmen receive the Stamps President’s Scholarship, which is renewable for up to four academic years or eight semesters, contingent upon honors-level performance and continued leadership development as evidenced by involvement in program, campus, and community activities. Scholarships are “full ride,” including tuition and mandatory fees, room and board, books, and personal expenses. See the website below for more information on stipends.

To ensure consideration, a student must apply as an incoming freshman, and submit the Georgia Tech Application for Freshman Admission, along with the application fee by the early action deadline of October 15th.

More information:

- Stamps President’s Scholars Program (http://stampsps.gatech.edu)

**Veterans Services**

Veterans Services at Georgia Tech is not a division of the US Department of Veterans Affairs (DVA) but part of the Office of the Registrar. It serves as a liaison between veteran students and the DVA. Its primary purposes are to assist veteran students with the processing of forms for educational benefits, to advise veteran students about certain procedural requirements, and to certify enrollment of Georgia Tech veteran students to the Department of Veterans Affairs.

Because the US Department of Veterans Affairs (DVA) must receive certification of enrollment before issuing benefit payments, any student planning to enroll under any of the DVA’s programs should initiate the certification procedure through the Office of the Registrar as early as possible.

Veterans must apply to Georgia Tech through the regular admissions procedure. Eligibility for DVA benefits does not guarantee acceptance into the Institute, nor does acceptance signify eligibility for DVA benefits. The Institute serves only as a source of certification and information to the DVA; the student must carry out all financial transactions with the US Department of Veterans Affairs directly.

1.888.422.4551

**Starting Benefits**

Before a student can use GI Bill education benefits, she/he must be formally admitted to Georgia Tech. Prospective students who need information about applying should see the Undergraduate Admissions web site. Individuals who intend to utilize GI Bill education benefits are admitted by the same standards as any other students.

Those who intend to utilize GI Bill education benefits for the first time should apply for these benefits least two months before the start of the
first academic term in which they will be enrolled as students at Georgia Tech.

First-Time GI Bill Applicants
If the student has already applied for GI Bill Education Benefits

- If the student is the veteran herself/himself
  - Veterans enrolling at Georgia Tech must apply for benefits through the GI Bill web site.
  - A veteran may transfer Ch 33 Post 9/11 GI Bill benefits to a family member with the approval of the US Department of Defence (DoD). Information regarding transfer of benefits is available on the GI Bill web site (http://www.benefits.va.gov/gibill/post911_gibill.asp). Once the DoD approves transfer of benefits, the family member must submit Form 22-1990e, “Application for Family Member to Use Transferred Benefits,” or by mailing the printable form (http://www.vba.va.gov/pubs/forms/VBA-22-1990e-ARE.pdf) to the address below:
    Department of Veterans Affairs
    Atlanta Regional Office
    P.O. Box 100026
    Decatur, GA 30037-7026

- If the student is the dependent or spouse of the veteran
  - A formally admitted student who is eligible and who has already sent a copy of her/his Certificate of Eligibility (COE) letter to the School Certifying Official (SCO) may be added to either the Yellow Ribbon participant list or the waiting list. Yellow Ribbon is given on a first-come, first-served basis. If all 40 participant slots are taken when a student completes the Yellow Ribbon Participation Request Form (http://www.registrar.gatech.edu/docs/pdf/Yellow_Ribbon_Participation_Request_Form.pdf), the student will be placed on a waiting list until a slot becomes available.
  - If the student is the dependent or spouse of the veteran
  - After family members apply for education benefits, the US Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Eugenia Snead, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.

Sign up for Yellow Ribbon

- The Yellow Ribbon Participation Request Form is submitted only once. If student is given a participant or a waiting list, Yellow Ribbon is given on a first-come, first-served basis. If all 40 participant slots are taken when a student completes the Yellow Ribbon Participation Request Form (http://www.registrar.gatech.edu/docs/pdf/Yellow_Ribbon_Participation_Request_Form.pdf), the student will be placed on a waiting list until a slot becomes available.

Types of Benefits

The Department of Veterans Affairs (DVA) administers a variety of education benefit programs. Many veterans and active duty personnel can qualify for education benefits. Currently, Georgia Tech participates in the following programs:

- Chapter 33 (http://www.benefits.va.gov/gibill/post911_gibill.asp), The Post-9/11 GI Bill (Yellow Ribbon)
- Chapter 30 (http://www.benefits.va.gov/gibill/montgomery_bill.asp), Montgomery GI Bill - Active Duty (MGIB-AD)
- Chapter 35 (http://www.benefits.va.gov/gibill/#DEA), Survivors’ and Dependents’ Educational Assistance Program (DEA)
- 1606 (http://www.benefits.va.gov/gibill/montgomery_bill.asp) - Montgomery GI Bill - Selected Reserve (MGIB-SR)
- 1607 (http://www.benefits.va.gov/gibill/#REAP) - Reserve Educational Assistance Program (REAP)
- Chapter 31 (http://www.benefits.va.gov/vocrehab), Vocational Rehabilitation Program

Certification Process

The School Certifying Official (SCO) releases an email to notify veteran students that initial enrollment certifications will be submitted 45 days before the start of the academic term. At this time, students may ask any questions or request to not be certified. Submitting the initial enrollment certification 45 days prior to the start of the semester ensures that students’ monthly stipend will be issued on time.

For students under Chapter 33 Post-9/11 GI Bill (Yellow Ribbon), this is the first of two certifications. The first certification reports a student’s enrollment for her/his monthly stipend. The second certification reports tuition and mandatory student fees (and Yellow Ribbon funding if applicable) after the Phase 2 Registration Period ends.

The Office of the Bursar places a deferral on each Chapter 33 student’s account for the amount expected from the DVA. This deferral prevents the assessment of late fees or schedule cancellation due to the student’s account balance. Students should make plans to pay whatever balance is not covered by Chapter 33 (e.g., housing, parking, meal plan) before the regular payment deadlines.

Students’ Responsibilities

Veteran students at Georgia Tech have ongoing responsibilities to the Department of Veterans Affairs. The DVA and the Veterans Services office at Georgia Tech closely monitor each veteran student’s enrollment
status and academic program. The student’s entitlement is based upon the number of credit hours for which a student is enrolled and any changes in academic program. To ensure that a student’s enrollment is certified to the DVA accurately, the student must abide by the following requirements:

- Check the Georgia Tech Veterans Services web page for current news
- Read all notification emails from the School Certifying Official (SCO)
- Email the SCO if adjustments are made to class schedule during the Phase 2 Registration Period
- Email the SCO if adjustments need to be made to schedule after the Phase 2 Registration Period ends
- Email the SCO if changing address or academic major

**Frequently Used Forms**

Many of the US Department of Veterans Affairs’ forms can be submitted online ([http://www.gibill.va.gov/resources/student_handouts](http://www.gibill.va.gov/resources/student_handouts)). Below are the most frequently used printable forms. All other printable forms may be found in the Forms Library ([http://www.va.gov/vaforms/search_action.asp](http://www.va.gov/vaforms/search_action.asp)) the DVA web site.

- Printable forms should be mailed to the DVA regional office in Atlanta.
  Department of Veterans Affairs
  Atlanta Regional Office
  P.O. Box 100026
  Decatur, GA 30037-7026

  - Form 22-5495 ([http://www.vba.va.gov/pubs/forms/VBA-22-5495-ARE.pdf](http://www.vba.va.gov/pubs/forms/VBA-22-5495-ARE.pdf), Dependents’ Request for Change of Program or Place of Training
  - VA Course Withdrawal Form ([http://www.registrar.gatech.edu/docs/pdf/Veterans_Drop.pdf](http://www.registrar.gatech.edu/docs/pdf/Veterans_Drop.pdf))
  - Yellow Ribbon Participation Request Form ([http://www.registrar.gatech.edu/docs/pdf/Yellow_Ribbon_Participation_Request_Form.pdf](http://www.registrar.gatech.edu/docs/pdf/Yellow_Ribbon_Participation_Request_Form.pdf))
  - Mandatory Student Fee Waiver Form for Active Duty Military and Veterans ([http://www.registrar.gatech.edu/docs/pdf/studentfeewaiver.pdf](http://www.registrar.gatech.edu/docs/pdf/studentfeewaiver.pdf))

**Additional Information**

More information is available on the Office of the Registrar’s web site on the Veterans Services’ Frequently Asked Questions ([http://www.registrar.gatech.edu/students/veterans](http://www.registrar.gatech.edu/students/veterans)) (FAQ) page.

**Billing**

A complete itemized statement of the student account is available to students and authorized users by logging into the Bill Payment portal. This portal can be accessed either through Buzzport or via the Student/Parent Pay Now links on the Bursar’s Office website. Registration changes impacting tuition and fee charges as well as online payments are updated in real time to show the most current information on the account. Parking/Meal Plan changes are uploaded daily to the student account. Please note that the Bursar’s Office does not mail invoices to students.

It is the student’s responsibility to make sure all requirements of his or her account are satisfied by the fee payment deadline for the term. Questions concerning charges on the student account or refunds should be directed to the Bursar’s Office. Verbal misinformation is not grounds for a waiver of a regulation. All tuition and other charges are subject to change without notice.

To access your student account, go to Buzzport or the Pay Now links on the Bursar’s website, bursar.gatech.edu ([http://bursar.gatech.edu](http://bursar.gatech.edu)), to log into Bill+Payment. You will need your student or authorized user credentials to log in to Bill+Payment. Please keep in mind that all notices from the Bursar’s Office concerning your account will be sent to the student’s Georgia Tech e-mail account, which is the Institute’s official means of communication with students.

Additional details are available on the Bursar’s web site ([http://www.bursar.gatech.edu](http://www.bursar.gatech.edu)).

- Student Payment Instructions ([http://www.bursar.gatech.edu/content/student-payment-instructions](http://www.bursar.gatech.edu/content/student-payment-instructions))
- Parent Payment Instructions ([http://www.bursar.gatech.edu/content/parent-payment-instructions](http://www.bursar.gatech.edu/content/parent-payment-instructions))
- Cost of Attendance ([http://www.finaid.gatech.edu/content/cost-attendance-2015-2016](http://www.finaid.gatech.edu/content/cost-attendance-2015-2016))

Official policies are available in the Georgia Tech Policy Library ([http://policylibrary.gatech.edu/student-affairs/financial-aid-and-bursar-policies](http://policylibrary.gatech.edu/student-affairs/financial-aid-and-bursar-policies)).

- Grade Substitution Policy ([http://policylibrary.gatech.edu/student-affairs/grade-substitution-policy](http://policylibrary.gatech.edu/student-affairs/grade-substitution-policy))
- Institute Policy for Scholarship/Fellowship Payments and the Payment of Prizes/Awards to Students ([http://policylibrary.gatech.edu/student-affairs/institute-policy-scholarshipfellowship-payments-and-payment-prizesawards-students](http://policylibrary.gatech.edu/student-affairs/institute-policy-scholarshipfellowship-payments-and-payment-prizesawards-students))
- Refunds ([http://policylibrary.gatech.edu/student-affairs/refunds](http://policylibrary.gatech.edu/student-affairs/refunds))
- Satisfactory Academic Progress ([http://policylibrary.gatech.edu/student-affairs/satisfactory-academic-progress](http://policylibrary.gatech.edu/student-affairs/satisfactory-academic-progress))
- Voluntary Student Fees ([http://policylibrary.gatech.edu/student-affairs/voluntary-student-fees](http://policylibrary.gatech.edu/student-affairs/voluntary-student-fees))

**Cancellation of Registration**

Students who register for classes and do not attend must cancel classes online. Failure to do so will result in awarded financial aid being applied to the student’s account. Non-attendance then results in the student receiving a grade of “F” in each course.
All students must be aware of Georgia Tech’s policies and processes regarding Verification of Participation (p. 137).

Fees

Paying Tuition and Fees

Tuition and fees are payable by the deadline published on the official Academic Calendar (http://www.registrar.gatech.edu/home/calendar.php) and on the Bursar’s Office (http://www.bursar.gatech.edu/content/bursar-calendar) web page for each academic term. Registration is not complete until all charges are paid. The Institute reserves the right at any time during the semester to drop any student from classes for failure to pay his/her balance in full. In no case is a regulation waived or an exception granted because a student pleads ignorance of the regulation or asserts that he or she was not informed of it by an adviser or other authority. Students who owe the Institute money and have been placed on "hold" because of failure to pay may have their account forwarded to a professional collection agency.

Payment may be made by cash with U.S. dollars, a check payable in U.S. currency and drawn on a financial institution located in the United States (made payable to "Georgia Institute of Technology" and with an encoded account number), or a cashier’s check. Credit card payments (MasterCard, American Express, and Discover) and WebChecks are accepted online through the Bill Payment portal. Credit card payments are processed by a third party vendor which charges a service fee of 2.85 percent for this service. A fee is not charged for WebCheck transactions. Credit or debit card payments cannot be made by mail, phone, fax, or in person.

Tuition and Fee Rates

The tuition and fees listed are estimates and are subject to change. These amounts should be used only as a planning guide for future payments. Tuition charges can vary based on state residency status and degree program of study. Residency status is determined by the Office of Admission at the time of acceptance. Students are either classified as a resident or nonresident of Georgia for tuition purposes in accordance with the regulations of the Board of Regents of the University System of Georgia. The most current information on tuition and fees is available at http://www.bursar.gatech.edu/content/tuition-fees.

Mandatory Student Fees

Published student fees are subject to change and should be considered estimates for use in planning future payments. Students registered for four or more credit hours in one academic term are charged all mandatory student fees which are due at the same time as tuition charges. Mandatory student fees are considered part of the registration process and must be paid in full for the student to be considered enrolled. The Student Activity Fee, Athletic Fee, CRC Operations Fee, Health Fee, Recreation Fee, Student Center Operations Fee, Special Institutional Fee, Technology Fee, and Transportation Fee are mandatory student fees used to provide cultural, social, and athletic programs for the entire student body. In addition, these fees provide financial support for student facilities at the Institute, guest speakers and lecturers, student publications, and many special events that are available exclusively for Georgia Tech students. These fees also assist in defraying shuttle costs for transporting students around campus. The Technology Fee supports the infrastructure necessary to provide students with the latest online computing services technology. Students registering for fewer than four credit hours in one academic term are required to pay the Technology Fee, Transportation Fee, and Special Institutional Fee. See http://www.bursar.gatech.edu/content/tuition-fees for current information.

Late Registration Fees

Students who do not meet payment deadlines may incur penalty fees. If a student does not pay all required fees by the published fee deadlines (http://www.bursar.gatech.edu/content/bursar-calendar) registration may be cancelled. The late payment fee is currently $100. If registration is cancelled, the reinstatement fee is $200. Reinstatement is not guaranteed.

Payment

Fee Payment

All fees are payable by the deadline published on the official Academic Calendar (http://www.registrar.gatech.edu/home/calendar.php) and on the Bursar’s Office (http://www.bursar.gatech.edu/content/bursar-calendar) web page for each academic term. Registration is not complete until all fees are paid. The Institute reserves the right at any time during the semester to drop any student from classes for failure to pay fees. In no case is a regulation waived or an exception granted because a student pleads ignorance of the regulation or asserts that he or she was not informed of it by an advisor or other authority. Students who owe the Institute money and have been placed on "Hold" because of failure to pay may have their account forwarded to a professional collection agency.

Payment may be made with cash (U.S. dollars); a check payable in U.S. currency and drawn on a financial institution located in the United States (checks must be made payable to “Georgia Institute of Technology” and have the checking account number encoded); or a cashier’s check. Georgia Tech does not accept credit card payments directly for payment of tuition, fees, and room and board that appear on the student’s account summary. Credit card payments can only be made via the Student Information System (http://www.buzzport.gatech.edu) and are processed by Georgia Tech’s vendor. Credit card users are charged a service fee by the vendor for this service. A fee is not charged for WebCheck transactions. MasterCard, American Express, and Discover (credit and debit), and WebChecks are accepted for online payments. Credit and debit card payments cannot be made by mail, phone, fax, or in person.

Choosing a Payment Option

Online Webcheck (ACH) or Credit Card

The Bursar's Office accepts ACH and credit card (AMEX, Visa, MasterCard & Discover) payments on-line. To make a payment for an account, go to Buzzport (https://buzzport.gatech.edu) and select the PayNow–Bursar icon on the Home or Student tab.

Mail In

Make all checks or money orders payable to Georgia Institute of Technology. The student’s ID number must be clearly printed on all checks or money orders. Payments must be received (not postmarked) by 4:00 PM, Eastern Standard Time, on the fee deadline date. Mail payments to the following address:

Georgia Institute of Technology
Office of the Bursar
Suite 111 Lyman Hall
225 North Avenue
Atlanta, Georgia 30332-0255
On Campus

Students who pay in person should bring their cash or check to the Bursar’s Office Cashier Window; First Floor, Lyman Hall. Payment by check or money order may be deposited in the drop box, located in the entry vestibule to Lyman Hall, at any hour of the day before the fee deadline. Do not put cash in the drop box. Checks should be made out to “Georgia Institute of Technology” and should contain the student id in the memo line.

Prepayments

Prepayment of fees is accepted. However, prepayment does not guarantee the student will successfully register for any or all classes needed. It is the student’s responsibility to properly register for classes by the registration deadline.

Fee Payment Using Financial Aid

All tuition waivers, financial aid, scholarships, and fellowships awarded are disbursed to the student’s account and applied to any outstanding balances. Financial aid is initially estimated before it is actually disbursed. The "Balance Due" for a student is reduced by this estimated amount. Actual disbursements begin approximately one week prior to the fee deadline. It is the student’s responsibility to ensure all funds are properly credited by the fee deadline date by reviewing his or her student Web invoice. If funds are not/will not be disbursed or credited by the fee deadline, the student may be eligible to request a deferment from the Office of Scholarships and Financial Aid. Deferments must be requested and will be granted only for the lesser of the amount of the financial aid award or the amount due to the Institute.

Disbursement of Financial Aid Checks

Financial aid processed by the Office of Scholarships and Financial Aid is applied directly to the student’s account in the Office of the Bursar. If a credit balance exists after all charges are posted and paid, the Office of the Bursar will deposit the credit amount into the student’s bank account. Many financial aid programs – including the HOPE scholarship, Federal Pell Grant, and Stafford Loan – do not require the student be enrolled full time in order for disbursement to occur. However, because some scholarships and grants do require full-time study, and some aid programs require registration for at least six hours of courses for disbursement, students who are planning to enroll for fewer than twelve hours and who are unsure of the requirements are advised to seek clarification from the Office of Scholarships and Financial Aid.

Important links:

- The Office of Scholarships and Financial Aid (http://www.finaid.gatech.edu)
- The Office of the Bursar | Policy on Returned Checks (http://www.bursar.gatech.edu/content/returned-check-policy)

Returned Checks

If a check is returned from the bank (e.g., for insufficient funds, stop payment), the student is required to redeem the returned check with cash or a cashier’s check in the Office of the Bursar. A returned check fee will be added to the amount of the check. Returned checks remaining unredeemed after a reasonable period of time may be forwarded to a collection agency. Students who have three checks returned against their Georgia Tech accounts will be denied future check-writing privileges.

If the student intends to withdraw from Georgia Tech, it remains the student’s responsibility to formally withdraw by following the Procedures for Withdrawal and Dropping Courses (http://www.registrar.gatech.edu/students/withdrawal.php) on the Office of the Registrar’s website.

Important links:

- The Office of the Registrar | Procedures for Withdrawal and Dropping Courses (http://www.registrar.gatech.edu/students/withdrawal.php)
- The Office of the Bursar | Policy on Returned Checks (http://www.bursar.gatech.edu/content/returned-check-policy)

Refunds

Refunds for Students with Financial Aid

For students withdrawing from school, a calculation is made on any financial aid received to determine whether a student who completely withdraws during a term has "earned" the monies disbursed. Students "earn" their aid based on the period of time they were enrolled. During the first 60 percent of the term, a student earns financial aid funds in direct proportion to the length of time the student was enrolled. Beyond the 60 percentage point, all aid is considered earned. The responsibility to repay "unearned" aid is shared by the Institute and the student in proportion to the aid each is assumed to possess. The most current refund schedule can be found at http://www.bursar.gatech.edu/content/refund-calendars.

If a student intends to withdraw from Georgia Tech, it is the student’s responsibility to formally withdraw by following the Withdrawal From School Procedures (http://www.registrar.gatech.edu/students/withdrawal.php) on the Registrar’s website.

Refund Policy

The refund amount for students withdrawing from the Institute shall be based on a pro rata percentage determined by dividing the number of calendar days in the semester that the student completed by the total number of calendar days in the semester. The total number of calendar days in a semester is calculated by using the first day of class through the last day of final exams for the Institute and excludes scheduled breaks of five or more consecutive days. Institutional charges are refunded up to the point in time that the percentage equals 60 percent. Students who withdraw from the Institute when the calculated percentage of completion is greater than 60 percent are not entitled to a refund of any portion of institutional charges. A full refund (100 percent) is available to students who fully withdraw from the Institute or to students who drop individual courses by the end of late registration, if the reduction in hours changes their tuition tier under the flat rate tuition model or they cease to be enrolled at least twelve hours under the fixed rate tuition model. No further refunds are given for individual classes dropped after the end of late registration.

Students suspended or expelled from the Institute for any reason forfeit their right to a refund of any credit balance on their student account.

Refund Information (http://www.bursar.gatech.edu/content/refunds)
Withdrawal Information (http://www.registrar.gatech.edu/students/withdrawal.php)

Student Financial Agreement

By registering for classes at the Georgia Institute of Technology (Georgia Tech), I agree to the following terms and conditions:
1. I accept full responsibility for payment of all tuition, fees and other associated costs assessed as a result of my class registration and/or receipt of services at Georgia Tech. I understand Georgia Tech uses electronic billing as the official billing method and does not mail invoices. I am responsible for reviewing and paying my student account balance by the scheduled due date. I further understand failure to review my account does not constitute a valid reason for non-payment by the scheduled due date.

2. If I drop or withdraw from some or all classes for which I register, I accept responsibility for paying all tuition and mandatory fees in accordance with the published tuition refund schedule at http://www.registrar.gatech.edu/students/formlanding/address.php. I further understand non-attendance does not absolve me of this responsibility.

3. I agree my financial aid is to be used to pay charges assessed to my account at Georgia Tech such as tuition, fees, campus housing and meal plans, student health insurance, parking permits, service fees, fines, bookstore charges, or any other charge, in accordance with the terms of the aid. If any portion of my financial aid is revoked, I agree to repay all revoked aid that was disbursed to my account and either applied to charges or refunded to me.

4. I understand if I fail to pay my student account bill or any monies owed to Georgia Tech by the scheduled due date, Georgia Tech will place a financial hold on my student account, preventing me from registering for future classes, requesting transcripts, or receiving my diploma. Georgia Tech may also assess late payment fees and/or cancel my class registration.

5. I understand if I fail to pay my student account bill or any monies owed to Georgia Tech by the scheduled due date, and also fail to make acceptable payment arrangements to bring my account current, Georgia Tech may refer my delinquent account to a collection agency. I further understand I am responsible for paying the collection agency fees which may be based on a percentage at a maximum of fifteen (15) percent of my delinquent account, together with all costs and expenses, including reasonable attorney’s fees necessary for the collection of my delinquent account. Further, I understand that my delinquent account may be reported to one or more of the national credit bureaus.

6. I understand Georgia Tech and its agents and contractors may contact me at my current and any future cellular phone number(s), email address(es) or wireless device(s) regarding my delinquent student account(s)/loan(s), any other debt I owe to Georgia Tech, or to receive general information. I authorize Georgia Tech and its agents and contractors to use automated telephone dialing equipment, artificial, pre-recorded voice or text messages, and personal calls and emails, in their efforts to contact me. I may withdraw my consent to call my cellular phone by submitting a request in writing to the Georgia Tech Bursar’s Office or in writing to the applicable contractor or agent contacting me on behalf of Georgia Tech.

7. I understand I am responsible for complying with all applicable Georgia Tech policies and procedures.

8. I understand Georgia Tech uses the e-mail account provided by Georgia Tech as the official method of communication with me and I am responsible for reading Georgia Tech e-mails on a timely basis.

9. I understand I am responsible for keeping Georgia Tech records up to date with my current physical addresses, email addresses, and phone numbers by following the procedure at http://www.registrar.gatech.edu/students/formlanding/address.php. The linked procedure is incorporated herein by reference. Upon leaving Georgia Tech for any reason, it is my responsibility to provide Georgia Tech with updated contact information for purposes of continued communication regarding any amounts owed to Georgia Tech.

10. I understand that this Agreement shall be governed by the laws of the State of Georgia without regard to choice of law provisions and that all actions arising under this agreement will be filed and litigated exclusively in the state or federal courts in Atlanta, Georgia, and I expressly agree to the jurisdiction of such courts.

**Tuition and Fee Rates**

Published tuition and fees listed are subject to change. These amounts should be used only as a planning guide for future payments. Tuition charges can vary based on state residency status and degree program of study. Residency status is determined by the Office of Admission at the time of acceptance. Students are either classified as a “resident” or “nonresident” of Georgia for tuition purposes in accordance with the regulations of the Board of Regents of the University System of Georgia. The most current information on tuition and fees is available from the Bursar’s Office (http://www.bursar.gatech.edu/content/tuition-fees).

More information:
- Out-of-State Tuition Waivers (p. 134)
- Tuition Classification (p. 136)

**Out-of-State Tuition Waivers**

Georgia Tech has permission from the Board of Regents to award out-of-state tuition differential waivers and assess in-state tuition for certain nonresidents of Georgia for the following reasons and under the following conditions. The waivers processed in the Office of the Registrar are listed below.

- University System Employees and Dependents
  - Full-time employees of the University System, their spouses, and their dependent children.
  - Download Application for USG Employees and Dependents (http://registrar.gatech.edu/docs/pdf/residency/usg.pdf)

- Full-time School Employees
  - Full-time employees in the public schools of Georgia or the Technical College System of Georgia, their spouses, and their dependent children. Teachers employed full-time on military bases in Georgia shall also qualify for this waiver (BR Minutes, 1988-89, p.43).
  - Download Application for Full-Time School Employees (http://registrar.gatech.edu/docs/pdf/residency/full_time_school_employees_waiver.pdf)

- Career Consular Officials
  - Career consular officers, their spouses, and their dependent children who are citizens of the foreign nation that their Consulate office represents and who are stationed and living in Georgia under orders of their respective governments.
  - Download Application for Career Consular Officials (http://registrar.gatech.edu/docs/pdf/residency/career_consular_waiver.pdf)

- Military
  - Active duty military personnel, their spouses, and their dependent children who meet one of the following:
a. The military sponsor is currently stationed in or assigned to Georgia; or,
b. The military sponsor previously stationed in or assigned to Georgia is reassigned outside of Georgia, and the student(s) remain (s) continuously enrolled in a Georgia school, Technical College System of Georgia institution, and/or a University System of Georgia institution; or,
c. The military sponsor is reassigned outside of Georgia and the spouse and/or dependent children remain in Georgia; or,
d. The military sponsor is stationed in a state contiguous to the Georgia border and resides in Georgia; or,
e. Dependent children of a military sponsor, previously stationed in or assigned to Georgia within the previous five years, or the child completed at least one year of high school in Georgia; or,
f. Any student utilizing VA educational benefits transferred from a currently serving military member is also eligible, even if the student is no longer a dependent of the transferor.
g. Individuals stationed in or assigned to Georgia due to a NATO assignment (in the U.S. on a NATO visa and part of a NATO exchange program). Students must present their current U.S. military ID card showing they are active duty and a copy of their NATO orders showing they are assigned to Georgia. Dependent students and spouses are also eligible provided they submit documentation of their relationship to the individual assigned to Georgia on NATO orders in addition to the other documentation.
   • Download Application for Active Duty Military Personnel (http://registrar.gatech.edu/docs/pdf/residency/Military-Personnel.pdf)

2. Active members of the Georgia National Guard stationed or assigned to Georgia or active members of a unit of the U.S. Military Reserves based in Georgia, and their spouses and their dependent children (BoR Minutes, October 2008).
   • Download Application for GA National Guard and Reservists (http://registrar.gatech.edu/docs/pdf/residency/GA-National-Guard-and-Reservists.pdf)

3. Separated military members from a unified military service of the United States who meet one of the following (BoR Minutes, June 2004; October 2008; October 2013: March 2016; May 2017):
a. Individuals who within thirty-six (36) months of separation from such service, enroll in an academic program and demonstrate intent to become domiciled in Georgia. This waiver may also be granted to their spouses and dependent children.
b. Any separated service member or any student utilizing transferred VA educational benefits, and physically residing in the state, who enrolls within one hundred-twenty (120) months of separation is also eligible.
d. Anyone using benefits under the Marine Gunnery Sergeant John David Fry Scholarship who lives in the state in which the institution is located (regardless of formal state residence).
   • Except...
      • Surviving spouses can use the Fry Scholarship for 15 years from the anniversary of the service member’s death or until they remarry.

   • Download Application for Those Separated from the Military (http://registrar.gatech.edu/docs/pdf/residency/Recently-Separated-Military.pdf)

• Economic Advantage
As of the first day of classes for the term, an economic advantage waiver may be granted to a U.S. citizen or U.S. legal permanent resident who is a dependent or independent student and can provide clear evidence that the student or the student’s parent, spouse, or U.S. court-appointed legal guardian has relocated to the State of Georgia to accept full-time, self-sustaining employment and has established domicile in the State of Georgia. Relocation to the state must be for reasons other than enrolling in an institution of higher education. For U.S. citizens or U.S. legal permanent residents, this waiver will expire 12 months from the date the waiver was granted.

As of the first day of classes for the term, an economic advantage waiver may be granted to an independent non-citizen possessing a valid employment-related visa status who can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Independent non-citizen students may continue to receive this waiver as long as they maintain a valid employment-related visa status and can demonstrate continued efforts to establish U.S. legal permanent residence and legal domicile in the State of Georgia.

A dependent non-citizen student who can provide clear evidence that the student’s parent, spouse, or U.S. court-appointed legal guardian possesses a valid employment-related visa status and can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment is also eligible to receive this waiver. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Non-citizen students currently receiving a waiver who are dependents of a parent, spouse, or U.S. court-appointed legal guardian possessing a valid employment-related visa status may continue to receive this waiver as long as they can demonstrate that their parent, spouse, or U.S. court-appointed legal guardian is maintaining full-time, self-sustaining employment in Georgia and is continuing efforts to pursue an adjustment of status to U.S. legal permanent resident and the establishment of legal domicile in the State of Georgia. (BR Minutes, October 2008.)

Download Application for Economic Advantage (http://registrar.gatech.edu/docs/pdf/residency/economic_advantage_waiver.pdf)

• Non-Resident Students
As of the first day of classes for the term, a non-resident student can be considered for this waiver under the following conditions:
   • Students under 24.
Tuition Classification

Classification of Students for Tuition Purposes

Under the Constitution and laws of Georgia, the Board of Regents of the University System of Georgia was created to govern, control, and manage a system of public institutions providing quality higher education for the benefit of Georgia citizens. The state, in turn, receives substantial benefit from individuals who attend or have attended these institutions through their significant contributions to the civic, political, economic, and social advancement of the citizens of Georgia.

Because the overwhelming proportion of financial support for the operation of the public institutions of higher education in Georgia comes from the citizens through the payment of taxes, the determination of whether a student is classified as a resident or a nonresident of the state for tuition purposes becomes a significant matter. The tuition paid by in-state students covers only about one-fourth of the total cost of their education in the University System. Therefore, Georgia taxpayers are contributing three-fourths of the necessary funds to provide quality education for the citizens of the state.

The practice followed by state colleges and universities of assessing out-of-state students a higher tuition rate is a rational attempt by states to achieve a partial cost equalization between those who have and those who have not recently contributed to the state’s economy, even though no precise way exists to determine the degree to which higher tuition charges equalize the cost of educating in-state and out-of-state students.

Courts that have been faced with challenges to residency classification procedures have consistently recognized the right of public institutions of higher education to charge higher rates to out-of-state students and to adopt reasonable criteria for determining the establishment of in-state status.

For the purpose of these regulations, the question to be answered is not primarily whether a student is a resident or nonresident of Georgia, but whether the student should pay University System fees on an in-state basis. The term “resident” is confusing because it may have several definitions as it relates to voter registration, driver’s licenses, automobile registration, deeds, contracts, wills, income taxes, and other matters. A student may be a resident of Georgia for some purposes, but not entitled to in-state status for tuition purposes.

The Board of Regents has adopted certain policies governing the classification of students as residents and nonresidents for tuition purposes in keeping with its responsibilities to the citizens of Georgia for an appropriate assessment of fees and reasonable share of the cost of their education. The taxpayers of Georgia are thereby assured that they are not assuming the financial burden of educating persons whose presence in the state is not intended to be permanent.

With these considerations in mind, the Board of Regents has adopted the following policies governing the classification of students for fee payment purposes:

http://www.usg.edu/policymanual/section4/policy/4.3_student_residency/

1. United States Citizens
   a. An independent student who has established and maintained a domicile in the State of Georgia for a period of at least twelve...
consecutive months immediately preceding the first day of classes for the term shall be classified as "in-state" for tuition purposes.

It is presumed that no student shall have gained or acquired in-state classification while attending any postsecondary educational institution in this state without clear evidence of having established domicile in Georgia for purposes other than attending a postsecondary educational institution in this state.

b. A dependent student shall be classified as "in-state" for tuition purposes if either:
   
   i. the dependent student's parent has established and maintained domicile in the State of Georgia for at least twelve consecutive months immediately preceding the first day of classes for the term and the student has graduated from a Georgia high school or

   ii. the dependent student's parent has established and maintained domicile in the State of Georgia for at least twelve consecutive months immediately preceding the first day of classes for the term and the parent claimed the student as a dependent on the parent's most recent federal income tax return.

c. A dependent student shall be classified as "in-state" for tuition purposes if a U.S. court-appointed legal guardian has established and maintained domicile in the State of Georgia for at least twelve consecutive months immediately preceding the first day of classes for the term, provided that appointment was not made to avoid payment of out-of-state tuition and the U.S. court-appointed legal guardian can provide clear evidence of having established and maintained domicile in the State of Georgia for a period of at least twelve consecutive months immediately preceding the first day of classes for the term.

d. If an independent student classified as "in-state" relocates temporarily but returns to the state of Georgia within 12 months, the student shall be entitled to retain in-state tuition classification.

e. If the parent or U.S. court-appointed legal guardian of a dependent student currently classified as "in-state" for tuition purposes establishes domicile outside of Georgia after having established and maintained domicile in the State of Georgia, the student may retain in-state tuition classification as long as the student remains continuously enrolled in a public postsecondary educational institution in the state, regardless of the domicile of the parent or U.S. court-appointed legal guardian.

2. Noncitizens

Noncitizens initially shall not be classified as "in-state" for tuition purposes unless there is evidence to warrant consideration of in-state classification. Lawful permanent residents, refugees, asylees, or other eligible noncitizens as defined by federal Title IV regulations may be extended the same consideration as citizens of the United States in determining whether they qualify for in-state classification. International students who reside in the United States under nonimmigrant status conditioned at least in part upon intent not to abandon a foreign domicile are not eligible for in-state classification.

Form:

Out-of-State Tuition Waivers-Residency (http://registrar.gatech.edu/docs/catalog/tuition_waiver_undergrad.pdf)

Verification of Participation

Verification of participation is a process whereby instructional faculty report to the Office of the Registrar and the Office of Scholarships and Financial Aid whether they have students enrolled in their classes who are not engaged with the course.

Verification of participation is a Federal Title IV requirement. The rule requires students who are receiving Federal Title IV financial aid to participate in all courses (credit hours) for which they have been funded. For example if a student is enrolled in twelve credit hours and her/his financial aid award has been based on a twelve-credit-hour course load, participation must be verified for all twelve credit hours.

Any student who is reported as "not participating" in the courses for which financial aid was awarded will see her/his amount of aid recalculated and revoked as appropriate. The student will be required to pay back the remaining amount. Lack of participation results in a financial impact for the student. Students cannot accept Federal Title IV aid and then neglect to engage in the study that it is funding.

Participation must be verified for all undergraduate and graduate classes that earn credit, are billable, and are gradable. For example, 7000- and 9000-level thesis courses for graduate students must be reported. Courses that are graded on a Pass/Fail basis must also be reported. Classes that are delivered online or at a distance must be reported.

Participation in a course can be indicated in a variety of ways. As instructional faculty are reporting their findings at the beginning of each term, the following examples might be helpful.

- Attending the class
- Handing in homework
- Taking a quiz or exam
- Posting information or accessing information on a website
- Posting blog entries or comments in a chat room
- Participation in group projects
- Meeting with or communicating with the thesis advisor on research progress
- Any other activity that demonstrates engagement in the course

The tool for reporting the verification of participation is available at http://verifyparticipation.gatech.edu.
POLICIES

The Rules and Regulations (p. 151) section of this catalog contains detailed information regarding the academic regulations of the Institute. Students who have questions concerning these regulations should consult either their major school or the Registrar’s Office (http://www.registrar.gatech.edu).

- Academic Honor Code (p. 138)
- Alcohol and Drug Policy (p. 138)
- Certificate Guidelines (p. 140)
- Disabled Persons Assistance (p. 142)
- Discrimination (p. 142)
- Family Educational Rights and Privacy Act (FERPA) and Applicant Records (p. 142)
- Grading GPA (p. 144)
- Health Policies (p. 147)
- Institute Commitment to Diversity, Equity, and Inclusion (p. 148)
- Intellectual Property Policy (p. 148)
- Required Computer Ownership (p. 149)
- Sexual Misconduct Policy (p. 149)
- Student Absence from Class Due to Illness or Personal Emergencies (p. 149)

Academic Honor Code

The Academic Honor Code is a student initiative that became an official Institute policy in 1996. The objective of the Academic Honor Code is to increase academic integrity and strengthen trust in the Georgia Tech community. All students are required to sign an agreement acknowledging their awareness of the Academic Honor Code. They are strongly encouraged to seek a full understanding of their instructors’ expectations regarding academic honor.

Alcohol and Drug Policy

The Student/Student Organization Alcohol Policy (http://www.policylibrary.gatech.edu/student-affairs/student-student-organization-alcohol-policy) is maintained by the Office of Student Integrity (http://osi.gatech.edu) and published in the Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/student-affairs/student-student-organization-alcohol-policy). In the event of any conflict, the most current policy shown on the OSI web site and/or the Policy Library shall govern.

Student/Student Organization Alcohol Policy

Last Revised: August 2015

Review Date: August 2018

Policy Owner: Student Life

Contact Name: Peter Paquette

Contact Title: Director of the Office of Student Integrity

Contact Email: peter.paquette@vpss.gatech.edu

The purpose of this policy is to promote and educate about the lawful and responsible use of alcohol by students, and to educate about illegal drugs in order to maintain an environment that is consistent with the educational focus of Georgia Tech. Georgia Tech will comply with all federal, state, and local laws and policies, including the policies of the Board of Regents of the University System of Georgia, on the abuse of alcohol and other drugs by its students. The legal drinking age in the State of Georgia is 21.

Each member of the Georgia Tech community should be involved in the implementation of, and compliance with this policy. Unless otherwise stated by law, each individual retains responsibility for his or her actions at all times regardless of his or her mental state, even if altered by alcohol or other drugs.

Campus organizations may develop and enforce additional group/individual standards which are more restrictive than those established in this policy.

Standards of Conduct and Sanctions

In accordance with federal and state laws and because of the potential detriment to the health and well-being of its students, all students are prohibited from engaging in the unlawful use, possession, manufacture, distribution, dispensation, and sale of alcoholic beverages, controlled substances (including marijuana), and other drugs. The term “dangerous drug” is defined in the Official Code of Georgia Section 16-13-71.

A. Alcohol

The sale, distribution, and consumption of alcoholic beverages in or on all Georgia Tech owned or leased (by) property, or on sidewalks/streets are specifically prohibited, with the exception of those approved by the Office of the President or designee. This policy does not prohibit the lawful use of alcohol in institute-owned residences.

Individual possession and/or consumption of alcohol is acceptable, provided individuals DO NOT:

a. Possess or consume alcohol if under 21 years of age.

b. Furnish, or cause to be furnished, any alcohol to persons under 21 years of age.

c. Conspicuously display open containers of alcohol in any public location, including, but not limited to, grounds, sidewalks, and streets within campus boundaries (but not the public sidewalks and streets, or privately owned or leased property).

d. Sell alcoholic beverages.

e. Misrepresent one’s age or identity in any manner for the purpose of obtaining or possessing alcohol.

f. Serve or make available alcohol to intoxicated persons.

Alcoholic beverages may be served and/or consumed by individuals 21 and older at advertised events and activities that are promoted, sponsored, or supervised by a chartered Georgia Tech organization, providing the organization shall:

a. Be responsible for enforcing the entire Student Policy on Alcohol and Illegal Drugs.

b. Completed and confirmed review of the “Acknowledgement of Alcohol and Illegal Drugs Policy.” This form will remain on file in
Promotional activities regarding alcohol are as follows:

b. Provide non-alcoholic beverages and food in reasonable quantity, in the same general area, and for the same time period, as the alcoholic beverages are accessible.

c. Ensure that alcohol is not the focal point, the reason for, or the drawing card for an event.

d. Submit, and have approved, a completed Alcohol Event Planning Form. Alcohol Event Planning Forms are available in the Office of Leadership and Civic Engagement.

e. Not advertise the service or availability of alcoholic beverages at functions.

f. Ensure that alcoholic beverages are not consumed by any individual under the legal drinking age of 21.

g. Seek or accept sponsorship or support from companies/vendors.

h. Control access to the alcoholic beverages through a central point of distribution by a designated server within a designated area at the event (e.g., beer garden) and through the use of sober monitors. Only students who have shown proper proof of age may enter the designated area where alcohol is being served. All alcohol must be distributed and consumed within the designated area. Control is for the purpose of restricting use by those under 21 and/or who are obviously intoxicated.

i. Not use organizational funds to purchase alcohol. Any funds used to pay for alcohol must be taken from personal/private sources and paid to a properly licensed third party vendor. Alcohol may not be paid for by the student organization via a sale at the activity or by charging an admission fee either in advance or at the door (as stated in the Georgia Code of Law, 1981 Section 3-3-21).

j. Not use kegs, champagne/punch fountains, or other common usage containers (such as punch bowls or frozen drink machines) for alcoholic beverages.

k. In the absence of a third-party vendor, designate or hire a TIPS (Training Intervention Procedures for Servers) trained server to monitor the service and consumption of alcohol. It is unlawful to serve or make available alcohol to intoxicated persons (as stated in the Georgia Code of Law, Section 3-3-22).

l. Require a full-time Institute employee, who must not be a minor, to be present for the duration of functions hosted by student organizations where alcohol is served or made available. Advisers are encouraged to attend such functions.

Promotional activities regarding alcohol are as follows:

a. The posted advertisement of alcoholic beverages on campus is not permitted. This includes, but is not limited to: chalking, electronic communications, bulletins, flyers, and social media sites.

b. Campus publications are encouraged to minimize/eliminate all advertisement of alcoholic beverages.

c. No promotion or advertising on campus of incentive drinking ("happy hours", "2-for-1 specials", unlimited quantities of alcohol available at reduced prices or free, events focusing on the consumption of alcohol, etc.) is permitted.

d. Chartered student organizations and student groups may not seek or accept sponsorship or support from companies/vendors whose main focus of business is the manufacture, distribution, or sale of alcohol, other drugs or related paraphernalia.

Participants in Study Abroad programs are bound by the legal drinking age of the respective countries in which they are traveling and in all other aspects this policy applies.

Sanctions for Violation of Standards:
Students who violate this policy will be subject to disciplinary action and penalties in accordance with the Georgia Tech Student Code of Conduct.

Attempts to circumvent the provisions in this policy in any way are an infraction of this policy.

B. Possession and/or Use of Illegal Drugs

Georgia Tech does not permit or condone the illegal possession and/or use of controlled substances. Controlled substances means any drug, substance, or immediate precursor included in the definition of controlled substance in the Official Code of Georgia Section 16-13-21 (4) or Schedule I through V of Section 202 of the Federal Controlled Substance Act [21 United States Code 812]. The term “dangerous drug” is defined in the Official Code of Georgia Section 16-13-71.

Sanctions for Violation of Standards:

Any student who violates this policy may be subject to disciplinary actions and penalties in accordance with the Georgia Tech Student Code of Conduct.

Additionally, in accordance with Georgia law, any student convicted of a felony that involves the manufacture, distribution, sale, possession, or use of controlled substances or other dangerous drugs shall be subject to disciplinary actions and penalties in accordance with the Georgia Tech Student Code of Conduct.

Further information regarding the effects of drug abuse and penalties for manufacture, distribution, sale, possession, or use of controlled substances or other illegal drug, or chartered student organizations and student groups involved in these activities may be subject to specific penalties required by state law.

Participants in Study Abroad programs are bound by the policies of the Georgia Institute of Technology regarding the possession and/or use of controlled substances or other illegal drugs.

Drug and Alcohol Counseling, Treatment, and Rehabilitation Programs

Students with alcohol- or drug-related concerns may be referred to, or seek assistance from the Division of Student Affairs. The Division of Student Affairs provides trained professional and paraprofessional counselors in the Counseling Center for drug and alcohol abuse prevention, education, and counseling.

Policy Review

This policy shall be reviewed by a Task Force which includes student representation and is appointed by the Vice President for Student Life and Dean of Students or their designee, to determine its effectiveness, to ensure that policies are enforced and the disciplinary sanctions are consistently applied, to evaluate the effectiveness of the implementation process, and recommend changes to the policy as needed.
of the educational component of the policy, and to recommend and implement changes as appropriate.

Policy Distribution
The Vice President for Student Life and Dean of Students, or their designee, shall oversee the annual distribution of this Policy to every Georgia Tech student. Additional copies of the Policy on Student Alcohol and Illegal Drugs may be obtained from the Office of the Vice President for Student Life and Dean of Students.

Parental Notification Policy
Parents or legal guardians of students under the age of 21 may be notified when a student is found responsible for violating the Student/Student Organization Alcohol Policy when any of the following occur:

- A student endangers himself/herself or others while under the influence of alcohol or other substances. Specific instances include driving under the influence, fighting, alcohol poisoning, and hospitalization.
- When the Vice President for Student Life and Dean of Students determines that any future violation of Institute Policy will most likely result in suspension from Georgia Tech.
- When a student conduct administrator determines that any future violation of Institute policy will likely result in removal from housing.

Certificate Guidelines

- Graduate Certificate Guidelines (p. 140)
- Undergraduate Certificate Guidelines (p. 141)

Graduate Certificate Guidelines

Georgia Institute of Technology offers two types of graduate certificates: embedded certificates and stand-alone certificates.

Embedded Graduate Certificates Guidelines

Embedded certificates are intended to encourage students to use the elective requirements in their degree program to form a coherent concentration of coursework in a specified area.

1. Embedded certificates will be granted only to students who, in addition to the certificate program requirements, have satisfied requirements for a graduate degree. The offering unit is responsible for verifying satisfaction of all certificate requirements, as well as completion of a graduate degree. Embedded certificates are not recorded on the student’s transcript or diploma. Arrangements must be made for awarding embedded certificates within colleges or offering units. Embedded certificates will not be awarded at the Institute level.
2. All graduate embedded certificate programs must be approved by the Graduate Curriculum Committee and by the Academic Senate.
3. Departments, schools, and colleges are eligible to offer graduate certificate programs in well-defined and coherent subject areas. Certificate programs sponsored jointly by more than one academic unit may be designated as multi-disciplinary certificates, subject to the special requirements listed below.
4. A certificate program generally will be available to all graduate students, subject to the restrictions below. Exceptions must be clearly justified in the certificate proposal.
5. All proposals for a certificate must originate from the faculty of the academic unit offering the certificate or, in the case of a multi-disciplinary certificate, from the faculty of each participating academic unit. Proposals must be endorsed by the appropriate College Dean(s) and by the Provost.
6. In addition to the academic requirements for the certificate, the proposal must define the procedures for management of the program and for awarding certificates. The offering unit must record and maintain enrollment and completion for certificates. The design and working of certificates must be approved by the Provost and a draft must be submitted with the proposal.
7. The embedded certificate program must comprise at least 12 semester hours in a coherent program of which at least three semester hours are foundational to provide a broad overview of that discipline. A multi-disciplinary certificate program will additionally require that courses be taken from more than one academic unit and that at least three semester hours be taken outside the student’s major field. Cross-listed courses may be counted as being outside the student’s major field.
8. No more than a total of 4 semester hours of Special Problems courses may be included in an embedded certificate program.
9. Courses used in a certificate also may be used to fulfill elective requirements in the student’s major degree program.
10. A course may not be counted toward more than one certificate.
11. All courses counting toward the embedded certificate must be taken on a letter-grade basis, and be completed with a grade of B or higher.
12. The availability of a certificate should be noted in the catalog, at least by title, under the appropriate academic unit(s). The academic unit(s) offering the certificate shall publish and make available to students the requirements for the certificate – the courses and total number of hours required, along with the enumeration of any particular courses that are mandated or excluded, and any grade requirements that differ from the general grade requirements of this policy.
13. All certificate programs are to be reviewed during the scheduled academic program review in the sponsoring unit(s).

Stand-Alone Graduate Certificates Guidelines

Stand-alone certificates may be completed independent of students being enrolled as Master’s or Doctoral student. These certificates represent a cohesive program of study of a smaller size than a Master’s program and provide more flexibility to professionals for pursuing graduate education, including a means for professionals to renew and retrain due to a fast-changing work force. When completed, these certificates appear on the student’s academic record (transcript), and the student receives a certificate of completion.

Curricular Requirements and Approvals

1. Departments, schools, and colleges are eligible to offer graduate certificate programs in well-defined and coherent subject areas. Certificate programs sponsored jointly by more than one academic unit may be designated as multi-disciplinary certificates, subject to the special requirements listed below.
2. All proposals for a certificate must originate from the faculty of the academic unit offering the certificate or, in the case of a multi-disciplinary certificate, from the faculty of each participating academic unit. Proposals must be endorsed by the appropriate College Dean(s) and by the Provost.

3. All Graduate Certificate programs must be approved by the Institute Graduate Curriculum Committee and by the Academic Faculty Senate.

4. In addition to the academic requirements for the certificate, the proposal must define the procedures for management of the program.

5. The certificate program must comprise at least 12 semester hours in a coherent program of which at least six semester hours are required and the remaining hours may be selected from a set of elective courses. A multi-disciplinary certificate program will additionally require that courses be taken from more than one academic unit. No Special Problems courses may be included in a certificate program.

6. A course may not be counted towards more than one certificate.

7. For students enrolled as a Master's or a Doctoral student, courses used in a certificate also may be used to satisfy requirements in the student's major degree program, unless otherwise designated by the academic unit(s) offering the certificates.

8. All courses counting toward the certificate must be taken on a letter-grade basis, and be completed with a grade of C or higher with a minimum GPA of 2.7 for the certificate.

Admissions

1. Students must be admitted to the Institute as either Graduate Certificate-seeking students or degree-seeking graduate students.

2. Admission requirements for Graduate Certificate-seeking students are listed in the description of the Certificate in the Catalog. A minimum requirement is a Bachelor's Degree.

Completion

1. Certificates will be granted only to students who have satisfied the requirements as listed in the Catalog. Students must complete the certificate requirements within a four-year time-frame.

2. The offering unit is responsible for verifying satisfaction of all Certificate requirements with the final audit being conducted by the Registrar's Office.

3. Upon completion of the required courses, the student must apply for the stand-alone certificate online through the on-line application for graduation. Stand-alone certificates will be awarded three times per year, in May, December, and August. The award of the Certificates coincides with the award of degrees.

4. Award of the Certificate will be posted by the Registrar to the academic record (transcript), and the Registrar's Office will issue a certificate of completion. The design of the certificate of completion will be uniform across the Institute and will be managed in a fashion similar to diplomas.

Management of the Program

1. The availability of a stand-alone certificate should be noted in the Catalog, at least by title, under the appropriate academic unit(s). The academic unit(s) offering the certificate shall publish and make available to students the requirements for the certificate – the courses and total number of hours required, along with the enumeration of any particular courses that are mandated or excluded, any grade requirements that differ from the general grade requirements of this policy, and whether the courses taken for the certificate can be counted towards an MS Degree in that unit.

2. The offering unit must record and maintain data related to student learning and professional opportunities enhanced related to Gainful Employment requirements. Data related to Gainful Employment is required if the Certificate is approved as eligible under Federal Title IV financial aid rules.

3. All certificate programs are to be reviewed during the scheduled academic program review in the sponsoring unit(s).

4. Costs may vary by program

Undergraduate Certificate Guidelines

Certificates are intended to encourage students to use the elective course requirements in their degree program to form a coherent package of coursework in a specified area.

1. Certificates will be granted only to students who, in addition to the certificate program requirements, have satisfied requirements for an undergraduate degree. The offering unit is responsible for verifying satisfaction of all certificate requirements, as well as completion of an undergraduate degree. Certificates are not recorded on the student's transcript or diploma. Arrangements must be made for awarding certificates within colleges or offering units. Certificates will not be awarded at the Institute level.

2. All undergraduate certificate programs must be approved by the Undergraduate Curriculum Committee and by the Academic Senate.

3. Departments, schools, and colleges are eligible to offer undergraduate certificate programs in well-defined and coherent subject areas. Certificate programs sponsored jointly by more than one academic unit may be designated as multi-disciplinary certificates, subject to the special requirements listed below.

4. A certificate program generally will be available to all undergraduate students, subject to the restrictions below. Exceptions must be clearly justified in the certificate proposal.

5. All proposals for a certificate must originate from the faculty of the academic unit offering the certificate or, in the case of a multi-disciplinary certificate, from the faculty of each participating academic unit. Proposals must be endorsed by the appropriate College dean(s) and by the Provost.

6. In addition to the academic requirements for the certificate, the proposal must define the procedures for management of the program and for awarding certificates. The design and wording of certificates must be approved by the Provost and a draft must be submitted with the proposal.

7. A certificate program must comprise at least twelve semester hours in a coherent program, of which at least nine semester hours are upper-division coursework (numbered 3000 or above). A multi-disciplinary certificate program will additionally require that courses be taken from more than one academic unit and that at least three semester hours be taken outside the student's major field. Cross-listed courses may be counted as being outside the student's major field.

8. No more than 6 semester hours of Special Topics courses may be included in a certificate program. No more than a total of 4 semester hours of Special Problems or Undergraduate Research courses may be included in a certificate program.

9. Courses required by name and number in a student’s major degree program can not be used in satisfying the course requirements for a certificate.
10. Courses used to satisfy Core Areas A through E in a student’s major degree program cannot also be used to satisfy the course requirements for a certificate.
11. Any free elective course used to satisfy the course requirements of the student’s major degree program may also be used to satisfy the course requirements for a certificate.
12. All academic units may designate a block or blocks of courses outside of the student’s major field of study in which the same course can be used to satisfy the course requirements in the student’s major degree program and also be used to satisfy the course requirements for a certificate.
13. A course may not be counted toward more than one certificate and/or minor.
14. All courses counting toward the certificate must be taken on a letter-grade basis, and be completed with a grade of C or better.
15. The availability of a certificate should be noted in the catalog, at least by title, under the appropriate academic unit(s). The academic unit(s) offering the certificate shall publish and make available to students the requirements for the certificate – the courses and total number of hours required, along with the enumeration of any particular courses that are mandated or excluded, and any grade requirements that differ from the general grade requirements of this policy.
16. All certificate programs are to be reviewed during the scheduled academic program review in the sponsoring unit(s).

Disabled Persons Assistance

Assistance for Individuals with Disabilities

The Office of Disability Services provides accessible programs, services, activities, and reasonable accommodations for students with a disability as defined by section 504 of the Rehabilitation Act of 1973, as amended, and by the Americans with Disabilities Act of 1990 and 2008. Services are available to ensure that individuals with disabilities have an equal opportunity to pursue education, employment, or other campus programs, activities, or services.

The Office of Disability Services offers self-identified students with permanent or temporary disabilities assistance with registration, accessibility, transportation, parking, housing, counseling, note taking, recorded textbooks, advocacy, test proctoring, referral services, and other needs. Disability Services promotes disability awareness programs for departmental faculty and staff, as well as the Georgia Tech community.

Students and prospective students who wish to learn more about accommodations for students with disabilities should contact:

Office of Disability Services
Suite 221 Smithgall
Student Services Building
Georgia Institute of Technology
Atlanta, Georgia 30332-0285

call 404.894.2563 (voice) or 404.894.1664 (TTY)
visit http://disabilityservices.gatech.edu
email dsinfo@gatech.edu

Faculty, staff, and visitors should contact Disability Services in the Office of Human Resources at 404.894.3344 (voice) or 404.894.9411 (TDD).

Office of Disability Services Website (http://www.adapts.gatech.edu)

Academic Accommodations for Students with Disabilities

Reasonable accommodations are provided to self-identified students with disabilities who meet the academic and technical standards requisite to admission or participation in the program of study.

Consideration may be given to the substitution or modification of certain course requirements as long as such changes do not detract from the quality of the educational experience and the changes remain within the accreditation criteria for the degree program. Such substitutions or modifications must be approved by the school chair, department head, or college dean, and the Undergraduate Curriculum Committee and/or the Graduate Committee.

Office of Disability Services Website (http://www.adapts.gatech.edu)

Discrimination

This institution is in compliance with Title VI of the Civil Rights Act of 1964 (http://www.justice.gov/crt/about/cor/coord/titlevi.php) and does not discriminate on the basis of race, creed, color, or national origin and is also in compliance with the provisions of Title IX of the Educational Amendments of 1972 (http://www.dol.gov/oasam/regs/statutes/titleix.htm), which prohibit discrimination on the basis of sex.

Family Educational Rights and Privacy Act (FERPA) and Applicant Records

Notification of Student Rights Under FERPA

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. They are:

• The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. They are:

• The right to inspect and review the student’s education records within forty-five days of the day that the Institute receives the request for access.

Students should submit written requests to the Registrar’s office in order to identify the record(s) they wish to inspect. The Registrar will make arrangements for access and notify the student of the time and place where the records may be inspected.

Students should specify the specific records being requested as stated below when making such written request:

• Transcripts (Office of the Registrar)
• Student Disciplinary Records (Office of Student Integrity)
• Title IX records (Title IX Coordinator)
• Student Housing (Department of Housing)
• Financial Aid Records (Office of Scholarships and Financial Aid)
For education records that are not specified above, please include a sufficient description and, if possible, the location for the requested records as these records are transient in nature and are not routinely maintained as part of a student’s FERPA records.

Please note that fees may be assessed solely to remove other student information that is protected by FERPA and that may be contained within these transient records. You will not be charged to review your student records except as stated herein and we will notify you first if fees may be assessed.

- The right to request the amendment of the student’s education records that the student believes are inaccurate or misleading.

Students may ask the Institute to amend a record that they believe is inaccurate or misleading. They should write the registrar, clearly identifying the part of the record they want changed, and specify why it is inaccurate or misleading.

If the Institute decides not to amend the record as requested by the student, the Institute will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

- The right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes disclosure without consent.

One exception which permits disclosure without consent is disclosure to school officials with legitimate educational interests. A school official is

- a person whether volunteering for or employed by the Institute in an administrative, supervisory, academic or research, or support staff position (including law enforcement unit personnel and health staff);
- a person or company with whom the Institute has contracted (such as an attorney, auditor, or collection agent);
- a person serving on the Board of Regents;
- a staff member in the office of the Board of Regents;
- staff in the Office of the Attorney General; or
- a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks.

A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility.

- The right to file a complaint with the United States Department of Education concerning alleged failures by the Georgia Institute of Technology to comply with the requirements of FERPA.

The name and address of the Office that administers FERPA is:

Family Policy Compliance Office  
U.S. Department of Education  
400 Maryland Avenue, SW  
Washington, DC 20202-4605

Applicant Records

Access to applicant records is strictly controlled and governed by Institute policy. To the extent permitted by law, these records are treated as confidential.

Annual Notice of Directory Information Contents

"Directory Information" is information not generally considered harmful or an invasion of privacy if disclosed. Effective November 12, 2016, the Georgia Institute of Technology considers the following information to be directory information:

- Name, address (including GT email address), and telephone listing
- Level (graduate or undergraduate)
- Field of study
- Enrollment status (full-time, part-time, less than part-time)
- Dates of attendance
- Degrees with associated honors and designations, and date(s) awarded
- Anticipated date of graduation
- Participation in NCAA Division I sports, including terms of team membership

Directory information cannot include social security numbers.

Students who wish to prohibit the release of Directory Information can view information on the registrar's confidentiality Web page (http://www.registrar.gatech.edu/students/formlanding/confid.php).

Possible Federal and State Data Collection and Use

As of January 3, 2012, the U.S. Department of Education’s FERPA regulations expand the circumstances under which your education records and personally identifiable information (PII) contained in such records — including your Social Security Number, grades, or other private information — may be accessed without your consent. First, the U.S. Comptroller General, the U.S. Attorney General, the U.S. Secretary of Education, or state and local education authorities ("Federal and State Authorities") may allow access to your records and PII without your consent to any third party designated by a Federal or State Authority to evaluate a federal- or state-supported education program. The evaluation may relate to any program that is "principally engaged in the provision of education," such as early childhood education and job training, as well as any program that is administered by an education agency or institution. Second, Federal and State Authorities may allow access to your education records and PII without your consent to researchers performing certain types of studies, in certain cases even when we object to or do not request such research. Federal and State Authorities must obtain certain use-restriction and data security promises from the entities that they authorize to receive your PII, but the Authorities need not maintain direct control over such entities. In addition, in connection with Statewide Longitudinal Data Systems, State Authorities may collect, compile, permanently retain, and share without your consent PII from your education records, and they may track your participation in education and other programs by linking such PII to other personal information about you that they obtain from other Federal or State data sources, including workforce development, unemployment insurance,
child welfare, juvenile justice, military service, and migrant student records systems.

Additional Information
Additional information on Georgia Tech's FERPA policies is available from the Registrar's Office.

Grading & GPA

- Academic Average (p. 144)
- Auditing (p. 144)
- Final Examinations (p. 144)
- Grade Substitution (p. 145)
- Grading System (p. 146)
- Pass/Fail Grading (p. 147)
- Progress Reports (p. 147)

Academic Average
The "academic average," or grade-point average (GPA), is the ratio of total quality points earned to total credit hours attempted.

When a student passes a course, she/he receives the designated number of credit hours; at the same time, she/he receives a certain number of quality points, based on the letter grade earned. Multiply the number of credit hours designated to the specific course by the numerical value of the letter grade earned to determine the number of quality points earned. Letter grades carry the following numerical values:

- "A" = 4
- "B" = 3
- "C" = 2
- "D" = 1

For example, when a student earns a letter grade of "C" in a 3-credit-hour course, she/he receives 6 quality points.

Grade-point averages are truncated after two decimal places.

If a student takes the same course more than once, any later grade does not replace any earlier one. The academic average includes both attempts, unless a grade substitution has been approved and processed.

If a student takes a course on a Pass/Fail basis, the course is not included in her/his academic average.

For undergraduate students, the academic average is calculated by summing the number of quality points earned by the student for all courses in which she/he has enrolled as an undergraduate and dividing this sum by the number of credit hours designated to all courses in which she/he has enrolled as an undergraduate.

For graduate students, the academic average includes only the courses in which the student has enrolled after her/his entrance into the graduate division.

Auditing
1. The auditing of a course will be permitted to regularly a enrolled student who has obtained the approval of her/his advisor and the departments concerned. Such a course counts at full value in computing the student’s course load for an academic term.

2. The grade of "V" (i.e., "Visitor") is earned when a student audits a course. The "V" grade has no effect on a student’s grade-point average (GPA).

3. No academic credit is granted for auditing a course.

4. Students are not permitted to change to or from an auditing status except through the regular procedures for schedule change or withdrawal. Any student who does not meet the instructor’s requirements for a successful audit will be withdrawn with a grade of "W" assigned at the end of the academic term.

Final Examinations
Final Instructional Class Days and Reading Periods
The following applies to the standard academic terms, including the Fall Semester, Spring Semester, and Full Summer Session. It does not apply to the Early Short Summer Session and Late Short Summer Session. Given the variability in the exact timing of the Full Summer Session, the Office of the Registrar will adjust the final instructional class days and reading periods for this semester only in order to meet required instructional time. This policy replaces the former Dead Week (Week Preceding Final Examinations) policy.

Final Instructional Class Days
a. Final Instructional Class Days are scheduled during each standard academic term including the Full Summer Session, and are the last two days a course officially meets.

b. No tests or quizzes are to be administered on these days. Lab quizzes and/or practicums may be given in courses comprised of both a lecture and a scheduled lab, wherein the lecture carries at least two credits.

c. For all courses, graded homework or assignments, lab reports, course projects, demonstrations, studio reviews, and presentations may be due during these two days, provided that they are listed on the syllabus at the start of the semester.

d. All quizzes and tests should be graded and reported to students on or before the last Final Instructional Class Day.

Reading Periods
a. Reading Periods will be designated to provide time for students to prepare for final examinations.

b. No classes meet. This includes labs, recitations, projects, design/capstone courses, and studios.

c. No assignments, projects, presentations, or other graded activities are allowed.

d. Instructors may schedule optional study review sessions for students during reading periods, but no credit or extra credit may be attached to these optional sessions. New content may not be covered, and any materials (e.g., handouts, slides, practice problems, etc.) that are provided at these optional review sessions must be made available to all students. This provision does not require that such optional sessions be audio or video recorded.

e. Requests for exceptions to the Final Instructional Class Day and Reading Period policies may be made in writing by the Dean of the College (or her/his designee) to the Student Rules and Regulations Committee (SRR). The SRR will then make a recommendation to the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate, for approval or denial.
Requests must be made no later than the academic term prior to the desired term of implementation and will be regularly reviewed.

f. Student concerns may be discussed with the faculty member and/or reported to the Chief Academic Officer of the department of instruction, or with the Assistant Provost for Academic Advocacy and Conflict Resolution. For more information, see the Student Academic Grievance Policy.

**Final Examinations**

1. In regularly scheduled lecture courses of the Institute, a final examination shall be administered at the time specified in the official Final Examination Schedule as distributed by the Office of the Registrar. In courses such as seminars, senior design, capstone, writing courses, and laboratories, final examinations may be waived and may be replaced with appropriate assessment. The decision to give a final examination in these courses shall be made by the instructor of record. An announcement of the course's final examination policy shall be made to the class at its first meeting and included in the syllabus.

2. No assessment other than a final examination or its replacement may be due during the Final Examination Period.

3. Requests to change a class's final examination time within the Final Examination Period must be submitted to the Chief Academic Officer of the department of instruction for approval no later than one week before the beginning of the Final Examination Period. Any such request must have the unanimous approval of the class as shown by secret ballot, as well as approval by the instructor of the class.

4. A change in the scheduling of a final examination for an individual student ordinarily will not be permitted; however, such a change may be allowed for hardship cases at the discretion of the instructor. The request for a change must be justified in writing by the student and shall be submitted to the instructor prior to Final Examination Period and may be rescheduled to an appropriate time.

5. In the event a student has two final examinations scheduled for at the same time, the course having the lower number shall be considered in conflict and the student shall notify the instructor no later than two weeks before the Thursday of the Final Examination Period. In such case, the final examination in that course shall be given during the Conflict Examination Period or, by agreement of the instructor and the student, at a mutually satisfactory time.

   a. If the student notifies the instructor after the above deadline but before the Thursday of the Final Examination Period, the student shall, at the discretion of the instructor:
      i. receive a course grade of "I" (Incomplete), with an opportunity to take a makeup final examination the following academic term (and have the course grade changed as warranted by the results of the test), or
      ii. be given the final examination during the Conflict Examination Period or at an alternative time during the Final Examination Period.

   b. A student who fails to notify the instructor of the conflict before the Thursday of the Final Examination Period shall, at the discretion of the instructor:
      i. receive a score of zero on the final examination, or
      ii. be given the final examination during the Conflict Examination Period or at an alternative time during the Final Examination Period, or
      iii. be given the final examination at the time scheduled for the course.

**Grade Substitution**

This policy is known as “freshman forgiveness” or “academic forgiveness” at some institutions. No assumptions based on experiences at other institutions should be made about the grade substitution policy at Georgia Tech. Students requesting grade substitutions must follow all steps outlined below.

1. First-time freshman students who receive a grade of "D" or "F" in a course within their first two academic terms of enrollment (first three academic terms for those who begin in the Summer Session for Freshmen) are eligible to repeat the course and have the original grade excluded from the calculation of the academic average. Grade substitution may be used only once per course, with a maximum of two courses in total.

2. The course must be repeated at Georgia Tech within the student’s first four academic terms of enrollment (first five academic terms for those who begin in the Freshman Summer Session).

3. The application for grade substitution must be filed with the Registrar’s Office no later than the deadline for withdrawing from a course during the student’s next term of enrollment after the course is repeated.

4. The original course and grade will continue to appear on the student’s transcript, with a notation that the course was repeated and that the original grade is not included in calculation of the academic average. Credit for the course will be counted only once.

5. If the revised academic average results in a change in academic standing for any term, then the revised standing will be reflected on the student’s transcript. If standing is changed from "Dismissal" to a higher standing, it will be recorded as "standing from Dismissal" and
Grading System

Grades

• The letter grades used in the calculation of grade-point average (GPA) are as follows:

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Excellent. Four quality points.</td>
</tr>
<tr>
<td>B</td>
<td>Good. Three quality points.</td>
</tr>
<tr>
<td>C</td>
<td>Satisfactory. Two quality points.</td>
</tr>
<tr>
<td>D</td>
<td>Passing. One quality point.</td>
</tr>
<tr>
<td>F</td>
<td>Failure. No quality points. If the course is required, the student must repeat it.</td>
</tr>
</tbody>
</table>

• The following grades are used under special conditions and are not included in the calculation of grade-point average (GPA):

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>Satisfactory</td>
</tr>
<tr>
<td>U</td>
<td>Unsatisfactory</td>
</tr>
<tr>
<td>V</td>
<td>No credit earned. The &quot;V&quot; grade is used when a student audits a course.</td>
</tr>
</tbody>
</table>

• The following grades are used in the cases indicated and are not be included in the calculation of grade-point average (GPA):

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>Incomplete. The &quot;I&quot; grade is used when, for reasons beyond her/his control and deemed acceptable by the instructor, a student whose academic performance had been satisfactory becomes unable to fulfill a course's requirements. If the student's academic performance had been so poor as to preclude her/his passing, the instructor shall assign the grade of &quot;F&quot; Regulation VII. &quot;Deficiencies,&quot; outlines the removal of the &quot;I&quot; grade. See the Registrar's Office website for more guidance on the use of the Incomplete grade under Incomplete grade page under the Faculty section.</td>
</tr>
<tr>
<td>NR</td>
<td>Not Reported. The &quot;NR&quot; grade is used when, by no fault of the student, the instructors fails to submit grades before the deadline.</td>
</tr>
<tr>
<td>IJ</td>
<td>Incomplete Judicial. The &quot;IJ&quot; is used when academic misconduct has been reported in a class and the investigation is being conducted. It is a placeholder grade that is changed to a permanent grade as determined by the outcome of the investigation. It remains in place until the charges are adjudicated and a proper final grade is determined and assigned.</td>
</tr>
</tbody>
</table>

• Final grades are reported to the Office of the Registrar at the end of each academic term.
• Progress report grades are submitted to the Office of the Registrar for all classes numbered 1000 and 2000 in the Fall Semester and Spring Semester. These grades are used for advising students, not for calculating any grade-point average (GPA) at Georgia Tech. Progress
report grades are "S" or "U." A grade of "U" indicates that, based on the work completed to that point in the academic term, the student's standing is in the "D" or lower range. Progress report grades must be submitted once 40 percent of the academic term has passed, as specified by the official Academic Calendar. The due date for reporting will be noon on Monday and the grades will be available to students that afternoon.

- If a final course grade is believed to be erroneous, the student should contact the professor as soon as possible. In general, no change of grade will be made after the end of the student's next academic term in residence.

**Academic Average**

The "academic average," or grade-point average (GPA), is the ratio of total quality points earned to total credit hours attempted.

When a student passes a course, she/he receives the designated number of credit hours; at the same time, she/he receives a certain number of quality points, based on the letter grade earned. Multiply the number of credit hours designated to the specific course by the numerical value of the letter grade earned to determine the number of quality points earned. Letter grades carry the following numerical values:

- "A" = 4
- "B" = 3
- "C" = 2
- "D" = 1

For example, when a student earns a letter grade of "C" in a 3-credit-hour course, she/he receives 6 quality points.

Grade-point averages are truncated after two decimal places.

If a student takes the same course more than once, any later grade does not replace any earlier one. The academic average includes both attempts, unless a grade substitution has been approved and processed. If a student takes a course on a Pass/Fail basis, the course is not included in her/his academic average.

For undergraduate students, the academic average is calculated by summing the number of quality points earned by the student for all courses in which she/he has enrolled as an undergraduate. The maximum number of credit hours that a student may earn on a pass/fail basis is related to the number of credit hours required for the program of study in which the student is enrolled.

<table>
<thead>
<tr>
<th>Hours included in program of study</th>
<th>Hours allowed on pass/fail basis</th>
</tr>
</thead>
<tbody>
<tr>
<td>45 to 70 credit hours</td>
<td>3 credit hours</td>
</tr>
<tr>
<td>71 to 90 credit hours</td>
<td>6 credit hours</td>
</tr>
<tr>
<td>91 or more credit hours</td>
<td>9 credit hours</td>
</tr>
</tbody>
</table>

2. For a second undergraduate degree, these limits apply to the credit hours included in the program of study for that second degree.

3. A master's degree program of study may include up to three semester credit hours on a pass/fail basis.

**Pass/Fail Grading**

**A. General**

1. At the option of the student's major school, credit toward a bachelor's degree may be allowed for courses taken under the pass/fail system and completed with a grade of "Pass."

2. The major school must approve all pass/fail courses included in the final program of study, and students should be aware of school requirements.

3. In graduate programs, thesis research hours will be evaluated on a pass/fail basis.

4. Pass/fail enrollment in any course may be restricted by the school or department offering the course.

5. Students who are permitted to register under the pass/fail system will be so designated on the official class rolls. The grades recorded will be "S" for "Satisfactory" or "U" for "Unsatisfactory." These grades will not be included in the calculation of the grade-point average and cannot be changed to a grade that will count in the average.

6. Withdrawals from courses taken on a pass/fail basis will follow the same rules that govern withdrawals from courses included in the grade-point average.

7. The deadline to change the grade mode from letter grade to pass/fail (and vice versa) is the same day as the Last Day to Withdraw from Individual Courses without a Penalty.

Grade mode changes are allowed online during the Registration Period. After the Registration Period ends, the following form must be completed and submitted to the Office of the Registrar.

Download Form ([http://www.registrar.gatech.edu/docs/catalog/grade_mode.pdf](http://www.registrar.gatech.edu/docs/catalog/grade_mode.pdf))

**B. Credit Hours Permitted**

Progress Report grades of "S" or "U" are issued for all students enrolled in 1000 and 2000 level courses in the Fall Semester and Spring Semester prior to midterm. A Progress Report grade of "U" indicates a performance level of "D" or lower. These are not permanent grades and never appear on a transcript, but are issued to help students assess where they stand in the class and obtain academic help from the faculty and the many academic resource services available on campus.

For more information, see Regulation V, "Grades/Average," Section A, "Grades." (p. 153)

**Health Policies**

A Medical Entrance Form and proof of required immunizations and tuberculosis screening must be on file with Stamps Health Services ([http://www.health.gatech.edu](http://www.health.gatech.edu)). Failure to provide this information may result in a health hold and delay of registration. All international students (F1 and J1 visas) are required to have health insurance coverage. Students may elect to purchase the health insurance made available by the health insurance provider contracted by Georgia Tech or may have their own comparable medical insurance.
Student Health Insurance

Source: Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/student-affairs/health-insurance-information)

The Georgia Board of Regents (BOR) offers student health insurance for eligible students and their dependents. Two groups of students may purchase student health insurance: Mandatory and Voluntary. Mandatory students are required by the BOR to have student health insurance and the charge is applied automatically to the student’s account along with tuition. Mandatory Graduates: Teaching Assistant, F1 or J1 visa holder, Research Assistant, Fellowship or Full tuition waiver. Mandatory Undergraduates: F1 or J1 visa holders. Mandatory students who already have health insurance may apply to waive the Board of Regents (BOR) student health insurance coverage.

There is a 30 day open enrollment period at the start of each semester to enroll for student insurance coverage, to enroll for the voluntary plan, or for mandatory students to add spouse/dependents coverage. For students and spouses with Board of Regents (BOR) student health insurance, Stamps Health Services (SHS) is the primary care provider. SHS renders care to students, spouses, and domestic partners. Dependent children are not eligible to be treated at SHS.

More information is available at www.health.gatech.edu (http://www.health.gatech.edu)

Immunizations

Source: Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/student-affairs/immunizations)

All incoming students must comply with the Board of Regents of the University System of Georgia’s immunization requirements. It is strongly recommended that immunization requirements are met as soon as possible to avoid a registration hold. A registration hold keeps students from registering for classes.

Incoming students must use Stamps Health Services Immunizations Form.

More information is available at www.health.gatech.edu (http://www.health.gatech.edu)

Special Health Considerations

Source: Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/student-affairs/special-health-considerations)

It is the responsibility of all students to notify the Health Center, the School of Applied Physiology, and the Office of Disabled Student Services of any disability that would make participation in swimming, competitive sports, and aerobic training hazardous to their well-being. Any student requesting special consideration because of mental or physical disability should have his or her physician write an explanatory letter, giving full details of the disability and consequent limitations on physical activity, to the medical director of Health Services. This letter must accompany the Medical Entrance Form.

Treatment

Source: Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/student-affairs/treatment)

Stamps Health Services (SHS) offers comprehensive health care to students, spouses, and/or domestic partners of Georgia Tech students. Eligibility status is determined before an appointment is scheduled for services. Services are provided through payment of the Health Fee or on a pay-per-visit basis. The Health Fee Coverage Period begins one business week before the first day of class of the upcoming term. The coverage period ends the last business day prior to the first day of class of the upcoming term.

More information about the Health Fee is available on the Stamps Health Services (http://health.gatech.edu/finance/Pages/Health-Fee.aspx) website.

Institute Commitment to Diversity, Equity, and Inclusion

Diversity is one of Georgia Tech’s greatest strengths and one of the major priorities identified in our twenty-five-year strategic plan.

“We will recruit, develop, retain, and engage a diverse cadre of students, faculty, and staff with a wide variety of background, perspectives, interests, and talents, creating a campus community that exemplifies the best in all of us—in our intellectual pursuits, our diversity of thought, our personal integrity, and our inclusive excellence.” — Georgia Tech Strategic Plan

At Tech, we embrace and leverage diversity in all its manifestations. We are proud that we are one of the most diverse universities in the world with students who represent every state in the nation and more than 100 countries. In the years ahead, our goal is to continue to build a campus culture of collegiality, close collaboration, global perspective, intercultural sensitivity, respect, and thoughtful interaction among a diverse community of students, employees, and alumni.

We realize that, in order to achieve our vision for Georgia Tech as a leader in influencing the major technological, social, and policy decisions in the twenty-first century, we must recruit and retain faculty, staff, and students from a wide array of backgrounds, perspectives, interests, and talents. In doing so, we will create a community that exemplifies the best in all of us — our intellectual pursuits, our diversity of thought, and our personal integrity. Our mission to achieve inclusive excellence means unleashing the full potential of Tech’s human capacity to create a better, sustainable future for us all.

You are invited to join us on the journey of creating and sustaining a future that builds upon the talents of all members of our community in addressing the major challenges of this and future generations.

The Office of the President
Georgia Institute of Technology

Intellectual Property Policy

The Institute’s Intellectual Property Policy, concerning inventions, copyright, and computer software, applies to students as well as to faculty and staff. Adherence thereto is a condition of continued enrollment at the Institute. The Intellectual Property Policy can be found in section 50 of the Faculty Handbook (http://www.academic.gatech.edu/handbook).

Faculty Handbook (http://www.academic.gatech.edu/handbook)
Office of Technology Licensing (http://otl.gtrc.gatech.edu)
Required Computer Ownership

In an effort to foster equal access to computers and to make the most of the teaching and learning technology available at Georgia Tech, all undergraduate students entering Georgia Tech under this or subsequent catalogs are required to own or lease a computer. The minimum hardware and software requirements (as well as purchasing and financing options) are sent each spring to students accepted for the summer and fall semesters, and in the fall to students accepted for spring semester.

Because computer ownership is mandatory, an average cost for the minimum hardware and software required can be included in computing a new student’s cost of education for the purpose of determining their eligibility for all forms of student financial aid. Students should contact the Office of Scholarships and Financial Aid for more information.

Student Computer Ownership Website (http://www.sco.gatech.edu)

Sexual Misconduct Policy

The official and most current version of the Sexual Misconduct Policy is available in the Georgia Tech Policy Library.

Sexual Misconduct Policy

Student Absence from Class Due to Illness or Personal Emergencies

Expectations, Rights, and Responsibilities

A. A student may miss class on occasion due to medical issues. The following statement intends to describe the expectations, rights, and responsibilities of all involved including students, Office of Student Life, instructors, and health care providers. The information is intended to give students better direction as to how they should proceed to notify instructors when they are ill and need to miss class and what kind of documentation they should provide and to whom. The information is intended to provide faculty, instructors, information that will be more useful to them in determining the student's options for making up the work, or understanding the implications on their grade in the class. The information is intended to provide some guidance to the on-campus health services staff and off-campus health care providers in terms of what kinds of documentation is needed and how it will be handled once provided.

Students who need to miss class due to illness should be aware of the following:

a. If ill, and possibly contagious, students are expected to take appropriate action including not coming to class and seeking medical treatment.

b. Students have the right to expect that their privacy will be protected under HIPAA but they must follow proper procedures in order to ensure that health care information is kept private.

c. Students are responsible for seeking medical attention and for obtaining some type of documentation that would include the following minimal information:

   i. Date of the visit
   ii. Name of medical facility where treatment occurred
   iii. Diagnosis or indication of whether class absence is recommended or required
   iv. Expected duration of the recovery

d. Students are responsible for providing the documentation to the Office of Student Life where it will be treated and handled confidentially with necessary information being submitted to the student’s instructors for that term.

2. Office of Student Life: Expectations, Rights, and Responsibilities

In regard to supporting students who need to miss class due to illness the Office of Student Life is expected to remain aware of the following:

a. It will serve as the collection point for medical documentation and treat it in a confidential manner.

b. It will share the medical documentation with appropriate instructional faculty. Sufficient information from the medical documentation to ensure that the dates of illness or of treatment for the illness occurred will be shared with the instructional faculty.

c. It will share sufficient information as to help determine whether the illness was of sufficient concern that missing class was recommended or required.

d. It will answer questions that instructional faculty may have if they are unclear about what to do with the information.

3. Instructors of Classes: Expectations, Rights, and Responsibilities

In regard to supporting students who need to miss class due to illness, instructors are expected to remain aware of the following:

a. It is the responsibility of the instructors to respect the student’s right to confidentiality and understand that medical documentation will be handled by the Office of Student Life in an appropriate manner.

b. It is expected that instructors will not ask the student directly for medical documentation. If it is provided without being requested, the instructors should return it to the student or destroy it.

c. Instructors are expected to:

   i. Work with the student to make up the missed assignments, when possible.
   ii. Work with the student to find alternatives, if possible, if the assignments missed cannot be made up.
   iii. Do so within a reasonable timeframe.

4. Medical Professionals: Expectations, Rights, and Responsibilities
In regard to supporting students who need to miss class due to illness, medical professionals are expected to remain aware of the following:

a. At the request of the student (patient), it is expected that some type of document be provided that indicates at minimum the date of the visit or treatment. If the student is to miss class, it is expected that the student would have sufficient information from the medical facility to support that need.

b. It is expected that the medical professional will provide sufficient information to the student so that the student can then provide it to the Office of Student Life.

c. The medical professional can expect the information to be handled in a confidential manner.

d. The medical documentation must be on official letterhead of the facility and contain a date.

B. A student may miss class on occasion due to personal emergencies. Whatever the type of personal that exists, there are expectations on part of the students, the Office of Student Life, and the instructional faculty.

1. **Students: Expectations, Rights, and Responsibilities**

   Students who need to miss class due to personal emergencies should remain aware of the following:

   a. Some type of documentation is required by the Office of Student Life. This could take the form of an obituary, travel itinerary, or other type of document that would include a date and possibly some type of explanation for the absence.

   b. The length of the absence needs to be clear as part of the documentation.

   c. Student have the right to expect that their privacy will be protected under FERPA.

2. **Office of Student Life: Expectations, Rights, and Responsibilities**

   In regard to supporting students who need to miss class due to personal emergencies, the Office of Student Life will remain aware of the following:

   a. It will serve as the collection point for documentation and treat it in a confidential manner.

   b. It will share with appropriate instructors sufficient information from the documentation to ensure that the dates of the incident or event are clear and that it was a severe enough life interruption to cause absence from class.

   c. It will answer questions that instructional faculty may have if they are unclear about what to do with the information.

3. **Faculty/Instructors of Classes: Expectations, Rights, and Responsibilities**

   In regard to supporting students who need to miss class due to personal emergencies, instructors are expected to remain aware of the following:

   a. It is the responsibility of the instructors to respect the student’s right to confidentiality and understand that the documentation will be handled by the Office of Student Life in an appropriate manner.

   b. It is expected that instructors will not ask the student directly for documentation. If it is provided without being requested, the instructors should return it to the student or destroy it. Depending upon the kind of documentation it is, there could be other information in it that could compromise the privacy of others, including other family members.

   c. Instructors are expected to:

   i. Work with the student to make up the missed assignments, when possible.

   ii. Work with the student to find alternatives, if possible, if the assignments missed cannot be made up.

   iii. Do so within a reasonable timeframe.

Forms:

RULES AND REGULATIONS

• I. Purpose (p. 151)
• II. Academic Calendar (p. 151)
• III. Notices (p. 152)
• IV. Attendance (p. 152)
• V. Grades / Average (p. 153)
• VI. Scholastic Regulations (p. 154)
• VII. Deficiencies (p. 157)
• VIII. Withdrawal/Readmission (p. 157)
• IX. Scheduling (p. 159)
• X. Pass/Fail Grading (p. 160)
• XI. Cross Enrollment and Concurrent Registration (p. 160)
• XII. Examinations (p. 160)
• XIII. Undergraduate Degrees (p. 162)
• XIV. Graduate Degrees (p. 163)
• XV. Student Vehicles (p. 165)
• XVI. Medical Regulations (p. 165)
• XVII. Extracurricular Activities (p. 165)
• XVIII. Academic Honor Code (p. 166)
• XIX. Code of Conduct (p. 166)
• XX. Grievance Procedures (p. 175)
• XXI. Exceptions (p. 176)
• XXII. Student-Faculty Expectations (p. 176)

I. Purpose

These regulations are intended to set forth the requirements of the faculty to the end that a large student body may live and work together harmoniously with a minimum of friction and misunderstanding. Each student is expected to be a law-abiding citizen and to obey the laws of the city of Atlanta, Fulton County, the state of Georgia, and the United States.

II. Academic Calendar

A. Standard Calendar

Georgia Tech’s standard Academic Calendar consists of a Fall Semester, a Spring Semester, and an accelerated Summer Session. Each Fall Semester and each Spring Semester normally includes approximately fifteen weeks of instruction plus one week of final examinations. A normal Summer Session includes approximately eleven weeks of instruction plus one week of final examinations. Each Academic Year consists of one sequence of a Fall Semester followed by a Spring Semester. The word “term” may refer to a Fall Semester, a Spring Semester, or a Summer Session. The Office of the Registrar publishes the official Academic Calendar for each term. Due to variations in the yearly calendar and the need to balance the dates of campus events, particularly in the Fall Semester, the Registrar uses discretion, as appropriate, to set dates on the Academic Calendar, such as Fall Recess, the Last Day to Withdraw from Individual Courses without a Penalty, and the Progress Report Grade Due Date. See Catalog Regulation V. Grades and Scholastic Average (http://catalog.gatech.edu/rules/5) for more information.

B. Other Academic Terms

In addition to the standard Academic Calendar, some programs may be offered on other schedules. All such offerings are subject to the approval of the Institute Undergraduate Curriculum Committee, Institute Graduate Committee, and/or the Registrar, as appropriate. With approval, such programs may operate under different academic rules, such as credit hour limits or withdrawal dates, than those specified for standard academic terms.

C. Curriculum Year

1. Requirements for degrees and minors shall be specified for each Curriculum Year, which is comprised of a Summer Session plus the immediately following Fall Semester and Spring Semester. This designation shall be independent of any schedule for publication of such requirements in printed or electronic form.

2. All changes in degree and minor requirements shall become effective at the beginning of the next Curriculum Year following final approval by the Institute Undergraduate Curriculum Committee, Institute Graduate Committee, Academic Senate, and/or University System, as appropriate.

3. The Office of the Registrar shall maintain an archival record of all degree and minor requirements associated with each curriculum year.

D. Unit of Credit Defined

The current Academic Calendar is semester-based, consisting of with 15 weeks of instruction in which 50 minutes of class attendance are considered one contact hour and one unit of credit. The working unit of credit definition is as follows:

One unit of credit represents how much time a typical student is expected to devote to learning per week of study. Each course is evaluated by a system of credits related to time spent in class, lab, research, or field study. One credit is expected to require at least three hours of scholarly activity per week.

For lecture-based course work, one 50-minute hour of class attendance is scheduled for each credit awarded, but any combination of class attendance, lab, research, or field study experience may be arranged. Additional time is expected out-of-class for preparation and homework.

• The amount of time that students should expect to spend out-of-class on homework and other assignments should be commensurate with the credit hours granted for the course. For example, a 3 credit lecture-based class requires nine (9) hours of scholarly activity per week which, considering three (3) hours of lecture per week, indicates a requirement for an additional six (6) hours of scholarly activity in the form of homework assignments, project assignments, guided study and self-guided study of the course materials.

Studio and laboratory classes earn one credit for each three hours of attendance. Exceptions to this policy for undergraduate courses must be approved by the Institute Undergraduate Curriculum Committee. Exceptions for graduate courses must be approved by the Institute Graduate Curriculum Committee.

During our current 15-week fall or spring terms, most 3-hour classes have the following amounts of instruction time.
• Classes meet three times per week for 50-minute periods, for a total of 2250 minutes (3x50x15); or
• Classes meet two times per week for 80-minute periods, for a total of 2400 minutes (2x80x15).

The following class scheduling protocols are intended to ensure sufficient meeting times to account for the credit assigned the course. At present, the average amount of class attendance is 750 minutes for each credit in a 15-week semester.

This policy is consistent with specifications in the University System of Georgia Academic and Student Affairs Handbook, Section 2.1 Semester System, Uniform Academic Calendar, Cancellation of Classes and Religious Holidays. This policy is also consistent with the Southern Association of Colleges and Schools policy statement on credit hours.

III. Notices

A. Notices

All enrolled students have an e-mail account provided by Georgia Tech. This account is a student’s official point of contact with the Institute, and she/he is expected to check it each school day. Students are also expected to be aware of notices that appear on the Student Access System and of general notices that are in the Technique. It is the student’s responsibility to check the Student Access System, both during the Drop/Add Period and during the academic term, in order to verify the accuracy of her/his course schedule and to become aware of important notices. A student should verify her/his course schedule at least once during the first five weeks of the academic term and once after Mid-term.

B. Change of Address

When a student’s address changes, the student is responsible for updating her/his record in the Student Access System within one week of the change.

C. Unclaimed Mail

Students are responsible for returning to the front window of the Post Office all mail in their Post Office boxes that is unclaimed after three days.

IV. Attendance

A. General

1. Each term, a course listing is published showing the time period for each class.
2. If an instructor should be late in meeting the class, the students shall wait twenty minutes after the published starting time. If the instructor has not arrived by that time, the students may leave unless specifically notified to await the instructor’s arrival.

B. Class Attendance

1. There are no formal institutional regulations regarding class attendance at Georgia Tech. The resources of the Institute are provided for the intellectual growth and development of the students who attend. A schedule of courses is provided for the students and faculty to facilitate an orderly arrangement of the program of instruction. The fact that classes are scheduled is evidence that attendance is important; students should, therefore, maintain regular attendance if they are to attain maximum success in the pursuit of their studies.

2. All students are responsible for obtaining an understanding of each instructor’s policy regarding absences; all students are expected to attend announced quizzes, laboratory periods, and final examinations. Although it is recognized that occasionally it may be necessary for students to be absent from scheduled classes or laboratories for personal reasons, students are responsible for all material covered in their absences, and they are responsible for the academic consequences of their absences. Students should discuss planned absences with their instructors as soon as possible after the beginning of an academic term. Work missed may be made up at the discretion of the instructors.

3. In the event of a medical emergency or an illness that is severe enough to require medical attention, students are responsible for contacting the Office of the Vice President for Student Life and Dean of Students as soon as possible to report the medical issue or emergency, providing dated documentation from a medical professional and requesting assistance in notifying their instructors. The medical documentation will be handled confidentially within the Office of the Vice President for Student Life and Dean of Students and will inform a decision as to whether communication with instructional faculty is appropriate. It is the expectation of the Institute that instructional faculty will honor a request from the Office of the Vice President for Student Life and Dean of Students to excuse a medical emergency or illness and allow make-up of the work missed, including homeworks, quizzes, presentations, examinations, or other class assignments.

4. Students who are absent because of participation in approved Institute activities (such as field trips, professional conferences, and athletic events) will be permitted to make up the work missed during their absences. Approval of such activities will be granted by the Student Academic and Financial Affairs Committee of the Academic Senate, and statements of the approved absence may be obtained from the Office of the Registrar. Course instructors are responsible for establishing reasonable deadlines and/or make-up materials for the missed work, and for clearly communicating this information to the relevant student(s), when absences for Institute activities are approved.

a. Student Responsibilities
i. Individual students requesting approval from the Student Academic and Financial Affairs Committee are expected to do so at least two weeks before their requested absences; ii. Students are expected to inform their instructors about their approved absence by the end of the class meeting immediately following receipt of their approval notice.

b. Course Instructor Responsibilities
i. Course instructors receiving timely notification of student absence (as outlined above) are expected to establish reasonable deadlines and/or make-up materials for missed work, and for clearly communicating this information to the relevant student(s).

c. Faculty/Staff Sponsor Responsibilities
i. Faculty/staff sponsors of student organizations are expected to submit requests for absence approval, to the Office of the Registrar, at least one week before the date of the expected absence(s); ii. Faculty/staff sponsors are expected to provide the Office of the Registrar with roster changes in as timely a fashion as
possible, to reduce negative impact on the ability of students and instructors to coordinate their plans;

iii Faculty/staff sponsors are expected to notify students of approved absences, along with instructions for notifying their instructors, within two business days of receipt of approval from the Office of the Registrar.

5. Students who are absent because of participation in a particular religious observance will be permitted to make up the work missed during their absence with no late penalty, provided the student informs the course instructor of the upcoming absence, in writing, within the first two weeks of class, and provided the student makes up the missed material within the time frame established by the course instructor. Exercising one's rights under this policy is subject to the Georgia Tech Honor Code. The course instructor is responsible for establishing reasonable deadlines and/or make-up material for the missed work, and for clearly communicating this information to the student. Students may choose to appeal to the Student Academic and Financial Affairs Committee of the Academic Senate for formal approval of this type of absence.

V. Grades / Average

A. Grades

- The letter grades used in the calculation of grade-point average (GPA) are as follows:

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Excellent. Four quality points.</td>
</tr>
<tr>
<td>B</td>
<td>Good. Three quality points.</td>
</tr>
<tr>
<td>C</td>
<td>Satisfactory. Two quality points.</td>
</tr>
<tr>
<td>D</td>
<td>Passing. One quality point.</td>
</tr>
<tr>
<td>F</td>
<td>Failure. No quality points. If the course is required, the student must repeat it.</td>
</tr>
<tr>
<td>I</td>
<td>Incomplete. The &quot;I&quot; grade is used when, for reasons beyond her/his control and deemed acceptable by the instructor, a student whose academic performance had been satisfactory becomes unable to fulfill a course's requirements. If the student's academic performance had been so poor as to preclude her/his passing, the instructor shall assign the grade of &quot;F&quot;. Regulation VII. &quot;Deficiencies,&quot; outlines the removal of the &quot;I&quot; grade. See the Registrar's Office website for more guidance on the use of the Incomplete grade under Incomplete grade page under the Faculty section.</td>
</tr>
<tr>
<td>S</td>
<td>Satisfactory</td>
</tr>
<tr>
<td>U</td>
<td>Unsatisfactory</td>
</tr>
<tr>
<td>V</td>
<td>No credit earned. The &quot;V&quot; grade is used when a student audits a course.</td>
</tr>
</tbody>
</table>

- The following grades are used under special conditions and are not included in the calculation of grade-point average (GPA):

<table>
<thead>
<tr>
<th>Letter Grade</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>W</td>
<td>Withdrawal without Penalty. Withdrawals from individual courses without penalty are not permitted after 60 percent of the academic term has passed, as specified by the official Academic Calendar, except in cases of hardship, as determined by the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate. Withdrawal from the Institute is not permitted after 60 percent of the academic term has passed, except in cases of hardship, as determined by the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate. With the exception of part-time graduate students, those who withdraw from the Institute and receive all grades of &quot;W&quot; customarily will not be permitted to enroll in courses in the next succeeding academic term. Regulation VII. &quot;Withdrawal and Readmission,&quot; outlines the Institute's policies on readmission. Faculty are expected to return to students a graded assignment or other meaningful performance feedback prior to the deadline for withdrawing from classes so that students can make informed decisions about withdrawing.</td>
</tr>
</tbody>
</table>

- The following grades are used in the cases indicated and are not be included in the calculation of grade-point average (GPA):
III. Scholastic Regulations

A. Classification of Students

Graduate students, with the exception of non-degree-seeking division.

Undergraduate students, with the exception of non-degree-seeking

Students, shall be classified at the end of each academic term.

1. Undergraduate students, with the exception of non-degree-seeking students, shall be classified at the end of each academic term by the Office of the Registrar on the basis of the total number of credit hours attempted.

2. Progress report grades are submitted to the Office of the Registrar for all classes numbered 1000 and 2000 in the Fall Semester and Spring Semester. These grades are used for advising students, not for calculating any grade-point average (GPA) at Georgia Tech. Progress report grades are "S" or "U." A grade of "U" indicates that, based on the work completed to that point in the academic term, the student's standing is in the "D" or lower range. Progress report grades must be submitted once 40 percent of the academic term has passed, as specified by the official Academic Calendar. The due date for reporting will be noon on Monday and the grades will be available to students that afternoon.

3. If a final course grade is believed to be erroneous, the student should contact the professor as soon as possible. In general, no change of grade will be made after the end of the student's next academic term in residence.

4. B. Academic Average

The "academic average," or grade-point average (GPA), is the ratio of total quality points earned to total credit hours attempted.

When a student passes a course, she/he receives the designated number of credit hours; at the same time, she/he receives a certain number of quality points, based on the letter grade earned. Multiply the number of credit hours designated to the specific course by the numerical value of the letter grade earned to determine the number of quality points earned. Letter grades carry the following numerical values:

- "A" = 4
- "B" = 3
- "C" = 2
- "D" = 1

For example, when a student earns a letter grade of "C" in a 3-credit-hour course, she/he receives 6 quality points.

Grade-point averages are truncated after two decimal places.

If a student takes the same course more than once, any later grade does not replace any earlier one. The academic average includes both attempts, unless a grade substitution has been approved and processed.

C. Grade Substitution

This policy is known as "freshman forgiveness" or "academic forgiveness" at some institutions. No assumptions based on experiences at other institutions should be made about the grade substitution policy at Georgia Tech. Students requesting grade substitutions must follow all steps outlined below.

1. First-time freshman students who receive a grade of "D" or "F" in a course within their first two academic terms of enrollment (first three academic terms for those who begin in the Summer Session for Freshmen) are eligible to repeat the course and have the original grade excluded from the calculation of the academic average. Grade substitution may be used only once per course, with a maximum of two courses in total.

2. The course must be repeated at Georgia Tech within the student's first four academic terms of enrollment (first five academic terms for those who begin in the Freshman Summer Session).

3. The application for grade substitution must be filed with the Registrar's Office no later than the deadline for withdrawing from a course during the student's next term of enrollment after the course is repeated.

4. The original course and grade will continue to appear on the student's transcript, with a notation that the course was repeated and that the original grade is not included in calculation of the academic average. Credit for the course will be counted only once.

5. If the revised academic average results in a change in academic standing for any term, then the revised standing will be reflected on the student's transcript. If standing is changed from "Dismissal" to a higher standing, it will be recorded as "standing from Dismissal" and the dismissal will continue to be counted with respect to regulations and policies related to Withdrawal and Readmission.

6. A course is not eligible for grade substitution if the student was found responsible for any academic misconduct in that course regardless of how many times it is repeated.

7. The grade substitution policy (including, but not limited to, course eligibility, number of courses, time limits, and deadlines) is not subject to exceptions and may not be petitioned to the Undergraduate Institute Curriculum Committee.

Download Form (http://registrar.gatech.edu/docs/catalog/GRADE_SUBSTITUTION_FORM.pdf)

VI. Scholastic Regulations

A. Classification of Students

1. Undergraduate students, with the exception of non-degree-seeking students, shall be classified at the end of each academic term by the Office of the Registrar on the basis of the total number of credit hours attempted.
attempted credit hours for which they have successfully earned credit in accordance with the following:

<table>
<thead>
<tr>
<th>Classification</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Freshman</td>
<td>0-29</td>
</tr>
<tr>
<td>Sophomore</td>
<td>30-59</td>
</tr>
<tr>
<td>Junior</td>
<td>60-89</td>
</tr>
<tr>
<td>Senior</td>
<td>90+</td>
</tr>
</tbody>
</table>

2. Graduate and special students who have completed all requirements for a particular classification, as defined by their major department, may request reclassification through their major department.

3. Students scheduled for at least twelve (12) credit hours in a semester are classified as full-time students; those scheduled for six to eleven (6-11) hours are classified as part-time students; and those scheduled for one to five (1-5) hours are classified as less-than-part-time students.

B. Eligibility for Class Rings
A student may purchase a class ring any time after successfully earning credit for 70 attempted credit hours.

C. Academic Standing
1. The assignment of academic standing is based on the student's most recent academic term and her/his cumulative grade-point average.

2. The minimum satisfactory grade-point average (GPA) is 1.70 for freshmen and joint-enrolled high school students; 1.80 for sophomores; 1.95 for juniors; 2.00 for seniors and special undergraduates; 2.70 for master's and special graduate students; and, 3.00 for doctoral students.

3. Students not on academic probation are in good academic standing.

4. Academic warning
   a. Academic warning is a subcategory of good academic standing, differing only in the maximum allowable schedule load.
   b. A student who has a cumulative grade-point average below the minimum satisfactory scholarship requirement, or whose cumulative grade-point average for work taken during any term is below this requirement, shall be placed on academic warning.
   c. A student on academic warning whose grade-point average for the academic term is above the minimum satisfactory scholarship requirement and cumulative grade-point average is below the minimum satisfactory scholarship requirement shall remain on academic warning.

5. Academic probation
   a. A student on academic warning whose grade-point average is below the minimum satisfactory scholarship requirement for any academic term shall be placed on academic probation.
   b. An undergraduate student in good academic standing whose grade-point average for any academic term is below 1.00, based on at least six graded hours, shall be placed on academic probation.
   c. A student also may be placed on academic probation through other actions, as described in the following section.

6. Dismissal for unsatisfactory scholarship
   a. The Institute may drop from the rolls at any time a student whose record in scholarship is unsatisfactory.

b. A graduate student whose grade-point average for any term is 2.00 or below may be placed on academic probation or dropped, regardless of the student's previous record.

c. A student on academic probation whose grade-point average for the academic term of probation is below the minimum satisfactory scholarship requirement and whose cumulative grade-point average is below the minimum satisfactory scholarship requirement shall be dropped from the rolls for unsatisfactory scholarship.

d. An undergraduate student on academic warning whose grade-point average for any term is below 1.00, based on at least six graded hours, and cumulative grade-point average is below the minimum satisfactory scholarship requirement shall be dropped from the rolls for unsatisfactory scholarship.

e. The record of a student on academic probation whose grade-point average for the academic term in unsatisfactory, but whose overall academic record is satisfactory, may be reviewed by the Institute Undergraduate Curriculum Committee or the Institute Graduate Curriculum Committee, as appropriate. The student may be dropped or may be continued on academic probation.

7. Academic review
   A student who normally would be dropped from the rolls for academic deficiencies, but appears from the record not to have completed the academic term, may be placed on academic review. This is a temporary standing that makes the student ineligible for registration. If no acceptable explanation is given within a reasonable time, the standing is changed to drop.

8. The academic standing regulations given previously for graduate students do not preclude a school from having more rigorous requirements.

D. Satisfactory Academic Progress Toward Degree Completion
1. Satisfactory academic progress toward degree completion means that for each term of enrollment, the student completes a course or courses with the minimum necessary grades that are either prerequisites for courses required in the major or that are degree applicable to stay on track towards graduation. It is noted that some majors may require a minimum grade that is higher than "D."

2. If a student withdraws from all courses in a term, there will be no change in status. However, if a student withdraws from all courses in a second term of enrollment, they will be placed on warning for lack of satisfactory academic progress towards degree completion. If withdrawal occurs in a third term of enrollment, the status will be revised to probation. If withdrawal occurs in a fourth term of enrollment, the student will be placed on academic dismissal for lack of satisfactory progress towards degree completion. The number of withdrawal terms is cumulative and irrespective of whether or not they occur consecutively.

3. Students applying for readmission may be denied based on prior terms of withdrawals.

4. Eligibility for financial aid, NCAA Division I sports, etc. may be predicated on different satisfactory progress requirements. Information on those requirements should be directed to the appropriate office on campus and should not be confused with this academic policy.
E. Maximum Schedule Load

1. The maximum number of credit hours for which an undergraduate student may register in a Fall Semester or Spring Semester, based on her/his academic standing, is as follows:

<table>
<thead>
<tr>
<th>Standing</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Good</td>
<td>21</td>
</tr>
<tr>
<td>Warning</td>
<td>16</td>
</tr>
<tr>
<td>Probation</td>
<td>14</td>
</tr>
</tbody>
</table>

2. The maximum number of credit hours for which an undergraduate student may register in a regular Summer Session, based on her/his academic standing, is as follows:

<table>
<thead>
<tr>
<th>Standing</th>
<th>Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Good</td>
<td>16</td>
</tr>
<tr>
<td>Warning</td>
<td>14</td>
</tr>
<tr>
<td>Probation</td>
<td>12</td>
</tr>
</tbody>
</table>

3. Students who are on probation or probation from dismissal may choose or be required to enroll in GT 2100. This course does not count toward graduation requirements nor would it count against the maximum course loads listed above.

4. A graduate student may register for a maximum of 21 credit hours in a Fall Semester or Spring Semester and a maximum of 16 credit hours during a regular Summer Session.

5. Requests for schedule overloads must be recommended by the student's major school and approved by the Institute Undergraduate Curriculum Committee or Institute Graduate Curriculum Committee, as appropriate.

6. During Phase 1 Registration, the Institute reserves the right to limit undergraduate students to 18 credits maximum for the Fall Semester and Spring Semester and to limit graduate students to less than 21 credit hours depending upon the needs of the program or school.

F. Academic Honors

The Institute encourages excellence in scholarship and gives official recognition to undergraduate students whose work is superior in any given academic term.

1. Dean's List
   a. The Dean’s List includes all degree-seeking undergraduates who, during the preceding academic term, earned a grade-point average (GPA) of 3.00 or higher, completed a schedule of at least twelve credit hours of coursework on a letter-grade basis, and are not on academic warning or probation or subject to any disciplinary action. All grades must be reported.

2. Faculty Honors
   a. Faculty Honors includes all degree-seeking undergraduates who, during the preceding academic term, earned a grade-point average (GPA) of 4.00, completed a schedule of at least twelve credit hours of coursework on a letter-grade basis with no "W" grades, and are not on academic warning or probation or subject to any disciplinary action. All grades must be reported.

G. Change of Major

1. Undergraduate students, with the exception of entering freshmen, by filing the required form, will be permitted one unrestricted transfer between majors (including undecided) until they have accumulated credit for sixty hours. After sixty hours or upon subsequent request for transfer, the transfer will be permitted at the discretion of the school that the student is seeking to enter. Students who transfer from another institution to pursue a degree at Georgia Tech will be permitted to change their major only at the discretion of the school that the student is seeking to enter. Transfer students are not eligible for the one unrestricted change of major. (Note: Certain majors, because of high enrollment, have been granted a waiver of the one unrestricted transfer regulation. Students should consult with the individual school concerning its current transfer policy.)

   - Programs with Change-of-Major restrictions:
     - Industrial and Systems Engineering (https://www.isye.gatech.edu/academics/bachelors/current-students/change-major)
     - Mechanical Engineering (http://www.me.gatech.edu/undergraduate/ug-curr/change_major/#me)
     - Music Technology (https://music.gatech.edu/about)

2. Graduate students, by filing the required form, may transfer with the concurrence of the schools involved and the graduate dean.

3. Students who change their majors must complete the degree requirements in the Catalog that was effective for the term in which the change of major became official, or any subsequent Catalog.

4. Admitted freshmen will not be allowed to submit a request for a change of major until after the deadline for withdrawal from classes with a W grade in the first term of their enrollment. The change would be effective for the second term of enrollment. This includes a change of major within the student’s current College. For freshmen admitted for Summer, the restriction is lifted after the withdraw deadline of their second semester of enrollment. All other restrictions also apply.

H. Exceptions

Exceptions to these scholastic regulations may be made by the Institute Undergraduate Curriculum Committee or the Institute Graduate Curriculum Committee, as appropriate, whenever a consideration of the student’s complete record indicates that the application of a specific regulation will result in injustice.

I. Course Requirements

1. Each course shall have a syllabus and course policies provided to students before the last day to drop a course without a W grade (the last day of Phase II registration). Each syllabus shall include an outline of the course objectives (learning outcomes), required materials, criteria used in determining the course grade, any other requirements for successful completion of the course, and a statement about services available through the Office of Disability Services. Each syllabus should outline acceptable student conduct as it relates to the Georgia Tech Honor Code and Student-Faculty Expectations Agreement. Students shall be informed of any changes made to the syllabus and course policies with reasonable time to adjust to these changes. Any changes to the syllabus after the first week of the term should be done prior to the last day to withdraw from the course with a W grade.

2. In all courses, faculty are expected to return to students a graded assignment or other meaningful performance feedback prior to the deadline for withdrawing from classes so that students can make an informed decision about withdrawing or changing the grade mode.

3. Progress Report grades of "S" or "U" will be submitted to the Office of the Registrar for all classes numbered in 1000 and 2000 ranges each semester prior to Mid-term, which is typically on the sixth week of Fall Semester and Spring Semester and on the fifth week of the Summer
VII. Deficiencies

A. About Deficiencies
1. A student who has received a grade of "I," "F," or "U" in a course has a deficiency in the course.
2. A student whose final grade is "F" or "U" has failed the course. The student must repeat and pass the course before credit will be allowed.

B. Removal of Deficiencies
1. When a grade of "I" ("Incomplete") is assigned in a course, the "I" grade must be removed and the grade change reported by the end of the student’s next academic term in residence or, if the student has not been enrolled, by the end of the academic term one calendar year from the date the incomplete was assigned. Failure to remove the "I" in the allotted time will result in the grade of "I" being changed to the grade of "F." To remove the "I" grade, the student should consult with the instructor as soon as possible after the academic term is over and complete whatever remaining coursework is outlined by the instructor. Repeating the course for credit does not remove the grade of "I."
2. A student who has a grade of "F" in a required course must schedule that course the next time it is offered while the student is in residence. When a course in which a "D" grade was earned is repeated and a grade of "F" is earned, the student must file a Petition to the Faculty to be allowed to use the "D" grade to meet graduation requirements.
3. A degree candidate who has otherwise completed all requirements for graduation and who has an "Incomplete" in laboratory work taken during his or her final academic term in residence may remove the "Incomplete" at the convenience of the department of instruction concerned.

VIII. Withdrawal/Readmission

A. Withdrawal
1. Withdrawal from the Institute will not be permitted after 60 percent of the academic term has passed, except in cases of hardship as determined by the Institute Undergraduate Curriculum Committee or Graduate Curriculum Committee, as appropriate. With the exception of part-time graduate students, students who withdraw from the Institute and receive all grades of "W" will not ordinarily be permitted to re-enroll the following term. A student may withdraw from the Institute via the Student Information System by the posted deadline in the official Academic Calendar. All holds on the student’s record must be cleared prior to withdrawal.
2. Students who cease attendance without withdrawing via the Student Information System receive grades of "F," "U," or "I" for their ongoing courses.
3. Permission and/or formal resignation are not required when a student has completed an academic term and does not register for the following term.
4. See Regulation V.A.3 (http://catalog.gatech.edu/rules/5) for further information on grading as it relates to withdrawal.

B. Readmission
1. Any student who is not enrolled for two or more consecutive terms (counting Summer Session) must apply for readmission. This application, with all the pertinent supporting information, must be submitted to the Office of the Registrar before the deadline for the academic term for which readmission is requested. Deadlines are listed below.

<table>
<thead>
<tr>
<th>Term</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fall</td>
<td>July 1</td>
</tr>
<tr>
<td>Spring</td>
<td>December 1</td>
</tr>
<tr>
<td>Summer</td>
<td>April 1</td>
</tr>
</tbody>
</table>

Applications received after these deadlines will not be accepted.
2. Readmission is not guaranteed. Schools/Colleges must recommend readmission for any student wishing to return in majors under their jurisdiction.
3. The readmission policy supersedes the change of major policy. No School/College is obligated to readmit a student even if that student is within their limit for requesting a non-restricted change of major. Once readmission applies, the change of major process is not applicable including the non-restricted change of major.
4. Any student who has attended any other college or university should plan her/his readmission process in a way that allows ample time for her/his official transcript(s) from any other institution to arrive at Georgia Tech. If official transcripts have not been received prior to the last day of the Registration Period, the student seeking readmission will not be allowed to register.
5. Any student in good standing who is not enrolled for one single term will be allowed to re-enroll without applying for readmission to the Institute. This regulation makes no distinction among Fall Semester, Spring Semester, and Summer Session.
6. A student who is on academic warning or academic probation and who does not enroll for one single term may have a registration hold placed on their account. If a hold is placed, the student will be notified and the hold must be cleared by their major school. For example, if a student is placed on academic probation at the end of the Fall Semester and fails to enroll by the close of the Registration Period for the Spring Semester, a registration hold may be set, and it must be cleared by the student’s major school before they can register for any future academic term.
7. A student who has been dropped once for unsatisfactory scholarship usually will not be readmitted. A student who seeks an exception to this rule must have been out of the Institute for at least one term and have had a conference with the major school concerning the readmission. The Readmission Application Deadline for a student who has been dropped is two months prior to the published Readmission Application Deadline for the academic term.
8. A student who is dropped a second time for unsatisfactory scholarship will not be readmitted to the Institute.

9. A student who is on expulsion, defined as permanent separation from the Institute, is not eligible for readmission.

10. Students are readmitted under the current catalog that is in effect at the time of readmission. If a student wishes to follow the degree requirements from a catalog in effect prior to the term of readmission, she/he must make a request to the major school. There is no guarantee that such a request will be granted, and readmitted students should be prepared to follow the degree requirements as outlined in the current catalog. Programs of study that have been deactivated or terminated are not available for readmission. Students who were enrolled in a program of study that has since been deactivated are eligible for readmission to the Institute; however, they must select an active program at the time of readmission. Once a decision is made to no longer admit students to a program of study due to an impending deactivation or termination, readmission is also not allowed.

11. Any student, except a part-time graduate student, who withdraws during an academic term and wishes to return the following academic term must complete a Petition to the Faculty for consideration. This petition must be submitted to the Office of the Registrar before the deadline for the academic term for which readmission is requested.

12. Students may be eligible for academic renewal. See below for more information.
   a. University System of Georgia undergraduate students who have been readmitted or reinstated after a period of absence of three (3) calendar years or longer are eligible for academic renewal. Academic renewal for the student signals the initiation of a new grade-point average to be used for determining academic standing. This provision allows University System of Georgia degree-seeking students who earlier experienced academic difficulty to make a fresh start and have one final opportunity to earn an associate or bachelor’s degree (BR Minutes, June, 1995, p. 7). The complete policy is available online at: www.usg.edu/academic_affairs_handbook/section2/handbook/2.5_grading_system/ (http://www.usg.edu/academic_affairs_handbook/section2/handbook/2.5_grading_system)
   b. The application for academic renewal shall be considered as a petition to the Undergraduate Curriculum Committee.

13. Students in good academic standing may be eligible for an approved Leave of Absence.
   a. Interruption in enrollment due to circumstances outside the student’s control may qualify for an approved Leave of Absence. This may include, for example, required military service.
   b. It should be noted that an approved Leave of Absence would be effective in a future term (see item I for more details). Students on an approved Leave of Absence would not have to apply for re-admission and would be able to retain their email accounts during the approved absence. Prior to returning, the student would have to notify the Registrar’s Office so that the record could be reactivated for re-entry.
   c. The Leave of Absence would cover eligible students for at least two and no more than seven semesters (including Summer). If the seventh semester is a Spring term, students may opt to return in either the Summer or Fall term.
   d. Students who are on an Approved Leave of Absence may not attend class, live in campus housing, or access other campus services.
   e. The form to request an Approved Leave of Absence is on the Registrar’s Office website under the student tab, forms and student records.
   f. The Leave of absence may be used more than once, but for no more than seven total semesters during the student’s enrollment at Tech.
   g. Students who have been placed on academic drop or suspended or expelled for disciplinary reasons may not participate.
   h. Students must clear up any other issues such as registration holds or providing any requested documentation prior to re-entry. The Approved Leave of Absence does not override other considerations or restrictions on enrollment.
   i. Students should apply for the Leave of Absence as soon as possible. Applications for Leave of Absence will require review and signatures by the Office of the Vice President for Student Life and Dean of Students and the student’s major academic advisor. Other signature approvals, such as the Office of International Education and Financial Aid may also need to be obtained.
      • Students should bear in mind the time limits as outlined in section k below in determining the anticipated date of return.
      • Readmission is required when two or more consecutive terms have been missed (which includes Summer). Once the student has made the decision that they will have to or need to be out for two or more consecutive terms and the student wishes to return to Tech without being readmitted, the application for a Leave of Absence should be filed with the Registrar’s Office.
      • The clock begins when the student does not enroll for a second consecutive term. The Leave of Absence Request would have to be effective for the second consecutive missed term to avoid readmission.
   j. The Leave of Absence cannot be approved retroactively.
   k. Students must file a Return from Leave of Absence form to return. If the leave exceeds the 7 semester time frame, the student must apply for readmission. The form is on the Registrar’s Office website under the student tab, forms and student records.
   I. The Leave of Absence, if approved, would be effective in a future term. It will not be approved to be effective in the term in which application is made. It is in no way supplanted or replaces any other policy. If a student needs to withdraw from classes within a given term, they should follow the withdrawal process and if a Leave of Absence is needed or desired, it would be effective for a future term or terms only as approved.

C. Transfer Credit

1. Coursework pursued at another institution after dismissal from Georgia Tech for unsatisfactory scholarship may be considered as evidence for readmission.
2. If readmitted, a student will not necessarily be awarded transfer credit for credits earned at another institution after she/he withdrew from or was dismissed from Georgia Tech.
3. With the exception of a course from which a student withdrew and received a grade of "W" or "V," in no case will a student be awarded transfer credit for a course she/he completed at another institution if she/he had previously taken the course at Georgia Tech.

### D. Study Abroad

Any student in good standing who chooses to participate in an approved study abroad program for two or more terms must complete a Student Information Update Form with the study abroad coordinator prior to departure. This form enables the student to re-enroll for the term of "planned re-entry" without submitting a formal readmission application. It will be the student's responsibility to inform the study abroad coordinator of any change to her/his planned re-entry date.

### IX. Scheduling

#### A. General

1. All previously scheduled coursework takes precedence over newly scheduled material. Therefore, all work that is incomplete from a previous term should be completed, or arrangements to complete it should be made prior to placing emphasis on new coursework.

2. Students must follow the approved curriculum of the academic school in which they are registered. Students who do not follow the approved curriculum may be denied registration privileges.

3. Each student is strongly advised each term to schedule all prerequisite courses. A student who has not completed the stated prerequisites for a course but believes she/he has the necessary knowledge to fulfill prerequisite requirements should contact the department of instruction.

4. The completion of incomplete work from a previous term and the scheduling of out-of-sequence courses are the responsibility of the student, and, consequently, she/he will be held accountable. The number of scheduled credit hours allowed for an academic term may be adjusted to take into consideration the amount of incomplete work remaining regardless of the student's academic standing.

5. Students may not repeat courses on a letter-grade basis in which the grade of "B" or higher has been earned previously.

6. Subject to approval by a faculty advisor, a course may be taken more than once for academic credit. All grades and hours will count in determining the student’s grade-point average (GPA), but the course will be counted only once for credit toward a degree.

7. See Regulation X, "Pass/Fail Grading," (http://catalog.gatech.edu/rules/10) for the Institute's rules regarding courses taken on a Pass/Fail basis.

#### B. Academic Load

1. Maximum credit hour loads are explained in Regulation VI, "Scholastic Regulations," Section D, "Maximum Schedule Load." Any hours above these limits must obtain prior approval from the Undergraduate Institute Curriculum Committee or the Graduate Institute Curriculum Committee, as appropriate.

2. Graduate students must maintain a minimum of three credit hours each academic term. Exceptions to this regulation may be made during the term in which the student graduates.

#### C. Auditing of Courses

1. The auditing of a course will be permitted for a regularly enrolled student who has obtained the approval of her/his advisor and the departments concerned. Such a course counts at full value in computing the student's course load for an academic term.

2. The grade of "V" (i.e., "Visitor") is earned when a student audits a course. The "V" grade has no effect on a student's grade-point average (GPA).

3. No academic credit is granted for auditing a course.

4. Students are not permitted to change to or from an auditing status except through the regular procedures for schedule change or withdrawal. Any student who does not meet the instructor's requirements for a successful audit will be withdrawn with a grade of "W" assigned at the end of the academic term.

5. Members of the faculty or staff of the Georgia Institute of Technology may sit in on, rather than audit, a course with the permission of the instructor. The permission is granted on a space-available basis in the class.

#### D. Attending Classes

1. Students may attend only those particular classes for which they are registered and paid.

#### E. Undergraduate Students Taking Graduate Courses

A senior with a grade-point average (GPA) of at least 2.7 may enroll in a graduate course if she/he obtains permission from the school or department offering the course.

1. Up to twelve credit hours earned as an undergraduate student may count toward earning a master's degree if the following conditions are satisfied.

   a. The student was in residence at Georgia Tech for at least two semesters before registering for the course(s).

   b. The student did not apply credit for the course toward a bachelor's degree. Special exceptions may apply in certain schools, as described below.

      i. If a student pursues both a bachelor's and master's at Georgia Tech, and if both degrees are in the same discipline, she/he may apply up to six credit hours of graduate-level credit in the major discipline to satisfying the requirements for both degrees. Because some master's degree programs do not have any unique undergraduate counterpart program, and because some master's programs are offered by several schools, the definition of "discipline" will be broadly interpreted in such cases. To qualify for this option, a student must complete the bachelor's degree with a cumulative grade-point average (GPA) of 3.5 or higher, and she/he must complete the master's degree within a two-year period following the award date of the bachelor's degree.

#### F. Graduate Students Taking Undergraduate Courses

Graduate students who wish to take a 1000- or 2000-level course must obtain a permit from the department teaching the course. The student must have the department of instruction enter a permit on her/his account, and then come in-person to the Office of the Registrar to have the course added to her/his schedule. Institute policy allows a graduate student to take a 1000- or 2000-level course on a Pass/Fail or audit basis only.
X. Pass/Fail Grading

A. General

1. At the option of the student’s major school, credit toward a bachelor’s degree may be allowed for courses taken under the pass/fail system and completed with a grade of “Pass.”
2. The major school must approve all pass/fail courses included in the final program of study, and students should be aware of school requirements.
3. In graduate programs, thesis research hours will be evaluated on a pass/fail basis.
4. Pass/fail enrollment in any course may be restricted by the school or department offering the course.
5. Students who are permitted to register under the pass/fail system will be so designated on the official class rolls. The grades recorded will be “S” for “Satisfactory” or “U” for “Unsatisfactory.” These grades will not be included in the calculation of the grade-point average and cannot be changed to a grade that will count in the average.
6. Withdrawals from courses taken on a pass/fail basis will follow the same rules that govern withdrawals from courses included in the grade-point average.
7. The deadline to change the grade mode from letter grade to pass/fail (and vice versa) is the same day as the Last Day to Withdraw from Individual Courses without a Penalty.

Grade mode changes are allowed online during the Registration Period. After the Registration Period ends, the following form must be completed and submitted to the Office of the Registrar.

Download Form (http://www.registrar.gatech.edu/docs/catalog/grade_mode.pdf)

B. Credit Hours Permitted

1. The maximum number of credit hours that a student may earn on a pass/fail basis is related to the number of credit hours required for the program of study in which the student is enrolled.

<table>
<thead>
<tr>
<th>Hours included in program of study</th>
<th>Hours allowed on pass/fail basis</th>
</tr>
</thead>
<tbody>
<tr>
<td>45 to 70 credit hours</td>
<td>3 credit hours</td>
</tr>
<tr>
<td>71 to 90 credit hours</td>
<td>6 credit hours</td>
</tr>
<tr>
<td>91 or more credit hours</td>
<td>9 credit hours</td>
</tr>
</tbody>
</table>

2. For a second undergraduate degree, these limits apply to the credit hours included in the program of study for that second degree.
3. A master’s degree program of study may include up to three semester credit hours on a pass/fail basis.

XI. Cross Enrollment and Concurrent Registration

A. General

1. Students who are enrolled at Georgia Tech may not receive credit for courses completed at another institution during the same academic term, unless prior permission has been obtained for cross enrollment or concurrent registration, as described in this section.
2. With the approval of the student’s major school, a student may schedule courses at any one of the colleges or universities comprising the Atlanta Regional Consortium for Higher Education (ARCHE), if such courses are not available in a particular term at Georgia Tech. A list of participating institutions is available from the Office of the Registrar.
3. Cross enrollment also is permitted among institutions participating in the Georgia Tech Regional Engineering Program (GTREP) and selected institutions in the Regents’ Engineering Transfer Program (RETP).
4. All cross enrollment registration activities are performed at the student’s home institution.
5. For institutions not participating in cross enrollment, a student must apply in advance for permission to be concurrently registered at both Georgia Tech and the other institution, except during the Summer.

B. Eligibility

1. Cross enrollment and concurrent registration are available only to degree-seeking juniors, seniors, and graduating students, except during the Summer Session, when concurrent registration is available to all degree-seeking students. Ordinarily students will not be allowed to participate during their first academic term at Georgia Tech, nor will students be allowed to cross enroll for more than two courses per academic term. Special rules apply to students participating in the RETP programs. International Plan students may cross enroll or register concurrently for a language course(s) not offered at Georgia Tech as early as the second semester of their first year of enrollment. Special permission to do this will be granted to International Plan students only. Forms and procedures are available from the Office of the Registrar. Any student seeking an exception to these eligibility requirements should contact the Office of the Registrar.
2. To participate in cross enrollment or concurrent registration, a student must be in good standing during the term when the application is processed.
3. During the term of cross enrollment or concurrent registration, the student must enroll in three or more credit hours at Georgia Tech and be in good standing. The total academic load carried at all institutions combined may not exceed the number of credit hours for which the student would be allowed to register at Georgia Tech.
4. Any cross enrollment and concurrent registration course must be completed with a grade of “C” or better in order to receive credit for the course. Credits earned under cross enrollment will be treated as transfer credit but will count as in-residence credit toward a degree. Credits earned under concurrent registration will be treated as transfer credit and will not count as in-residence credit toward a degree. Grades received in cross enrollment or concurrent registration courses will not be included in the calculation of the grade-point average. No credit will be awarded until an official transcript from the participating institution is received by the Office of the Registrar.

XII. Examinations

A. General

1. Any Examination for Advanced Standing or special examination must be authorized by the Registrar before being scheduled.
2. If the instructor considers it necessary during an examination, students may be required to present their student identification card to the instructor or an authorized representative.
B. Examinations for Advanced Standing

1. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination. Such an examination is called an "Examination for Advanced Standing."

2. Examinations for advanced standing require the recommendation of the department of instruction in which the course is offered, payment of the appropriate fee to the Office of the Bursar, and authorization by the Office of the Registrar.

3. Examinations for Advanced Standing will usually be offered during the Final Examination Period.

4. A student will not be allowed to take an Examination for Advanced Standing in a given course more than twice.

5. Students will not be allowed to take an Examination for Advanced Standing in a course for which any prerequisite has not been met, except with the consent of the school offering the course.

6. An Examination for Advanced Standing will be reported with an "S" or "U" grade. Neither grade will be included in the calculation of grade-point average (GPA).

7. Advanced standing is not allowed for laboratory or studio classes, except with the consent of the school offering the course.

8. Students may not use more than nine credits of advanced standing to meet degree requirements.

9. Students may submit the Advanced Standing Application and Fee to obtain six to eight hours of proficiency credit for foreign language at the 1001 or 1002 levels upon completion of two classes in the same language at the 2000 level or higher with a minimum grade of "C."

C. Final Instructional Class Days and Reading Periods

The following applies to the standard academic terms, including the Fall Semester, Spring Semester, and Full Summer Session. It does not apply to the Early Short Summer Session and Late Short Summer Session. Given the variability in the exact timing of the Full Summer Session, the Office of the Registrar will adjust the final instructional class days and reading periods for this semester only in order to meet required instructional time. This policy replaces the former Dead Week (Week Preceding Final Examinations) policy.

1. Final Instructional Class Days
   a. Final Instructional Class Days are scheduled during each regular term including the Full Summer Session and are the last two instructional days of the term immediately preceding the first reading period.
   b. No tests or quizzes are to be administered on these days. Lab quizzes and/or practicums may be given in courses comprised of both a lecture and a scheduled lab, wherein the lecture carries at least two credits.
   c. For all courses, graded homework or assignments, lab reports, course projects, demonstrations, studio reviews, and presentations may be due during these two days, provided that they are listed on the syllabus at the start of the semester.
   d. All quizzes and tests should be graded and reported to students on or before the last Final Instructional Class Day.

2. Reading Periods
   a. Reading Periods will be designated to provide time for students to prepare for final examinations.
   b. No classes meet. This includes labs, recitations, projects, design/capstone courses, and studios.
   c. No assignments, projects, presentations, or other graded activities are allowed.
   d. Instructors may schedule optional review sessions for students during reading periods, but no credit or extra credit may be attached to these optional sessions. New content may not be covered, and any materials (e.g., handouts, slides, practice problems, etc.) that are provided at these optional review sessions must be made available to all students. This provision does not require that such optional sessions be audio or video recorded.

3. Requests for exceptions to the Final Instructional Class Day and Reading Period policies may be made in writing by the Dean of the College (or her/his designee) to the Student Rules and Regulations Committee (SRR). The SRR will then make a recommendation to the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate, for approval or denial. Requests must be made no later than the academic term prior to the desired term of implementation and will be regularly reviewed.

4. Student concerns may be discussed with the faculty member and/or reported to the Chief Academic Officer of the department of instruction, or with the Assistant Provost for Academic Advocacy and Conflict Resolution. For more information, see the Student Academic Grievance Policy.

D. Final Examinations

1. In regularly scheduled lecture courses of the Institute, a final examination shall be administered at the time specified in the official Final Examination Schedule as distributed by the Office of the Registrar. In courses such as seminars, senior design, capstone, writing courses, and laboratories, final examinations may be waived and may be replaced with appropriate assessment. The decision to give a final examination in these courses shall be made by the instructor of record. An announcement of the course's final examination policy shall be made to the class at its first meeting and included in the syllabus.

2. No assessment other than a final examination or its replacement may be due during the Final Examination Period.

3. Requests to change a class's final examination time within the Final Examination Period must be submitted to the Chief Academic Officer of the department of instruction for approval no later than one week before the beginning of the Final Examination Period. Any such request must have the unanimous approval of the class as shown by secret ballot, as well as approval by the instructor of the class.

4. A change in the scheduling of a final examination for an individual student ordinarily will not be permitted; however, such a change may be allowed for hardship cases at the discretion of the instructor. The request for a change must be justified in writing by the student and shall be submitted to the instructor prior to Final Examination Period and may be rescheduled to an appropriate time.

5. In the event a student has two final examinations scheduled for at the same time, the course having the lower number shall be considered in conflict and the student shall notify the instructor no later than two weeks before the Thursday of the Final Examination Period. In such case, the final examination in that course shall be given during the Final Examination Period or, by agreement of the instructor and the student, at a mutually satisfactory time.
a. If the student notifies the instructor after the above deadline but before the Thursday of the Final Examination Period, the student shall, at the discretion of the instructor:
   i. receive a course grade of "I" (Incomplete), with an opportunity to take a makeup final examination following the academic term (and have the course grade changed as warranted by the results of the test), or
   ii. be given the final examination during the Conflict Examination Period or at an alternative time during the Final Examination Period.

b. A student who fails to notify the instructor of the conflict before the Thursday of the Final Examination Period shall, at the discretion of the instructor:
   i. receive a score of zero on the final examination, or
   ii. be given the final examination during the Conflict Examination Period or at an alternative time during the Final Examination Period.

6. In the event a student is scheduled for three final examinations in one day, the examination scheduled for the middle period shall be considered in conflict and the student shall notify the instructor no later than two weeks before the Thursday of the Final Examination Period. In such case, the final examination in that course shall be given during the Conflict Examination Period or, by agreement of the instructor and the student, at a mutually satisfactory time.

a. If the student notifies the instructor after the above deadline but before the Thursday of the Final Examination Period, the student shall, at the discretion of the instructor:
   i. receive a course grade of "I" (Incomplete), with an opportunity to take a makeup final examination following the academic term (and have the course grade changed as warranted by the results of the test), or
   ii. be given the final examination during the Conflict Examination Period or at an alternative time during the Final Examination Period.

b. A student who fails to notify the instructor of the conflict before the Thursday of the Final Examination Period shall, at the discretion of the instructor:
   i. receive a score of zero on the final examination, or
   ii. be given the final examination during the Conflict Examination Period or at an alternative time during the Final Examination Period, or
   iii. be given the final examination at the time scheduled for the course.

XIII. Undergraduate Degrees

A. General

1. To be considered for admission to candidacy for a degree, a student must complete the Online Application for Graduation during the academic term preceding the term in which she/he will complete the degree requirements for her/his program.

2. A student who wishes to withdraw her/his name from the rolls of degree candidates must formally withdraw the Online Application for Graduation before the end of the seventh week of the semester (or fourth week of the summer term). This privilege will be extended to a degree candidate only once.

3. A degree program may include a maximum of four hours of basic ROTC and a maximum of six hours of advanced ROTC.

4. The diploma of a candidate for a degree shall bear the date of the commencement at which the degree is awarded.

5. All requirements for the degree must be completed and certified by the Registrar no later than 48 hours after Final Grade Submission Deadline of the academic term in which the candidate intends to graduate. If a candidate is not certified by the appropriate deadline, the candidate will be graduated at the next scheduled commencement. The diploma will bear the date of the commencement at which the degree is awarded. It is the responsibility of the student to reactivate the Online Application for Graduation for the appropriate term.

B. Residency Rule

No student may be considered a candidate for a degree unless the final 36 credit hours required for the degree are earned in residence at Georgia Tech and approved by the major school.

C. Ten-Year Rule

Work that was completed more than ten years prior to commencement must be validated by special examinations before it can be counted toward a degree.

D. Requirements For a Bachelor's Degree

1. To be a candidate for a degree, undergraduate students must have passed or be enrolled in all courses required for the degree, must have a grade-point average for their entire academic program of at least 2.00, and must have done creditable work in their departmental courses so as to merit the recommendation for the degree by the chair and faculty of their school.

2. A bachelor's degree program must require at least 21 credit hours of upper division courses in the major field and at least 39 credit hours of upper division work overall.

3. A bachelor's degree program must require at least 120 credit hours, plus the Wellness Requirement, for a total of 122 credit hours.

4. A student, with the approval of her/his school or specialization, may satisfy the requirements for a bachelor's degree by meeting all of the requirements associated with any one curriculum year that has been in effect during her/his period of enrollment in the Institute (or that has been in effect during her/his last two years in the program at one of the RETP institutions, if her/his enrollment there occurred prior to her/his enrollment at Georgia Tech). A curriculum year is in effect for a student only if the student's date of matriculation is prior to the ending date of the Spring Semester concluding that curriculum year.

5. Constitution and History Requirements

a. The Georgia law, as amended March 4, 1953, requires that before graduation all students pass examinations or pass comparable courses in United States and Georgia history and in the United States and Georgia Constitutions.

b. For courses that may satisfy the Constitution Requirement and History Requirement, see the Core Curriculum (p. 92) section of the Catalog.

6. Regents' Exam

   • Since Spring 2010, the Regents' Exam has no longer required at Georgia Tech. To be considered a degree candidate, a student
must complete an Online Application for Graduation during the term preceding the final term in residence.

7. Wellness Requirement
   a. Unless medically exempted, all students are required to satisfy the wellness requirement prior to graduation, as specified in the Core Curriculum (p. 101) section of the Catalog.
   b. The Health Information Record on file with the Director of Health Services will be used to determine any medical exemptions from the Wellness Requirement. All certificates of disability from personal physicians must be endorsed by the Director of Health Services before they will be accepted by the School of Applied Physiology.

E. Graduation with Academic Distinction
1. For graduation with highest honor, the minimum grade-point average (GPA) shall be 3.55.
   For graduation with high honor, the minimum grade-point average (GPA) shall be 3.35.
   For graduation with honor, the minimum grade-point average (GPA) shall be 3.15.
2. A student must have earned at least 60 semester credit hours (excluding remedial coursework) at Georgia Tech to graduate with highest honor; with high honor, or with honor.
3. In order to qualify for graduation with honors, all grades or grade corrections affecting the honors designation must be received and certified by the Office of the Registrar no later than noon on Wednesday following Commencement.
4. Tentative honors at graduation (recognized at Commencement) are determined by the grade-point average (GPA) entering the graduating term and the sum total of graded hours accumulated prior to the graduation term plus graded hours registered for and pending during the graduation term.

F. Second Undergraduate Degree
1. A student enrolled for a second undergraduate degree shall be classified as an undergraduate student, except that a graduate student wishing to pursue a second undergraduate degree will remain classified as a graduate student. A graduate student, with approval of the major school, may work toward a second undergraduate degree while pursuing a graduate program.
2. To be a candidate for a second undergraduate degree, a student must have the recommendation of the chair of the school concerned and the approval of the Undergraduate Institute Curriculum Committee.
3. To obtain a second undergraduate degree, a student must complete all major required courses for the degree and earn credit for a total of at least 36 credit hours in excess of the requirement for any previous degrees earned.
4. All items in Regulation XIII, "Undergraduate Degrees," (p. 162) apply to students completing second undergraduate degrees.

G. Minors
1. A student may complete a minor in another academic field while completing the requirements of her/his major degree program.
2. With the approval of the major school, the student should consult an advisor in the minor field, who can inform the student of the requirements for the minor.
3. A Change of Undergraduate Minor Form must be completed, signed by the Minor Advisor/Coordinator and the Major Advisor, and submitted to Office of the Registrar. Students are encouraged to submit the completed form when they decide to pursue the minor but no later than the Deadline for the Online Application for Graduation in the academic term preceding anticipated graduation.
4. Students who change or add a minor must complete the requirements in the Catalog that was effective for the term in which the change or addition of a minor became official, or any subsequent edition of the Catalog.
5. A readmitted student who wishes to pursue a minor must indicate her/his choice on the Application for Readmission. Requirements for the minor are those in effect at the time the student is readmitted as stated in the current edition of the Catalog. The readmitted student may select only minors offered at the time of readmission.
6. Some courses in a minor may have prerequisites that are not included in the minor description. Some minors may have additional requirements that students must meet before being admitted to that minor.
7. The student must declare any minor(s) prior to applying for graduation. A Minor Program of Study Form signed by the major and minor advisor may be required depending on the minor. Minor requirements and information for a Minor Program of Study Form are located in DegreeWorks.
8. The minor will be conferred at the same time the degree is conferred.
9. Minors may not be conferred retroactively upon students who have graduated.
10. The minor will not be printed on the diploma, but both the degree and minor will be recorded on the student's transcript.
11. A student who has applied for a minor but does not wish to complete the minor must have her/his advisor contact the Office of the Registrar for the minor to be removed prior to completing an Online Application for Graduation. Minors will be audited with the major and the status will be noted in DegreeWorks.

XIV. Graduate Degrees
The faculty of Georgia Tech grants advanced degrees in engineering, science, management, computing, architecture, city and regional planning, public policy, and other technology-related areas. The goals for graduate studies and research are to establish an educational environment that will strengthen students' personal and professional development, to encourage students and faculty to pursue the discovery and generation of new knowledge through research, to investigate ways of applying such knowledge for the benefit of society and humanity, and to foster the development of new tools, objects, and ideas.

Students whose interests and aptitudes lead them beyond the limits of the traditional undergraduate curriculum may broaden their knowledge of a given field and pursue independent inquiry through graduate study. A graduate education is of particular benefit to students interested in careers in research, management, development, design, or consulting; to those who aspire to formulate and administer policy; and to those who desire careers in higher education.

Graduate Student Work Loads
Full-time students must be enrolled for at least 12 credit hours on a letter grade or pass/fail basis. As an exception, the advisor and school chair may allow up to three hours out of the minimum 12 to be taken on an audit basis in fall and spring semesters; in summer semesters,
A doctoral student normally does not request transfer credit. The rules appearing on the approved program of study form for the masters degree at Georgia Tech. The courses to be transferred would typically be those stated in the catalog effective the semester in which they enrolled or the regulations in the catalog that records the change. Students with fellowships, graduate research or teaching assistantships, traineeships, tuition waivers, or student visas, and those assigned to the Institute by the armed forces for the purpose of pursuing a degree are required to enroll full time. Part-time doctoral students engaged in research for their Ph.D.s should meet the minimum enrollment requirement and register for the number of 9000 level hours consistent with the time they and their faculty advisors spend on the dissertation research.

Graduate Policies and Regulations

The Institute Graduate Curriculum Committee, with the approval of the Academic Faculty Senate, is responsible for establishing academic policy for the graduate programs; however, final authority rests with the Senate. This committee reserves the right to change requirements for degrees as may be appropriate. Students enrolled at the time such changes appear in the catalog have the privilege of following either the regulations stated in the catalog effective the semester in which they enrolled or the regulations in the catalog that records the change.

This catalog records the institute-wide policies and regulations that govern the graduate programs. Schools may make additional rules concerning their programs and the pursuit of their degrees, but such rules may not contradict Institute policies and regulations.

Transfer Credit

A student may not apply for transfer credit until after matriculation at Georgia Tech. The courses to be transferred would typically be those appearing on the approved program of study form for the masters degree. A doctoral student normally does not request transfer credit. The rules relative to and the process for obtaining transfer of credit for graduate-level courses are as follows:

1. Student’s in a master’s degree program requiring fewer than 33 semester credit hours may receive up to six hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree. This ensures completion of at least one-third of the courses for a degree in residence at Georgia Tech (applies to programs that are face-to-face and online format). The student must supply a current transcript for this evaluation.

2. To obtain transfer of credit, the student must complete the following procedure:
   a. The student will confer with the graduate advisor to ascertain whether the courses to be transferred are a logical part of the student’s graduate program;
   b. If the courses are appropriate, the student will deliver to the school that teaches such courses a copy of the current transcript, necessary descriptive materials including catalog descriptions, and textbooks used for evaluation. The faculty of the appropriate school will determine the equivalent Georgia Tech course and the number of credit hours accepted. The faculty member who prepares the transfer credit form should have the school chair consign it. The school should then send the form directly to the registrar with a copy of the student’s Approved Program of Study attached;
   c. If the student wishes to transfer more than the number of hours permitted in item one listed above, a petition must be submitted to the Institute Graduate Curriculum Committee that includes statements of possible justification for the granting of such a petition, transfer credit forms, and the recommendation of the student’s school chair.

3. A joint enrollment student may receive graduate credit for up to one-third of the hours required for the degree for graduate courses taken at Emory University or Georgia State University provided that the following is true:
   a. Georgia Tech does not offer such courses;
   b. The student’s advisor and school chair approve the courses in advance and in writing;
   c. The student passes the courses with a C or better. Advance approval is satisfied when the courses appear on the student’s proposed Program of Study.

4. A student may not receive transfer credit from universities outside the United States and Canada unless the courses were taken at a foreign institution or university that is accredited by a Canadian or U.S. regional accrediting board or has a signed partner agreement with Georgia Tech. In any other case, an international student can obtain credit for courses previously taken but not applied toward another degree by filling out an Examination for Advanced Standing Authorization Request Form, paying the appropriate fee at the Bursar’s Office, and passing the examination for advanced standing. The school or college that normally teaches the equivalent course will administer any necessary examinations.

Double Counting Credit between Master’s Degrees

Students who are pursing two Master’s degrees at Georgia Tech may double count a maximum of 6 hours of credit for both degrees. This ensures that each degree involves a minimum of 24 hours of coursework completed at Tech that is not double counted. The six-hour limit may be exceeded when specifically allowed as a component of an approved degree program.

Staff Members

No staff member beyond the rank of instructor in a school may work for a master’s degree in that school. No new staff member with the rank of
assistant professor in a school may work for a doctoral degree in that school.

**General**

A student who wishes to withdraw her/his name from the rolls of degree candidates must formally withdraw the Online Application for Graduation before the end of the seventh week of the semester (or fourth week of the summer term). This privilege will be extended to a degree candidate only once.

**XV. Student Vehicles**

Students desiring to operate motor vehicles on campus are subject to all rules set forth by the Georgia Tech motor vehicle regulations.

**Parking and Transportation Services**

Georgia Tech Parking and Transportation Services maintains information on its web site regarding:

- Parking (https://pts.gatech.edu/subsite1/Pages/default.aspx)
- Transit (https://pts.gatech.edu/subsite2/Pages/Transit.aspx)
- Alternative Transportation (https://pts.gatech.edu/Alternative_Transportation/Pages/Alternative%20Transportation.aspx)

**Bicycles**

The Georgia Tech Police Department provides important information for students who ride bicycles.

- Bicycle Information (http://www.police.gatech.edu/crimeprevention/bicycle)

**XVI. Medical Regulations**

A Medical Entrance Form and proof of required immunizations and tuberculosis screening must be on file with Stamps Health Services (http://www.health.gatech.edu). Failure to provide this information may result in a health hold and delay of registration. All international students (F1 and J1 visas) are required to have health insurance coverage. Students may elect to purchase the health insurance made available by Georgia Tech or may have their own comparable medical insurance.

**Student Health Insurance**

**Source:** Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/student-affairs/health-insurance-information)

The Georgia Board of Regents (BOR) offers student health insurance for eligible students and their dependents. Two groups of students may purchase student health insurance: Mandatory and Voluntary. Mandatory students are required by the BOR to have student health insurance and the charge is applied automatically to the student's account along with tuition. Mandatory Graduates: Teaching Assistant, F1 or J1 visa holder, Research Assistant, Fellowship or Full tuition waiver. Mandatory Undergraduates: F1 or J1 visa holders. Mandatory students who already have health insurance may apply to waive the Board of Regents (BOR) student health insurance coverage.

There is a 30 day open enrollment period at the start of each semester to enroll for student insurance coverage, to enroll for the voluntary plan, or for mandatory students to add spouse/dependents coverage. For students and spouses with Board of Regents (BOR) student health insurance, Stamps Health Services (SHS) is the primary care provider. SHS renders care to students, spouses, and domestic partners. Dependent children are not eligible to be treated at SHS.

More information is available at www.health.gatech.edu (http://www.health.gatech.edu)

**Immunizations**

**Source:** Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/student-affairs/immunizations)

All incoming students must comply with the Board of Regents of the University System of Georgia’s immunization requirements. It is strongly recommended that immunization requirements are met as soon as possible to avoid a registration hold. A registration hold keeps students from registering for classes.

Incoming students must use Stamps Health Services Immunizations Form.

More information is available at www.health.gatech.edu (http://www.health.gatech.edu)

**Special Health Considerations**

**Source:** Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/student-affairs/special-health-considerations)

It is the responsibility of all students to notify the Health Center, the School of Applied Physiology, and the Office of Disabled Student Services of any disability that would make participation in swimming, competitive sports, and aerobic training hazardous to their well-being. Any student requesting special consideration because of mental or physical disability should have his or her physician write an explanatory letter, giving full details of the disability and consequent limitations on physical activity, to the medical director of Health Services. This letter must accompany the Medical Entrance Form.

**Treatment**

**Source:** Georgia Tech Policy Library (http://www.policylibrary.gatech.edu/student-affairs/treatment)

Stamps Health Services (SHS) offers comprehensive health care to students, spouses, and/or domestic partners of Georgia Tech students. Eligibility status is determined before an appointment is scheduled for services. Services are provided through payment of the Health Fee or on a pay-per-visit basis. The Health Fee Coverage Period begins one business week before the first day of class of the upcoming term. The coverage period ends the last business day prior to the first day of class of the upcoming term.

More information about the Health Fee is available on the Stamps Health Services (http://health.gatech.edu/finance/Pages/Health-Fee.aspx) web site.

**XVII. Extracurricular Activities**

**A. Participation**

1. In order to be eligible to participate in extracurricular activities, a student must satisfy the following requirements:
   a. be enrolled in a degree program and be registered;
   b. for Fall and Spring semesters, maintain a schedule with at least six credit hours on a for-credit basis or be a student registered...
with the Center for Career Discovery and Development on a work term

c. all student organization officers must be enrolled in Georgia Tech classes with at least six credit hours on a for-credit basis or be a student registered with the Center for Career Discovery and Development on a work term in Atlanta

2. Changes in academic standing that affect eligibility become effective at the end of each academic term, usually the Tuesday following Final Examination Period.

3. Any student placed on Academic Drop/Dismissal or Review, or placed on Suspension or Expulsion by the Office of Student Integrity, is immediately ineligible for participation. Any student placed on Suspension in Abeyance may be immediately ineligible, based upon the individual organization’s decision to allow participation.

4. Changes in disciplinary standing that affect eligibility become effective immediately.

5. Participation also requires satisfaction of any additional requirements established by the Student Activities Committee of the Academic Senate.

B. Scheduling of Events

1. All student organizations must make written application to, and receive permission from, the Division of Student Life to hold a social function.

2. In each term, the weekend before the Final Examination Period is closed to student-sponsored extracurricular events.

C. Student Organizations

1. All student organizations must adhere to the Student Organization Code of Conduct, the Student/Student Organization Alcohol Policy, and other policies set forth by the Division of Student Life.

2. Every organization must renew its charter every year or when changing officers by submitting an Officer Update Form and by signing the Alcohol Policy Acknowledgement Form.

3. Requirements and standards for chartering a student organization are established by the Student Activities Committee of the Academic Senate and are available from the Division of Student Life.

D. Fraternity and Sorority Regulations

1. To be eligible for initiation, a student must be a full-time student not on academic or disciplinary probation.

2. The initiation of any individual must be registered with and approved by the Division of Student Life prior to the initiation.

3. The individual must meet all Georgia Tech Interfraternity Council (IFC) or Panhellenic requirements concerning initiation.

4. All fraternities and sororities are subject to the rules established by the Georgia Tech IFC/Panhellenic/National Pan-Hellenic and all Georgia Tech policies, rules, and regulations.

E. Intercollegiate Athletics Regulations

1. To be eligible for intercollegiate athletic competition, a student must satisfy the following requirements:

   a. be eligible to participate in extracurricular activities, as defined in Regulation XVII, “Extracurricular Activities,” Section A, “Participation” (http://catalog.gatech.edu/rules/17);

   b. be carrying a full-time workload as defined in Regulation VI, “Scholastic Regulations,” Section A, “Classification of Students,” Item 3 (p. 154);

   c. for Summer semesters, be carrying an appropriate workload (3-16 hours) with the provision that the definition of full-time in Regulation VI, “Scholastic Regulations,” Section A, “Classification of Students,” Item 3 remains applicable;

   d. be making satisfactory progress toward a degree; and

   e. meet any further requirements of the NCAA or other governing organization; see the Athletic Director for details.

2. No student may be excused from regularly scheduled classes for athletic practice.

3. Special accommodations may be made (or coordinated) for intercollegiate student-athletes whose competition schedules conflict with the first week of reading periods and final exams.

4. No student may participate in more than two sports in intercollegiate competition in any school year, except by permission of the Division of Student Life. Being a manager or assistant manager is counted as participation within the meaning of this rule.

XVIII. Academic Honor Code

Academic Honor Code

The Academic Honor Code is a student initiative that became an official Institute policy in 1996. The objective of the Academic Honor Code is to increase academic integrity and strengthen trust in the Georgia Tech community. All students are required to sign an agreement acknowledging their awareness of the Academic Honor Code. They are strongly encouraged to seek a full understanding of their instructors’ expectations regarding academic honor.

The Honor Agreement

“Having read the Georgia Institute of Technology Academic Honor Code, I understand and accept my responsibility as a member of the Georgia Tech community to uphold the Honor Code at all times. In addition, I understand my options for reporting honor violations as detailed in the Code.”

XIX. Code of Conduct

CourseLeaf Help User: dbarbero3 Leepfrog Page Body

The official and most current versions of this policy document can be found in the Georgia Tech Policy Library (http://www.policylibrary.gatech.edu) and/or the Office of Student Integrity (http://osi.gatech.edu) web site. In the event of any conflict, the document in the Policy Library and/or on the OSI web site shall govern.

**Student Code of Conduct**

**Last Revised:** March 2016

**Review Date:** March 2019

**Policy Owner:** Student Life

**Contact Name:** John Stein

**Contact Title:** VP of Student Life

**Contact Email:** john.stein@vpss.gatech.edu

**Policy Statement:**

The most current Student Code of Conduct can be found on the Office of Student Integrity Web site as listed in the References. In the event of any conflict, the Code found on the Web site will govern.

A. General (p. 167)
B. Prohibited Academic Conduct (p. 168)
C. Prohibited Non-Academic Conduct (p. 169)
D. Student Code of Conduct Procedures (p. 170)
E. Sanctions (p. 172)
F. Interim Suspension (p. 173)
G. Appeal Procedures (p. 173)
H. Record Keeping and Release of Information (p. 174)
I. References (p. 174)

**A. General**

1. **Purpose**

The Student Code of Conduct educates all members of the Georgia Tech Community about the Institute’s expectations and Students’ rights, and creates a standard by which Students are expected to conduct themselves for the purpose of establishing an environment conducive to academic excellence.

2. **Definitions**

As used in this Code:

- “Administrative Conference” refers to the meeting between the Respondent and the Student Conduct Administrator that occurs during an investigation. An Administrative Resolution may be offered during this conference.

- “Administrative Resolution” refers to a decision by a Student Conduct Administrator that will result in the Respondent either being found responsible or not for the alleged violation.

- “Advisor” refers to an individual, chosen by the Student or Organization, who assists a participant with the Student Conduct process. Attorneys at law are not allowed to serve as Advisors to Complainant(s) or Respondent(s) unless the Student or Students are subject to criminal prosecution or the parent/legal guardian is the attorney.

- “Appellate Officer” means the person authorized by the Institute to consider an appeal of a disciplinary decision rendered by a Student Conduct Administrator, a Student Conduct Panel, or the Vice President for Student Life and Dean of Students.

- “Business day” means any day in which the Institute is open for its full hours of operation, in accordance with the Institute’s official calendars. All campuses will follow their respective calendars. When an authorized Institute Official closes the Institute, it will not be considered an official business day.

- “Chairperson” means a member of a Student Conduct Panel who is identified by the Institute to oversee the proceedings during a hearing.

- “Complainant” means any person who submits a complaint to OSI alleging that a Student or Organization violated the Student Code of Conduct, or anyone who has been affected by the alleged misconduct.

- “Community” includes any Student, Faculty member, Institute Official, or any other person employed by the Institute. A person’s status in a particular situation shall be determined by the Vice President for Student Life and Dean of Students.

- “Faculty Member” means any person hired by the Institute to conduct classroom, teaching, or research activities or who is otherwise considered by the Institute to be a member of its Faculty, except as otherwise provided in Section D.5.c.

- “Group” means a number of persons who are associated with each other, but who have not complied with Institute requirements for registration as an Organization.

- “Group or Organization Activity” means any activity on or off Institute Premises that is directly initiated for, or supervised by a Group or Organization including any individual activity occurring in buildings, facilities, grounds, utilities, or resources (including computer resources) owned, leased, operated, controlled, or supervised by an Institute Organization.

- “Hazing” is conduct, whether on or off Institute property, which exceeds the normal expectations of the organizational purpose or mission and which a) endangers the mental or physical health or safety of a student as a condition of affiliation with a group or organization and/or b) which is sufficiently severe or pervasive enough to interfere with academic responsibilities.

- “Information” means any Witness testimony, documents, statements, or tangible material presented to a Student Conduct Administrator or Student Conduct Panel.

- “Institute” and “Georgia Tech” each refer to the Georgia Institute of Technology and all of its undergraduate, graduate, and professional schools, divisions, and programs.

- “Institute Official” is defined as faculty, administration, or staff personnel including Students serving as Institute employees.

- “Institute Premises” includes all land buildings, facilities, grounds, utilities, resources, and other property (including computer resources) in the possession of, or owned, operated, leased, controlled, or supervised by the Institute (including adjacent streets and sidewalks).

“May” is used in the permissive sense.

“Office of Student Integrity” or “OSI” means the office designated by the Institute to oversee the Student Code of Conduct.

“Organization” means a number of persons who have complied with, or are in process of complying with the requirements for chartering.

“Policy” or “Policies” means any written rule or regulation of the Institute.

“Preponderance of the Evidence” means it is more likely than not that the Accused is responsible for a violation of the Student Code of Conduct.

“President” means Georgia Institute of Technology or his/her designee.

“Respondent” means a Student, Group, or Organization who is alleged to be in violation of the Student Code of Conduct.

“Sanction” and “Supplementary Requirements” means the conditions imposed upon an Respondent found responsible for a violation of the Student Code of Conduct.

“Student” means any person who is taking or auditing classes of the Institute, either full-time or part-time; is participating in academic programs; or is pursuing undergraduate, graduate, or professional studies. A Student is also any person who matriculates in any Institute program, has been accepted for enrollment, or is eligible to reenroll without applying for readmission.

“Student Conduct Administrator” means an Institute Official authorized on a case-by-case basis by the Vice President for Student Life and Dean of Students to impose Sanctions upon any Student(s) found to have violated the Student Code of Conduct.

“Student Conduct Panel” means a set of persons authorized by the Institute to determine whether the Respondent has violated the Student Code of Conduct. In academic cases, the Panel makes a decision and Sanctions, if applicable, to the Director of Student Integrity.

“Weapon” means any object or substance designed, intended, or used to inflict or threaten bodily injury.

“Will” and “shall” are used in the imperative sense.

“Witness” is defined as a person providing Information during the Conduct process.

3. Authority

a. This Code is not written with the specificity of a criminal statute and should not be confused with criminal law. Institute conduct proceedings are not restricted by the rules of evidence governing criminal and civil proceedings. Students may be held accountable both to civil authorities and the Institute for acts that constitute violations of law and the Code. Proceedings under this Code may be carried out prior to, simultaneously with, or following civil or criminal proceedings. Students who reside in Institute housing will be held accountable under housing policies and procedures in accordance with Section D.

b. OSI, in consultation with the Office of Legal Affairs, shall develop consistent operating procedures for the administration of the Student Code of Conduct process and for the conduct of Student Conduct Panel hearings.

c. Any question of the interpretation or application of the Student Code of Conduct shall be referred to the Vice President for Student Life and Dean of Students for final determination.

d. In any instance in which reference is made to an official of the Institute, such reference shall mean the official or his/her designee.

4. Jurisdiction

a. The Institute reserves the right to take necessary and appropriate action to protect the safety and well-being of the community. Academic misconduct relevant to any Institute activity will be addressed regardless of where it may have occurred. Non-academic misconduct will be addressed whenever such acts:

i. occur on Institute Premises; or
ii. occur at Institute sponsored activities; or
iii. occur at Group or Organization Activities; or
iv. occur off Institute Premises when conduct adversely affects the Institute and/or the pursuit of its objectives.

b. Each Student shall be responsible for his/her conduct from the time of application for admission through the actual awarding of a degree. This includes conduct that may occur before classes begin or after classes end, as well as during the academic year and during periods between terms of actual enrollment. The Code shall apply to a Student’s conduct even if the Student withdraws from school while a disciplinary matter is pending. The Code applies to Institute programs in remote and overseas locations.

c. The Institute shall retain jurisdiction over all Students irrespective of when the Student is subject to tenets of an agreement with other schools.

5. Inappropriate Classroom Behavior

The primary responsibility for managing the classroom environment rests with the instructor. Students who engage in any acts that result in disruption of a class may be directed by the instructor to leave the class for the remainder of the class period. Longer suspensions from a class can be administered only by the Vice President for Student Life and Dean of Students in accordance with this Code.

6. Student Organizational Discipline

Student Organizations are accountable to this Code. A Student Organization and its officers may be held collectively and individually responsible when violations of this Code by those associated with the Organization have received the consent or encouragement of the Organization, or of the Organization’s leaders or officers.

B. Prohibited Academic Conduct

Any Student accused of committing or attempting to commit one or more of the following acts of academic misconduct is subject to conduct procedures in accordance with Section D.

1. Unauthorized Access: Possessing, using, or exchanging improperly acquired written or verbal information in the preparation of a problem set, laboratory report, essay, examination, or other academic assignment.

2. Unauthorized Collaboration: Unauthorized interaction with another Student or Students in the fulfillment of academic requirements.
3. Plagiarism: Submission of material that is wholly or substantially identical to that created or published by another person or persons, without adequate credit notations indicating the authorship.

4. False Claims of Performance: False claims for work that has been submitted by a Student.

5. Grade Alteration: Alteration of any academic grade or rating so as to obtain unearned academic credit.

6. Deliberate Falsification: Deliberate falsification of a written or verbal statement of fact to a Faculty member and/or Institute Official, so as to obtain unearned academic credit.

7. Forgery: Forgery, alteration, or misuse of any Institute document relating to the academic status of the Student.

8. Distortion: Any act that distorts, or could distort grades or other academic records.

9. Intellectual Property: The unauthorized use of an instructor’s intellectual property, including marketing and selling, is prohibited (such properties may include power point presentations, lecture notes (any media), examination questions, study guides, etc.).

C. Prohibited Non-Academic Conduct

Any Student accused of committing or attempting to commit one or more of the following acts of non-academic misconduct is subject to conduct procedures in accordance with Section D. Any Student Organization accused of committing or attempting to commit one or more of the following acts of non-academic misconduct is subject to conduct procedures in accordance with the Addendum “Student Organization Code of Conduct Procedures.”

1. Alcohol violations including, but not limited to:
   a. Underage use or possession of alcohol.
   b. Possession or consumption of alcohol in an unauthorized area.
   c. Use or possession of fake identification.
   d. Distribution of alcohol to underage person(s).
   e. Behavior, while under the influence of alcohol that endangers any person.
   f. Disorderly conduct associated with the use of alcoholic beverages.

2. Illegal drugs and other substance violations including, but not limited to:
   a. Use or possession of illegal drugs (without valid medical or dental prescription).
   b. Behavior, while under the influence of illegal drugs, that endangers any person.
   c. Manufacturing, furnishing, selling, or distributing of any narcotic or dangerous drug controlled by law.
   d. Disorderly conduct associated with the use of illegal drugs.

3. Unjustifiably pushing, striking, or otherwise intentionally causing reasonable apprehension of such harm to any person.

4. Disorderly conduct including, but not limited to:
   a. Boisterousness, rowdiness, obscene, or indecent conduct or appearance.
   b. Obstruction or disruption of teaching, research, administration, or other Institute activities, including its public service functions or other authorized activities.
   c. Breach of the peace.
   d. Attempting to influence the impartiality of a Student Conduct Administrator and/or a member of a Student Conduct Panel at any point in the Student Conduct process.

5. Behavior that endangers any person(s), including self.

6. Unauthorized use of Institute facilities or premises including:
   a. Unauthorized entry into any Institute Premises or remaining without permission in any building after normal closing hours.
   b. Possessing, using, making, or causing to be made any key or other means of access to any Institute Premises without proper authorization.

7. Furnishing false information to any Institute Official.

8. Forgery, alteration, replication, or misuse of any document, record, or identification upon which the Institute relies, regardless of the medium.

9. “Hazing” is conduct, whether on or off Institute property, which exceeds the normal expectations of the organizational purpose or mission and which a) endangers the mental or physical health or safety of a student as a condition of affiliation with a group or organization and/or b) which is sufficiently severe or pervasive enough to interfere with academic responsibilities.

10. Safety violations, including, but not limited to:
    a. Intentionally initiating or causing to be initiated any false reporting, warning or threat of fire, explosion, or other emergency.
    b. Tampering with safety devices or other emergency, safety, or firefighting equipment.
    c. Setting or attempting to set an unauthorized fire.
    d. Unauthorized possession of fireworks, firearms, and/or ammunition.
    e. Unauthorized possession of weapons and/or dangerous materials or chemicals.
    f. Unauthorized sale, possession, furnishing, or use of any bomb or explosive or incendiary device.

11. Theft and/or unauthorized possession or use of property or services belonging to the Institute, another person, or any other entity.

12. Malicious or unauthorized damage to or destruction of Institute property or property belonging to another.

13. Illegal gambling, including online gambling.

14. Failure to return or submit property or records of the Institute within the time prescribed by the Institute.

15. Acting with any other person to perform an unlawful act or to violate an Institute regulation or Policy.

16. Failure to comply with instructions or a directive of any properly identified Institute Official while that person is acting in the performance of his/her duties.

17. Abuse of the Student Code of Conduct Procedures including, but not limited to:
    a. Failure to cooperate with the investigation, resolution, and procedures of the Student Code of Conduct.
    b. Falsification, distortion, or misrepresentation of Information before a Student Conduct Administrator or Student Conduct Panel.
    c. Disruption or interference with the orderly conduct of an Administrative Conference and/or a Student Conduct Panel proceeding.
    d. Attempting to influence the impartiality of a Student Conduct Administrator and/or a member of a Student Conduct Panel at any point in the Student Conduct process.
Throughout the conduct process, the Respondent is granted the following rights:

3. Rights of the Respondent

Throughout the conduct process, the Respondent is granted the following rights:

21. Violation of any Board of Regent's policy and/or federal, state, or local law.

22. Discriminatory conduct including

a. objectively offensive conduct directed at a particular person or persons based upon that person or persons’ race, color, religion, sex, national origin, age, disability, sexual orientation, gender identity, veteran status, or any class protected by law that creates a hostile environment or that results in excluding participation in, or denies the benefits of any educational program or working opportunity for that person or persons.

b. verbal or written threats, coercion or any other conduct that is based on race, color, religion, sex, national origin, age, disability, sexual orientation, gender identity, veteran status, or any class protected by law, that by design, intent or recklessness incites reasonable fear of physical harm or otherwise unreasonably interferes with another’s ability or opportunity to participate in work, education, research, living, or other activities.

Allegations of sex and/or gender-based discrimination will be governed by the Student Sexual Misconduct Policy.

D. Student Code of Conduct Procedures

1. Case Referrals

Any person may file a complaint against a Student for violations of the Student Code of Conduct. The complaint shall be prepared in writing and directed to OSI or, in academic cases, the instructor of record may hold a Faculty Conference (see Section D.5.c.). The procedures for filing a complaint can be found on the OSI web site. The complaint should be submitted as soon as possible after the event takes place or when it is reasonably discovered, and no later than thirty (30) business days following the discovery of the incident. The Complainant should forward any supporting documentation to OSI within ten (10) business days of the original submission or OSI may process the case based solely on the original complaint. OSI may also initiate a complaint based upon information received.

2. Communication

All communication (requests for meetings, notifications, notice of hearings, etc.) will be provided via official Institute e-mail addresses, as defined by the Office of Information Technology. If the Respondent is not currently enrolled, the notification will be sent via U.S. Postal Service to the last known address on file with the Registrar.

3. Rights of the Respondent

Throughout the conduct process, the Respondent is granted the following rights:

a. to seek information from a Student Conduct Administrator about the Investigation and Resolution Process;

b. to be informed of the charge(s) and alleged misconduct upon which the charge is based;

c. to be informed of the Information upon which a charge is based and afforded an opportunity to offer a relevant response;

d. to be accompanied by an Advisor;

e. to remain silent with no inference of responsibility drawn;

f. to call and question relevant Witnesses;

g. to present Information in his/her behalf;

h. to be considered not responsible until proven responsible by a Preponderance of the Evidence;

i. to be informed of the outcome of the disciplinary proceeding in writing;

j. to appeal the decision; k. to waive any of the above rights; and

l. to have resolution of the case within a reasonable time.

4. Investigation and Resolution Process

The Institute’s conduct process utilizes an investigatory model, not an adversarial model, with the primary goal of uncovering the truth. The standard of proof shall be a Preponderance of the Evidence. The investigation and resolution process is as follows:

a. After OSI receives a complaint, the Student Conduct Administrator will review the complaint and any supporting Information to decide what, if any process to initiate. The Student Conduct Administrator will:

• determine whether the facts as alleged in the complaint or report are sufficient to initiate a conduct process.

• If the Student Conduct Administrator determines that the facts of the complaint or report, even if true, would not constitute a violation of policy, no further action will be taken. Otherwise, the Student Conduct Administrator may (1) attempt to resolve the situation through an informal resolution process including, but not limited to, mediation or a meeting between the Respondent and a Student Conduct Administrator or a third party; or (2) initiate a conduct process.

b. If OSI receives multiple complaints involving the same Student, each complaint will be considered separately in determining whether a conduct process should be initiated. Multiple charges against the same Respondent will generally be investigated and adjudicated separately; however, multiple charges may be aggregated under appropriate circumstances, which may include, but are not limited to, consent of the parties, similar or related conduct, and the administrative burden of considering the charges separately.

c. If the Student Conduct Administrator initiates a conduct process, the Respondent is notified and is requested to contact the Student Conduct Administrator within five (5) business days of the notification to schedule an Administrative Conference. During the conduct process, the Respondent should continue to attend class and required Institute functions unless otherwise instructed by the Vice President for Student Life and Dean of Students or OSI. Should the Respondent fail to contact the Student Conduct Administrator within five (5) business days, or fail to attend the Administrative Conference, the Student Conduct Administrator may resolve the case in the Student’s absence, or may refer the case to a Student Conduct Panel.

d. At the Administrative Conference, the Respondent is presented with the alleged violation of the Student Code of Conduct, supporting Information, and an explanation of his/her rights. The Respondent may bring an Advisor. However, if the Advisor disrupts the investigation and resolution process, he/she may be asked to leave. The Respondent will
be provided the opportunity to present his/her version of the reported incident.

e. The case will be adjudicated by the Student Conduct Administrator or a Student Conduct Panel. The Respondent may state a preference for a decision to be rendered by the Student Conduct Administrator or by a Student Conduct Panel. The Respondent may also request that the case be adjudicated by a different Student Conduct Administrator than that initially authorized to hear the case in the event of perceived bias of the initially authorized official. The Student’s reasons for his/her preference must be conveyed to the Vice President for Student Life and Dean of Students, in writing, before the investigation begins. Ordinarily, the Student’s preference will be honored; however, the Vice President for Student Life and Dean of Students, according to appeal procedures described in Section G.

f. If the case is to be adjudicated by the Respondent shall provide his/her statement regarding the alleged misconduct, supporting Information, and names of Witnesses no later than 48 hours following the conclusion of the Administrative Conference. The Student Conduct Administrator shall continue the investigation as necessary by meeting with the Complainant(s) and Witnesses and gathering additional Information. If the Student Conduct Administrator determines that a Witness (including faculty or staff) may have relevant Information, s/he will make a good faith effort to contact such Witness to obtain a statement from the Witness. Before rendering a decision, the Student Conduct Administrator will communicate with the Respondent and share with the Respondent the Information collected. The Student Conduct Administrator will then render a final decision, which will be communicated to the Respondent via the Respondent’s Institute e-mail address.

g. If the case is to be adjudicated by the Student Conduct Panel, the case shall be referred to the Student Conduct Panel and follow the procedures outlined in Section D.5.b.

h. Resolution of the case should be made within thirty (30) business days of the Administrative Conference. If resolution cannot be reached in thirty (30) business days, OSI will inform the Respondent and Complainant. OSI may waive this timeline for good cause.

5. Forms of Case Resolution

a. Administrative Resolution
The Student Conduct Administrator renders a decision of 1) Not Responsible, which closes the case, or 2) Responsible for one or more violations with an appropriate Sanction and, as warranted, one or more from among the Supplementary Requirements. The Respondent, after being notified of the Student Conduct Administrator’s decision, may submit an appeal to the Vice President for Student Life and Dean of Students according to the appeal procedures described in Section G.

b. Student Conduct Panel
The Student Conduct Panel is convened only when either the Student Conduct Administrator or the Respondent elects this form of resolution. The Student Conduct Panel, after convening a hearing, makes a recommendation of 1) Not Responsible, which closes the case, or 2) Responsible for one or more violations of the Student Code of Conduct with an appropriate Sanction and, as warranted, one or more from among the Supplementary Requirements. The Respondent, after being notified of the decision, may submit an appeal to the Vice President for Student Life and Dean of Students according to procedure procedures described in Section G. The Student Conduct Panel, at the request of the Respondent, may also conduct a hearing solely to determine appropriate sanctions in cases where the Respondent accepts responsibility for a violation of this Code.

2. Decisions and Sanctions for Non-academic Cases
The Student Conduct Panel, after convening a hearing, recommends a disciplinary decision to the Director of Student Integrity. The Director of Student Integrity, after reviewing the case, renders a decision of 1) Not Responsible, which closes the case, or 2) Responsible for one or more violations of the Student Code of Conduct with an appropriate Sanction and, as warranted, one or more from among the Supplementary Requirements. The Respondent, after being notified of the decision and Sanction, may appeal to the Vice President for Student Life and Dean of Students, according to appeal procedures described in Section G.

3. Scheduling of Student Conduct Panel Hearing
After the case is forwarded to a Student Conduct Panel, the Complainant and the Respondent will be notified of available dates and times for a hearing. The Respondent may indicate preferences from among the available dates and times. These preferences will be considered by OSI if received within three (3) business days of the date the options were presented to the Respondent.

This official notice will be provided at least five (5) business days prior to the hearing and will include the time, date, and location of the hearing. In addition, the notice will specify the Complainant(s), Witnesses(s), and nature of the alleged misconduct. The Accused may waive the notification timeline in order to expedite the hearing process. Upon request, the Respondent may meet with a Student Conduct Administrator to review Information and hearing procedures.

6. Hearing Participants and Attendees
• Student Conduct Panel hearings shall ordinarily be closed except for the Respondent(s), the Complainant(s), Advisor(s), and Witnesses. Exceptions may be made at the discretion of the Chairperson. Witnesses are allowed at the discretion of the Chairperson. The Chairperson may exclude any person, including the Respondent, who disrupts a hearing.
• An Respondent Student who fails to appear after proper notice will be deemed to have responded “Not Responsible” to the charges against him/her and to have exercised the right to remain silent without prejudice. At the discretion of the Chairperson the hearing may be conducted in the absence of the Student(s) and all the Information regarding the alleged misconduct shall be presented and considered.
• The Complainant(s) and Respondent(s) have the right to be accompanied by an Advisor. The Complainant(s) and/or Respondent(s) should select an Advisor who can attend the hearing at the scheduled date and time. Delays are not usually granted due to scheduling conflicts of an Advisor.
• Subject to the Chairperson’s control of the hearing, the Complainant(s), Respondent(s), and their Advisor(s), shall be allowed to attend the Student Conduct Panel hearing, but not Panel deliberations.
• In Student Conduct Panel hearings involving more than one Respondent, OSI may permit the Student Conduct Panel hearings concerning each Student to be conducted either separately or jointly.
• A maximum of two (2) character Witnesses will be allowed in a hearing.

7. Hearing Procedures
• The Chairperson shall exercise control over the proceedings to achieve orderly completion of the hearing.
• Advisors are restricted to private communications with their advisee(s). However, if the Advisor disrupts the investigation and resolution process, he/she may be asked to leave.
• All questions by the Complainant(s) and Respondent(s) must be directed to the Chairperson, rather than to the Witness directly. Questions of whether potential Information will be received shall be resolved at the discretion of the Chairperson.
• In addition to the Information provided by OSI, the Student Conduct Panel, at the discretion of the Chairperson, may accept additional pertinent Information and testimony (including impact statements). Any letters of recommendation submitted by the Respondent will be admitted for consideration at the discretion of the Chairperson and, if admitted, will be viewed only during Panel deliberations.
• All procedural questions arising during the hearing are subject to the final decision of the Chairperson.
• The Student Conduct Panel’s standard of proof shall be a Preponderance of the Evidence.
• The Student Conduct Panel in consultation with OSI, may reasonably accommodate concerns for the personal safety, well-being, and/or fears of confrontation of the Complainant(s), Respondent(s), and/or Witnesses during the hearing.
• The Student Conduct Panel shall make a recording and/or summary transcription of the proceeding, which will serve as the official record of the hearing. No other recording will be permitted. The Respondent or the Complainant may request a copy of the Institute’s recording upon payment of the cost to reproduce the recording, or may listen to the original recording in a location designated by OSI at no charge. The record shall be the property of the Institute, and is subject to the Family Educational Rights and Privacy Act of 1974, 20 USC §1232g.

c. Faculty Conference (optional academic case resolution)
A faculty conference is an optional way in which an alleged act of academic misconduct can be resolved.

1. Initiation of Complaint
The Faculty Conference is initiated by the instructor of record, who requests the meeting with the Respondent to discuss the alleged misconduct. Should the Respondent not choose to participate in a Faculty Conference, the instructor should forward the case to OSI for investigation.

2. Participants
The Faculty Conference involves the instructor of record and the Respondent. The Faculty Conference may also involve Witnesses and a representative from OSI if requested by either the instructor or the Respondent.

3. Process
During the Faculty Conference, the instructor of record explains the alleged misconduct, supporting Information, and the Rights of the Respondent. The Respondent has the opportunity to provide 1) his/her response to alleged misconduct, 2) supporting Information, and 3) Witnesses.

4. Conclusion
• If the instructor finds the Respondent not responsible, the case is closed.
• If the instructor finds the Respondent responsible, but the Respondent does not admit responsibility, the instructor forwards the case to OSI for investigation.
• If the instructor finds the Respondent responsible, and the Respondent acknowledges responsibility, the instructor proposes a Faculty Resolution including 1) a Sanction of Disciplinary Warning, or Disciplinary Probation, 2) a grade penalty, and 3) an educational component.
• If the Respondent agrees to the Faculty Resolution, the Faculty Member forwards the resolution to OSI for consideration. OSI will determine if the Respondent has prior disciplinary history. If so, in the case will be investigated by OSI, in accordance with Section D.4.
• If the Respondent does not agree to the Faculty Resolution, the Faculty Member forwards the case to OSI.

5. Implementation
• The Respondent is formally notified of the proposed Faculty Resolution by OSI, according to the communication guidelines in Section D.2.
• The Faculty resolution goes into effect upon delivery unless the Respondent requests within five (5) business days that the case be forwarded to OSI for investigation.

E. Sanctions
Sanctions are imposed only when the Respondent is found responsible for one (1) or more violations of the Student Code of Conduct. All Sanctions are officially recorded. Sanctions are determined by the severity of the case and the disciplinary history of the Respondent(s).

A. Sanctions
Sanctions are imposed only when the Respondent is found responsible for one (1) or more violations of the Student Code of Conduct. All Sanctions are officially recorded. Sanctions are determined by the severity of the case and the disciplinary history of the Respondent(s). A Respondent who is found responsible must be given one of the four (4) Sanctions, listed in Section E.1 in ascending order of severity. In addition the Respondent may be subject to one or more Supplementary Requirements. There is no requirement that a Student receive less severe sanctions before more severe sanctions; some conduct may warrant immediate expulsion.

1. Sanction Descriptions

a. Disciplinary Warning
A Disciplinary Warning means that the Student has been found responsible for violating the Institute’s Code of Conduct. Any further disciplinary violation may result in disciplinary action up to, and including Expulsion.

b. Disciplinary Probation
Disciplinary Probation means that the Student has been found responsible for violating the Institute’s Code of Conduct. Disciplinary Probation is for a specified period of time. Any further disciplinary violation may result in disciplinary action up to, and including Expulsion.

c. Suspension
Suspension means that the Student has been found responsible for violating the Institute’s Code of Conduct. Suspension is separation of the Student from the Institute for a specified period of time, after which the Student is eligible to return. Conditions for readmission may be specified by OSI or the Vice President for Student Life and Dean of Students.
suspended Student shall immediately leave campus and may not re-enter campus without prior approval from OSI. Students on suspension are not permitted to enroll in classes at the Institute during their suspension. The Vice President for Student Life and Dean of Students will determine when the Respondent has met the requirements for readmission. Any further disciplinary violation may result in disciplinary action up to and including Expulsion.

d. Expulsion
Expulsion means that the Student has been found responsible for violating the Institute's Code of Conduct. Expulsion is permanent separation and termination of the Respondent's status as a Georgia Tech Student, and exclusion from Institute Premises, privileges, and activities.

2. Supplementary Requirements

a. Restitution: Payment to the Institute or to an affected party for damages resulting from a violation of the Student Code of Conduct.

b. Fine: A monetary penalty paid to the Institute.

c. Grade Change: Change of grade for the course and/or coursework in which the academic misconduct occurred.

d. Programmatic Requirements: Required completion of designated educational programs (e.g., alcohol, community issues, anger management, assessments, etc.).

e. Restrictions: Exclusion from participation in specified services and activities.

f. Revocation of Admission and/or Degree: Admission to, or a degree awarded from the Institute may be revoked for fraud, misrepresentation, or other violation of Institute standards in obtaining the degree, or for other serious violations committed by a Student prior to graduation.

g. Withholding Degree: The Institute may withhold awarding a degree otherwise earned until the completion of the process set forth in this Student Code of Conduct, including the completion of all Sanctions and Supplementary Requirements, if any.

h. Other Requirements: Other Requirements may be imposed.

F. Interim Suspension
In certain circumstances the Vice President for Student Life and Dean of Students may impose an Institute suspension prior to the investigation and resolution process.

1. The Vice President for Student Life and Dean of Students will determine if interim suspension is warranted. Interim suspension may be imposed only:

   • To ensure the Student's physical or emotional safety and well-being; or
   • To ensure the safety and well-being of members of the Institute Community or to preserve Institute property; or
   • If the Student poses a definite threat of disruption of, or interference with the normal operations of the Institute; or
   • If the Student is charged with a felony.

2. During the interim suspension the Student may be denied access to classes, campus facilities, and all other Institute activities or privileges.

3. The Student shall be notified in writing of this action and the reasons for the Interim Suspension, in accordance with Section F.1. The notice should include the time, date, and place of a subsequent meeting with the Vice President for Student Life and Dean of Students in order for the student to show cause why he/she should not be interim suspended.

4. Cases of interim suspension shall be given priority and will be expedited through the Conduct process.

G. Appeal Procedures

1. Reasons for Appeal
The appeal process is not intended to grant a new hearing at a higher level. An appeal shall be limited to a review of the record of the initial hearing, supporting documents, and the Respondent's written appeal. The Respondent must explicitly state why he or she believes an appeal is warranted. Appeals will be considered only for the following reasons:

   a. To determine whether the original hearing was conducted fairly and in conformity with prescribed procedures;
   b. To determine whether there was sufficient evidence to support the decision;
   c. To determine whether the Sanctions and Supplementary Requirements imposed were appropriate for the violation for which the Student was found responsible; and/or
   d. To determine whether new Information, not available at the time of the hearing, is relevant to the final decision.

2. Process
If a case is appealed, sanctions are not imposed unless the welfare of a person or the community is threatened.

Sanctions will be imposed if an appeal is not filed, the deadline for an appeal passes, or when an appeal decision has been finalized.

The appeal must be addressed to the appropriate Appellate Officer, and delivered to the Office of Student Integrity within five (5) business days of the delivery of the decision. Appeal decisions will normally be rendered within ten (10) business days either in person, or accordance with the communication guidelines in Section D.2. Extension of these deadlines may be granted for extenuating circumstances. At the discretion of the Appellate Officer, a designee may be selected to determine the outcome of the appeal.

For all decisions made by the Office of Student Integrity, the Appellate Officer shall be the Vice President for Student Life and Dean of Students.

For all academic cases where the sanction includes suspension or expulsion, Undergraduate Students may, after an appeal to the Vice President for Student Life and Dean of Students, appeal to the Institute President, via the Vice Provost for Undergraduate Education. The Vice Provost for Undergraduate Education will review and make a recommendation to the Institute President. The Institute President’s decision will be the final decision of the Institute.

For all academic cases where the sanction includes suspension or expulsion, Graduate Students may, after an appeal to the Vice President for Student Life and Dean of Students, appeal to the Institute President, via the Vice Provost for Graduate Education and Faculty Affairs. The Vice Provost for Graduate Education and Faculty Affairs will review and make a recommendation to the Institute President. The Institute President’s decision will be the final decision of the Institute.

For all non-academic cases where the sanction includes suspension or expulsion, the Student may, after an appeal to the Vice President for
Student Life and Dean of Students, appeal to the Institute President, via the Vice President for Student Vice President for Student Life and Dean of Students. The Institute President’s decision will be the final decision of the Institute.

3. Appeal Decisions

Decisions of the Appellate Officer go into effect immediately. The Appellate Officer is authorized to take one of the following actions:

a. dismiss the appeal for failure to state valid reasons, in accordance with Section G.1.

b. find no error and uphold the original decision;

c. uphold the original decision, but modify Sanctions and Supplementary Requirements;

d. remand the case to a Student Conduct Administrator or Student Conduct Panel; or

e. reverse the original decision.

4. Board of Regents

The Board of Regents of the University System of Georgia (the "Board") is the final appellate authority for all cases of suspension or expulsion that have been reviewed by the Institute President. Should the Respondent be dissatisfied with the decision of the Institute President, he/she may apply to the Board for a review of the decision. The application for review shall be submitted in writing to the executive secretary of the Board within the period specified by the Board of Regents.

H. Record Keeping and Release of Information

1. Maintenance of Disciplinary Files

A case referral results in the creation of a disciplinary file in the name of the Respondent. Disciplinary files of Students found responsible of any charges against them will be retained for five (5) years after graduation or date of last attendance. Disciplinary records containing records of Suspension and Expulsion will be permanently retained. This file shall be destroyed if the Student is found not responsible for the charges.

2. Release of Information

Student disciplinary records shall be governed by the Family Educational Rights of Privacy Act 20 U.S.C. § 1232g.

a. Academic or non-academic misconduct resulting in expulsion may be released to third parties indefinitely.

b. Academic misconduct that resulted in suspension may be released to third parties for five years after sanction completion.

c. Any non-academic misconduct that resulted in suspension where a potential threat to the campus community exists (including but not limited to illegal drug distribution, endangering or harming any person, or jeopardizing the safety of any person) may be released to third parties for five years after sanction completion. In instances of suspension where no threat to the community is identified, the suspension may be reported until the sanction is complete.

d. Any academic or non-academic misconduct that did not result in suspension or expulsion is not released to third parties.

e. The Institute requires a specific written request from the student to release the entire disciplinary record to third parties.

3. Parent/Legal Guardian Notification

Parents/Legal Guardians of Students under the age of 21 may be notified when a Student is found responsible for violating the Georgia Tech Student Policy on Alcohol and other Drugs when any of the following occur:

a. A Student endangers himself/herself or others while under the influence of alcohol or other substances. Specific instances include driving under the influence, fighting, alcohol poisoning, and hospitalization.

b. When the Vice President for Student Life and Dean of Students determines that any future violation of Institute Policy will most likely result in suspension from the Institute.

c. When a Student Conduct Administrator determines that any future violation of Institute Policy will likely result in removal from housing.

4. Transcript Encumbrances

In pending cases that could result in Suspension or Expulsion, the Vice President for Student Life and Dean of Students will normally place a temporary encumbrance (hold) on a Student’s records. The Vice President for Student Life and Dean of Students will also place a hold on a Student’s records if the Student fails to respond to an official request to meet or if the Student fails to complete assigned Sanctions.

XX. Grievance Procedures

These procedures are intended to provide students at Georgia Tech a means for setting forth grievances relating to academic matters, intellectual diversity, and grade disputes when they believe that an instructor has acted unfairly or improperly in assignment of grades. It is not the intention of these procedures to provide a forum for questioning the judgment or grading policies of faculty. A student’s concerns may be discussed with a faculty member and/or reported to the school or unit head, the academic deans, of the Assistant Vice Provost for Academic Affairs.

A. Applicability of the Grievance Procedures

1. Subject Matter:
   These procedures apply to the review of grievances concerning academic matters and grade disputes. Grade appeals must be initiated by the grievant within their next enrolled academic term following the academic term of the course in question, and best efforts should be applied to resolve the appeal within that academic term.

2. Grievant:
   These procedures shall be the appellate procedures for students at Georgia Tech. Students who have pursued a formal grievance procedure or who have pursued informally the resolution of a grievance in their own school, college, or unit and have had that appeal dismissed, may submit the grievance for review under these procedures.

B. Overview of Grievance Process

1. Informal resolution attempted at the school, department, or unit level.
2. Formal resolution sought at the school, department, or unit level.
3. Formal resolution sought at the Institute level: appeal reviewed and, if so determined, heard by the Student Grievance and Appeal Committee.

C. Steps in the Grievance Process*

*The steps of the grievance process must followed in the order presented below:

1. The student shall attempt to resolve the grievance with the individual faculty member, the department, or the unit involved.
2. If the grievance is not resolved in Step C.1 and the student elects to continue the grievance process, the student may request a formal hearing setting forth in writing the complaint and the remedy sought at the school, college, or unit level. Upon receipt of such appeal, the unit director will acknowledge the appeal in writing within seven calendar days and will expeditiously proceed to constitute an ad hoc appeal committee. The unit director will serve as a nonvoting member of the committee. In addition, the following four committee members will be selected:
   a. One tenured faculty member from within the unit, selected by the unit director.
   b. One member of the academic faculty, selected by the student. The student may elect not to select a faculty member; in that case, the committee will consist of three members.
   c. One member from outside the unit, selected by the Student Grievance and Appeal Committee in consultation with the unit director.
   d. One member of the academic faculty selected by the faculty member whose action is in question.

The Committee will proceed with due haste to examine the merits of the complaint and to render a decision within 30 days. During the proceedings, the student may present any and all evidence that the student deems necessary to support the complaint, except that the Committee must agree that the evidence is in some way relevant. Such evidence may consist of documentation and/or testimony, within reason. Both grievant and respondent may be accompanied by advisors; the role of advisor must, however, be restricted to advice. Grievant and respondent must make their own cases before the committee.

Following a hearing and a written decision at the school, college, or unit level, the grievance is presumed to be resolved unless the grievant appeals.

3. The grievant may appeal the decision that has been rendered by the school, college, or unit to the Student Grievance and Appeal Committee.
   a. If the Committee, or subset thereof appointed by the chairperson, rules that the procedures are not applicable or that based on the facts stated by the grievant viewed in the light most favorable to the grievant, there is no basis for relief, then the appeal is denied
   b. If the Committee rules that the Institute procedural rules are applicable and that a hearing of the appeal is warranted, the Committee shall initiate a hearing process.
   c. If a student wishes to have a grievance outcome reviewed by the Student Grievance and Appeal Committee with a view to a formal hearing, the student shall observe the following requirements:
      i. The appeal must be in writing. It must state the basis for the grievance and the facts that support it, including a summary of the steps that have already been taken to resolve the grievance, reasons why the student finds the resolutions unfair or unsatisfactory, and a statement of the desired remedy.
      ii. The written appeal must be presented to the chairperson of the Student Grievance and Appeal Committee within thirty days after the student has received notice of a decision from a school, college, or unit.
      iii. The decision as to whether a formal hearing is warranted shall be made available, in writing, to the parties concerned within thirty days after the Committee has received notice of the appeal.
      iv. The Committee may alter a deadline specified in these procedures on written petition of either party showing a meritorious reason for delay; if the Committee itself needs to extend a deadline, it may do so on its own authority for periods up to fourteen calendar days; for longer delays, the Committee must request an extension from the Executive Board of the Institute.
      v. The determination of the Committee as to whether a hearing is warranted is final.
      vi. The Committee shall develop and, with the approval of the Academic Senate, establish and publish its own rules of procedures for the conduct of formal hearings.
vii After receiving testimony and the relevant documents, the Committee shall make a decision within thirty days on the basis of the received material.

viii The Committee's decision shall contain finding of fact, the decision arrived at, reasons for the decision, and the criteria or policy applied in reaching the decision.

D. Remedies

1. General

   If the Committee finds, after a formal hearing, that a faculty member, a departmental committee, or an administrator of a unit has not acted fairly or properly, it will recommend a remedy. It will seek to find a remedy that can be implemented by those whose cooperation is needed. In the matter of a grade dispute, this must include the faculty member involved in the dispute.

2. Enforcement

   a. If any party does not comply with the decision of the Committee, the Committee shall, upon request of any party, seek full compliance through the administrative offices of the Institute through the Chief Academic Officer (CAO).

   b. The merits of the dispute shall not be subject to review in the process of enforcement. There shall be strong presumption in favor of the remedy selected by the Committee.

3. Report of a Final Decision

   After a final decision has been made in a case, the Committee shall prepare a report setting forth its findings and recommendations for action and present the report to the CAO. A copy of the report shall be presented to the parties concerned and to those persons involved in implementing the Committee’s recommendations. All such communications shall be effectuated in person or by certified mail with a return receipt requested; such receipt will become part of the Institute records of the case.

   Care will be given that no incomplete or inaccurate information pertaining to the grievance is placed in any file and that all evidence obtained at any stage of the process and all deliberations and proceedings be kept confidential. At the conclusion of each case, the Student Grievance and Appeal Committee shall transmit original or true copies of the documents related to the case to the appropriate Office of the Vice President of Student Affairs, who shall keep such records securely as Institute records for a period of time specified by Institute statutes.

   a. Grade Changes:

      In decisions that would result in the changing of a posted grade, the CAO will instruct the unit director to ask the involved faculty member to effect the prescribed grade change or, if cooperation is not forthcoming, to effect the grade change directly by action of the unit director. Such action shall not be construed as restrictive of the resources of the faculty member through the usual appeal procedure of the Institute.

4. Final Appeal

   Appeal of the decision of the Committee to the CAO shall be permitted only for the purposes of procedural review. Such appeals shall be submitted in writing, with copies to the Committee. The CAO will review the findings of the Committee and, upon judgment that the Committee has failed to follow these procedures or has failed to follow the procedures approved by the Academic Senate for the operation of the Student Grievance and Appeal Committee (XXI.C.3.c.c6), return the case to the Committee for reconsideration, along with description of the received error in procedure and a recommendation for its correction.

XXI. Exceptions

Where appeals are not otherwise specified, exceptions to these regulations may be made by the appropriate faculty committee upon petition by the student and recommendation of the student's school or department. Blanket exceptions that have the effect of amending these regulations shall be referred to the Academic Senate for approval.

XXII. Student-Faculty Expectations

A. Preamble

The Georgia Tech community believes that it is important to continually strive for an atmosphere of mutual respect, acknowledgement, and responsibility between faculty members and the student body. Therefore, we herein endeavors to enumerate the specific expectations of each side. However, this document is not intended to be either comprehensive or limiting in regards to the Institute's statutes. Ultimately, simple respect for knowledge, hard work, and cordial interactions will help build the environment we seek. We remain committed to the ideals of Georgia Tech, agree to abide by these principles in our time here, and will encourage each other to uphold these responsibilities.

B. Student Expectations

We hold that all students have the right to expect:

1. a positive, respectful, and engaged academic environment inside and outside the classroom;
2. to attend classes at regularly scheduled times without undue variations and without penalty if the student cannot attend instructional, lab, or examination hours not institutionally scheduled; to have their instructor of record be present during most scheduled lecture periods.
3. to receive a syllabus which should include an outline of the course objectives, evaluation criteria, and any other requirements for successful completion of each course during the first week of class meetings and to be clearly informed of any changes made to the syllabus during the semester with reasonable time to adjust to these changes;
4. to consult with faculty outside of usual classroom times through regularly scheduled office hours or a mutually convenient appointment;
5. to have reasonable access to Institute facilities and equipment in order to complete course assignments and/or objectives;
6. to have reasonable time to learn course material prior to the administration of an examination;
7. to receive a clear explanation of the faculty's definition and interpretation of academic misconduct within the course that extends over and beyond those clearly defined in the Georgia Tech Honor Code;
8. to have reasonable access to grading instruments and/or grading criteria for individual assignments, exams, or exams and to review graded material in a timely fashion;
9. to consult with each course’s faculty regarding the petition process for graded coursework;
10. faculty to adhere to formal Institute policies, rules and regulations, such as the policy on Final Instructional Class Days and Reading Periods, and the confidentiality policies of FERPA.

11. faculty to be supportive of students’ desires and needs to find rewarding careers after graduation from Georgia Tech. Faculty should be flexible in allowing students to attend the Georgia Tech All Majors Career Fair (http://www.careerdiscovery.gatech.edu/all-majors-career-fair) that occurs in the Fall and Spring Semesters and should refrain when possible from scheduling quizzes or tests on those days;

12. faculty to be flexible during the semester when students have off campus interviews for jobs or graduate/professional schools and should allow students to make up missed work when possible.

C. Faculty Expectations

We hold that all faculty members have the right to expect:

1. a positive, respectful, and engaged academic environment inside and outside the classroom;

2. students to appear regularly for class meetings in a timely fashion;

3. to select qualified Teaching Assistants in accordance with departmental protocols as well as the right to delegate grading, studio and laboratory instruction, tutoring, and other academic activities to these individuals;

4. students to appear at office hours or a mutually convenient appointment for official matters of academic concern;

5. full attendance at examination, midterms, presentations, studios, and laboratories, with the exception of formal pre-approved excused absences or emergency situations;

6. students to be prepared for class, appearing with appropriate materials and having completed assigned readings and homework;

7. full engagement within the classroom, including meaningful focus during lectures, appropriate and relevant questions, and class participation;

8. to cancel class due to emergency situations and to cover missed material during subsequent class meeting times at the discretion of the instructor;

9. students to act with integrity and to adhere to the principles of the Georgia Tech Student Honor Code;

10. students to adhere to the formal Institute policies, such as the Student Code of Conduct.

11. students to make every effort to minimize their absences from scheduled lectures, laboratories, and studios during the Georgia Tech All Majors Career Fair (http://www.careerdiscovery.gatech.edu/all-majors-career-fair) that occurs in the Fall and Spring Semesters, and to notify them in advance if they intend to miss class to attend the Georgia Tech All Majors Career Fair;

12. students to notify them as soon as possible when they have off campus interviews for jobs or graduate/professional schools that conflict with class attendance.

• Urban Design. MS (p. 538)
• Aerospace Engineering. PhD (p. 479)
• Algorithms, Combinatorics, and Optimization. PhD (p. 480)
• Applied Physiology. PhD (p. 480)
Georgia Institute of Technology offers three types of Certificates: 

**Undergraduate Embedded**

Undergraduate embedded certificates are intended to encourage students to use the elective course requirements in their degree program to form a coherent package of coursework in a specified area. Undergraduate embedded certificates will be granted only to students who, in addition to the undergraduate embedded certificate program requirements, have satisfied requirements for an undergraduate degree. The offering unit is responsible for verifying satisfaction of all undergraduate embedded certificate requirements, as well as completion of an undergraduate degree. Undergraduate embedded certificates are not recorded on the student's transcript or diploma. Arrangements must be made for awarding undergraduate embedded certificates within colleges or offering units. Undergraduate embedded certificates will not be awarded at the Institute level.

**Undergraduate Certificate Guidelines** (http://catalog.gatech.edu/policies/certificate-guidelines/undergraduate-certificate-guidelines)

**Graduate Embedded**

Graduate embedded certificates are intended to encourage students to use the elective course requirements in their degree program to form a coherent package of coursework in a specified area.

Graduate embedded certificates will be granted only to students who, in addition to the graduate embedded certificate program requirements, have satisfied requirements for an graduate degree. The offering unit is responsible for verifying satisfaction of all graduate embedded certificate requirements, as well as completion of an graduate degree. Graduate embedded certificates are not recorded on the student’s transcript or diploma. Arrangements must be made for awarding graduate embedded certificates within colleges or offering units. Graduate embedded certificates will not be awarded at the Institute level.

**Graduate Stand-Alone Certificate Guidelines**

**Graduate Stand-Alone** (p. 183)

Stand-alone certificates may be completed independent of students being enrolled as Master’s or Doctoral student. These certificates represent a cohesive program of study of a smaller size than a Master’s program and provide more flexibility to professionals for pursuing graduate education, including a means for professionals to renew and retrain due to a fast-changing work force. When completed, these certificates appear on the student’s academic record (transcript), and the student receives a certificate of completion.

Graduate Stand-Alone Certificates

- Graduate Stand-Alone Certificate Guidelines (http://catalog.gatech.edu/policies/certificate-guidelines/graduate-certificate-guidelines)

Once graduate stand-alone certificate programs are approved by the Institute, they will be listed here.

Bachelor of Science in Computer Science - Thread: Intelligence & Media

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Media thread is where computing meets design. This thread prepares students by helping them to understand the technical and computational capabilities of systems in order to exploit their abilities to provide creative outlets.

The Intelligence thread is where computing models intelligence. This thread is concerned with computational models of intelligence from top to bottom. To this end, we emphasize designing and implementing artifacts that exhibit various levels of intelligence as well as understanding and modeling natural cognitive agents such as humans, ants, or bees. Students acquire the technical knowledge and skills necessary for expressing, specifying, understanding, creating, and exploiting computational models that represent cognitive processes. It prepares students for fields as diverse as artificial intelligence, machine learning, perception, and cognitive science, as well as for fields that benefit from applications of techniques from those fields.

Free Electives
- 14 credit hours

Total Credit Hours
- 126 credit hours

Pass-fail only allowed for Free Electives (max 6 credit hours), CS 1100, and CS 1171 (if required).

1. Minimum grade of C required.
2. Two of three lab sciences MUST be a sequence.
3. Junior Design Options are as follows (students must pick one option and may not change):
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   - Option 2 - ECE VIP courses and LMC 3403.
   - Option 3 - Satisfy Georgia Tech Research Option.
   - Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the average credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit. Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-up Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4. Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs
The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further Information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

International Plan
The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option
To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;

2. Write an undergraduate thesis/report of research on their findings;

3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes
The following classes count toward fulfillment of the Research Option:

Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student's transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).
BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

Bachelor of Science in Physics - Astrophysics

The School of Physics offers two undergraduate degrees, the Bachelor of Science in Physics and the Bachelor of Science in Applied Physics. The basis of the Bachelor of Science in Physics degree is the traditional preparation of a student for graduate study in physics.

Each of the baccalaureate programs contains the following:

1. courses needed to meet general institutional degree requirements;
2. a core of technical courses intended to give a strong background in mathematics and the physical principles of mechanics, electricity and magnetism, thermodynamics, and the quantum theory that governs physical phenomena at the microscopic level of molecules, atoms, and nuclei;
3. technical electives that enable the student to explore areas of his or her choice in greater depth;
4. courses involving undergraduate research, and
5. free electives, about fifteen percent of the total hours, which may be employed to schedule additional technical or nontechnical courses.

The considerable flexibility inherent in the physics curricula is advantageous to students who wish to work out individual programs of study. At the same time, this flexibility suggests the need for consultation with advisors so students can make the best use of elective hours and avoid scheduling difficulties that may arise in later semesters. Students may utilize their elective freedom in the physics curricula to specialize in particular areas of physics, to prepare for careers in interdisciplinary areas of science, to compose a preprofessional program, or to gain a background in other technical or nontechnical disciplines. Students should contact their academic advisor for assistance in planning programs of study with emphasis directed toward a particular objective. Since some students who earn a degree in physics have transferred from other disciplines, the School has planned its degree programs to enable most students to transfer into physics with little or no loss of credit.

A total of 120 credit hours (exclusive of wellness) and a grade-point average of at least 2.0 in physics courses numbered 3000 and higher are requisites for the bachelor’s degree in physics.

BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Student must have 2.0 in all PHYS classes 3000-level or higher

1. If PHYS 2231 is taken, extra hour goes toward Free Electives
2. Any PHYS course or BIOL 4478, CHEM 3411, CHEM 3412, CHEM 3511, EAS 2750, EAS 4300, EAS 4430, ECE 4501, MATH 2106, MATH 3215, MATH 3235, MATH 4320, MATH 4347 MATH 4348, MATH 4581, NRE 3301, NRE 4610
3. Minimum of one class in PHYS 3211, PHYS 3226, PHYS 4322
4. If PHYS 2232 is taken, extra hour goes toward Free Electives

### Research Option in Physics

The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in Physics. The purpose of this program is to prepare students who plan to go on to graduate research after their BS degree. This option includes three or four semesters of focused research in the student's junior and senior years. Students who complete this option receive a designation on their transcript. For an undergraduate to fulfill the Research Option in the School of Physics, the student must fulfill the following requirements:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYS 4698</td>
<td>Research Assistantship 1</td>
<td>9</td>
</tr>
<tr>
<td>or PHYS 4699</td>
<td>Undergraduate Research</td>
<td></td>
</tr>
<tr>
<td>LMC 4701</td>
<td>US Rsch Proposal Writing 2</td>
<td>1</td>
</tr>
<tr>
<td>LMC 4702</td>
<td>US Rsch Thesis Writing 3</td>
<td>1</td>
</tr>
<tr>
<td>Research Thesis 4</td>
<td>11</td>
<td></td>
</tr>
<tr>
<td>Total Credit Hours</td>
<td>122</td>
<td></td>
</tr>
</tbody>
</table>

1. At least three credits must be PHYS 4699.
2. LMC 4701: Undergraduate Research Proposal Writing - typically taken during the first or second semester of research.
3. LMC 4702: Undergraduate Research Thesis Writing - taken during the term in which the thesis is completed.
4. Write and submit an undergraduate research thesis to the School of Physics based on the student’s research that is approved by the student’s research advisor.

Course requirements are detailed in brochures available from the School of Physics. For specific questions, students should contact the Associate Chair for Undergraduate Studies in the School of Physics.

### BS/MS Chemical and Biomolecular Engineering

The program seeks to engage undergraduate students at Georgia Tech who indicate an interest in, and ability for, additional education beyond the BS degree. Students with significant AP credit will be especially well positioned to take full advantage of this opportunity.

Students in the BS/MS Program will remain undergraduates until they meet the requirements for the BS degree; after which, their status will change to graduate student.

Students are eligible to apply for the program after completion of thirty semester credit hours at Georgia Tech (i.e., at the end of freshman year). As a practical matter, it is recommended that students apply to the program immediately after completion of CHBE 3110. Students must have a Georgia Tech GPA of 3.5 or higher for admission into the program.

Admission into the program will be based on academic performance at Georgia Tech, as well as the potential for advanced study and/or research as assessed from the essay and recommendation letter.

Continuation in the program will require the student to maintain a GPA of 3.0 or higher. This GPA requirement should not deter students from taking challenging courses. The program will not penalize students who opt out after receiving the BS degree. Additionally, students participating in the program will be eligible for the six credit-hour Graduate Course Option (http://www.catalog.gatech.edu/academics/graduate/masters-degrees/graduate-course-option).

Additional Information (http://www.chbe.gatech.edu/programs/bs-ms)

### BS/MS Electrical and Computer Engineering

This program allows highly qualified students to receive the Bachelor of Science in either Electrical Engineering or Computer Engineering and a master’s degree in Electrical and Computer Engineering. The joint BS/MS degree program affords undergraduate electrical or computer engineering
majors the opportunity to broaden their studies and improve their career prospects.

Eligible Georgia Tech undergraduates normally apply for this program during their junior year. Contact the Electrical and Computer Engineering Graduate Affairs Office for program information, eligibility requirements, and applications.

BS/MS Information (5 Year) (http://www.ece.gatech.edu/academic/grad/bsms_prog)

BS/MS in Computational Media and Digital Media

Students who want to pursue the five-year BS/MS combination in CM and DM must apply to the school of LMC after completing at least 75 hours of work towards the CM degree. Applicants should have a cumulative GPA of at least 3.5. This GPA must be maintained for the student to take graduate level courses. Students must start the program in the Fall to be on track with other MS students.

Students admitted to the program will take a total of twelve credit hours of graduate course work during their final undergraduate year; six credit hours of that work, in DM courses, will count towards two 4000 level LMC courses (6 hours) and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During their fifth year, students will take a total of 24 credit hours, including either LMC 6800 or LMC 7000, and with no more than three courses taken outside of the DM program.

Students admitted to the program will take a total of twelve credit hours of graduate course work during their final undergraduate year; six credit hours of that work, in DM courses, will count towards two 4000 level LMC courses (6 hours) and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During their fifth year, students will take a total of 24 credit hours, including either LMC 6800 or LMC 7000, and with no more than three courses taken outside of the DM program.

BS/MS in Earth and Atmospheric Sciences

EAS offers a BS/MS Program. EAS majors may apply to the BS/MS program after completing at least thirty semester credit hours at Georgia Tech with a GPA of at least 3.5.

Students admitted to the program must maintain a cumulative GPA of at least 3.0.

As part of the program, students may use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

To apply, complete the BS/MS application form, a biographical statement, and two letters of recommendation.

EAS Undergraduate Information (http://www.eas.gatech.edu/academics/5Year_BSMS)

BS/MS in Environmental Engineering

The joint BS/MS program is designed to attract the best-of-the-best undergraduate students and is especially intended for students who demonstrate an interest in and ability for, additional education beyond the bachelor’s degree.

Students will be eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech and appropriate progress in their degree program. As a practical matter, students should apply for the program at least three semesters prior to graduation in order to take graduate-level courses prior to receiving their BS degree. Students must have a Georgia Tech GPA of 3.5 or higher for admission into the BS/MS Program in Environmental Engineering.

This program is available only to those completing a Bachelor’s degree with majors of Civil Engineering or Environmental Engineering.

The key components of this program are intense interaction among students and faculty, including mentoring and undergraduate research, and careful advising and course planning to enable students to begin challenging coursework in their fourth year of study.

Students in the joint BS/MS program remain undergraduates until they meet the requirements for the bachelor's degree, at which point they will receive the BSEnvE degree. Their status will then be changed to graduate status. Graduate school application fees and the GRE requirements are waived.

Once admitted, a GPA of at least 3.0 must be maintained to remain in the program. Additionally, students in the BS/MS program are eligible to use the Graduate Course Option (http://catalog.gatech.edu/academics/graduate/masters-degrees/graduate-course-option) even if their cumulative grade-point average is below 3.5 at the time they complete their bachelor’s degree.

BS/MS in International Affairs

The Sam Nunn School of International Affairs offers a BS/MS program for students enrolled in the International Affairs undergraduate program who demonstrate an interest in and ability for additional education beyond the BS degree.

Students in the BS/MS program will remain undergraduates until they meet requirements for the undergraduate degree, at which point they will receive their BS degree and be changed to graduate status. Students will be eligible to apply for the program after completion of 45 semester credit hours at Georgia Tech (i.e., at the end of their third semester), and if they show appropriate progress in their degree program thereafter. Any student in good standing in the BS INTA program is eligible to apply to the program. Admissions decisions will be based on GPA and judgments of the faculty who have served as advisors or instructors. Continuation in the program will require the student to maintain a GPA of 3.5 or higher in Ivan Allen College courses. The program will not penalize students who opt out after the bachelor’s degree. Students participating in this program will be eligible for the six semester credit-hour Graduate Course Option, which allows students completing both the bachelor’s and master’s in the same discipline to use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

The Graduate-level Credits Required in the BS/MS Program are usually as follows:

<table>
<thead>
<tr>
<th>Core</th>
<th>15</th>
</tr>
</thead>
<tbody>

INTA Undergraduate Information (http://www.inta.gatech.edu)

---

## BS/MS in Literature, Media, and Communication / Digital Media

Students who wish to pursue the BS/MS combination in LMC and DM must apply to the School after completing at least seventy-five credit hours of work toward an LMC degree that includes the Interaction Design thread. Applicants should have a 3.5 GPA.

Students admitted to the program will select the LMC 4400 seminar option and take a total of twelve credit hours of graduate coursework during their final undergraduate year. Six credit hours of that work, in DM media courses, will replace the STAC free electives and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During the fifth year, students will take a total of twenty-four credit hours, including either LMC 6800 (Project) or LMC 7000 (Thesis), and with no more than three courses taken outside the DM program.

---

### BS/MS in Materials Science and Engineering

The School of Materials Science and Engineering (MSE) offers a BS/MS program for outstanding students who want to obtain a graduate degree in addition to their BS degree. The advanced degree provides the additional knowledge and specialization needed to further facilitate a technical career. As a participant in this program, students have an opportunity to work with individual faculty members on projects in one of the traditional or innovative research areas in MSE. See www.mse.gatech.edu (http://www.mse.gatech.edu) for more details.

---

### BS/MS in Mechanical Engineering

The Woodruff School offers a BS/MS program for those students who demonstrate an interest in and ability for additional education beyond the BS degree. Woodruff School students with a GPA of 3.5 or higher are eligible to apply for the program after completion of 30 credit hours at Georgia Tech, but before the completion of seventy-five credit hours, including transfer and advanced placement credits. Students who have more than 75 credit hours will be considered for the program on a case-by-case basis.

Participants in the BS/MS Program in the Woodruff School can obtain a master’s degree in mechanical engineering, nuclear engineering, medical physics, or in Georgia Tech’s interdisciplinary bioengineering graduate program. There are two options to consider:

#### Non-Thesis Option

The Non-Thesis Option is completed by taking 10 classes according to the MS degree requirements. In many cases, two courses can be counted towards both a student’s BS and MS degrees, thereby streamlining the process. With proper planning, most MS non-thesis degrees could be completed in one year.

#### Thesis Option

The Thesis Option involves working with a faculty member on a project in a wide range of research topics being investigated by Woodruff School faculty members. This will give you hands-on experience in working with a faculty mentor; the opportunity to work in a laboratory or a research environment; and the chance to perform theoretical and experimental work. These events will foster your career interests and expand your selection of possible employers. In some cases, a student will receive a graduate research assistantship, which includes a stipend and a tuition waiver. The time to graduation depends on your thesis project, your advisor, and your work ethic.

During the first year of your graduate studies, you will be encouraged to continue for the PhD In many cases, you might be working on an interesting topic of study as part of your master’s degree research that could provide the basis for doctoral research.

---

BS/MS Information (https://www.me.gatech.edu/undergraduate/bsms)
BS/MS in Public Policy

The School of Public Policy offers a BS/MS program for students enrolled in the undergraduate program who demonstrate an interest in and ability for additional education beyond the BS degree.

Students in the BS/MS program remain undergraduates until they meet requirements for the undergraduate degree, at which point they receive their BS degree and change to graduate status. Students are eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech (i.e., at the end of their first year), and if they show appropriate progress in their degree program thereafter. Admissions decisions will be based on GPA and judgments of the faculty who have served as advisors or instructors. Continuation in the program requires the student to maintain a GPA of 3.0 or higher in public policy courses.

Students participating in this program will be eligible for the six semester credit-hour Graduate Course Option, which allows students completing both the bachelor’s and master’s in the same discipline to use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

The graduate-level credits required in the BS/MS Program are usually as follows:

BS/MS Information (http://spp.gatech.edu/graduate-programs/five-year-bsms-program)

**Bachelor of Business Administration**

**- Strategy and Innovation**

Students with a broad interest in business and management activities and operating problems would profit from the Bachelor of Science in Business Administration degree program. The program builds upon knowledge of the functional, environmental, behavioral, and legal aspects of business and provides analytical and conceptual tools for analyzing complicated problems. It prepares the student for business and managerial responsibilities and decision making. The large number of elective hours allows the student to tailor a program to his or her individual educational objectives. Students must complete a concentration of electives in one of the following areas:

- Accounting
- Finance
- General Management
- Information Technology Management
- Leadership and Organizational Change
- Marketing
- Operations and Supply Chain Management
- Strategy and Innovation

The new BS Business Administration degree replaces the BS Management degree previously offered by the College of Business. Starting summer 2011, all new freshmen and transfer students will be admitted to the B.S. Business Administration (BSBA) degree as the B.S. Management (BSM) degree will no longer be offered to new students. Current Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BSBA degree, as the BSM degree will no longer be available to new change of major students. Current BSM students can change their majors to BSBA, but are not required to change majors.

**Change of Major Policy**

The College of Business requires a 2.3 cumulative GPA for any non-College of Business students requesting a change of major to Business Administration if the student has completed sixty credits (junior standing) or more. There is no GPA requirement for freshmen and sophomores (less than sixty credits) requesting a major change. This policy was approved by the College of Business faculty in April 2007.

All students seeking a major change to Business Administration must attend a “change of major” meeting. Contact the College of Business Undergraduate Program Office (http://mgt.gatech.edu/programs/undergraduate) for dates and times of upcoming meetings.

Current Georgia Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BS Business Administration degree, as the BS Management degree will no longer be available to new change of major students. Students who submit change of major forms before January 17, 2011 will have the BS Management degree. BS Management students may choose to stay in the BS degree or may change into the BSBA degree. Once a student changes majors to BSBA, he or she cannot return to the BSM degree.

The BSBA and BSM degrees have different degree requirements. Students joining the BSBA degree must complete all BSBA degree requirements, including one of the newly approved management concentrations and several other courses not currently required of all BSM students. Current BSM students MUST attend a change of major meeting to change their majors to BSBA so they understand the requirements of the new degree which are different than the BSM requirements.

Current BSM students who decide to continue pursuing the BSM degree should review previous Georgia Tech catalogs and the College of Business website to see the BSM requirements.

Contact the BS PP program director for further information.

|          |                                            | 122    |

1. C-minimum required.
2. Students must select one of two options: (1) they may select 9 credit hours of coursework from Group B or (2) select 6 credit hours of coursework from Group B and 3 credit hours of coursework from Group C.
3. Any courses except for MGT or ACCT.
4. Maximum 3 credits of internship; Maximum 9 credits of undergraduate research; Maximum 3 credits of Special Problems/Independent Study.
5. Other advisor approved MGT 4803 courses offered by the Strategy & Innovation Faculty.

**International Plan**

The International Plan (http://www.internationalplan.gatech.edu) degree option is available to all College of Business undergraduate students. This option has been specifically designed to increase the international competence of our students through foreign language instruction, selected international courses, overseas residential experience, and a capstone, culminating course. This international competence is characterized by a graduate's ability to communicate in a second world language, discuss substantively the major international socioeconomic processes, assimilate into foreign lifestyles and work environments, and communicate with confidence the specifics of management and business in a global context. Given the ever-increasing pace of globalization of business, this option should help students prepare for the business world of the future. All College of Business students should
achieve the following objectives:
The undergraduate aerospace engineering degree program is designed to provide each student with a general background for employment in industry or government, or advanced study in graduate school at the end of four years. The program stresses the analytical, experimental, and design aspects of aerospace engineering. A certain degree of specialization is available to undergraduate students through the proper choice of Options and through a choice of air- or space-focused tracks. In addition, opportunities for undergraduate research and team competition courses are available, depending on the student’s abilities and career objectives. Courses do not have to be taken during the specific semester indicated in the curriculum, but all prerequisites must be satisfied for each course. Advisement is encouraged before registration, with each student assigned a faculty advisor who remains the same for the full undergraduate program, unless the student requests a change. Students should consult with academic advisors for the availability of courses and recommended course sequences.

Educational Objectives
The undergraduate aerospace engineering degree program is designed to achieve the following objectives:

- Our graduates will be technically proficient and effective leaders and entrepreneurs. They will display high professional and ethical standards in aerospace engineering and related fields, and within industry, academia, and government.
- Our graduates will create new knowledge and engineering practices that develop products and services that have a global impact. They will collaborate with international partners and engage in culturally diverse teams.
- Our graduates will be life-long learners, continually developing their leadership, critical thinking, and problem-solving skills. They will be actively engaged in the acquisition and advancement of knowledge and technical expertise through research and development, and through active participation in professional societies, graduate studies, conferences, and symposia.
- Our graduates will transfer the knowledge gained from their aerospace engineering degrees to new fields that intersect with aerospace engineering such as robotics, medicine, and clean energy. They will use their degrees as a launching point for careers in other professional fields such as law, medicine, and public service.

The School of Aerospace Engineering offers the "Research Option" under the BSAE degree program. In order to graduate with a BSAE (RO) degree, the students must complete at least nine units of undergraduate research (over at least two, preferably three terms). Research may be for either pay (AE 2698 or AE 4698) or credit (AE 2699 or AE 4699). Research for credit may be used towards the BSAE free elective requirements.

• Complete at least nine units of undergraduate research (over at least two, preferably three terms). Research may be for either pay (AE 2698 or AE 4698) or credit (AE 2699 or AE 4699). Research for credit may be used towards the BSAE free elective requirements.

• Write an undergraduate thesis/report of research on their findings. This is usually done during the graduating term.

• Take both LMC 4701 (typically taken during the first or second semester of research) and LMC 4702: (taken during the thesis-writing semester).

At least six of the nine required credit hours of research should be on the same topic. A research proposal must be approved by a faculty advisor and one other faculty member. This proposal will be written in LMC 4701 which serves as a prerequisite for LMC 4702. Completion of Research Option is noted on the student's transcript.

For additional details, please contact:

Lakshmi Sankar
Daurette Joseph

**BS/MS Honors Program**

A combined BS/MS honors program is also offered that prepares students for graduate studies and research. Please see http://ae.gatech.edu/bs-ms-honors-program for more information.

**Bachelor of Science in Applied Languages & Intercultural Studies**

The School of Modern Languages offers a Bachelor of Science degree in Applied Languages and Intercultural Studies, with separate language concentrations in Chinese, French, German, Japanese, Russian, and Spanish. The ALIS degree program delivers foreign language study in the many contexts in which other languages are spoken (including social and technical communication, cultural perspectives, industry, arts and literature, media and science) that will provide students with the competitive edge needed to meet 21st century language requirements of the global marketplace. Since this degree couples language and cultural development with studies in another discipline at Georgia Tech, graduates are expected to join the workforce in many different camps: international trade, management, operations and logistics, journalism, advertising and publicity, local and national government, not-for-profit entities, medicine, media, virtual world development, website design, among others. Students in this program take 33 credit hours of advanced language study in the areas of Societies and Cultures, Industry and Technology, Arts and Media, and Advanced Language Acquisition. In addition, students must complete a 15 credit hour concentration in an approved cluster or minor program. A total of 12 credit hours in the language or cluster areas must be completed abroad.

### International Plan

The degree requirements for the Applied Languages and Intercultural Studies (Chinese, French, German, Japanese, Russian, and Spanish) - International Plan (ALIS-IP) are basically the same as for the ALIS degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese, and Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad must total a minimum of twenty-six weeks; typically these consist of one semester of study plus a twenty-six-week building; typically these consist of one semester of study plus a twenty-six-week project abroad. Only one summer semester abroad will count in this total. ALIS-IP majors are strongly encouraged to enroll in the Language for Business and Technology (LBAT) intensive summer programs offered by the School of Modern Languages.

In addition to gaining advanced global competence, the International Plan designation will set ALIS majors apart from other applicants with recruitment from top companies and governmental agencies. Other required courses include the following, which can easily be obtained within the regular required curriculum offerings of Modern Languages (these requirements can also be met with courses taken abroad, upon consultation with ALIS degree advisors):

1. One course (p. 86) focused on international relations historically and theoretically, including topics such as:
   a. the role of state sovereignty and nationalism and non-state actors in the international system;
   b. international conflict, peace, security, intervention, and nation-building;
   c. international organizations, law, and ethics; and
   d. transnational problems of the environment, terrorism, health, and migration; among other issues.

2. One course (p. 86) that provides a historical and theoretical understanding of the global economy, including topics such as international trade, finance, investment, and production; regional economic integration (such as the EU); economic development and modernization; and questions of natural resource sustainability.

3. One course (p. 86) that provides familiarity with an area of the world or a country that allows them to make systematic comparisons with their own society and culture. A culminating course, occurring either at the end of or after the international experience that integrates knowledge of the discipline and the international experience in a global context. (satisfied by the CHIN 4500/FREN 4500/GRMN 4500/JAPN 4500/ RUSS 4500/SPAN 4500 course)

RUSS 4500 Intercultural Seminar 3
ML Electives 6 15

Free Electives
Free Electives 26
Total Credit Hours 122

1 Designed for coursework toward certificates, minors, additional degrees, or study-abroad programs. Please consult with advisor on course selection.
2 Courses related to Societies/Cultures thread
3 Courses related to Industry/Technology thread
4 Courses related to Arts/Media thread
5 Courses related to Advanced Language Acquisition thread
6 Must be RUSS 3000/4000 level course
7 AE 1770, ARCH 4220, BC 3630, BMED 2400, CEE 1770, CHEM 1315, CP 4510, CS 1301, CS 1315, CS 1316, CS 1331, CS 1332, CS 4235, EAS 4430, EAS 4610, ECE 2030, ID 3103, ID 4103, LMC 3402, LMC 3410, ME 1770, ME 2016, MGT 2200, MGT 4051, MGT 4058, MGT 4052, MUSI 4630, PHYS 3266
8 Students may also take MATH 1551 and MATH 1554 or MATH 1551 and MATH 1554

International Plan

The degree requirements for the Applied Languages and Intercultural Studies (Chinese, French, German, Japanese, Russian, and Spanish) - International Plan (ALIS - IP) are basically the same as for the ALIS degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese, and Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad must total a minimum of
Bachelor of Science in Applied Languages and Intercultural Studies - Spanish

The School of Modern Languages offers a Bachelor of Science degree in Applied Languages and Intercultural Studies, with separate language concentrations in Chinese, French, German, Japanese, Russian, and Spanish. The ALIS degree program delivers foreign language study in the many contexts in which other languages are spoken (including social and technical communication, cultural perspectives, industry, arts and literature, media and science) that will provide students with the competitive edge needed to meet 21st century language requirements of the global marketplace. Since this degree couples language and cultural development with studies in another discipline at Georgia Tech, graduates are expected to join the workforce in many different camps: international trade, management, operations and logistics, journalism, advertising and publicity, local and national government, not-for-profit entities, medicine, media, virtual world development, website design, among others. Students in this program take 33 credit hours of advanced language study in the areas of Societies and Cultures, Industry and Technology, Arts and Media, and Advanced Language Acquisition. In addition, students must complete a 15 credit hour concentration in an approved cluster or minor program. A total of 12 credit hours in the language or cluster areas must be completed abroad.

Total Credit Hours 122

Pass-fail only allowed for Free Electives.

1. If PHYS 2231 is taken, extra hour goes toward Free Electives
2. MATH 3670 is not allowed. At most one of MATH 3406 and MATH 4305 are allowed.
3. Minimum grade of C required.
Bachelor of Science in Applied Physics

The School of Physics offers two undergraduate degrees, the Bachelor of Science in Physics and the Bachelor of Science in Applied Physics.

The degree program in applied physics may be better suited for entry into industry or government upon graduation, preparation for further professional training (medicine, law, dentistry, or business), or preparation for graduate study in some other discipline. The applied physics program differs from the traditional one in that a few courses intended primarily as preparation for graduate study in physics are replaced by courses oriented toward the applications of physics.

Each of the baccalaureate programs contains the following: a) courses needed to meet general institutional degree requirements; b) a core of technical courses intended to give a strong background in mathematics and the physical principles of mechanics, electricity and magnetism, thermodynamics, and the quantum theory that governs physical phenomena at the microscopic level of molecules, atoms, and nuclei; c) technical electives that enable the student to explore areas of his or her choice in greater depth; d) courses involving undergraduate research, and e) free electives, about fifteen percent of the total hours, which may be employed to schedule additional technical or nontechnical courses.

The considerable flexibility inherent in the physics curricula is advantageous to students who wish to work out individual programs of study. At the same time, this flexibility suggests the need for consultation with advisors so students can make the best use of elective hours and avoid scheduling difficulties that may arise in later semesters. Students may utilize their elective freedom in the physics curricula to specialize in particular areas of physics, to prepare for careers in interdisciplinary areas of science, to compose a preprofessional program, or to gain a background in other technical or nontechnical disciplines. Students should contact their academic advisor for assistance in planning programs of study with emphasis directed toward a particular objective.

Since some students who earn a degree in physics have transferred from other disciplines, the School has planned its degree programs to enable most students to transfer into physics with little or no loss of credit.

A total of 120 credit hours (exclusive of wellness) and a grade-point average of at least 2.0 in physics courses numbered 3000 and higher are requisites for the bachelor’s degree in physics.

**Total Credit Hours**: 122

Student must have 2.0 in all PHYS classes 3000-level or higher

Pass-fail only allowed for Free Electives, Humanities, and Social Sciences.

1. If PHYS 2231 is taken, extra hour goes toward Free Electives
2. BIOL 4478, CHEM 3411, CHEM 3412, CHEM 3511, EAS 2750, EAS 4300, EAS 4430, ECE 4501, MATH 2106 MATH 3215, MATH 3235, MATH 4320, MATH 4347, MATH 4348, MATH 4581, NRE 3301, NRE 4610
3. Minimum of one class in PHYS 3211, PHYS 3226, PHYS 4322
4. Maximum of six credit hours below 3000-level
5. Maximum of nine credit hours PHYS 2699 or PHYS 4699
with advisors so students can make the best use of elective hours and avoid scheduling difficulties that may arise in later semesters. Students may utilize their elective freedom in the physics curricula to specialize in particular areas of physics, to prepare for careers in interdisciplinary areas of science, to compose a preprofessional program, or to gain a background in other technical or nontechnical disciplines. Students should contact their academic advisor for assistance in planning programs of study with emphasis directed toward a particular objective.

Since some students who earn a degree in physics have transferred from other disciplines, the School has planned its degree programs to enable most students to transfer into physics with little or no loss of credit.

A total of 120 credit hours (exclusive of wellness) and a grade-point average of at least 2.0 in physics courses numbered 3000 and higher are requisites for the bachelor's degree in physics.

**Bachelor of Science in Architecture**

The Bachelor of Science in Architecture (B.S. Arch) offers a rigorous and distinguished architectural education profile for our students around technology in all areas – design, history, theory, and communication. It is defined by a knowledge of how to think about and apply technology in architecture. Our program offers flexibility in the design studio sequence to allow coordinated interdisciplinary work with other schools at Georgia Tech. We build our academic foundation on studio classes, history and theory, and a deliberate blend of technology and design. We offer incubator workshops to all our students, from Freshmen through Seniors, which allow them to follow their intellectual passions and hone in-demand skills. Our students graduate with a broad-based undergraduate education grounded in design, science, and technology.

The Bachelor of Science in Architecture program prepares students for graduate-level studies in architecture, for graduate study in related fields, or a variety of careers related to architecture, the building industry, or government service.

**Grade Requirements**

Students must maintain a minimum 2.0 grade-point average in each year's grouping of architectural design studio courses (e.g., ARCH 2011, ARCH 2012, etc.) in order to enter the next sequence of studio courses. Each sequence of design studio courses must be started in the fall
semester. A maximum of 9 credit hours may be taken on a pass/fail basis. Only courses taken as free electives within the undergraduate curriculum are eligible for pass/fail credit. See Institute regulations regarding pass/fail courses (p. 160).

Students who complete both the Bachelor of Science in Architecture (BS Arch) and Master of Architecture (M.Arch.) in the Georgia Tech School of Architecture may apply up to 6 credit hours of graduate coursework toward both degrees. In order to qualify for this option, the student must complete the undergraduate degree with a cumulative grade-point average of 3.5 or higher and complete the master's degree within a four-year period from the award date of the bachelor's degree.

Pass-fail only allowed for Free Electives.

1. No ARCH courses allowed.
2. If PHYS 2231 is taken, excess hour applies to Free Electives.
4. Minimum grade of C average required for ARCH 3011 and ARCH 3012.
5. Limit 3 credit hours of ARCH undergraduate research. Excess apply to Free Electives.
6. Students may also complete a 10 credit hour concentration approved by faculty. Please consult with your advisor on course selection.

**International Plan**

The International Plan (IP) in the School of Architecture is a challenging and coherent academic program for undergraduate students who will develop an introductory level of global competence within the study of architecture. The International Plan is an intensive degree-long program designed to prepare students with the ability to:

1. assimilate comfortably in a constantly evolving international context within the profession of architecture,
2. value how architecture is practiced in different global contexts,
3. function effectively in a multi-national academic and work environment, and
4. understand the complexity of the global economy and the importance of developing a sensibility to international relations.

While many students gain some exposure to these aspects of today's world through the patchwork of traditional international opportunities such as study abroad and international internships, IP is designed to develop a deeper level of competency in these areas within the study of architecture.

The requirements of IP are:

1. Proficiency in a Foreign Language
2. Globally Focused Courses
3. International Experience, and
4. A Capstone Course

IP students in the School of Architecture can fulfill the International Experience requirement of the International Plan by participation in a university-approved international program with the approval of the School of Architecture.

Undergraduate students in the School of Architecture must hold a minimum 2.5 GPA at the time of application to be eligible for the
International Plan. Students must maintain a minimum 3.0 grade-point average in each year’s grouping of architectural design studio courses (e.g., ARCH 2011, ARCH 2012, etc.) in order to maintain eligibility for IP. Each sequence of design studio courses must be started in the fall semester.

For more information on IP visit www.arch.gatech.edu/international-education (http://www.arch.gatech.edu/international-education).

**Bachelor of Science in Biochemistry**

The Bachelor of Science in Biochemistry degree program consists of a combination of requirements and electives that ensure a strong foundation in the chemical and biological sciences while providing the flexibility to tailor the curriculum to satisfy specific interests or career goals. This program may be of interest to students who plan careers in research, teaching, or in a life/health science profession (medicine, pharmacy, dentistry). The judicious use of free electives also enables the student to achieve considerable knowledge of other disciplines at Georgia Tech, such as chemical and biomolecular engineering, bioinformatics (computing), biomedical engineering, and biology. The biochemistry curriculum enables majors who are interested in medical, dental, or law school to meet admission requirements of these schools. Successful completion of the Pre-Health Science Option is noted on the student’s transcript.

Chemistry Website (http://www.chemistry.gatech.edu)

- Bachelor of Science in Biochemistry - General (p. 211)
- Bachelor of Science in Biochemistry - Business Option (p. 208)
- Bachelor of Science in Biochemistry - Pre-health Option (p. 212)

**International Plan**

The BS in Chemistry (International Plan) and BS in Biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate study or research abroad experience (usually in the junior year). While abroad, students are required to complete in a supervised research experience with a faculty member in chemistry and biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the diploma. If interested in participating in the International Plan as part of the BS in Chemistry or BS in Biochemistry, students should visit: www.internationalplan.gatech.edu (http://www.internationalplan.gatech.edu).

Chemistry Website (http://www.chemistry.gatech.edu)

**Research Option**

The BS in Chemistry (Research Option) and BS in Biochemistry (Research Option) are offered for students who wish to participate in a research problem under the supervision of one of the fifty members of faculty and adjunct faculty in the School. Participants in the Research Option learn how to address a research problem from experiment design and execution to interpretation of results. There is an expectation that undergraduates who contribute to completed studies will be co-authors on submissions to high-quality scholarly journals. Research projects are available in the traditional areas of chemistry (analytical, biological, inorganic, organic, physical, and polymer chemistry) as well as highly interdisciplinary research areas, such as nanochemistry, polymer and materials chemistry, environmental chemistry and sensors, medicinal chemistry, molecular biophysics, and computational chemistry.

To pursue the Research Option in the School of Chemistry and Biochemistry, students should obtain a research project with a faculty member in the department and apply online via www.undergradresearch.gatech.edu (http://www.undergradresearch.gatech.edu). Successful completion of the Research Option requires the following:

Research Option

The Research Option requires the following:

- Online via www.undergradresearch.gatech.edu
- Students should obtain a research project with a faculty member in the department and apply.
- Materials chemistry, environmental chemistry and sensors, medicinal chemistry, inorganic, organic, physical, and polymer chemistry.
- Courses may be applied toward completion of a minor.
- Students should obtain a research project with a faculty member.
- Students should visit: www.internationalplan.gatech.edu
- Successful completion of the Research Option is noted on the student’s transcript.

International Plan

The BS in Chemistry (International Plan) and BS in Biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate study or research abroad experience (usually in the junior year). While abroad, students are required to complete in a supervised research experience with a faculty member in chemistry and biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the transcript. Students completing this option often pursue graduate studies in the chemical or biological sciences or research careers in industrial or governmental laboratories.

Chemistry Website (http://www.chemistry.gatech.edu)

Bachelor of Science in Biochemistry - Pre-Health Option

The Bachelor of Science in Biochemistry degree program consists of a combination of requirements and electives that ensure a strong foundation in the chemical and biological sciences while providing the flexibility to tailor the curriculum to satisfy specific interests or career goals. This program may be of interest to students who plan careers in research, teaching, or in a life/health science profession (medicine, pharmacy, dentistry). The judicious use of free electives also enables the student to achieve considerable knowledge of other disciplines at Georgia Tech, such as chemical and biomolecular engineering, bioinformatics (computing), biomedical engineering, and biology. The biochemistry curriculum enables majors who are interested in medical, dental, or law school to meet admission requirements of these schools.

### Free Electives

Free Electives

- Total Credit Hours: 122

Pass-fail only allowed for Free Electives.

1. It is suggested that students select pre-health preparation courses (SOC and PSYC).
2. It is suggested that students select pre-health preparation courses (APPH, BIOL, HTS, LMC, PSYC).
3. VIP courses may be used only as free electives.
4. Courses may be applied toward completion of a minor.
5. MATH 1554 or MATH 1564 may be used in place of MATH 1553.

### International Plan

The BS in Chemistry (International Plan) and BS in Biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate study or research abroad experience (usually in the junior year). While abroad, students are required to complete in a supervised research experience with a faculty member in chemistry and biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the diploma. If interested in participating in the International Plan as part of the BS in Chemistry or BS in Biochemistry, students should visit: www.internationalplan.gatech.edu (http://www.internationalplan.gatech.edu).

### Research Option

The BS in Chemistry (Research Option) and BS in Biochemistry (Research Option) are offered for students who wish to participate in a research problem under the supervision of one of the fifty members of faculty and adjunct faculty in the School. Participants in the Research Option learn how to address a research problem from experiment design and execution to interpretation of results. There is an expectation that undergraduates who contribute to completed studies will be co-authors on submissions to high-quality scholarly journals. Research projects are available in the traditional areas of chemistry (analytical, biological, inorganic, organic, physical, and polymer chemistry) as well as highly interdisciplinary research areas, such as nanochemistry, polymer and materials chemistry, environmental chemistry and sensors, medicinal chemistry, molecular biophysics, and computational chemistry.

To pursue the Research Option in the School of Chemistry and Biochemistry, students should obtain a research project with a faculty member in the department and apply online via www.undergradresearch.gatech.edu (http://www.undergradresearch.gatech.edu). Successful completion of the Research Option requires the following:

**Code** | **Title** | **Credit Hours**
--- | --- | ---
CHEM 4698/4699 | Research Assistantship | 9
LMC 4701 | US Rsch Proposal Writing (complete during the first or second semester of research) | 1
LMC 4702 | US Rsch Thesis Writing (take during the term in which students complete their thesis) | 1

Total Credit Hours: 11

1. supervised research with faculty over three or more semesters
2. approval of proposal on project by a committee of two or more faculty members
3. submission of an approved thesis
Successful completion of the Research Option is noted on the student's transcript. Students completing this option often pursue graduate studies in the chemical or biological sciences or research careers in industrial or governmental laboratories.

Chemistry Website (http://www.chemistry.gatech.edu)

Bachelor of Science in Biology

The undergraduate curriculum for the Bachelor of Science in Biology degree is designed to prepare students for employment in academia, government, or industry; for graduate studies in the biological sciences or science teaching; or for admission to medical, dental, or veterinary schools. The theme of the curriculum is systems biology, employing a systems approach in solving biological problems. All students participate in research through undergraduate research courses. The School also offers the International Plan, Business Option, a minor in biology, and several certificates.

Biology Undergraduate Programs (http://www.biology.gatech.edu/undergraduate-program)

- Bachelor of Science in Biology - General (p. 215)
- Bachelor of Science in Biology - Business Option (p. 214)

Bachelor of Science in Biology - Business Option

The undergraduate curriculum for the Bachelor of Science in Biology degree is designed to prepare students for employment in academia, government, or industry; for graduate studies in the biological sciences or science teaching; or for admission to medical, dental, or veterinary schools. University, Tokyo Technological University, University of Victoria (New Zealand), National University of Singapore, University of Strathclyde (Scotland), and Bilkent University (Turkey). Successful completion of this plan earns students an international designation on their Georgia Tech degree.

**Research Option**

This Research Option enables students to complete nine credit hours of supervised research with a Biology faculty member over multiple semesters. With faculty guidance, students write a brief proposal, perform independent, original research, and write a thesis about their work. The thesis is evaluated by two Biology Faculty members. The first six credit hours of the research option are taken as BIOL 2699/BIOL 4699 (research for credit) or BIOL 2698/BIOL 4698 (research for pay). Students then take either BIOL 4690 or BIOL 4910 in their final semester and two, one-credit-hour writing courses, LMC 4701 and LMC 4702. These writing courses can be counted as Biology electives for Research Option students. Note that LMC 4701 should be taken in the semester prior to enrolling in BIOL 4910/BIOL 4690. The student’s research is presented in BIOL 4460.

### International Plan

Georgia Tech's International Plan, through the Office of International Education (www.oie.gatech.edu/), involves two study abroad experiences and coursework in global studies. The plan offers a challenging and coherent academic program for students to develop global competence within the context of a Biology degree. The requirements include: language proficiency equivalent to two years of college coursework (twelve hrs), one course in international relations (three hrs), global economy (three hrs), focused study of a region (three hrs), an integrative course synthesizing the international experience (three hrs), and two semesters (minimum of 26 weeks) in residence abroad. Georgia Tech biology courses are taught in Australia/New Zealand (www.oie.gatech.edu/sa/programs/) and Spain (www.oie.gatech.edu/sa/programs/) as part of the Study Abroad program. In addition, many biology courses are available through Georgia Tech partner universities abroad (www.oie.gatech.edu/sa/programs/). Some of these universities teach biology courses in English, such as Hong Kong University, Tokyo Technological University, University of Victoria (New Zealand), National University of Singapore, University of Strathclyde (Scotland), and Bilkent University (Turkey). Successful completion of this plan earns students an international designation on their Georgia Tech degree.

### BS/MS Programs

The School of Biological Sciences offers two 5-year BS/MS programs:

- BS in Biology/MS in Biology (http://biosci.gatech.edu/undergrad/5-year-bsms-program-bsbiomsbio-0)
- BS in Biology/MS in Bioinformatics (http://biosci.gatech.edu/undergrad/5-year-bsms-program-bsbiombsinf-0)

### Bachelor of Science in Biology - General

The undergraduate curriculum for the Bachelor of Science in Biology degree is designed to prepare students for employment in academia, government, or industry; for graduate studies in the biological sciences or science teaching; or for admission to medical, dental, or veterinary schools. The theme of the curriculum is systems biology, employing a systems approach in solving biological problems. All students participate...
in research through undergraduate research courses. The School also offers the International Plan, Business Option, a minor in biology, and several certificates.

Biology Undergraduate Programs (http://www.biology.gatech.edu/undergraduate-program)

### Core A - Essential Skills
- **ENGL 1101** English Composition I [3]
- **ENGL 1102** English Composition II [3]
- **MATH 1552** Integral Calculus [4]

### Core B - Institutional Options
- **Select one of the following:**
  - **CS 1301** Intro to Computing [3]
  - **CS 1315** Intro Media Computation [3]
  - **CS 1371** Computing for Engineers [3]

### Core C - Humanities
- **Any HUM** (p. 93) [6]

### Core D - Science, Math, & Technology
- **PHYS 2211** Intro Physics I [4]
- **PHYS 2212** Intro Physics II [4]
- **MATH 1551** Differential Calculus [2]
- **MATH 1553** Intro to Linear Algebra [2]

### Core E - Social Sciences
- **Select one of the following:**
  - **HIST 2111** United States to 1877 [3]
  - **HIST 2112** United States since 1877 [3]
  - **INTA 1200** American Government [3]
  - **POL 1101** Government of the U.S. [3]
  - **PUBP 3000** US Constitutional Issues [3]
- **Any SS** (p. 97) [9]

### Core F - Courses Related to Major
- **BIOL 1510** Biological Principles [4]
- **CHEM 1211K** Chemical Principles I [4]
- **CHEM 1212K** Chemical Principles II [4]
- **CHEM 2311** Organic Chemistry I [3]
- **CHEM 2312** Organic Chemistry II [3]
  - or **CHEM 2316** Organic/Bioorganic Chem [3]

### Major Requirements
- **BIOL 1520** Intro to Organismal Biol [4]
- **BIOL 2335** General Ecology [3]
- **BIOL 3450** Cell Molecular Biol [3]
- **BIOL 2344** Genetics [3]
  - or **BIOL 2355** Honors Genetics [3]
- **Biology Lab** [2]
- **BIOL 3600** Intro Evolutionary Biol [3]
- **BIOL 4460** Comm Biological Research [1]

Select one of the following:
- **BIOL 4590** Research Project Lab [3]
- **BIOL 4690** Independent Research Proj [3]
- **BIOL 4910** Honors Research Thesis [3]

### Non-Biology Courses
- **CHEM 2380** Synthesis Lab I [2]
- **Select one of the following:**
  - **BIOL 2400** Math Models in Biol [3]
  - **BIOL 4150** Genomics & Appl Bioinfor [3]
  - **BIOL 4401** Exp Dgn & Stats Methods [3]

### Biology Electives
- **Biology Electives 3000-level or higher** [2] [21]

### Free Electives
- **Free Electives** [11]
- **Total Credit Hours** [122]

1. Students must complete two of following three lab options: **BIOL 2336** or **BIOL 2344** or **BIOL 2355** or **BIOL 4351**.

2. Students are required to complete 21 credit hours of Biology electives defined as follows:
   - 12 "depth" credit hours must be courses with a "BIOL" prefix, excluding **BIOL 4694-BIOL 4699**. Biology Elective courses that are cross-listed with other departments are included in these 12 depth credit hours.
   - The remaining 9 "breadth" credit hours can be selected from: other BIOL 3000-level and higher courses, **BIOL 4695, BIOL 4697, BIOL 4699**, VIP courses with a Biological Sciences instructor; and the list of approved courses offered in the other departments (MATH 2000-level and higher courses and APHP, BMED, CHEM, EAS, PHYS, PSYC 3000-level and higher courses; EXCEPT for the following: **APHP 3300, APHP 3901-APHP 3904, APPH 4699, BMED 4699, BMED 4900-BMED 4903, CHEM 4601, CHEM 4699, CHEM 4901-CHEM 4903, EAS 4651, EAS 4699, EAS 4900, MATH 2699, MATH 4080, MATH 4090, MATH 4699, MATH 4999, PHYS 4601, PHYS 4602, PHYS 4609, PSYC 4600, PSYC 4601, PSYC 4699, PSYC 4900-PSYC 4910.)

3. Minimum grade of C required.

### International Plan

Georgia Tech’s International Plan, through the Office of International Education (www.oie.gatech.edu/ (http://www.oie.gatech.edu)), involves two study abroad experiences and coursework in global studies. The plan offers a challenging and coherent academic program for students to develop global competence within the context of a Biology degree. The requirements include: language proficiency equivalent to two years of college coursework (twelve hrs), one course in international relations (three hrs), global economy (three hrs), focused study of a region (three hrs), an integrative course synthesizing the international experience (three hrs), and two semesters (minimum of 26 weeks) in residence abroad. Georgia Tech biology courses are taught in English, such as Hong Kong University, Tokyo Technological University, University of Victoria (New Zealand), National University of Singapore, University of Strathclyde (Scotland), and Bilkent University (Turkey). Successful completion of this...
plan earns students an international designation on their Georgia Tech degree.

**Research Option**

This Research Option enables students to complete nine credit hours of supervised research with a Biology faculty member over multiple semesters. With faculty guidance, students write a brief proposal, perform independent, original research, and write a thesis about their work. The thesis is evaluated by two Biology Faculty members. The first six credit hours of the research option are taken as BIOL 2699/BIOL 4699 (research for credit) or BIOL 2698/BIOL 4698 (research for pay). Students then take either BIOL 4690 or BIOL 4910 in their final semester and two, one-credit-hour writing courses, LMC 4701 and LMC 4702. These writing courses can be counted as Biology electives for Research Option students. Note that LMC 4701 should be taken in the semester prior to enrolling in BIOL 4910/BIOL 4690. The student's research is presented in BIOL 4460.

</tbody>
</table>

In the final semester of study, select the following courses:

- BIOL 4690 Independent Research Proj 3
- or BIOL 4910 Honors Research Thesis
- LMC 4701 US Rsch Proposal Writing 2
  & LMC 4702 and US Rsch Thesis Writing 1

Total Credit Hours 11

1 These writing courses can be counted as Biology electives for Research Option students. Note that LMC 4701 should be taken in the semester prior to enrolling in BIOL 4910/BIOL 4690.

Successful completion of this option earns students a "Research Option in Biology" designation on their Georgia Tech transcripts.

**BS/MS Programs**

The School of Biological Sciences offers two 5-year BS/MS programs:

- BS in Biology/MS in Biology (http://biosci.gatech.edu/undergrad/5-year-bsms-program-bsbiomsbio-0)
- BS in Biology/MS in Bioinformatics (http://biosci.gatech.edu/undergrad/5-year-bsms-program-bsbiolmsbinf-0)

**Bachelor of Science in Biomedical Engineering**

The true integration of the life sciences and engineering is essential in educating a substantial percentage of the next generation of biomedical engineers in order to benefit from the biological revolution and its applications to medicine. This degree program attracts outstanding students who wish to have that integration in their undergraduate education, so that they may be equipped with the tools to be leaders in this field in the 21st Century.

The curriculum includes a solid foundation in fundamental engineering, mathematics, and sciences - biology, chemistry, and physics - as well as grounding in humanities, social sciences, and communication skills. A unique aspect of the curriculum is the incorporation of problem-based learning (PBL) methodologies to foster development of both self-directed learning skills and problem-solving skills in a team-based environment.

**Program Educational Objectives**

The program strives to produce graduates who are expected to demonstrate the following during the first few years after graduation:

1. mathematics, science, and engineering fundamentals expertise at the interface of engineering and the life sciences which enables them to take leadership roles in the field of biomedical engineering;
2. an ability to use their multidisciplinary background to foster communication across professional and disciplinary boundaries with the highest professional and ethical standards; and
3. the ability to recognize the limits of their knowledge and initiate self-directed learning opportunities to be able to continue to identify and create professional opportunities for themselves in the field of biomedical engineering.

The Georgia Tech Undergrad Co-op Program is a five-year, academic program designed to complement a student's formal education with paid practical work experience directly related to the student's academic major. It is available in all engineering majors, as well as in many majors in other colleges at Georgia Tech.

Co-ops alternate semesters of on-campus study with semesters of full-time employment through their junior year, then continue in school through their senior year. Co-ops are classified as full-time students during each term, regardless of whether they are attending classes on campus or working full-time at an employer location. Most undergrad Co-op students begin the program as freshmen or sophomores. With more than 2,700 students participating, Georgia Tech's program is currently the largest optional co-op program in the United States and has perennially been listed in U.S. News & World Report as one of the "Top Ten" co-op programs in America.

As an integral part of the overall education experience, the co-op program allows students to take on increasing levels of responsibility and to use their job knowledge and classroom learning to make meaningful contributions to the organizations in which they work. Many co-op graduates are hired by their co-op employer, and more than 700 companies or government organizations throughout the United States and abroad currently employ Georgia Tech Undergrad Co-op Program students.

To learn more about Biomedical Engineering Co-op opportunities at Georgia Tech, contact Rob Rogers. Rob is a Development Co-op Advisor with the Georgia Tech Center for Career Discovery and Development, and the point person for BME students. Rob is located in the Bill Moore Student Success Center, 1st Floor. His phone number is (404) 894-1348

### International Plan

The International Plan is a challenging and coherent academic program for undergraduates that develops global competence within the context of a student's major. It is a degree-long program that integrates international studies and experiences into any participating major at Georgia Tech. It helps to prepare Georgia Tech graduates professionally and personally for successful lives in the twenty-first century.

The International Plan is not intended to replace current international programs; it supplements them. Existing study abroad opportunities continue to be offered. It is also not intended to be an add-on to the current degree programs. It is intended to be another curriculum path to earn a degree in which international competence is integrated into the program of study. The Plan can be completed within the normal timeframe of four years of undergraduate study.

The overarching model for the International Plan has four components:

1. **International coursework:** Three courses to include one from each of the following categories:
   a. International relations
   b. Global economics
   c. A course about a specific country or region

2. **International experience:** Two terms abroad (not less than 26 weeks) engaged in any combination of study abroad, research, or internship

3. **Second language proficiency:** All students in the program are expected to reach at least the proficiency level equivalent to two years of college-level language study. Students who use the language to study, conduct research, or participate in an internship during their international experience are expected to attain a higher level of proficiency. Language proficiency is determined by testing (not course credits).

4. **Culminating course:** A capstone course in the major designed to tie the international studies and experiences together with the student's major. The senior design project (i.e. BMED) will be used to satisfy this requirement. The design project must incorporate a significant element of the international experience (e.g. foreign client, location of work, project customers, motivation, regulatory issues, etc).

Completion of the International Plan is recognized by a designation on the student's diploma indicating completion of the degree with global competence.
For additional information about the International Plan visit www.oie.gatech.edu/internationalplan (http://www.internationalplan.gatech.edu).

**Research Option**

The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in biomedical engineering. Students are strongly encouraged at the end of their experience to work with their faculty mentor to develop a journal publication or conference presentation on the research in addition to the actual thesis. Students who complete this option receive a designation on their transcript.

Students may be able to satisfy the additional requirements imposed for the Research Option designation through appropriate choices of electives without additional credit hours to complete the degree. The Research Option designation may be pursued separately, or in combination with the Cooperative Plan and/or the International Plan.

**Research Option Requirements**

1. Complete at least nine credit hours of undergraduate research (i.e. BMED 2698, BMED 2699, BMED 4698, or BMED 4699) spanning typically at least three terms. The research may be for either pay or credit, and at least six credit hours must be on the same research project, broadly defined.
2. Take the course LMC 4701, typically in the second semester of research. The research proposal outlining the research topic and project for the thesis will be written for this course. The proposal must be approved by a faculty advisor and one other faculty member.
3. Take the course LMC 4702 during the thesis-writing semester. The thesis documenting the results of the research will be written as part of this course. It must be approved by two faculty members and will be archived in the Georgia Tech Library.

**Bachelor of Science in Building Construction**

**The B.S. in Building Construction is deactivated. Please contact the academic department for questions.**

The Georgia Tech School of Building Construction (BC) is a technology and management-centered course of study that prepares students for leadership roles in the construction industry. The curriculum is designed to teach students the basic principles and practices of construction management, project delivery, building science, and technology. Students are taught to manage the functions and processes of every aspect of the construction industry. The curriculum provides a well-rounded course of study conducted by award-winning faculty and staff and offers hands-on experience and guidance by industry professionals.

Undergraduate Studies Information (http://www.bc.gatech.edu/content/undergraduate-certificate)

**Bachelor of Science in Business Administration**

Students with a broad interest in business and management activities and operating problems would profit from the Bachelor of Science in Business Administration degree program. The program builds upon knowledge of the functional, environmental, behavioral, and legal aspects of business and provides analytical and conceptual tools for analyzing complicated problems. It prepares the student for business and managerial responsibilities and decision making. The large number of elective hours allows the student to tailor a program to his or her individual educational objectives. Students must complete a concentration of electives in one of the following areas:

- Accounting
- Finance
- General Management
- Information Technology Management
- Leadership and Organizational Change
- Marketing
- Operations and Supply Chain Management
- Strategy and Innovation

The new BS Business Administration degree replaces the BS Management degree previously offered by the College of Business. Starting summer 2011, all new freshmen and transfer students will be admitted to the B.S. Business Administration (BSBA) degree as the B.S. Management (BSM) degree will no longer be offered to new students. Current Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BSBA degree, as the BSM degree will no longer be available to new change of major students. Current BSM students can change their majors to BSBA, but are not required to change majors.

**Change of Major Policy**

The College of Business requires a 2.3 cumulative GPA for any non-College of Business students requesting a change of major to Business Administration if the student has completed sixty credits (junior standing) or more. There is no GPA requirement for freshmen and sophomores (less than sixty credits) requesting a major change. This policy was approved by the College of Business faculty in April 2007. All students seeking a major change to Business Administration must attend a "change of major" meeting. Contact the College of Business Undergraduate Program Office (http://mgt.gatech.edu/programs/under) for dates and times of upcoming meetings.

Current Georgia Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BS Business Administration degree, as the BS Management degree will no longer be available to new change of major students. Students who submit change of major forms before January 17, 2011 will have the BS Management degree. BS Management students may choose to stay in the BSM degree or may change into the BSBA degree. Once a student changes majors to BSBA, he or she cannot return to the BSM degree.

The BSBA and BSM degrees have different degree requirements. Students joining the BSBA degree must complete all BSBA degree requirements, including one of the newly approved management concentrations and several other courses not currently required of all BSM students. Current BSM students MUST attend a change of major meeting to change their majors to BSBA so they understand the requirements of the new degree which are different than the BSM requirements.
Current BSM students who decide to continue pursuing the BSM degree should review previous Georgia Tech catalogs and the College of Business website to see the BSM requirements.

Total Credit Hours 122

Pass-fail only allowed for Free Electives.

1 Any courses except for MGT or ACCT.

2 Maximum 3 credit hours of internship; Maximum 9 credit hours of undergraduate research; Maximum 3 credit hours of Special Problems/Independent Study.

3 Minimum grade of C required.

4 Consult your Academic Advisor for approval to use one Special Problems MGT 4910 course (3 credit hours) for a concentration elective. Course must be taught by a College of Business Accounting faculty member.

**International Plan**

The International Plan (http://www.internationalplan.gatech.edu) degree option is available to all College of Business undergraduate students. This option has been specifically designed to increase the international competence of our students through foreign language instruction, selected international courses, overseas residential experience, and a capstone, culminating course. This international competence is characterized by a graduate’s ability to communicate in a second world language, discuss substantively the major international socioeconomic processes, assimilate into foreign lifestyles and work environments, and communicate with confidence the specifics of management and business in a global context. Given the ever-increasing pace of globalization of business, this option should help students prepare for the business world of the future. All College of Business students should seek advising through the College of Business Undergraduate Programs Office (http://mgt.gatech.edu).

**Bachelor of Science in Business Administration - Finance**

Students with a broad interest in business and management activities and operating problems would profit from the Bachelor of Science in Business Administration degree program. The program builds upon knowledge of the functional, environmental, behavioral, and legal aspects of business and provides analytical and conceptual tools for analyzing complicated problems. It prepares the student for business and managerial responsibilities and decision making. The large number of elective hours allows the student to tailor a program to his or her individual educational objectives. Students must complete a concentration of electives in one of the following areas:

- Accounting
- Finance
- General Management
- Information Technology Management
- Leadership and Organizational Change
- Marketing
- Operations and Supply Chain Management
- Strategy and Innovation

The new BS Business Administration degree replaces the BS Management degree previously offered by the College of Business. Starting summer 2011, all new freshmen and transfer students will be admitted to the B.S. Business Administration (BSBA) degree as the B.S. Management (BSM) degree will no longer be offered to new students. Current Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BSBA degree, as the BSM degree will no longer be available to new change of major students. Current BSM students can change their majors to BSBA, but are not required to change majors.

**Change of Major Policy**

The College of Business requires a 2.3 cumulative GPA for any non-College of Business students requesting a change of major to Business Administration if the student has completed sixty credits (junior standing) or more. There is no GPA requirement for freshmen and sophomores (less than sixty credits) requesting a major change. This policy was approved by the College of Business faculty in April 2007. All students seeking a major change to Business Administration must
attend a “change of major” meeting. Contact the College of Business Undergraduate Program Office (http://mgt.gatech.edu/programs/under) for dates and times of upcoming meetings.

Current Georgia Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BS Business Administration degree, as the BS Management degree will no longer be available to new change of major students. Students who submit change of major forms before January 17, 2011 will have the BS Management degree. BS Management students may choose to stay in the BSM degree or may change into the BSBA degree. Once a student changes majors to BSBA, he or she cannot return to the BSM degree.

The BSBA and BSM degrees have different degree requirements. Students joining the BSBA degree must complete all BSBA degree requirements, including one of the newly approved management concentrations and several other courses not currently required of all BSM students. Current BSM students MUST attend a change of major meeting to change their majors to BSBA so they understand all BSM students. Current BSM students MUST attend a “change of major” meeting. Contact the College of Business Undergraduate Program Office for dates and times of upcoming meetings.

Current BSM students who decide to continue pursuing the BSM degree should review previous Georgia Tech catalogs and the College of Business website to see the BSM requirements.

**International Plan**

The International Plan (http://www.internationalplan.gatech.edu) degree option is available to all College of Business undergraduate students. This option has been specifically designed to increase the international competence of our students through foreign language instruction, selected international courses, overseas residential experience, and a capstone, culminating course. This international competence is
characterized by a graduate's ability to communicate in a second world language, discuss substantively the major international socioeconomic processes, assimilate into foreign lifestyles and work environments, and communicate with confidence the specifics of management and business in a global context. Given the ever-increasing pace of globalization of business, this option should help students prepare for the business world of the future. All College of Business students should seek advising through the College of Business Undergraduate Programs Office (http://mgt.gatech.edu).

**Bachelor of Science in Business Administration - Information Technology Management**

Students with a broad interest in business and management activities and operating problems would profit from the Bachelor of Science in Business Administration degree program. The program builds upon knowledge of the functional, environmental, behavioral, and legal aspects of business and provides analytical and conceptual tools for analyzing complicated problems. It prepares the student for business and managerial responsibilities and decision making. The large number of elective hours allows the student to tailor a program to his or her individual educational objectives. Students must complete a concentration of electives in one of the following areas:

- Accounting
- Finance
- General Management
- Information Technology Management
- Leadership and Organizational Change
- Marketing
- Operations and Supply Chain Management
- Strategy and Innovation

The new BS Business Administration degree replaces the BS Management degree previously offered by the College of Business. Starting summer 2011, all new freshmen and transfer students will be admitted to the B.S. Business Administration (BSBA) degree as the B.S. Management (BSM) degree will no longer be offered to new students. Current Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BSBA degree, as the BSM degree will no longer be available to new change of major students. Current BSM students can change their majors to BSBA, but are not required to change majors.

**Change of Major Policy**

The College of Business requires a 2.3 cumulative GPA for any non-College of Business students requesting a change of major to Business Administration if the student has completed sixty credits (junior standing) or more. There is no GPA requirement for freshmen and sophomores (less than sixty credits) requesting a major change. This policy was approved by the College of Business faculty in April 2007. All students seeking a major change to Business Administration must attend a "change of major" meeting. Contact the College of Business Undergraduate Program Office (http://mgt.gatech.edu/programs/under) for dates and times of upcoming meetings.

Current Georgia Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BS Business Administration degree, as the BS Management degree will no longer be available to new change of major students. Students who submit change of major forms before January 17, 2011 will have the BS Management degree. BS Management students may choose to stay in the BSM degree or may change into the BSBA degree. Once a student changes majors to BSBA, he or she cannot return to the BSM degree.

The BSBA and BSM degrees have different degree requirements. Students joining the BSBA degree must complete all BSBA degree requirements, including one of the newly approved management concentrations and several other courses not currently required of all BSM students. Current BSM students MUST attend a change of major meeting to change their majors to BSBA so they understand the requirements of the new degree which are different than the BSM requirements.

Current BSM students who decide to continue pursuing the BSM degree should review previous Georgia Tech catalogs and the College of Business website to see the BSM requirements.

1. MGT 4803 must have a title of Spreadsheet Modeling for Decision Support or Foundations of Internet Policy and Governance.

2. Any courses except for MGT or ACCT.

3. Minimum grade of C required.

4. Maximum 3 credit hours of internship; Maximum 9 credit hours of undergraduate research; Maximum 3 credit hours of Special Problems/Independent Study.

5. Students may apply unused Group A elective courses toward Group B electives.

### International Plan

The International Plan (http://www.internationalplan.gatech.edu) degree option is available to all College of Business undergraduate students. This option has been specifically designed to increase the international competence of our students through foreign language instruction, selected international courses, overseas residential experience, and a capstone, culminating course. This international competence is characterized by a graduate's ability to communicate in a second world language, discuss substantively the major international socioeconomic processes, assimilate into foreign lifestyles and work environments, and communicate with confidence the specifics of management and business in a global context. Given the ever-increasing pace of globalization of business, this option should help students prepare for the business world of the future. All College of Business students should seek advising through the College of Business Undergraduate Programs Office (http://mgtp.gatech.edu).

### Bachelor of Science in Business Administration - Leadership and Organizational Change

Students with a broad interest in business and management activities and operating problems would profit from the Bachelor of Science in Business Administration degree program. The program builds upon knowledge of the functional, environmental, behavioral, and legal aspects of business and provides analytical and conceptual tools for analyzing complicated problems. It prepares the student for business and managerial responsibilities and decision making. The large number of elective hours allows the student to tailor a program to his or her individual educational objectives. Students must complete a concentration of electives in one of the following areas:

- Accounting
- Finance
- General Management
- Information Technology Management
- Leadership and Organizational Change
- Marketing
- Operations and Supply Chain Management
- Strategy and Innovation

The new BS Business Administration degree replaces the BS Management degree previously offered by the College of Business. Starting summer 2011, all new freshmen and transfer students will be admitted to the B.S. Business Administration (BSBA) degree as the B.S. Management (BSM) degree will no longer be offered to new students. Current Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BSBA degree, as the BSM degree will no longer be available to new change of major...
students. Current BSM students can change their majors to BSBA, but are not required to change majors.

**Change of Major Policy**

The College of Business requires a 2.3 cumulative GPA for any non-College of Business students requesting a change of major to Business Administration if the student has completed sixty credits (junior standing) or more. There is no GPA requirement for freshmen and sophomores (less than sixty credits) requesting a major change. This policy was approved by the College of Business faculty in April 2007. All students seeking a major change to Business Administration must attend a “change of major” meeting. Contact the College of Business Undergraduate Program Office (http://mgt.gatech.edu/programs/under) for dates and times of upcoming meetings.

Current Georgia Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BS Business Administration degree, as the BS Management degree will no longer be available to new change of major students. Students who submit change of major forms before January 17, 2011 will have the BS Management degree. BS Management students may choose to stay in the BSM degree or may change into the BSBA degree. Once a student changes majors to BSBA, he or she cannot return to the BSM degree.

The BSBA and BSM degrees have different degree requirements. Students joining the BSBA degree must complete all BSBA degree requirements, including one of the newly approved management concentrations and several other courses not currently required of all BSM students. Current BSM students MUST attend a change of major meeting to change their majors to BSBA so they understand the requirements of the new degree which are different than the BSM requirements.

Current BSM students who decide to continue pursuing the BSM degree should review previous Georgia Tech catalogs and the College of Business website to see the BSM requirements.

Current BSM students can change their majors to BSBA, but are not required to change majors.

Change of Major Policy

The College of Business requires a 2.3 cumulative GPA for any non-College of Business students requesting a change of major to Business Administration if the student has completed sixty credits (junior standing) or more. There is no GPA requirement for freshmen and sophomores (less than sixty credits) requesting a major change. This policy was approved by the College of Business faculty in April 2007. All students seeking a major change to Business Administration must attend a “change of major” meeting. Contact the College of Business Undergraduate Program Office (http://mgt.gatech.edu/programs/undergrad) for dates and times of upcoming meetings.

Current Georgia Tech students who submit change of major forms to join the College of Business after January 17, 2011 will have the BS Business Administration degree, as the BS Management degree will no longer be available to new change of major students. Students who submit change of major forms before January 17, 2011 will have the BS Management degree. BS Management students may choose to stay in the BSM degree or may change into the BSBA degree. Once a student changes majors to BSBA, he or she cannot return to the BSM degree.

The BSBA and BSM degrees have different degree requirements. Students joining the BSBA degree must complete all BSBA degree requirements, including one of the newly approved management
concentrations and several other courses not currently required of all BSM students. Current BSM students MUST attend a change of major meeting to change their majors to BSBA so they understand the requirements of the new degree which are different than the BSM requirements.

Current BSM students who decide to continue pursuing the BSM degree should review previous Georgia Tech catalogs and the College of Business website to see the BSM requirements.

1. MGT 4803 must have title of Management of Healthcare Operations.
2. Any courses except for MGT or ACCT.
3. Minimum grade of C required.
4. Maximum 3 credit hours of internship; Maximum 9 credit hours of undergraduate research; Maximum 3 credit hours of Special Problems/Independent Study.
5. Consult your Academic Advisor for approval to use one Special Problems MGT 4910 course (3 credit hours) for a concentration elective. Course must be taught by a College of Business Operations faculty member.

### International Plan

The International Plan (http://www.internationalplan.gatech.edu) degree option is available to all College of Business undergraduate students. This option has been specifically designed to increase the international competence of our students through foreign language instruction, selected international courses, overseas residential experience, and a capstone, culminating course. This international competence is characterized by a graduate's ability to communicate in a second world language, discuss substantively the major international socioeconomic processes, assimilate into foreign lifestyles and work environments, and communicate with confidence the specifics of management and business in a global context. Given the ever-increasing pace of globalization of business, this option should help students prepare for the business world of the future. All College of Business students should...
seek advising through the College of Business Undergraduate Programs Office (http://mgt.gatech.edu).

**Bachelor of Science in Chemical and Biomolecular Engineering**

The Bachelor of Science in Chemical and Biomolecular Engineering provides the basics of biomolecular engineering but allows flexibility for the student to pursue other areas of chemical engineering such as microelectronics, materials, and the environment.

The curriculum has two options. The Biotechnology Option is for students who wish to focus their education on the biomolecular aspects of chemical and biomolecular engineering. This option includes the core chemical engineering courses, specialized biomolecular engineering courses, biochemistry, and technical electives focused in the biotechnology area. The Standard Option provides the basics of biomolecular engineering but allows much more flexibility for the student to pursue other areas of chemical engineering such as microelectronics, materials, and the environment. Special opportunities exist for students wishing to pursue minors or certificates in fields of particular interest, and students are encouraged to explore the frontiers of knowledge through involvement in faculty-directed research.

**Program Objectives**

The mission of the School of Chemical and Biomolecular Engineering is to provide students with the intellectual basis to be educated citizens, to prepare them for successful professional careers, and to advance the science and technology that form the basis of chemical and biomolecular engineering. In pursuit of this mission, the School has adopted the following:

**Program Educational Objectives**

1. Graduates will demonstrate proficiency in the principles and methods essential to modern chemical and biomolecular engineering.
2. Graduates will demonstrate broadened perspectives regarding social issues and responsibilities, ethics, and professionalism.
3. Graduates will be recognized for excellence and leadership and selected for high-quality industrial, academic, government, and other professional positions.
4. Graduates will demonstrate an understanding of the global nature of engineering practice and business activities.
5. Graduates will understand the importance of further professional growth through continuing education and research.

**Program Outcomes**

In pursuit of its educational objectives, the School has adopted the following program outcomes:

1. Students will demonstrate the ability to apply knowledge of mathematics, science, and engineering.
2. Students will demonstrate the ability to design and conduct experiments, as well as to analyze and interpret data.
3. Students will demonstrate the ability to design a system, component, product, and/or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. Students will demonstrate an ability to lead and function on multidisciplinary teams.
5. Students will demonstrate an ability to identify, formulate, and solve engineering problems.
6. Students will demonstrate an understanding of professional and ethical responsibility.
7. Students will demonstrate the ability to communicate effectively.
8. Students will demonstrate a breadth in education that facilitates understanding the impact of engineering solutions in a global, economic, environmental, and societal context.
9. Students will demonstrate recognition of the need for and an ability to engage in lifelong learning.
10. Students will demonstrate knowledge of contemporary issues, especially as related to chemical engineering practice.
11. Students will demonstrate the ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
12. Students will have an understanding of the chemical engineering profession as obtained through professional organizations, cooperative education, internships, undergraduate research, and/or required laboratory courses.
13. Students will have a thorough grounding in the basic sciences including chemistry, physics, and biology appropriate to the program objectives.
14. Students will demonstrate knowledge in the applications of these basic sciences to enable graduates to design, analyze, and control physical, chemical, and biological processes consistent with the program's educational objectives.

Total Credit Hours 132

Pass-fail only allowed for Free Electives, Humanities electives, and undesignated Social Sciences electives.

CHBE Electives must be chosen from the following list: CHBE 4020, CHBE 4310, CHBE 4535, CHBE 4752, CHBE 4757, CHBE 4760, CHBE 4763, CHBE 4764, CHBE 4765, CHBE 4770, CHBE 4775, CHBE 4776, CHBE 4791, CHBE 4793, CHBE 4794, CHBE 4803 (must be titled “Microfluidics and NanoFluidics,” “Surfaces and Colloids,” or “Data-Driven Modeling and Analysis for Chemical and Biomolecular Systems”).

Students should consult with their advisor regarding Technical Elective options. Technical Electives must be chosen from the following list: AE 4451, AE 4461, AE 4883, BMED 2400, BMED 3400, BMED 3510, BMED 4477, BMED 4751, BMED 4784, CEE 2040, CEE 2300, CEE 4300, CEE 4330, CEE 4620, CHBE 4020, CHBE 4310, CHBE 4535, CHBE 4752, CHBE 4757, CHBE 4763, CHBE 4764, CHBE 4765, CHBE 4770, CHBE 4775, CHBE 4791, CHBE 4793, CHBE 4794, CHBE 4803 (must include title of “Data-Driven Modeling & Anal. for Ch,” “Microfluidics/BioMEMS,” “Surface & Colloid Chemistry & Engineering”), CHBE 6120, CHBE 6794, COE 2001, COE 3001, COE 3002, ECE 2025, ECE 2030, ECE 3025, ECE 3040, ECE 3065, ECE 3071, ECE 3080, ECE 3710, ECE 3741, ISYE 2027, ISYE 2028, ISYE 3025, ISYE 3039, ISYE 3133, ISYE 3232, ISYE 4803 (must include title of “EDA Supply Chain Econ.,” or “Regression/Forecasting”), ME 2202, ME 3057, ME 4011, MSE 2021, MSE 3002, MSE 4751, MSE 4803 (must include title of “Biologically Inspired Design,” or “Fund. of Nanomater. & Struct.”), NRE 3301, NRE 4328, NRE 4610, NRE 4803 (must include title of “Nuclear & Radiation Technol.,” “Probabilistic Risk Assessment”), or NRE 6501.

Phys 2XXX (AP credit) not allowed.

Cooperative Option

Since 1912, Georgia Tech has offered a five-year Undergraduate Cooperative Program to those students who wish to combine career-related experience with classroom studies. The program is the fourth oldest of its kind in the world and the largest optional co-op program in the country. Traditionally, 35 to 40 percent of chemical and biomolecular engineering students participate in the program each year at Georgia Tech.

Students alternate between industrial assignments and classroom studies until they complete four or five semesters of work. Co-op students with chemical and biomolecular engineering majors complete the same coursework on campus that is completed by regular four-year students. Most co-op students begin the program as sophomores and are classified as full-time students regardless of whether they are attending classes on campus or are working full time at an employer’s location.

Students who participate in the program have the opportunity to develop career interests, become more confident in their career choices, and develop human relation skills through their work experience. Graduates of the program receive a bachelor’s degree with a Cooperative Plan designation.

International Plan

The International Plan is a challenging and coherent academic program for undergraduates emphasizing global competence within the context of the aerospace engineering major. This program has specific language requirements. There are also coursework requirements related to history, global economy, international culture, and residential foreign experience. Refer to www.internationalplan.gatech.edu (http://www.internationalplan.gatech.edu) for the general requirements of the International Plan. These requirements may be satisfied by carefully
selecting the humanities, social sciences, and free elective hours available in the program, in consultation with a faculty advisor.

**Research Option**

The Chemical and Biomolecular Engineering undergraduate program offers an undergraduate Research Option that allows students to participate in undergraduate research and complete an undergraduate thesis. The words "Research Option" will appear on the transcript of each student completing the requirements to indicate that the student has had substantial, in-depth research experience.

**BS/MS Chemical and Biomolecular Engineering**

The program seeks to engage undergraduate students at Georgia Tech who indicate an interest in, and ability for, additional education beyond the BS degree. Students with significant AP credit will be especially well positioned to take full advantage of this opportunity.

Students in the BS/MS Program will remain undergraduates until they meet the requirements for the BS degree; after which, their status will change to graduate student.

Students are eligible to apply for the program after completion of thirty semester credit hours at Georgia Tech (i.e., at the end of freshman year). As a practical matter, it is recommended that students apply to the program immediately after completion of CHBE 3110. Students must have a Georgia Tech GPA of 3.5 or higher for admission into the program.

Admission into the program will be based on academic performance at Georgia Tech, as well as the potential for advanced study and/or research as assessed from the essay and recommendation letter.

Continuation in the program will require the student to maintain a GPA of 3.0 or higher. This GPA requirement should not deter students from taking challenging courses. The program will not penalize students who opt out after receiving the BS degree. Additionally, students participating in the program will be eligible for the six credit hour Graduate Course Option (http://www.catalog.gatech.edu/academics/graduate/masters-degrees/graduate-course-option).

Additional Information (http://www.chbe.gatech.edu/programs/bs-ms)

**Bachelor of Science in Chemistry**

The School of Chemistry and Biochemistry has a vibrant program of study leading to a Bachelor of Science in Chemistry. The flexibility of the curriculum allows students to study fundamental areas of chemistry while tailoring their degree with technical and free electives to produce a well-rounded experience in preparation for a variety of career opportunities. Students may pursue tailored tracks towards the BS in Chemistry, including those allowing specialization in: pre-health science, biochemistry, business, polymers, and materials options. There are also tremendous opportunities to gain valuable research experience in state-of-the-art laboratories. In addition to coursework requirements, students in the program often participate in a variety of experiential programs, including: undergraduate research, Cooperative work, study abroad, summer internship, and serving as an undergraduate teaching assistant.

Faculty in the school are committed to undergraduate education and several have won awards for excellence in teaching. With a faculty to student ratio of approximately 1:6, the School prides itself on the close contact that it maintains with its undergraduate students. The high quality of the curriculum and faculty is part of the reason chemistry graduates receive job offers at the highest salary levels for BS chemists. Graduates of the BS in Chemistry pursue careers such diverse field as forensics, environmental science, nanoscience, biotechnology, pharmaceuticals in industry or governmental organizations; or they may continue their education in the chemical or biological sciences, or in medicine, pharmacy, dentistry, and law. Chemistry, especially with the biochemistry option (or the stand-alone BS in Biochemistry degree) is a superb preparation for medical school.

- Bachelor of Science in Chemistry · Polymer Option (p. 241)
- Bachelor of Science in Chemistry · Pre-health Option (p. 242)

**International Plan**

The BS in Chemistry (International Plan) and BS in biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate study or research abroad experience (usually in the junior year). While abroad, students are required to complete a supervised research experience with a faculty member in chemistry or biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the diploma. If interested in participating in the International Plan as part of the BS in Chemistry or BS in Biochemistry, students should visit: www.internationalplan.gatech.edu (http://www.internationalplan.gatech.edu).

**Research Option**

The BS in Chemistry (Research Option) and BS in Biochemistry (Research Option) are offered for students who wish to participate in a research problem under the supervision of one of the fifty members of faculty and adjunct faculty in the School. Participants in the Research Option learn how to address a research problem from experiment design and execution to interpretation of results. There is an expectation that undergraduates who contribute to completed studies will be co-authors on submissions to high-quality scholarly journals. Research projects are available in the traditional areas of chemistry (analytical, biological, inorganic, organic, physical, and polymer chemistry) as well as highly interdisciplinary research areas, such as nanotechnology, polymer and materials chemistry, environmental chemistry and sensors, medicinal chemistry, molecular biophysics, and computational chemistry.

To participate in the Research Option in the School of Chemistry and Biochemistry, students should find a research project with a faculty member in the department and apply online via www.undergradresearch.gatech.edu (http://www.undergradresearch.gatech.edu). Successful completion of the Research Option requires the following:

Bachelor of Science in Chemistry - Business Option

**Research Option**

The following options are available:

- **Chemistry Website** ([http://www.chemistry.gatech.edu](http://www.chemistry.gatech.edu))
- **Research Assistantship**
  - CHEM 4698/4699
  - LMC 4701 US Rsch Proposal Writing (complete during the first or second semester of research)  
  - LMC 4702 US Rsch Thesis Writing (take during the term in which students complete their thesis)

**Total Credit Hours** 11

1. supervised research with a chemistry or biochemistry faculty over three or more semesters
2. approval of this proposal on project by a committee of two or more faculty
3. submission of an approved thesis

Successful completion of the Research Option is noted on the student's transcript. Students completing this degree may pursue graduate studies in the chemical or biological sciences or research careers in industrial or governmental laboratories.

**International Plan**

The BS in Chemistry (International Plan) and BS in Biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate study or research abroad experience (usually in the junior year). While abroad, students are required to complete a supervised research experience with a faculty member in chemistry or biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the diploma. If interested in participating in the International Plan as part of the BS in Chemistry or BS in Biochemistry, students should visit: www.internationalplan.gatech.edu ([http://www.internationalplan.gatech.edu](http://www.internationalplan.gatech.edu)).

**Bachelor of Science in Chemistry - Business Option**

The School of Chemistry and Biochemistry has a vibrant program of study leading to a Bachelor of Science in Chemistry. The flexibility of the curriculum allows students to study fundamental areas of chemistry while tailoring their degree with technical and free electives to produce a well-rounded experience in preparation for a variety of career opportunities. Students may pursue tailored tracks towards the BS in Chemistry, including those allowing specialization in: pre-health science, biochemistry, business, polymers, and materials options. There are also tremendous opportunities to gain valuable research experience in state-of-the-art laboratories. In addition to coursework requirements, students in the program often participate in a variety of experiential programs, including: undergraduate research, Cooperative work, study abroad, summer internship, and serving as an undergraduate teaching assistant.

Faculty in the school are committed to undergraduate education and several have won awards for excellence in teaching. With a faculty to student ratio of approximately 1:6, the School prides itself on the close contact that it maintains with its undergraduate students. The high quality of the curriculum and faculty is part of the reason chemistry graduates receive job offers at the highest salary levels for BS chemists. Graduates of the BS in Chemistry pursue careers such diverse field as forensics, environmental science, nanoscience, biotechnology, pharmaceuticals in industry or governmental organizations; or they may continue their education in the chemical or biological sciences, or in medicine, pharmacy, dentistry, and law. Chemistry, especially with the biochemistry option (or the stand-alone BS in Biochemistry degree) is a superb preparation for medical school.

- MGT 4191: Entrepreneurship Forum
- MGT 4192: IMPACT Forum
- MGT 4193: Serv Lead Values Systems
- MGT 4194: Social Entrepreneurship
- MGT 4303: Personal Sell&S Sales Mgt
- MGT 4304: Strategic Brand Mgt
- MGT 4307: Strategic Marketing
- MGT 4335: International Marketing
- MGT 4610: Law, Mgt, & Economics
- MGT 4670: Entrepreneurship

**Free Electives**

Free Electives 3,4 10

Total Credit Hours 122

Pass-fail only allowed for Free Electives.

1. CHEM 4699 not allowed.
2. If CHEM 4694, CHEM 4698, COOP 4000, or INTN 4000 are selected, then 2 hours of free electives must be taken.
3. Courses may be applied toward completion of a minor.
4. VIP courses may be used only as free electives.
5. MATH 1554 or MATH 1564 may be used in place of MATH 1553.

**International Plan**

The BS in Chemistry (International Plan) and BS in biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate study or research abroad experience (usually in the junior year). While abroad, students are required to complete a supervised research experience with a faculty member in chemistry or biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the diploma. If interested in participating in the International Plan as part of the BS in Chemistry or BS in Biochemistry, students should visit: www.internationalplan.gatech.edu (http://www.internationalplan.gatech.edu).
Research Option

The BS in Chemistry (Research Option) and BS in Biochemistry (Research Option) are offered for students who wish to participate in a research problem under the supervision of one of the fifty members of faculty and adjunct faculty in the School. Participants in the Research Option learn how to address a research problem from experiment design and execution to interpretation of results. There is an expectation that undergraduates who contribute to completed studies will be co-authors on submissions to high-quality scholarly journals. Research projects are available in the traditional areas of chemistry (analytical, biological, inorganic, organic, physical, and polymer chemistry) as well as highly interdisciplinary research areas, such as nanomaterials, polymer and materials chemistry, environmental chemistry and sensors, medicinal chemistry, molecular biophysics, and computational chemistry.

To participate in the Research Option in the School of Chemistry and Biochemistry, students should find a research project with a faculty member in the department and apply online via www.undergradresearch.gatech.edu (http://www.undergradresearch.gatech.edu). Successful completion of the Research Option requires the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>

- MSE 4751 Intro to Biomaterials

Free Electives

- Free Electives 3,4 13

Total Credit Hours 122

Pass-fail only allowed for Free Electives.

1 Six of the nine credits must be 3000-level or higher. Special Topics also allowed with departmental approval.
2 If CHEM 4694, CHEM 4698, COOP 4000, or INTN 4000 are selected, then 2 hours of free electives must be taken.
3 Courses may be applied toward completion of a minor.
4 VIP courses may be used only as free electives.
5 MATH 1554 or MATH 1564 may be used in place of MATH 1553.

International Plan

The BS in Chemistry (International Plan) and BS in biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate study or research abroad experience (usually in the junior year). While abroad, students are required to complete a supervised research experience with a faculty member in chemistry or biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the diploma. If interested in
participating in the International Plan as part of the BS in Chemistry or BS in Biochemistry, students should visit: www.internationalplan.gatech.edu (http://www.internationalplan.gatech.edu).

**Research Option**

The BS in Chemistry (Research Option) and BS in Biochemistry (Research Option) are offered for students who wish to participate in a research problem under the supervision of one of the fifty members of faculty and adjunct faculty in the School. Participants in the Research Option learn how to address a research problem from experiment design and execution to interpretation of results. There is an expectation that undergraduates who contribute to completed studies will be co-authors on submissions to high-quality scholarly journals. Research projects are available in the traditional areas of chemistry (analytical, biological, inorganic, organic, physical, and polymer chemistry) as well as highly interdisciplinary research areas, such as nanochemistry, polymer and materials chemistry, environmental chemistry and sensors, medicinal chemistry, molecular biophysics, and computational chemistry.

To participate in the Research Option in the School of Chemistry and Biochemistry, students should find a research project with a faculty member in the department and apply online via www.undergradresearch.gatech.edu (http://www.undergradresearch.gatech.edu). Successful completion of the Research Option requires the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM4698/4699</td>
<td>Research Assistantship</td>
<td>9</td>
</tr>
<tr>
<td>LMC 4701</td>
<td>US Rsch Proposal Writing (complete during the first or second semester of research)</td>
<td>1</td>
</tr>
<tr>
<td>LMC 4702</td>
<td>US Rsch Thesis Writing (take during the term in which students complete their thesis)</td>
<td>1</td>
</tr>
</tbody>
</table>

Total Credit Hours 11

1. supervised research with a chemistry or biochemistry faculty over three or more semesters
2. approval of this proposal on project by a committee of two or more faculty
3. submission of an approved thesis

Successful completion of the Research Option is noted on the student’s transcript. Students completing this degree may pursue graduate studies in the chemical or biological sciences or research careers in industrial or governmental laboratories.

**Bachelor of Science in Chemistry - Polymer Option**

The School of Chemistry and Biochemistry has a vibrant program of study leading to a Bachelor of Science in Chemistry. The flexibility of the curriculum allows students to study fundamental areas of chemistry while tailoring their degree with technical and free electives to produce a well-rounded experience in preparation for a variety of career opportunities. Students may pursue tailored tracks towards the BS in Chemistry, including those allowing specialization in: pre-health science, biochemistry, business, polymers, and materials options. There are also tremendous opportunities to gain valuable research experience in state-of-the-art laboratories. In addition to coursework requirements, students in the program often participate in a variety of experiential programs, including: undergraduate research, Cooperative work, study abroad, summer internship, and serving as an undergraduate teaching assistant.

Faculty in the school are committed to undergraduate education and several have won awards for excellence in teaching. With a faculty to student ratio of approximately 1:6, the School prides itself on the close contact that it maintains with its undergraduate students. The high quality of the curriculum and faculty is part of the reason chemistry graduates receive job offers at the highest salary levels for BS chemists. Graduates of the BS in Chemistry pursue careers such diverse field as forensics, environmental science, nanoscience, biotechnology, pharmaceuticals in industry or governmental organizations; or they may continue their education in the chemical or biological sciences, or in medicine, pharmacy, dentistry, and law. Chemistry, especially with the biochemistry option (or the stand-alone BS in Biochemistry degree) is a superb preparation for medical school.

**Free Electives**

Free Electives 8

Total Credit Hours 122

Georgia Institute of Technology - DRAFT COPY 243
Lab Electives:
Select two of three lab courses. The lab elective may be fulfilled with either CHEM 3380 (3 credits) or CHEM 3481 (2 credits) or one of the following [CHEM 4695 (3 credits) or CHEM 4699 (3 credits) or CHEM 4694 (no credit) or CHEM 4698 (no credit)].

Research or Internship Experience:
Either Undergraduate Research CHEM 4699 (3) or Undergraduate Internship CHEM 4695 (3) are acceptable. If research or an internship is conducted for pay/audit rather than credit (e.g., CHEM 4699 or CHEM 4694), then additional free elective(s) may be substituted to achieve the required earned hours to graduate. The research or internship experience must include a final comprehensive laboratory report. Only one Research or Internship course may be used for the Lab elective requirement. If CHEM 3481 is used, add one free elective.

2 The technical elective requirement may be fulfilled by coursework in Science, Engineering, and Computing at the 3000 level or higher. MATH 2551, MATH 2552, SLS 3110, or SLS 3120 may also be used for a Technical Elective. If a 4 credit hour course is used, one less free elective credit is required.

3 It is suggested students select pre-health preparation courses (SOC or PSYC).

4 It is suggested students select pre-health preparation courses (APPH, BIOL, HTS, LMC, PSYC).

5 Courses may be applied toward completion of a minor.

6 VIP courses may be used only as free electives.

7 Courses taken as pass-fail may only be used in free electives.

8 MATH 1554 or MATH 1564 may be used in place of MATH 1553.

International Plan
The BS in Chemistry (International Plan) and BS in Biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate study or research abroad experience (usually in the junior year). While abroad, students are required to complete a supervised research experience with a faculty member in chemistry or biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the diploma. If interested in participating in the International Plan as part of the BS in Chemistry or BS in Biochemistry, students should visit: www.internationalplan.gatech.edu (http://www.internationalplan.gatech.edu).

Research Option
The BS in Chemistry (Research Option) and BS in Biochemistry (Research Option) are offered for students who wish to participate in a research problem under the supervision of one of the fifty members of faculty and adjunct faculty in the School. Participants in the Research Option learn how to address a research problem from experiment design and execution to interpretation of results. There is an expectation that undergraduates who contribute to completed studies will be co-authors on submissions to high-quality scholarly journals. Research projects are available in the traditional areas of chemistry (analytical, biological, inorganic, organic, physical, and polymer chemistry) as well as highly interdisciplinary research areas, such as nanoscience, polymer and materials chemistry, environmental chemistry and sensors, medicinal chemistry, molecular biophysics, and computational chemistry.

To participate in the Research Option in the School of Chemistry and Biochemistry, students should find a research project with a faculty member in the department and apply online via www.undergradresearch.gatech.edu (http://www.undergradresearch.gatech.edu). Successful completion of the Research Option requires the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 4698/4699</td>
<td>Research Assistantship</td>
<td>9</td>
</tr>
<tr>
<td>LMC 4701</td>
<td>US Rsch Proposal Writing (complete during the first or second semester of research)</td>
<td>1</td>
</tr>
<tr>
<td>LMC 4702</td>
<td>US Rsch Thesis Writing (take during the term in which students complete their thesis)</td>
<td>1</td>
</tr>
</tbody>
</table>

Successful completion of the Research Option is noted on the student’s transcript. Students completing this degree may pursue graduate studies in the chemical or biological sciences or research careers in industrial or governmental laboratories.

Bachelor of Science in Civil Engineering
The four-year curriculum leading to the Bachelor of Science in Civil Engineering (BS CE) enables the graduate to enter professional practice as an engineer or to continue his or her studies in programs leading to advanced degrees in the following broad fields of specialization:

- construction engineering and management,
- environmental engineering,
- environmental hydraulics,
- geotechnical engineering,
- hydrology,
- materials,
- structural engineering and mechanics,
- transportation, and
- water resources planning and management.

The BS CE degree program is designed to offer depth in course material considered essential for all civil engineers, as well as flexibility in selecting elective courses that offer breadth of topic exposure. Civil engineers contribute to society in numerous ways; thus, the School’s philosophy is to provide the student with a range of electives that meet student interests. Civil engineers must not only be technically proficient, but also be effective in working with people and with professionals in other disciplines.
Program Objectives

Graduates will pursue a diverse range of careers that build on their engineering education. During the initial years of their careers, graduates will:

1. apply technical proficiency in the principles and methods essential to modern civil engineering practice.
2. demonstrate understanding of global, societal, environmental, and sustainability issues related to civil engineering.
3. exhibit effective communication, teamwork, entrepreneurial, and leadership skills.
4. engage in ethical and responsible practice while pursuing professional growth.

Prerequisites and Other Requirements

Although students are not obligated to take the courses during the semester indicated, they must satisfy all prerequisites for a particular course. In addition to campus-wide academic requirements for graduation with a bachelor's degree, the following are also required for the BS CE degree:

A C or better must have been earned in the following:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 1501</td>
<td>Calculus I</td>
<td>4</td>
</tr>
<tr>
<td>MATH 1502</td>
<td>Calculus II</td>
<td>4</td>
</tr>
<tr>
<td>PHYS 2211</td>
<td>Intro Physics I</td>
<td>4</td>
</tr>
<tr>
<td>CHEM 1310</td>
<td>General Chemistry</td>
<td>4</td>
</tr>
<tr>
<td>COE 2001</td>
<td>Statics</td>
<td>2</td>
</tr>
</tbody>
</table>

The number of quality points earned in CEE courses taken toward the degree must be at least twice the number of credit hours in those courses. If a course is repeated, the latest grade will be included in applying this rule. No CEE course may be repeated for the purpose of satisfying this rule if the original grade was a C or higher.

exposure and learning, and the acquisition of needed skills. This program assignments are designed to include practical training, cross-cultural students typically are juniors and seniors. The international work experience directly related to civil engineering. Participating (www.workabroad.gatech.edu
In addition, there is the Work Abroad Program www.gtip.gatech.edu) hours of coursework at Georgia Tech before they can participate in more work experiences. Students must have completed at least 30 work for one semester, usually in the summer, with an option for career-related experience before graduation. Students generally who do not participate in the Cooperative Program, but want some related experience with classroom studies. The program is the fourth designation.

Cooperative Plan
Since 1912, Georgia Tech has offered a five-year Undergraduate Cooperative Program to those students who wish to combine career-related experience with classroom studies. The program is the fourth oldest of its kind in the world and the largest optional co-op program in the country.

Students alternate between work assignments and classroom studies until they complete four or five semesters of work. Co-op students with a civil engineering major complete the same coursework on campus that is completed by regular four-year students. Most co-op students begin the program as freshmen or sophomores and are classified as full-time students regardless of whether they are attending classes on campus or are full time at an employer's location.

Students who participate in the program have the opportunity to develop career interests, become more confident in their career choices, and develop human relations skills through their work experience. Graduates of the program receive a bachelor's degree with a Cooperative Plan Designation.

The Georgia Tech Internship Program is for civil engineering students who do not participate in the Cooperative Program, but want some career-related experience before graduation. Students generally work for one semester, usually in the summer, with an option for more work experiences. Students must have completed at least 30 hours of coursework at Georgia Tech before they can participate in the program. For more details, visit www.gtip.gatech.edu/ (http://www.gtip.gatech.edu).

In addition, there is the Work Abroad Program (www.workabroad.gatech.edu (http://www.workabroad.gatech.edu)), which complements a student's formal education with paid international work experience directly related to civil engineering. Participating students typically are juniors and seniors. The international work assignments are designed to include practical training, cross-cultural exposure and learning, and the acquisition of needed skills. This program satisfies requirements for the International Plan, which is available to civil engineering students.

For more information about all of the programs in the Center for Career Discovery and Development, visit www.careerdiscovery.gatech.edu (http://careerdiscovery.gatech.edu).

International Plan
The International Plan is a challenging and coherent academic program for undergraduates that develops global competence within the context of a student's major. It is a degree-long program that integrates international studies and experiences into any participating major at Georgia Tech. It helps to prepare Georgia Tech graduates professionally and personally for successful lives in the twenty-first century.

The International Plan is not intended to replace current international programs; it supplements them. Existing study abroad opportunities continue to be offered. It is also not intended to be an add-on to the current degree programs. It is intended to be another curriculum path to earn a degree in which international competence is integrated into the program of study. The plan can be completed within the normal timeframe of four years of undergraduate study.

The overarching model for the International Plan has four components:

1. International coursework: Three courses to include one from each of the following categories:
   a. International relations
   b. Global economics
   c. A course about a specific country or region

2. International experience: Two terms abroad (not less than 26 weeks) engaged in any combination of study abroad, research, or internship

3. Second language proficiency: All students in the program are expected to reach at least the proficiency level equivalent to two years of college-level language study. Students who use the language to study, conduct research, or participate in an internship during their international experience are expected to attain a higher level of proficiency. Language proficiency is determined by testing (not course credits).

4. Culminating course: A capstone course in the major designed to tie the international studies and experiences together with the student's major

Completion of the International Plan is recognized by a designation on the student's diploma indicating completion of the degree with global competence.

For additional information about the International Plan visit www.oie.gatech.edu/internationalplan (http://www.internationalplan.gatech.edu).

Research Option
The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in civil engineering. In order to graduate with a BSC.E – Research Option degree, the students must:

Complete at least nine units of undergraduate research (over at least two, preferably three terms). Research may be for either pay (CEE 2698 or
CEE 4698) or credit (CEE 2699 or CEE 4699). Research for credit may be used towards the BS CE approved elective requirements.

Write an undergraduate thesis/report of research on their findings. This is usually done during the graduating term. The thesis will be published in the Georgia Tech Library.

Take two 1-hour classes: LMC 4701 (typically taken during the first or second semester of research) and LMC 4702 (taken during the thesis-writing semester).

At least six of the nine required credit hours of research should be on the same topic. A research proposal must be approved by a faculty advisor and one other faculty member. This proposal will be completed in LMC 4701 which serves as a prerequisite for LMC 4702. Completion of Research Option is noted on the student’s transcript.

**Joint BS/MS Degree Program - Civil Engineering**

The joint BS/MS program is designed to attract the best-of-the-best undergraduate students and is especially intended for students who demonstrate an interest in, and ability for, additional education beyond the bachelor’s degree.

Students will be eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech and appropriate progress in their degree program. As a practical matter, students should apply for the program at least three semesters prior to graduation in order to take graduate-level courses prior to receiving their BS degree. Students must have a Georgia Tech GPA of 3.5 or higher for admission into the BS/MS Program in Civil Engineering.

This program is available only to those completing a Bachelor’s degree with the School of Civil and Environmental Engineering.

Students in the joint BS/MS program remain undergraduates until they meet the requirements for the bachelor’s degree, at which point they will receive the BSCE or BSEnvE degree. Their status will then be changed to graduate status. Graduate school application fees and the GRE requirements are waived.

Once admitted, a GPA of at least 3.0 must be maintained to remain in the program. Additionally, students in the BS/MS program are eligible to use the Graduate Course Option (p. 106) even if their cumulative grade-point average is below 3.5 at the time they complete their bachelor’s degree.

**Bachelor of Science in Computational Media**

The Bachelor of Science in Computational Media is a collaborative effort by the College of Computing and the School of Literature, Media, and Communication (LMC). The program offers a thorough education in all aspects of the computer as a medium: the technical, the historical-critical, and the applied. Program graduates will have both significant hands-on and theoretical knowledge of computing and an understanding of visual design and the history of media. Graduates will be uniquely positioned to plan, create, and critique new digital media forms for entertainment, education, and business communication.

The program requires 36 credit hours of courses in computer science and 30 credit hours of courses in LMC (in addition to the humanities requirement). A substantial number of required courses in each unit ensures that every student has basic competence in:

- computational principles;
- the representation and manipulation of digital media, including graphics and sound;
- software design;
- visual and interactive design;
- digital arts; and
- media theory and history.

After completing required courses, students specialize in a specific area of media computing. Typical specialty areas include:

- Interactive games design: This is one of the fastest growing areas of digital media production and is already a $7 billion industry.
- Special effects: As special effects become more complex and focused on computer-generated imagery, employment in this area will increasingly require expertise in both media and computer science.
- Culturally informed program design: As programming work is increasingly outsourced to nations offering lower labor costs, programming that adds value through a sophisticated response to the needs of specific corporate and group cultures will offer job security to American programmers.

Depending on their coursework within the BS program, students will also be qualified to enter graduate studies in computer science, digital arts, digital media studies, and human-computer interface.

- LMC 3254 Film History
LMC 3256  Major Filmmakers
LMC 3257  Global Cinema
LMC 3258  Documentary Film
LMC 3259  Experimental Film
LMC 3314  Tech of Representation
LMC 3352  Film Technology
LMC 3362  Sci, Tech & Performance

CM or Media Courses 1,2  12

Total Credit Hours  122

Pass-Fail is allowed for courses in core areas C, D, E and Free.

1  Minimum grade of C required.
2  CM or LMC courses include 2700-, 3700-, and 4700-level courses, as well as 3250-level courses, and LMC 2400, LMC 2500, LMC 3206, LMC 3314, LMC 3362, LMC 3406, and LMC 3853
3  Junior Design Options are as follows (students must pick one option and may not change):
   • Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   • Option 2 - ECE VIP courses and LMC 3403.
   • Option 3 - Satisfy Georgia Tech Research Option.
   • Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours / 2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit. Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-Ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4  Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs.

See links below for further Information.

Undergraduate Cooperative Plan (p. 83)
Graduate Cooperative Plan (p. 83)

International Plan

The Computational Media (CM) International Plan follows the Institute model to develop a global competence within the student's major program of study. It thus integrates international studies and experiences with work in all aspects of the computer as a medium, preparing graduates to plan, create, and critique new digital media forms within an international professional environment.

As in the basic CM program, students following the International Plan will take credit 36 hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). Students will also:

1. take three international courses, including one from each of the following categories: International Relations, Global Economics, and a course on a specific country or region;
2. spend two terms abroad engaged in any combination of study abroad, research, or internship;
3. demonstrate language proficiency equivalent to two years of college-level language study (to be determined by testing); and
4. complete a CM capstone course that links international studies with the major.

Research Option

The CM Research Plan follows the Institute model to allow students to incorporate research experiences into the major program of study. Students will complete nine hours of credit research work on various aspects of the computer as a medium, working in such areas as computational principles, the representation and manipulation of digital media, software design, visual and interactive design, digital art, and media theory and history.

As in the basic CM program, students following the Research Plan will take 36 credit hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). CM students can complete the Research Option with nine CS or LMC research hours. Students cannot have a mix of both count towards the Research Option. The breakdown of hours is as follows:

<table>

BS/MS Computational Media and Digital Media

Students who want to pursue the five-year BS/MS combination in CM and DM must apply to the school of LMC after completing at least 75 hours of work towards the CM degree. Applicants should have a cumulative GPA of at least 3.5. This GPA must be maintained for the student to take graduate level courses. Students must start the program in the Fall to be on track with other MS students.

Students admitted to the program will take a total of twelve credit hours of graduate course work during their final undergraduate year; six credit hours of that work, in DM courses, will count towards two 4000 level LMC courses (6 hours) and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During their fifth year, students will take a total of 24 credit hours, including either LMC 6800 or LMC 7000, and with no more than three courses taken outside of the DM program.

Bachelor of Science in Computational Media - Intelligence - Game Studies

The Bachelor of Science in Computational Media is a collaborative effort by the College of Computing and the School of Literature, Media, and Communication (LMC). The program offers a thorough education in all aspects of the computer as a medium: the technical, the historical-
critical, and the applied. Program graduates will have both significant hands-on and theoretical knowledge of computing and an understanding of visual design and the history of media. Graduates will be uniquely positioned to plan, create, and critique new digital media forms for entertainment, education, and business communication.

The program requires 36 credit hours of courses in computer science and 30 credit hours of courses in LMC (in addition to the humanities requirement). A substantial number of required courses in each unit ensures that every student has basic competence in:

- computational principles;
- the representation and manipulation of digital media, including graphics and sound;
- software design;
- visual and interactive design;
- digital arts; and
- media theory and history.

After completing required courses, students specialize in a specific area of media computing. Typical specialty areas include:

- Interactive games design: This is one of the fastest growing areas of digital media production and is already a $7 billion industry.
- Special effects: As special effects become more complex and focused on computer-generated imagery, employment in this area will increasingly require expertise in both media and computer science.
- Culturally informed program design: As programming work is increasingly outsourced to nations offering lower labor costs, programming that adds value through a sophisticated response to the needs of specific corporate and group cultures will offer job security to American programmers.

Depending on their coursework within the BS program, students will also be qualified to enter graduate studies in computer science, digital arts, digital media studies, and human-computer interface.

Total Credit Hours 122

1 Minimum grade of C required.

2 CM or LMC courses include 2700-, 3700-, and 4700-level courses, as well as 3250-level courses, and LMC 2400, LMC 2500, LMC 3206, LMC 3314, LMC 3362, LMC 3406, and LMC 3853
6 Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
- Option 2 - CS 4980 or LMC 4699 (4 credit hours), LMC 4701, LMC 4702.
- Option 3 - ECE VIP courses and LMC 3403.

Six credits of the Junior Design option are used as Major Requirements and the average credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least four semesters of VIP. (VIP 1 + VIP 2 + VIP 3) for a total of 5 credit hours + VIP 4 (3 credit hours) = 8 hours of VIP credit. VIP 4 must be taken after 90 credit hours at the 4000 level and be on the same project as 2 of VIP 1-3s.

4 Two credits of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs
The College of Computing participates in the undergraduate and graduate Cooperative Programs.

See links below for further Information.

Undergraduate Cooperative Plan (p. 83)
Graduate Cooperative Plan (p. 83)

International Plan
The Computational Media (CM) International Plan follows the Institute model to develop a global competence within the student’s major program of study. It thus integrates international studies and experiences with work in all aspects of the computer as a medium, preparing graduates to plan, create, and critique new digital media forms within an international professional environment.

As in the basic CM program, students following the International Plan will take credit 36 hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). Students will also:

1. take three international courses, including one from each of the following categories: International Relations, Global Economics, and a course on a specific country or region;
2. spend two terms abroad engaged in any combination of study abroad, research, or internship;
3. demonstrate language proficiency equivalent to two years of college-level language study (to be determined by testing); and
4. complete a CM capstone course that links international studies with the major.

Research Option
The CM Research Plan follows the Institute model to allow students to incorporate research experiences into the major program of study. Students will complete nine hours of credit research work on various aspects of the computer as a medium, working in such areas as computational principles, the representation and manipulation of digital media, software design, visual and interactive design, digital art, and media theory and history.

As in the basic CM program, students following the Research Plan will take 36 credit hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). CM students can complete the Research Option with nine CS or LMC research hours. Students cannot have a mix of both count towards the Research Option. The breakdown of hours is as follows:

<table>

BS/MS Computational Media and Digital Media
Students who want to pursue the five-year BS/MS combination in CM and DM must apply to the school of LMC after completing at least 75 hours of work towards the CM degree. Applicants should have a cumulative GPA of at least 3.5. This GPA must be maintained for the student to take graduate level courses. Students must start the program in the Fall to be on track with other MS students.

Students admitted to the program will take a total of twelve credit hours of graduate course work during their final undergraduate year; six credit hours of that work, in DM courses, will count towards two 4000 level LMC courses (6 hours) and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During their fifth year, students will take a total of 24 credit hours, including either LMC 6800 or LMC 7000, and with no more than three courses taken outside of the DM program.

Bachelor of Science in Computational Media - Intelligence - Interaction Design & Experimental Media
The Bachelor of Science in Computational Media is a collaborative effort by the College of Computing and the School of Literature, Media, and Communication (LMC). The program offers a thorough education in all aspects of the computer as a medium: the technical, the historical-critical, and the applied. Program graduates will have both significant hands-on and theoretical knowledge of computing and an understanding of visual design and the history of media. Graduates will be uniquely positioned to plan, create, and critique new digital media forms for entertainment, education, and business communication.

The program requires 36 credit hours of courses in computer science and 30 credit hours of courses in LMC (in addition to the humanities requirement). A substantial number of required courses in each unit ensures that every student has basic competence in:

- computational principles;
- the representation and manipulation of digital media, including graphics and sound;
- software design;
- visual and interactive design;
- digital arts; and
- media theory and history.
After completing required courses, students specialize in a specific area of media computing. Typical specialty areas include:

- Interactive games design: This is one of the fastest growing areas of digital media production and is already a $7 billion industry.
- Special effects: As special effects become more complex and focused on computer-generated imagery, employment in this area will increasingly require expertise in both media and computer science.
- Culturally informed program design: As programming work is increasingly outsourced to nations offering lower labor costs, programming that adds value through a sophisticated response to the needs of specific corporate and group cultures will offer job security to American programmers.

Depending on their coursework within the BS program, students will also be qualified to enter graduate studies in computer science, digital arts, digital media studies, and human-computer interface.

**Free Electives** 9

**Total Credit Hours** 122

Pass Fail is allowed for courses in core areas C, D, E and Free.

1. Minimum grade of C required.
2. CM or LMC courses include 2700-, 3700-, and 4700-level courses, as well as 3250-level courses, and LMC 2400, LMC 2500, LMC 3206, LMC 3314, LMC 3362, LMC 3406, and LMC 3853
3. Junior Design Options are as follows (students must pick one option and may not change):
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   - Option 2 - CS 4980 or LMC 4699 (4 credit hours), LMC 4701, LMC 4702.
   - Option 3 - ECE VIP courses and LMC 3403.

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least four semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + VIP 4 (3 credit hours) = 8 hours of VIP credit. VIP 4 must be taken after 90 credit hours at the 4000 level and be on the same project as 2 of VIP 1-3s.

4. Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

**Cooperative Programs**

The College of Computing participates in the undergraduate and graduate Cooperative Programs.

See links below for further Information.

Undergraduate Cooperative Plan (p. 83)

Graduate Cooperative Plan (p. 83)

**International Plan**

The Computational Media (CM) International Plan follows the Institute model to develop a global competence within the student’s major program of study. It thus integrates international studies and experiences with work in all aspects of the computer as a medium, preparing graduates to plan, create, and critique new digital media forms within an international professional environment.

As in the basic CM program, students following the International Plan will take credit 36 hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). Students will also:

1. take three international courses, including one from each of the following categories: International Relations, Global Economics, and a course on a specific country or region;
2. spend two terms abroad engaged in any combination of study abroad, research, or internship;
3. demonstrate language proficiency equivalent to two years of college-level language study (to be determined by testing); and
4. complete a CM capstone course that links international studies with the major.

**Research Option**

The CM Research Plan follows the Institute model to allow students to incorporate research experiences into the major program of study.
Students will complete nine hours of credit research work on various aspects of the computer as a medium, working in such areas as computational principles, the representation and manipulation of digital media, software design, visual and interactive design, digital art, and media theory and history.

As in the basic CM program, students following the Research Plan will take 36 credit hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). CM students can complete the Research Option with nine CS or LMC research hours. Students cannot have a mix of both count towards the Research Option. The breakdown of hours is as follows:

**BS/MS Computational Media and Digital Media**

Students who want to pursue the five-year BS/MS combination in CM and DM must apply to the school of LMC after completing at least 75 hours of work towards the CM degree. Applicants should have a cumulative GPA of at least 3.5. This GPA must be maintained for the student to take graduate level courses. Students must start the program in the Fall to be on track with other MS students.

Students admitted to the program will take a total of twelve credit hours of graduate course work during their final undergraduate year; six credit hours of work, in DM courses, will count towards two 4000 level LMC courses (6 hours) and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During their fifth year, students will take a total of 24 credit hours, including either LMC 6800 or LMC 7000, and with no more than three courses taken outside of the DM program.

**Bachelor of Science in Computational Media - Media - Film, Performance, & Media Studies**

The Bachelor of Science in Computational Media is a collaborative effort by the College of Computing and the School of Literature, Media, and Communication (LMC). The program offers a thorough education in all aspects of the computer as a medium: the technical, the historical-critical, and the applied. Program graduates will have both significant hands-on and theoretical knowledge of computing and an understanding of visual design and the history of media. Graduates will be uniquely positioned to plan, create, and critique new digital media forms for entertainment, education, and business communication.

The program requires 36 credit hours of courses in computer science and 30 credit hours of courses in LMC (in addition to the humanities requirement). A substantial number of required courses in each unit ensures that every student has basic competence in:

- computational principles;
- the representation and manipulation of digital media, including graphics and sound;
- software design;
- visual and interactive design;
- digital arts; and
- media theory and history.

After completing required courses, students specialize in a specific area of media computing. Typical specialty areas include:

- Interactive games design: This is one of the fastest growing areas of digital media production and is already a $7 billion industry.
- Special effects: As special effects become more complex and focused on computer-generated imagery, employment in this area will increasingly require expertise in both media and computer science.
- Culturally informed program design: As programming work is increasingly outsourced to nations offering lower labor costs, programming that adds value through a sophisticated response to the needs of specific corporate and group cultures will offer job security to American programmers.

Depending on their coursework within the BS program, students will also be qualified to enter graduate studies in computer science, digital arts, digital media studies, and human-computer interface.

BS/MS Computational Media and Digital Media

Students who want to pursue the five-year BS/MS combination in CM and DM must apply to the school of LMC after completing at least 75 hours of work towards the CM degree. Applicants should have a cumulative GPA of at least 3.5. This GPA must be maintained for the student to take graduate level courses. Students must start the program in the Fall to be on track with other MS students.

Students admitted to the program will take a total of twelve credit hours of graduate course work during their final undergraduate year; six credit hours of that work, in DM courses, will count towards two 4000 level LMC courses (6 hours) and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During their fifth year, students will take a total of 24 credit hours, including either LMC 6800 or LMC 7000, and with no more than three courses taken outside of the DM program.

Bachelor of Science in Computational Media - People - Film, Performance, & Media Studies

The Bachelor of Science in Computational Media is a collaborative effort by the College of Computing and the School of Literature, Media, and Communication (LMC). The program offers a thorough education in all aspects of the computer as a medium: the technical, the historical-critical, and the applied. Program graduates will have both significant hands-on and theoretical knowledge of computing and an understanding of visual design and the history of media. Graduates will be uniquely positioned to plan, create, and critique new digital media forms for entertainment, education, and business communication.

The program requires 36 credit hours of courses in computer science and 30 credit hours of courses in LMC (in addition to the humanities requirement). A substantial number of required courses in each unit ensures that every student has basic competence in:

• computational principles;
• the representation and manipulation of digital media, including graphics and sound;
• software design;

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs.

See links below for further Information.

Undergraduate Cooperative Plan (p. 83)
Graduate Cooperative Plan (p. 83)

International Plan

The Computational Media (CM) International Plan follows the Institute model to develop a global competence within the student’s major program of study. It thus integrates international studies and experiences with work in all aspects of the computer as a medium, preparing graduates to plan, create, and critique new digital media forms within an international professional environment.

As in the basic CM program, students following the International Plan will take credit 36 hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). Students will also:

1. take three international courses, including one from each of the following categories: International Relations, Global Economics, and a course on a specific country or region;
2. spend two terms abroad engaged in any combination of study abroad, research, or internship;
3. demonstrate language proficiency equivalent to two years of college-level language study (to be determined by testing); and
4. complete a CM capstone course that links international studies with the major.

Research Option

The CM Research Plan follows the Institute model to allow students to incorporate research experiences into the major program of study. Students will complete nine hours of credit research work on various aspects of the computer as a medium, working in such areas as computational principles, the representation and manipulation of digital media, software design, visual and interactive design, digital art, and media theory and history.

Six credits of the Junior Design option are used as Major Requirements and the average credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least four semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + VIP 4 (3 credit hours) = 8 hours of VIP credit. VIP 4 must be taken after 90 credit hours at the 4000 level and be on the same project as 2 of VIP 1-3s.

Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.
• visual and interactive design;
• digital arts; and
• media theory and history.

After completing required courses, students specialize in a specific area of media computing. Typical specialty areas include:

• Interactive games design: This is one of the fastest growing areas of digital media production and is already a $7 billion industry.
• Special effects: As special effects become more complex and focused on computer-generated imagery, employment in this area will increasingly require expertise in both media and computer science.
• Culturally informed program design: As programming work is increasingly outsourced to nations offering lower labor costs, programming that adds value through a sophisticated response to the needs of specific corporate and group cultures will offer job security to American programmers.

Depending on their coursework within the BS program, students will also be qualified to enter graduate studies in computer science, digital arts, digital media studies, and human-computer interface.

| PSYC 2015 Research Methods ¹               |              |
| PSYC 2210 Social Psychology                |              |
| PSYC 2760 Human Language Process           |              |
| PSYC 3040 Sensation & Perception           |              |

Pass Fail is allowed for courses in core areas C, D, E and Free.

¹ Minimum grade of C required.
² CM or LMC courses include 2700-, 3700-, and 4700-level courses,
as well as 3250-level courses, and LMC 2400, LMC 2500, LMC 3206,
LMC 3314, LMC 3362, LMC 3406, and LMC 3853.
³ Junior Design Options are as follows (students must pick one option
and may not change):
• Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
• Option 2 - CS 4980 or LMC 4699 (4 credit hours), LMC 4701, LMC 4702.
• Option 3 - ECE VIP courses and LMC 3403.

Six credits of the Junior Design option are used as Major
Requirements and the overlap of credits is research/VIP (5 credit
hours/2 credit hours) may be used as free electives. Students
completing VIP for their junior design requirement will be required to
complete at least four semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a
total of 5 credit hours) + VIP 4 (3 credit hours) = 8 hours of VIP credit.
VIP 4 must be taken after 90 credit hours at the 4000 level and be on
the same project as 2 of VIP 1-3s.

Four credits of MATH 1554 may count along with MATH 2550 to
give Area F 18 credit hours.

Cooperative Programs

The College of Computing participates in the undergraduate and graduate
Cooperative Programs.
See links below for further information.

Undergraduate Cooperative Plan (p. 83)
Graduate Cooperative Plan (p. 83)

International Plan
The Computational Media (CM) International Plan follows the Institute model to develop a global competence within the student’s major program of study. It thus integrates international studies and experiences with work in all aspects of the computer as a medium, preparing graduates to plan, create, and critique new digital media forms within an international professional environment.

As in the basic CM program, students following the International Plan will take credit 36 hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). Students will also:

1. take three international courses, including one from each of the following categories: International Relations, Global Economics, and a course on a specific country or region;
2. spend two terms abroad engaged in any combination of study abroad, research, or internship;
3. demonstrate language proficiency equivalent to two years of college-level language study (to be determined by testing); and
4. complete a CM capstone course that links international studies with the major.

Research Option
The CM Research Plan follows the Institute model to allow students to incorporate research experiences into the major program of study. Students will complete nine hours of credit research work on various aspects of the computer as a medium, working in such areas as computational principles, the representation and manipulation of digital media, software design, visual and interactive design, digital art, and media theory and history.

As in the basic CM program, students following the Research Plan will take 36 credit hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). CM students can complete the Research Option with nine CS or LMC research hours. Students cannot have a mix of both count towards the Research Option. The breakdown of hours is as follows:

BS/MS Computational Media and Digital Media
Students who want to pursue the five-year BS/MS combination in CM and DM must apply to the school of LMC after completing at least 75 hours of work towards the CM degree. Applicants should have a cumulative GPA of at least 3.5. This GPA must be maintained for the student to take graduate level courses. Students must start the program in the Fall to be on track with other MS students.

Students admitted to the program will take a total of twelve credit hours of graduate course work during their final undergraduate year; six credit hours of that work, in DM courses, will count towards two 4000 level LMC courses (6 hours) and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During their fifth year, students will take a total of 24 credit hours, including either LMC 6800 or LMC 7000, and with no more than three courses taken outside of the CM program.

Bachelor of Science in Computational Media - People - Interaction Design & Experimental Media
The Bachelor of Science in Computational Media is a collaborative effort by the College of Computing and the School of Literature, Media, and Communication (LMC). The program offers a thorough education in all aspects of the computer as a medium: the technical, the historical-critical, and the applied. Program graduates will have both significant hands-on and theoretical knowledge of computing and an understanding of visual design and the history of media. Graduates will be uniquely positioned to plan, create, and critique new digital media forms for entertainment, education, and business communication.

The program requires 36 credit hours of courses in computer science and 30 credit hours of courses in LMC (in addition to the humanities requirement). A substantial number of required courses in each unit ensures that every student has basic competence in:

- computational principles;
- the representation and manipulation of digital media, including graphics and sound;
- software design;
- visual and interactive design;
- digital arts; and
- media theory and history.

After completing required courses, students specialize in a specific area of media computing. Typical specialty areas include:

- Interactive games design: This is one of the fastest growing areas of digital media production and is already a $7 billion industry.
- Special effects: As special effects become more complex and focused on computer-generated imagery, employment in this area will increasingly require expertise in both media and computer science.
- Culturally informed program design: As programming work is increasingly outsourced to nations offering lower labor costs, programming that adds value through a sophisticated response to the needs of specific corporate and group cultures will offer job security to American programmers.

Depending on their coursework within the BS program, students will also be qualified to enter graduate studies in computer science, digital arts, digital media studies, and human-computer interface.

**Bachelor of Science in Computer Engineering**

The School of Electrical and Computer Engineering offers two undergraduate degree programs: electrical engineering (EE) and computer engineering (CmpE). Both programs include elective hours, enabling students to individually tailor their programs to provide emphasis in a particular specialization or exposure to a broad range of subjects. Engineering analysis and design concepts are integrated throughout both programs, culminating in a common major design experience involving a broad range of issues including economic and societal considerations.

The field of computer engineering is centered in digital design, computer architecture, computer networks and internetworking, and computer applications. The BS CmpE program offers elective courses in a wide variety of specializations, including computer architecture; embedded systems and software; design tools, test, and verification; computer networks and internetworking; distributed systems and software; and VLSI design. Additionally, students may elect to take advanced courses in other EE specializations, computer science, or programs, such as mathematics, physics, or management. As an alternative to the BS CmpE degree, students may choose a computer engineering specialization within the BS EE degree program.

**Program Objectives**

The School of Electrical and Computer Engineering has established the following student educational objectives for its undergraduate programs:

A. Graduates will be successful in the professional practice of engineering or other related fields. They will obtain employment appropriate to their background, interests, and education and will advance in their career field.

B. Graduates will engage in life-long learning; e.g., advanced education/degrees, professional development activities, and/or other career-appropriate options.

C. Graduates who are employed within engineering fields will demonstrate technical competence, such as identifying, formulating, analyzing, and creating engineering solutions using appropriate current engineering techniques, skills, and tools.

D. As appropriate to their professional or educational positions, graduates will
   i. effectively communicate technical information in multiple formats,
   ii. function effectively on teams, and
   iii. develop and apply electrical/computer engineering solutions within global, societal, and environmental contexts.

Additional information about program assessment (http://www.ece.gatech.edu/academics/accreditation.html) for all of the School’s programs is available on the ECE website.

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Science Electives, and Free Elective courses.

Courses that are cross-listed with ECE must be taken under the ECE number.

1. Students must complete an Ethics requirement. See below for allowable Ethics courses.
2. If PHYS 2231 is taken, extra hour goes to Free Electives.
3. Minimum grade of C required.
4. Science Elective must be chosen from the following list: APPH 3751, BIOL 1510, BIOL 1520, BIOL 3571, CHEM 1212K, CHEM 1315, EAS 1600, EAS 1601, EAS 2600, PHYS 2021, PHYS 2022, or PHYS 2213.
5. Students must complete one Ethics course during their program. For a complete list of Ethics courses, please see: http://www.catalog.gatech.edu/students/ugrad/core/ethics.php
6. ECE 3005, ECE 3710, ECE 3741, ECE 4699, CS 4699, ECE 3900-level, CS 3900-level, ECE 4900-level, CS 4900-level, ECE 3800-level, and CS 4800-level not allowed.

Cooperative Plan

The Georgia Tech Undergraduate Cooperative Education Program allows students to combine classroom study with paid practical work experience directly related to the academic major. Co-ops alternate semesters of on-campus study with semesters of full-time employment, normally beginning the program as freshmen or sophomores. Over 30 percent of ECE undergraduates participate in the co-op program.

The degree requirements for students in the co-op program are the same as those for other students in the major. The Cooperative Plan designation may be pursued separately or in combination with the International Plan and/or the Research Option.

Begun in 1912, Georgia Tech's program is currently the largest optional co-op program in the United States and has perennially been listed in U.S. News & World Report as one of the top ten co-op programs in America. As an integral part of the overall education experience, the co-op program allows students to take on increasing levels of responsibility and to use their job knowledge and classroom learning to make meaningful contributions to the organizations in which they work. Many co-op graduates are hired by their co-op employer, and more than 700 companies or government organizations throughout the United States and abroad currently employ Georgia Tech Undergrad Co-op Program students.

Because the School of ECE in Atlanta offers a wide range of electives and almost all required courses every term, including summer, co-op students have substantial flexibility in completing their degree requirements. Many students continue their co-op work assignments through the senior year. Additionally, co-op students working in the Atlanta area may be able to take certain ECE courses, particularly laboratories offered in the evening, during the work term.

In addition to the co-op program, the Center for Career Discovery and Development also offers the Undergraduate Professional Internship and Work Abroad programs. These programs also provide opportunities for students to gain practical work experience, without the long-term commitment of the co-op program.

Center for Career Discovery and Development (http://www.careerdiscovery.gatech.edu)

International Plan

The International Plan is intended for students who seek an intensive international experience integrated into their undergraduate studies.
in computer engineering. The International Plan develops global competence through a combination of coursework, language study, and residential overseas experience. Students who complete this option receive a designation on their transcript and diploma.

The computer engineering aspects of the BS CmpE - International Plan degree requirements are identical to those for the regular BS CmpE. Please refer to the BS CmpE catalog description for general information about the degree program. Students may be able to satisfy the additional requirements imposed for the International Plan designation through appropriate choices of electives without additional credit hours to complete the degree. The International Plan designation may be pursued separately, or in combination with the Cooperative Plan and/or the Research Option.

The School of Electrical and Computer Engineering offers a junior-year program at the Georgia Tech-Lorraine campus in Metz, France, that is designed to facilitate participation in the International Plan. However, computer engineering majors are not restricted to this option and may complete any allowable courses, languages, and overseas experiences that satisfy the International Plan requirements.

Research Option
The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in computer engineering. This option includes three or four semesters of structured research and provides an open evaluation of a student’s research capabilities, viewable by the public via a required Web-based research portfolio. Students who complete this option receive a designation on their transcript.

The computer engineering aspects of the BS CmpE-Research Option degree requirements are identical to those for the regular BS CmpE. Please refer to the BS CmpE catalog description for general information about the degree program. Students may be able to satisfy the additional requirements imposed for the Research Option designation through appropriate choices of electives without additional credit hours to complete the degree. The Research Option designation may be pursued separately, or in combination with the Cooperative Plan and/or the International Plan.

The School of Electrical and Computer Engineering (ECE) offers a two-semester Undergraduate Research Opportunity Program (UROP), which may be completed to provide a less-intensive research experience or as the initial phase of the Research Option. Contact the ECE Academic Office for additional information about the Research Option, including specific Institute and ECE requirements, and assistance in planning your schedule to allow participation in this program.

BS/MS Electrical and Computer Engineering
This program allows highly qualified students to receive the Bachelor of Science in either Electrical Engineering or Computer Engineering and a master’s degree in Electrical and Computer Engineering. The joint BS/MS degree program affords undergraduate electrical or computer engineering majors the opportunity to broaden their studies and improve their career prospects.

Eligible Georgia Tech undergraduates normally apply for this program during their junior year. Contact the Electrical and Computer Engineering Graduate Affairs Office for program information, eligibility requirements, and applications.

BS/MS Information (5 Year) (http://www.ece.gatech.edu/internal/students/bsms_prog)

Dual BS in Computer Engineering
Georgia Tech & Korea Advanced Institute of Science & Tech

Students may pursue the BSEE degree from the Korea Advanced Institute of Science and Technology (KAIST) as they earn the BSEE or BSCmpE from Georgia Tech. KAIST offers one of the top engineering programs in Korea and the Far East. All lectures at KAIST are given in English to better serve a growing number of students from overseas. While earning their dual degrees, students spend two years each at both Georgia Tech and KAIST.

Bachelor of Science in Computer Science
Bachelor of Science in Computer Science with Threads
Focus: building on a base of fundamentals in programming and computational theory to provide a solid foundation of knowledge and skills for applying digital processes effectively to issues of broad interest in a global society.

The undergraduate degree in computer science (CS) offered by the College of Computing provides a solid foundation of knowledge and skills for applying digital processes effectively to issues of broad interest in a global society. Our program is based on a unique concept, Threads™, a significant College of Computing innovation in undergraduate CS education. The curriculum builds on a base of fundamentals in programming and computational theory to allow each student the opportunity to explore a variety of computing paths in depth. There are eight Threads, each providing a focused journey through a broad spectrum of course offerings at Georgia Tech in preparation for a distinctive future in a changing and interconnected world. Each student selects two Threads to fulfill the requirements for an accredited Bachelor of Science degree in computer science. It is at the intersection of the two paths that the unique synergistic value of this educational experience is realized. Graduates will leave the College of Computing fully aware of the limitless potential of their dynamic discipline and be able to adapt and continuously add value to society throughout their careers.

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The CS curriculum also offers opportunities in undergraduate research and international study. In addition to the standard four-year plan, a five-year cooperative plan is offered for students who wish to combine their academic education with industry experience.

The undergraduate program requires:

- a total of 124 credit hours for graduation, plus
• a two-hour Wellness course.
• With the exception of free electives, all Bachelor of Science degree coursework must be taken on a letter-grade basis.
• Up to six hours of free electives may be taken on a pass/fail basis.
• No 1000- or 2000-level HPS hours or precalculus hours (currently MATH 1113) may be used as free electives.
• No course that covers the same material as other courses in a student’s plan of study can be used as a free elective.
• All required CS courses, whether Thread or non-Thread, must be completed with a C or better to be counted toward degree requirements.
• All courses listed as required for a Thread, whether CS or non-CS, must be completed with a C or better to be counted toward degree requirements.

The College of Computing Defines Eight Threads

A Thread provides an intuitive, flexible, and mutually strengthening set of courses that allows a student to craft a distinctive future in an area that is certain to have societal value in the emerging world. A Thread provides a skill and credential basis that allows graduates to create value in ways beyond what would be possible with only a narrowly focused tool set.

Choose any two threads to create your own path and special variation on an area of study.

1. Computing and Devices: creating devices embedded in physical objects that interact in the physical world
2. Computing and Information Internetworks: representing, transforming, transmitting, and presenting information
3. Computing and Intelligence: building top-to-bottom models of human-level intelligence
4. Computing and Media: building systems in order to exploit computing’s abilities to provide creative outlets
5. Computing and Modeling - Simulation: representing natural and physical processes
6. Computing and People: designing, building, and evaluating systems that treat the human as a central component
7. Computing and Systems and Architecture: creating computer architectures, systems, and languages
8. Computing and Theory: theoretical foundations underlying a wide range of computing disciplines

Threads" are defined as partial paths through the course offerings of the Institute. Students construct their own personalized computer science degree by weaving through two Threads". Each Thread" is about 2/3 of a degree, but with Thread" arithmetic, since there’s so much overlap, 2/3 + 2/3 = 1. Each pair of Threads" fulfills the requirements for an accredited Bachelor of Science degree in computer science.

The Power of One Thread

Are you a computationalist who is interested in the expressive arts (telling stories, making games, creating emotional experiences)? Join the Computing and Media Thread. Here you’ll see courses on topics ranging from computational graphics to Hamlet, from human perception to interactive fiction engines.

Are you a computationalist who is interested in placing intelligence in physical objects like robots, airplanes, or cell phones? Join the Computing and Devices Thread. Here you’ll see courses on everything from computational sensors to dealing with noisy data, from real-time operating systems to mobile power issues and computational autonomy.

Weaving Two Threads Together - A Leap

Are you interested in computer security? Then perhaps choose Computing and Information to learn how data is stored, retrieved, encoded, transmitted, etc. And perhaps also choose Computing and People to learn how people use technology, how to run experiments with human subjects, etc. The kind of person who will become is the kind of person who will be able to invent and build secure systems that are usable by people.

For more information about the BS CS undergraduate program or the College of Computing, visit The College of Computing website (http://www.cc.gatech.edu).

Bachelor of Science in Computer Science

Threads

Devices

The Devices thread is concerned with embedded computational artifacts that interact with people or the physical world. In this thread, one learns how to create and evaluate devices that operate under physical constraints such as size, power, and bandwidth. Examples include PDAs, cell phones, robots, jet engines, and intelligent appliances.

• Modeling and Simulation & Devices (p. 304)
• Theory & Devices (p. 285)
• Information Internetworks & Devices (p. 274)
• Intelligence & Devices (p. 277)
• Media & Devices (p. 279)
• People & Devices (p. 281)
• Systems and Architecture & Devices (p. 283)

Information Internetworks

The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

• Modeling and Simulation & Information Internetworks (p. 316)
• Devices & Information Internetworks (p. 274)
• Theory & Information Internetworks (p. 321)
• Intelligence & Information Internetworks (p. 287)
• Media & Information Internetworks (p. 289)
• People & Information Internetworks (p. 291)
• Systems and Architecture & Information Internetworks (p. 293)

Intelligence

The Intelligence thread is where computing models intelligence. This thread is concerned with computational models of intelligence from top to bottom. To this end, we emphasize designing and implementing artifacts that exhibit various levels of intelligence as well as understanding and modeling natural cognitive agents such as humans, ants, or bees. Students acquire the technical knowledge and skills necessary for expressing, specifying, understanding, creating, and exploiting computational models that represent cognitive processes. It prepares students for fields as diverse as artificial intelligence, machine
learning, perception, and cognitive science, as well as for fields that benefit from applications of techniques from those fields.

- Modeling and Simulation & Intelligence (p. 306)
- Devices & Intelligence (p. 277)
- Theory & Intelligence (p. 323)
- Information Internetworks & Intelligence (p. 287)
- Media & Intelligence (p. 183)
- People & Intelligence (p. 295)
- Systems and Architecture & Intelligence (p. 298)

**Media**
The Media thread is where computing meets design. This thread prepares students by helping them to understand the technical and computational capabilities of systems in order to exploit their abilities to provide creative outlets.

- Modeling and Simulation & Media (p. 314)
- Devices & Media (p. 279)
- Theory & Media (p. 325)
- Information Internetworks & Media (p. 289)
- Intelligence & Media (p. 183)
- People & Media (p. 300)
- Systems and Architecture & Media (p. 302)

**Modeling and Simulation**
The Modeling · Simulation thread is intended for students interested in developing a deep understanding and appreciation of how natural and human-generated systems such as weather, biological processes, supply chains, or computers can be represented by mathematical models and computer software. Such models are widely used today to better understand and predict the behavior of such systems. Because these models are often described and represented by mathematical expressions, and the models themselves often deal with physical phenomena, a background in mathematics and the sciences is required. Combining this background with a deep knowledge in computer science will yield the basic tools necessary to transform abstract conceptual models to computer programs that execute efficiently on digital machines. The required coursework in this thread includes topics in continuous and discrete mathematics, the sciences, and computing. Elective courses enable students to further develop and apply their knowledge and skills to a specific discipline where Modeling · Simulation plays an important role.

- Devices & Modeling and Simulation (p. 304)
- Theory & Modeling and Simulation (p. 312)
- Information Internetworks & Modeling and Simulation (p. 316)
- Intelligence & Modeling and Simulation (p. 306)
- Media & Modeling and Simulation (p. 314)
- People & Modeling and Simulation (p. 308)
- Systems and Architecture & Modeling and Simulation (p. 310)

**People**
The People thread is where computing meets users. This thread prepares students by helping them to understand the theoretical and computational foundations for designing, building, and evaluating systems that treat the human as a central component.

- Modeling and Simulation & People (p. 308)

- Devices & People (p. 281)
- Theory & People (p. 327)
- Information Internetworks & People (p. 291)
- Intelligence & People (p. 295)
- Media & People (p. 300)
- Systems and Architecture & People (p. 319)

**Systems and Architecture**
The Systems and Architecture thread is where many of the practical skills of computing are learned. Like Theory, Systems and Architecture lies at the center of computing. It prepares students to create and evaluate computer architectures, systems, and languages across a variety of paradigms and approaches.

- Modeling and Simulation & Systems and Architecture (p. 310)
- Devices & Systems and Architecture (p. 283)
- Theory & Systems and Architecture (p. 329)
- Information Internetworks & Systems and Architecture (p. 293)
- Intelligence & Systems and Architecture (p. 298)
- Media & Systems and Architecture (p. 302)
- People & Systems and Architecture (p. 319)

**Theory**
The Theory thread is where computing meets itself. Theory teaches students the theoretical and mathematical foundations underlying a wide range of computational disciplines. Early preparation includes discrete mathematics, algorithms, and complexity. Knowledge goals are for students to mature in development and analysis of abstract models for applications ranging from theoretical computer science to computational physics, biology, mathematics, economics, and optimization.

- Modeling and Simulation & Theory (p. 312)
- Devices & Theory (p. 285)
- Information Internetworks & Theory (p. 321)
- Intelligence & Theory (p. 323)
- Media & Theory (p. 325)
- People & Theory (p. 327)
- Systems and Architecture & Theory (p. 329)

**Bachelor of Science in Computer Science - Thread: Devices & Information Internetworks**
The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Devices thread is concerned with embedded computational artifacts that interact with people or the physical world. In this thread, one learns how to create and evaluate devices that operate under physical constraints such as size, power, and bandwidth. Examples include PDAs, cell phones, robots, jet engines, and intelligent appliances.
The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development

International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;

2. Write an undergraduate thesis/report of research on their findings;

3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes

The following classes count toward fulfillment of the Research Option:

Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.
A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

**BS/MS in Computer Science**

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

**Bachelor of Science in Computer Science - Thread: Devices & Intelligence**

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Devices thread is concerned with embedded computational artifacts that interact with people or the physical world. In this thread, one learns how to create and evaluate devices that operate under physical constraints such as size, power, and bandwidth. Examples include PDAs, cell phones, robots, jet engines, and intelligent appliances.

- APPH 1040 Sci Foundation of Health
  - or APPH 10 Sci of Phys Act & Health

**Core A - Essential Skills**

- ENGL 1101 English Composition I
- ENGL 1102 English Composition II
- MATH 1552 Integral Calculus

**Core B - Institutional Options**

- CS 1301 Intro to Computing

**Core C - Humanities**

- Any HUM (p. 93)
Bachelor of Science in Computer Science - Thread: Devices & Intelligence

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes

The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>
To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

**BS/MS in Computer Science**

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

**Bachelor of Science in Computer Science - Thread: Devices & Media**

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Devices thread is concerned with embedded computational artifacts that interact with people or the physical world. In this thread, one learns how to create and evaluate devices that operate under physical constraints such as size, power, and bandwidth. Examples include PDAs, cell phones, robots, jet engines, and intelligent appliances.

Total Credit Hours 126

1. Minimum grade of C required.
2. Two of three labs MUST be a sequence.
3. Junior Design Options are as follows (students must pick one option and may not change):
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   - Option 2 - ECE VIP courses and LMC 3403.
   - Option 3 - Satisfy Georgia Tech Research Option
   - Option 4 - CS 2701 (3 hours), CS 4699-12P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-12P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit. Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-up Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4. Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further Information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes

The following classes count toward fulfillment of the Research Option:

Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>

Cooperative Programs
The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)

- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

International Plan
The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

### Research Option
To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;

2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

### Research Classes
The following classes count toward fulfillment of the Research Option:

#### Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

#### Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.
A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

**BS/MS in Computer Science**

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

**Bachelor of Science in Computer Science - Thread: Devices & Systems and Architecture**

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to make Thread decisions very early in their academic careers; however, students develop computing skills even if their focus shifts as they go along.

The Devices thread is concerned with embedded computational artifacts that interact with people or the physical world. In this thread, one learns how to create and evaluate devices that operate under physical constraints such as size, power, and bandwidth. Examples include PDAs, cell phones, robots, jet engines, and intelligent appliances.

Bachelor of Science in Computer Science - Thread: Devices & Theory

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Devices thread is concerned with embedded computational artifacts that interact with people or the physical world. In this thread, one learns how to create and evaluate devices that operate under physical constraints such as size, power, and bandwidth. Examples include PDAs, cell phones, robots, jet engines, and intelligent appliances.

The Theory thread is where computing meets itself. Theory teaches students the theoretical and mathematical foundations underlying a wide range of computational disciplines. Early preparation includes discrete mathematics, algorithms, and complexity. Knowledge goals are for students to mature in development and analysis of abstract models for applications ranging from theoretical computer science to computational physics, biology, mathematics, economics, and optimization.

- ISYE 2020 Basic Statistical Meth

### Free Electives

<table>
<thead>
<tr>
<th>Course</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Free Electives</td>
<td>10</td>
</tr>
</tbody>
</table>

**Total Credit Hours:** 126

Pass-fail only allowed for Free Electives (max 6 credit hours), CS 1100, and CS 1171 (if required)

1. Minimum grade of C required.
2. Two of three labs MUST be a sequence.
3. Junior Design Options are as follows (students must pick one option and may not change):
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   - Option 2 - ECE VIP courses and LMC 3403.
   - Option 3 - Satisfy Georgia Tech Research Option.
   - Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the average credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) for a total of 5 credit hours

Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4. Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

### Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

- Undergraduate Cooperative Program (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Program (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

### International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

### Research Option

To complete the Research Option in the College of Computing, students must:

1. **Complete at least nine units of undergraduate research**
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. **Write an undergraduate thesis/report of research on their findings**;
3. **Take**
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

### Research Classes

The following classes count toward fulfillment of the Research Option:

#### Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

#### Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

### BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have
a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

**Bachelor of Science in Computer Science - Thread: Information Internetworks & Intelligence**

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Intelligence thread is where computing models intelligence. This thread is concerned with computational models of intelligence from top to bottom. To this end, we emphasize designing and implementing artifacts that exhibit various levels of intelligence as well as understanding and modeling natural cognitive agents such as humans, ants, or bees. Students acquire the technical knowledge and skills necessary for expressing, specifying, understanding, creating, and exploiting computational models that represent cognitive processes. It prepares students for fields as diverse as artificial intelligence, machine learning, perception, and cognitive science, as well as for fields that benefit from applications of techniques from those fields.

The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

Select one of the following for Embodied Intelligence:  
- CS 3630 Intro-Perception&Robotic
- CS 3790 Intro-Cognitive Science
- PSYC 3040 Sensation & Perception

Other Required Courses

- MATH 3012 Applied Combinatorics
- MATH 3215 Probability & Statistics
- MATH 3670 Statistics and Applications
- CS 2701
- ISYE 3770 Statistics & Applications
- ISYE 3770 Statistics & Applications
- ISYE 2 Probability With Apps or ISYE 2 Probability
- Other Required Courses

Free Electives

- Free Electives 10
- Total Credit Hours 126

Pass-fail only allowed for Free Electives (max six credit hours), CS 1100, and CS 1171 (if required).

1. Minimum grade of C required.
2. Two of three labs MUST be a sequence.
3. Junior Design Options are as follows (students must pick one option and may not change):
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   - Option 2 - ECE VIP courses and LMC 3403.
   - Option 3 - Satisfy Georgia Tech Research Option.
   - Option 4 - CS 2701 (3 hours), CS 4699-12P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-12P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit. Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-Up Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4. Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester)

Research Classes

The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
</tbody>
</table>
To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

Bachelor of Science in Computer Science - Thread: Information Internetworks & Media

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Media thread is where computing meets design. This thread prepares students by helping them to understand the technical and computational capabilities of systems in order to exploit their abilities to provide creative outlets.

The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

**Bachelor of Science in Computer Science - Thread: Information Internetworks & People**

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The People thread is where computing meets users. This thread prepares students by helping them to understand the theoretical and computational foundations for designing, building, and evaluating systems that treat the human as a central component.

The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Free Electives</td>
<td>9</td>
</tr>
</tbody>
</table>

Total Credit Hours: 126

Pass-fail only allowed for Free Electives (max six credit hours), CS 1100, and CS 1171 (if required).

1. Minimum grade of C required.
2. Two of three labs MUST be a sequence.
3. Junior Design Options are as follows (students must pick one option and may not change):
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   - Option 2 - ECE VIP courses and LMC 3403.
   - Option 3 - Satisfy Georgia Tech Research Option.
   - Option 4 - CS 2701 (3 hours), CS 4699-IP (3 hours), LMC 3403 (3 hours) + 9 hours OR CS 4699-IP (6 hours), LMC 3403 (3 hours) = 9 hours.

Six credits of the Junior Design option are used as Major Requirements and the average credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.

Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4. Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

### Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

### International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).
However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes

The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>
<th>Research for Credit</th>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td></td>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td></td>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Research for Pay (Audit only)</th>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td></td>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student's transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

Bachelor of Science in Computer Science - Thread: Information Internetworks & Systems and Architecture

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Systems and Architecture thread is where many of the practical skills of computing are learned. Like Theory, Systems and Architecture lies at the center of computing. It prepares students to create and evaluate computer architectures, systems, and languages across a variety of paradigms and approaches.

The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

Bachelor of Science in Computer Science - Thread: Intelligence & People

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The People thread is where computing meets users. This thread prepares students by helping them to understand the theoretical and computational foundations for designing, building, and evaluating systems that treat the human as a central component.

The Intelligence thread is where computing models intelligence. This thread is concerned with computational models of intelligence from top to bottom. To this end, we emphasize designing and implementing artifacts that exhibit various levels of intelligence as well as understanding and modeling natural cognitive agents such as humans, ants, or bees. Students acquire the technical knowledge and skills necessary for expressing, specifying, understanding, creating, and exploiting computational models that represent cognitive processes. It prepares students for fields as diverse as artificial intelligence, machine learning, perception, and cognitive science, as well as for fields that benefit from applications of techniques from those fields.

Total Credit Hours 126

Pass-fail only allowed for Free Electives (max 6 credit hours), CS 1100, and CS 1171 if required.

1. Minimum grade of C required.
2. Two of three lab sciences MUST be a sequence.
3. If CS 3790 is successfully completed, Embodied Intelligence is considered fulfilled, and three credit hours are added to Free Electives.
4. If PSYC 3040 is successfully completed, both requirements are fulfilled, and three credit hours are added to Free Electives.
Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit. Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further Information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)

b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes

The following classes count toward fulfillment of the Research Option:

Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.
Bachelor of Science in Computer Science - Thread: Intelligence & Systems and Architecture

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Systems and Architecture thread is where many of the practical skills of computing are learned. Like Theory, Systems and Architecture lies at the center of computing. It prepares students to create and evaluate computer architectures, systems, and languages across a variety of paradigms and approaches.

The Intelligence thread is where computing models intelligence. This thread is concerned with computational models of intelligence from top to bottom. To this end, we emphasize designing and implementing artifacts that exhibit various levels of intelligence as well as understanding and modeling natural cognitive agents such as humans, ants, or bees. Students acquire the technical knowledge and skills necessary for expressing, specifying, understanding, creating, and exploiting computational models that represent cognitive processes. It prepares students for fields as diverse as artificial intelligence, machine learning, perception, and cognitive science, as well as for fields that benefit from applications of techniques from those fields.

Pass-fail only allowed for Free Electives (max six credit hours), CS 1100, and CS 1171 (if required)

1. Minimum grade of C required.
2. Two of three lab sciences MUST be a sequence.
3. If CS 4460 is successfully completed, one of the Media Technologies is fulfilled, one of the Human-Centered Technology is fulfilled, and an additional 3 credit hour Thread Elective is required. Thread Electives can be chosen from the following courses: CS 2110, CS 2261, CS 3240, CS 3510, CS 3790, CS 4455, CS 4464, CS 4470, CS 4472, CS 4475, CS 4480, CS 4496, CS 4550, CS 4590, CS 4605, CS 4660, CS 4665, CS 4670, CS 4690, CS 4770, CS 4775, CS 4793, PSYC 2020, PSYC 2210, PSYC 2760, PSYC 3012, PSYC 3040, PSYC 4090, PSYC 4250 or CX 4236.
4. Junior Design Options are as follows (students must pick one option and may not change):
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   - Option 2 - ECE VIP courses and LMC 3403.
   - Option 3 - Satisfy Georgia Tech Research Option.
   - Option 4 - CS 2701 (3 hours), CS 4699-12P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-12P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are as follows (students must pick one option and may not change):
- Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4 - CS 2701 (3 hours), CS 4699-12P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-12P (6 hours), LMC 3403 (3 hours) = 9 hours

5. Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs
The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further Information:
- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/undergraduate-experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/undergraduate-experiential-education/graduate-cooperative-plan)

International Plan
The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option
To complete the Research Option in the College of Computing, students must:
1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes
The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>

</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.
Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

**BS/MS in Computer Science**

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

**Bachelor of Science in Computer Science - Thread: Media & Systems and Architecture**

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Media thread is where computing meets design. This thread prepares students by helping them to understand the technical and computational capabilities of systems in order to exploit their abilities to provide creative outlets.

The Systems and Architecture thread is where many of the practical skills of computing are learned. Like Theory, Systems and Architecture lies at the center of computing. It prepares students to create and evaluate computer architectures, systems, and languages across a variety of paradigms and approaches.

Free Electives
   Free Electives  11
Total Credit Hours  126

Pass-fail only allowed for Free Electives (max six credit hours), CS 1100, and CS 1171 (if required)

1 Minimum grade of C required.
2 Two of three lab sciences MUST be a sequence.
3 Junior Design Options are as follows (students must pick one option and may not change):
   • Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   • Option 2 - ECE VIP courses and LMC 3403.
   • Option 3 - Satisfy Georgia Tech Research Option.
   • Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours
          OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the average credits of research/VIP (5 credit
hours/2 credit hours) may be used as free electives. Students
completing VIP for their junior design requirement will be required to
complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for
a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.
Students using CREATE-X for junior design take at least 6 hours
of CREATE-X Start-up Lab and Idea 2 Prototype (I2P) and 3 of the 6
hours must be I2P. Students take these 6 hours with LMC 3403 (3
hours) for a total of 9 hours. Extra three hours for CREATE-X option
can be used in free electives.

4 Two credit hours of MATH 1554 may count along with MATH 2550 to
give Area F 18 credit hours.

Cooperative Programs
The College of Computing participates in the undergraduate and graduate
Cooperative Programs. See links below for further Information:
   • Undergraduate Cooperative Plan (http://catalog.gatech.edu/
     academics/special-academic-programs/experiential-education/
     center-career-discovery-development)
   • Graduate Cooperative Plan (http://catalog.gatech.edu/academics/
     special-academic-programs/experiential-education/graduate-
     cooperative-plan)

International Plan
The College of Computing (http://www.cc.gatech.edu) has an approved
BS CS International Plan that accommodates the unique requirements
of this option discussed in the International Plan section of the catalog
(p. 86).

However, due to the flexible nature of the Threads curriculum, the
International Plan designation may not be available with all of the Thread
combinations. Efforts will be made to work with interested students
to accommodate their individual circumstances with regard to the
International Plan designator for the Bachelor of Science in Computer
Science.

Research Option
To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;

2. Write an undergraduate thesis/report of research on their findings;

3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken
during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during
the thesis writing semester).

Research Classes
The following classes count toward fulfillment of the Research Option:

Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>

<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for
pay, students must be registered for the appropriate audit-only, research
for pay class (CS 2698 or 4698). If work on research for pay begins
after the close of registration and the student has not signed up for the
appropriate class, unfortunately it is not possible to get credit toward the
Research Option for work that term.

A research project will also fulfill the capstone design requirement if
the student registers for CS 4980 for one of the research terms. This is
typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s
transcript. For more information, see www.urop.gatech.edu (http://
www.urop.gatech.edu).
BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

Bachelor of Science in Computer Science - Thread: Modeling - Simulation & Devices

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough that students develop computing skills even if their focus shifts as they go along.

The Devices thread is concerned with embedded computational artifacts that interact with people or the physical world. In this thread, one learns how to create and evaluate devices that operate under physical constraints such as size, power, and bandwidth. Examples include PDAs, cell phones, robots, jet engines, and intelligent appliances.

The Modeling - Simulation thread is intended for students interested in developing a deep understanding and appreciation of how natural and human-generated systems such as weather, biological processes, supply chains, or computers can be represented by mathematical models and computer software. Such models are widely used today to better understand and predict the behavior of such systems. Because these models are often described and represented by mathematical expressions, and the models themselves often deal with physical phenomena, a background in mathematics and the sciences is required. Combining this background with a deep knowledge in computer science will yield the basic tools necessary to transform abstract conceptual models to computer programs that execute efficiently on digital machines. The required coursework in this thread includes topics in continuous and discrete mathematics, the sciences, and computing. Elective courses enable students to further develop and apply their knowledge and skills to a specific discipline where Modeling - Simulation plays an important role.

**Bachelor of Science in Computer Science - Thread: Modeling - Simulation & Intelligence**

The Threads represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Modeling - Simulation thread is intended for students interested in developing a deep understanding and appreciation of how natural and human-generated systems such as weather, biological processes, supply chains, or computers can be represented by mathematical models and computer software. Such models are widely used today to better understand and predict the behavior of such systems. Because these models are often described and represented by mathematical expressions, and the models themselves often deal with physical phenomena, a background in mathematics and the sciences is required. Combining this background with a deep knowledge in computer science will yield the basic tools necessary to transform abstract conceptual models to computer programs that execute efficiently on digital machines. The required coursework in this thread includes topics in continuous and discrete mathematics, the sciences, and computing. Elective courses enable students to further develop and apply their knowledge and skills to a specific discipline where Modeling - Simulation plays an important role.

The Intelligence thread is where computing models intelligence. This thread is concerned with computational models of intelligence from top to bottom. To this end, we emphasize designing and implementing artifacts that exhibit various levels of intelligence as well as understanding and modeling natural cognitive agents such as humans, ants, or bees. Students acquire the technical knowledge and skills necessary for expressing, specifying, understanding, creating, and exploiting computational models that represent cognitive processes. It prepares students for fields as diverse as artificial intelligence, machine learning, perception, and cognitive science, as well as for fields that benefit from applications of techniques from those fields.

Free Electives

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Free Electives 3</td>
<td>8</td>
</tr>
</tbody>
</table>

Total Credit Hours 126

Pass-fail only allowed for Free Electives (max 6 credit hours), CS 1100, and CS 1171 (if required).

1 Minimum grade of C required.
2 Two of three lab sciences MUST be a sequence.
3 If CS 4641 is successfully completed, it counts toward both requirements, and an addition 3 credit hours Free Elective is required.

Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit. Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-Ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes
The following classes count toward fulfillment of the Research Option:

Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science
Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

Bachelor of Science in Computer Science - Thread: Modeling - Simulation & People

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Modeling - Simulation thread is intended for students interested in developing a deep understanding and appreciation of how natural and human-generated systems such as weather, biological processes, supply chains, or computers can be represented by mathematical models and computer software. Such models are widely used today to better understand and predict the behavior of such systems. Because these models are often described and represented by mathematical expressions, and the models themselves often deal with physical phenomena, a background in mathematics and the sciences is required. Combining this background with a deep knowledge in computer science will yield the basic tools necessary to transform abstract conceptual models to computer programs that execute efficiently on digital machines. The required coursework in this thread includes topics in continuous and discrete mathematics, the sciences, and computing. Elective courses enable students to further develop and apply their knowledge and skills to a specific discipline where Modeling - Simulation plays an important role.

The People thread is where computing meets users. This thread prepares students by helping them to understand the theoretical and computational foundations for designing, building, and evaluating systems that treat the human as a central component.

Bachelor of Science in Computer Science - Thread: Modeling - Simulation & Systems and Architecture

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Modeling - Simulation thread is intended for students interested in developing a deep understanding and appreciation of how natural and human-generated systems such as weather, biological processes, supply chains, or computers can be represented by mathematical models and computer software. Such models are widely used today to better understand and predict the behavior of such systems. Because these models are often described and represented by mathematical expressions, and the models themselves often deal with physical phenomena, a background in mathematics and the sciences is required. Combining this background with a deep knowledge in computer science will yield the basic tools necessary to transform abstract conceptual models to computer programs that execute efficiently on digital machines. The required coursework in this thread includes topics in continuous and discrete mathematics, the sciences, and computing. Elective courses enable students to further develop and apply their knowledge and skills to a specific discipline where Modeling - Simulation plays an important role.

The Systems and Architecture thread is where many of the practical skills of computing are learned. Like Theory, Systems and Architecture lies at the center of computing. It prepares students to create and evaluate computer architectures, systems, and languages across a variety of paradigms and approaches.

   - Option 2 - ECE VIP courses and LMC 3403.
   - Option 3 - Satisfy Georgia Tech Research Option.
   - Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 + 8 hours of VIP credit.

Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4. Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

### Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)
International Plan
The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option
To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes
The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science
Students who want to pursue
the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core and Elective hours their fall semester and 3 hours of MS Core and Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

Bachelor of Science in Computer Science - Thread: Modeling - Simulation & Theory

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Modeling - Simulation thread is intended for students interested in developing a deep understanding and appreciation of how natural and human-generated systems such as weather, biological processes, supply chains, or computers can be represented by mathematical models and computer software. Such models are widely used today to better understand and predict the behavior of such systems. Because these models are often described and represented by mathematical expressions, and the models themselves often deal with physical phenomena, a background in mathematics and the sciences is required. Combining this background with a deep knowledge in computer science will yield the basic tools necessary to transform abstract conceptual models to computer programs that execute efficiently on digital machines. The required coursework in this thread includes topics in continuous and discrete mathematics, the sciences, and computing. Elective courses enable students to further develop and apply their knowledge and skills to a specific discipline where Modeling - Simulation plays an important role.

The Theory thread is where computing meets itself. Theory teaches students the theoretical and mathematical foundations underlying a wide range of computational disciplines. Early preparation includes discrete mathematics, algorithms, and complexity. Knowledge goals are for students to mature in development and analysis of abstract models for applications ranging from theoretical computer science to computational physics, biology, mathematics, economics, and optimization.

### Other Required Courses

- MATH 3012 | Applied Combinatorics                     | 3            
- Select one of the following:  
  - MATH 3215 Probability & Statistics  
  - MATH 3670 Statistics and Applications  
  - CEE 3770 Statistics & Applications  
  - ISYE 3770 Statistics & Applications  
  - or ISYE 2 Probability With Apps  
  - & ISYE 2 & Basic Statistical Meth

### Free Electives

- Free Electives                          11
- Total Credit Hours                       126

Pass-fail only allowed for Free Electives (max 6 hours), CS 1100, and CS 1171 (if required)

1. Minimum grade of C required.
2. Two of three lab sciences MUST be a sequence.
3. Junior Design Options are as follows (students must pick one option and may not change):  
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.  
   - Option 2 - ECE VIP courses and LMC 3403.  
   - Option 3 - Satisfy Georgia Tech Research Option.  
   - Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours  
   - OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) = 9 hours  

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.

Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4. Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

### Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:
• Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
• Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

**International Plan**

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

**Research Option**

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

**Research Classes**

The following classes count toward fulfillment of the Research Option:

**Research for Credit**

<table>

---

1 Minimum grade of C required.
2 Two of three lab sciences MUST be a sequence.
3 Junior Design Options are as follows (students must pick one option and may not change):
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   - Option 2 - ECE VIP courses and LMC 3403.
   - Option 3 - Satisfy Georgia Tech Research Option.
   - Option 4 - CS 2701 (3 hours), CS 4699-2IP (3 hours), LMC 3403 (3 hours) = 9 hours
   OR CS 4699-6IP (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.

Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-up Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.
Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs
The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

International Plan
The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option
To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes
The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>

<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science
Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

Bachelor of Science in Computer Science - Thread: Modeling-Simulation & Information Internetworks

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Modeling - Simulation thread is intended for students interested in developing a deep understanding and appreciation of how natural and human-generated systems such as weather, biological processes, supply chains, or computers can be represented by mathematical models and computer software. Such models are widely used today to better understand and predict the behavior of such systems. Because these models are often described and represented by mathematical expressions, and the models themselves often deal with physical phenomena, a background in mathematics and the sciences is required. Combining this background with a deep knowledge in computer science
will yield the basic tools necessary to transform abstract conceptual models to computer programs that execute efficiently on digital machines. The required coursework in this thread includes topics in continuous and discrete mathematics, the sciences, and computing. Elective courses enable students to further develop and apply their knowledge and skills to a specific discipline where Modeling - Simulation plays an important role.

The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

Pass-fail only allowed for Free Electives (max six credit hours) and CS 1171 (if required).
Minimum grade of C required.
Two of three labs MUST be a sequence.
Junior Design Options are as follows (students must pick one option and may not change):
- Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) + 9 hours OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) x 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.

Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-up Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Cooperative Programs
The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further Information:

- Undergraduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/center-career-discovery-development)
- Graduate Cooperative Plan (http://catalog.gatech.edu/academics/special-academic-programs/experiential-education/graduate-cooperative-plan)

International Plan
The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option
To complete the Research Option in the College of Computing, students must:
1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes
The following classes count toward fulfillment of the Research Option:

Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student's transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science
Students who want to pursue the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.
## Bachelor of Science in Computer Science - Thread: People & Systems and Architecture

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Systems and Architecture thread is where many of the practical skills of computing are learned. Like Theory, Systems and Architecture lies at the center of computing. It prepares students to create and evaluate computer architectures, systems, and languages across a variety of paradigms and approaches.

The People thread is where computing meets users. This thread prepares students by helping them to understand the theoretical and computational foundations for designing, building, and evaluating systems that treat the human as a central component.

Bachelor of Science in Computer Science - Thread: Theory & Information Internetworks

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Theory thread is where computing meets itself. Theory teaches students the theoretical and mathematical foundations underlying a wide range of computational disciplines. Early preparation includes discrete mathematics, algorithms, and complexity. Knowledge goals are for students to mature in development and analysis of abstract models for applications ranging from theoretical computer science to computational physics, biology, mathematics, economics, and optimization.

The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

International Plan designator for the Bachelor of Science in Computer Science.

Research Option
To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;

2. Write an undergraduate thesis/report of research on their findings;

3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes
The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>
<th>Research for Credit</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>Code</td>
<td>Title</td>
</tr>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and</td>

</tr>
<tr>
<td></td>
<td>Sophomore)</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science
Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have
a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

Bachelor of Science in Computer Science - Thread: Theory & Intelligence

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Theory thread is where computing meets itself. Theory teaches students the theoretical and mathematical foundations underlying a wide range of computational disciplines. Early preparation includes discrete mathematics, algorithms, and complexity. Knowledge goals are for students to mature in development and analysis of abstract models for applications ranging from theoretical computer science to computational physics, biology, mathematics, economics, and optimization.

The Intelligence thread is where computing models intelligence. This thread is concerned with computational models of intelligence from top to bottom. To this end, we emphasize designing and implementing artifacts that exhibit various levels of intelligence as well as understanding and modeling natural cognitive agents such as humans, ants, or bees. Students acquire the technical knowledge and skills necessary for expressing, specifying, understanding, creating, and exploiting computational models that represent cognitive processes. It prepares students for fields as diverse as artificial intelligence, machine learning, perception, and cognitive science, as well as for fields that benefit from applications of techniques from those fields.

Free Electives
Free Electives 17

Total Credit Hours 126

Pass-Fail only allowed for Free Electives (max six credit hours), CS 1100, and
and ISYE 2027 (or ISYE 2028 & ISYE 2828).
1 Minimum grade of C required.
2 Two of three lab sciences MUST be a sequence.
3 Junior Design Options are as follows (students must pick one option and
may not change):
   - Option 1 - LMC 3432, LMC 3431, CS 3311, CS 3312.
   - Option 2 - ECE VIP courses and LMC 3403
   - Option 3 - Satisfy Georgia Tech Research Option.
   - Option 4 - CSE 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9
     hours OR CS 4699-I2P (6 hours), LMC 3403 (3 hours) = 9 hours

   Six credits of the Junior Design option are used as Major
   Requirements and the average credits of research/VIP (5 credit
   hours/2 credit hours) may be used as free electives. Students
   completing VIP for their junior design requirement will be required to
   complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for
   a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.

   Students using CREATE-X for junior design take at least 6 hours
   of CREATE-X Start-up Lab and Idea 2 Prototype (I2P) and 3 of the 6
   hours must be I2P. Students take these 6 hours with LMC 3403 (3
   hours) for a total of 9 hours. Extra three hours for CREATE-X option
   can be used in free electives.
4 Two credit hours of MATH 1554 may count along with MATH 2550 to
give Area F 18 credit hours.

Cooperative Programs
The College of Computing participates in the undergraduate and graduate
Cooperative Programs. See links below for further information:
   - Undergraduate Cooperative Plan (http://catalog.gatech.edu/
     academics/special-academic-programs/experiential-education/
     center-career-discovery-development)
   - Graduate Cooperative Plan (http://catalog.gatech.edu/academics/
     special-academic-programs/experiential-education/graduate-
     cooperative-plan)

International Plan
The College of Computing (http://www.cc.gatech.edu) has an approved
BS CS International Plan that accommodates the unique requirements of
this option discussed in the International Plan section of the catalog
(p. 86).

However, due to the flexible nature of the Threads curriculum, the
International Plan designation may not be available with all of the Thread
combinations. Efforts will be made to work with interested students
to accommodate their individual circumstances with regard to the
International Plan designator for the Bachelor of Science in Computer
Science.

Research Option
To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken
during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during
the thesis writing semester).

Research Classes
The following classes count toward fulfillment of the Research Option:

Research for Credit

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for
pay, students must be registered for the appropriate audit-only, research
for pay class (CS 2698 or 4698). If work on research for pay begins
after the close of registration and the student has not signed up for the
appropriate class, unfortunately it is not possible to get credit toward the
Research Option for work that term.

A research project will also fulfill the capstone design requirement if
the student registers for CS 4980 for one of the research terms. This is
typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s
transcript. For more information, see www.urop.gatech.edu (http://
www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science
Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at
least 60 hours of work towards the BSCS degree. Applicants should have
a cumulative GPA of at least 3.4. This GPA must be maintained for the
student to take graduate level courses.
Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

**Bachelor of Science in Computer Science - Thread: Theory & People**

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Theory thread is where computing meets itself. Theory teaches students the theoretical and mathematical foundations underlying a wide range of computational disciplines. Early preparation includes discrete mathematics, algorithms, and complexity. Knowledge goals are for students to mature in development and analysis of abstract models for physics, biology, mathematics, economics, and optimization.

The People thread is where computing meets users. This thread prepares students by helping them to understand the theoretical and computational foundations for designing, building, and evaluating systems that treat the human as a central component.

International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;

2. Write an undergraduate thesis/report of research on their findings;

3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes

The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2698</td>
<td>Research Assistantship (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.
Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

**Bachelor of Science in Computer Science - Thread: Theory & Systems and Architecture**

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The Systems and Architecture thread is where many of the practical skills of computing are learned. Like Theory, Systems and Architecture lies at the center of computing. It prepares students to create and evaluate computer architectures, systems, and languages across a variety of paradigms and approaches.

The Theory thread is where computing meets itself. Theory teaches students the theoretical and mathematical foundations underlying a wide range of computational disciplines. Early preparation includes discrete mathematics, algorithms, and complexity. Knowledge goals are for students to mature in development and analysis of abstract models for applications ranging from theoretical computer science to computational physics, biology, mathematics, economics, and optimization.

International Plan

The College of Computing (http://www.cc.gatech.edu) has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog (p. 86).

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes

The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Proj</td>
<td>1-21</td>
</tr>
</tbody>
</table>

Research for Pay (Audit only)

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>

<td>1-12</td>
</tr>
<tr>
<td>CS 4698</td>
<td>Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu (http://www.urop.gatech.edu).

General Research Option Information (p. 90)

BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MScS program after completing at least 60 hours of work towards the BScS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.
Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours in their fall semester and 3 hours of MS Core or Elective hours in their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing (https://www.cc.gatech.edu) for more information.

**Bachelor of Science in Discrete Mathematics**

Certain areas of mathematics have become increasingly important over the past thirty years due to the introduction of computing into nearly every aspect of science, technology, and business. These are the branches of mathematics that are devoted to the study of discrete as opposed to continuous structures. Methods of discrete mathematics are used whenever objects are to be counted, when the relationships between finite sets are examined, and when processes involving a finite number of steps are studied. These methods become essential when, for example, computer algorithms are analyzed, transportation networks or communications systems are designed, or when optimal schedules are sought.

Many problems associated with the transmission and storage of information, the design of complicated circuits, or the identification of organic chemicals require the tools of discrete mathematics. Several fields of application, most notably operations research and computer science, not only use the techniques of discrete mathematics, but have also contributed significantly to the development of the subject. For example, computer algorithms are analyzed, transportation networks or communications systems are designed, or when optimal schedules are sought.

After completion of the program's core requirements in the first two years, students take

</tr>
</tbody>
</table>

Total Credit Hours 11

1 supervised research with a faculty advisor over two to three semesters
2 Four credit hours of MATH 4699 may be used in place of MATH 4080 and MATH 4090 for the BS in Discrete Mathematics.
3 a short proposal on their research project is developed
4 prepare a research report (research paper, project report/thesis); and make an oral presentation of the project

Completion of this Research Option is noted by the designation "Research Option in Mathematics" on the student's transcript.

For more information, visit: http://www.undergradresearch.gatech.edu/research-option/.

Math Undergraduate Website (http://www.math.gatech.edu/academics/undergraduate/undergraduate-programs)

**Bachelor of Science in Discrete Mathematics - Business Option**

Certain areas of mathematics have become increasingly important over the past thirty years due to the introduction of computing into nearly every aspect of science, technology, and business. These are the branches of mathematics that are devoted to the study of discrete as opposed to continuous structures. Methods of discrete mathematics...
are used whenever objects are to be counted, when the relationships between finite sets are examined, and when processes involving a finite number of steps are studied. These methods become essential when, for example, computer algorithms are analyzed, transportation networks or communications systems are designed, or when optimal schedules are sought.

Many problems associated with the transmission and storage of information, the design of complicated circuits, or the identification of organic chemicals require the tools of discrete mathematics. Several fields of application, most notably operations research and computer science, not only use the techniques of discrete mathematics, but have also contributed significantly to the development of the subject. For this reason, the curriculum for the bachelor’s degree program in discrete mathematics combines basic work in mathematics and science and advanced studies in discrete mathematics with substantial training in these areas of application.

After completion of the program’s core requirements in the first two years, students take

Business and Research Options

A student may elect to complete both the Business Option and the Research Option.

Completion of the Business and Research Options is noted by "Business Option" and "Research Option" designations on the student’s transcript.

Math Undergraduate Website (http://www.math.gatech.edu/academics/undergraduate/undergraduate-programs)

Research Option

Select one of the following Research Options: 1

MATH 2698 Research Assistantship
MATH 4698 Research Assistantship (for pay)

MATH 2699 Undergraduate Research
MATH 4699 Undergraduate Research (for credit)

LMC 4701 US Rsch Proposal Writing (take during the first or second semester of research) 3
LMC 4702 US Rsch Thesis Writing (take during the thesis-writing semester) 4

Total Credit Hours 11

1 supervised research with a faculty advisor over two to three semesters
2 Four credit hours of MATH 4699 may be used in place of MATH 4080 and MATH 4090 for the BS in Discrete Mathematics.
3 a short proposal on their research project is developed
4 prepare a research report (research paper, project report/thesis); and make an oral presentation of the project

Completion of this Research Option is noted by the designation “Research Option in Mathematics” on the student’s transcript.

For more information, visit: http://www.undergradresearch.gatech.edu/research-option/.

Bachelor of Science in Discrete Mathematics - General

Certain areas of mathematics have become increasingly important over the past thirty years due to the introduction of computing into
nearly every aspect of science, technology, and business. These are the branches of mathematics that are devoted to the study of discrete as opposed to continuous structures. Methods of discrete mathematics are used whenever objects are to be counted, when the relationships between finite sets are examined, and when processes involving a finite number of steps are studied. These methods become essential when, for example, computer algorithms are analyzed, transportation networks or communications systems are designed, or when optimal schedules are sought.

Many problems associated with the transmission and storage of information, the design of complicated circuits, or the identification of organic chemicals require the tools of discrete mathematics. Several fields of application, most notably operations research and computer science, not only use the techniques of discrete mathematics, but have also contributed significantly to the development of the subject. For this reason, the curriculum for the bachelor's degree program in discrete mathematics combines basic work in mathematics and science and advanced studies in discrete mathematics with substantial training in these areas of application.

After completion of the program's core requirements in the first two years, students take

Math Undergraduate Website (http://www.math.gatech.edu/academics/undergraduate/undergraduate-programs)

Bachelor of Science in Earth and Atmospheric Sciences

The EAS degree is comparable to traditional degrees in meteorology and environmental sciences, but the program has several unique attributes. EAS courses provide "hands-on" experiences in collection and interpretation of environmental data and in predictive modeling. The integrated approach of the program gives a broad environmental background while still allowing students to specialize in meteorology, earth science, education, or a business option. The program prepares students for graduate study or immediate employment in fields such as meteorology, air quality, environmental chemistry, exploration geophysics, geological engineering, geological hazards, impact assessment, and environmental policy. Electives (30 hours), both within the School and in other units of Georgia Tech, allow students considerable flexibility in tailoring their degree programs according to individual career goals. The School provides incentives and encouragement for undergraduate students to participate in ongoing research with the faculty.

EAS Undergraduate Information (http://www.eas.gatech.edu/undergrad/prospective-undergraduate-students)

**International Plan**

The EAS with International Plan (EAS-IP) is designed to give a student a solid, global competence within the context of an Earth and Atmospheric Science degree.

The major course requirements are the same for both EAS and EAS-IP. Where they differ is that for the EAS-IP degree, a student:

1. Spends 26 weeks abroad engaged in any combination of study abroad, research, or internship.
2. Takes their Social Science/Humanities electives in targeted areas:
   a. International relations
   b. Global economics
   c. A course about a particular country or region

3. Complete the equivalent to two years of college-level language study. See Georgia IP requirements for the different options: www.internationalplan.gatech.edu/ (http://www.internationalplan.gatech.edu)
4. Complete a capstone course that combines their global experience with their EAS degree.

**Research Option**

The BS in Earth and Atmospheric Sciences with Research Option allows students to emphasize their interest in research. To complete the Research Option in the School of Earth and Atmospheric Sciences, students must:

1. Complete at least nine units of undergraduate research
   a. Courses should span at least two, preferably three terms (note there is also a two semester sequence of proposal and thesis writing courses - see below)
   b. Research may be for either pay (EAS 4698) or credit (EAS 4699)
   c. At least six of the nine required credit hours should be on the same topic
2. Complete a research proposal outlining their research topic and project for the thesis while taking LMC 4701.
3. Write an undergraduate thesis/report of research on their findings while taking LMC 4702.

To submit your intent form to Undergraduate Research Opportunities Program (UROP), please go to the web form at http://undergradresearch.gatech.edu/ This form must be completed and can also be reached from the main UROP webpage.

For further information, consult the EAS Undergraduate Coordinator.

**General Research Option Information (p. 90)**

**BS/MS Earth and Atmospheric Sciences**

EAS offers a BS/MS Program. EAS majors may apply to the BS/MS program after completing at least thirty semester credit hours at Georgia Tech with a GPA of at least 3.5.

Students admitted to the program must maintain a cumulative GPA of at least 3.0.

As part of the program, students may use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

To apply, complete the BS/MS application form, a biographical statement, and two letters of recommendation.

EAS Undergraduate Information (http://www.eas.gatech.edu/undergrad/5-year-bsms)
The Bachelor of Science in Earth and Atmospheric Sciences (EAS) degree is comparable to traditional degrees in meteorology and environmental sciences, but the program has several unique attributes. EAS courses provide "hands-on" experiences in collection and interpretation of environmental data and in predictive modeling. The integrated approach of the program gives a broad environmental background while still allowing students to specialize in meteorology, earth science, education, or a business option. The program prepares students for graduate study or immediate employment in fields such as meteorology, air quality, environmental chemistry, exploration geophysics, geological engineering, geological hazards, impact assessment, and environmental policy. Electives (30 hours), both within the School and in other units of Georgia Tech, allow students considerable flexibility in tailoring their degree programs according to individual career goals. The School provides incentives and encouragement for undergraduate students to participate in ongoing research with the faculty.

4. Complete a capstone course that combines their global experience with their EAS degree.

EAS Undergraduate Information (http://www.eas.gatech.edu/undergrad/eas-major)

Research Option
The BS in Earth and Atmospheric Sciences with Research Option allows students to emphasize their interest in research. To complete the Research Option in the School of Earth and Atmospheric Sciences students must:

1. Complete at least nine units of undergraduate research
   a. Courses should span at least two, preferably three terms (note there is also a two semester sequence of proposal and thesis writing courses - see below)
   b. Research may be for either pay (EAS 4698) or credit (EAS 4699)
   c. At least six of the nine required credit hours should be on the same topic
2. Complete a research proposal outlining their research topic and project for the thesis while taking LMC 4701.
3. Write an undergraduate thesis/report of research on their findings while taking LMC 4702.

To submit your intent form to Undergraduate Research Opportunities Program (UROP), please go to the web form at http://undergradresearch.gatech.edu/ This form must be completed and can also be reached from the main UROP webpage.

For further information, consult the EAS Undergraduate Coordinator.

General Research Option Information (p. 90)

BS/MS Earth and Atmospheric Sciences
EAS offers a BS/MS Program. EAS majors may apply to the BS/MS program after completing at least thirty semester credit hours at Georgia Tech with a GPA of at least 3.5.

Students admitted to the program must maintain a cumulative GPA of at least 3.0.

As part of the program, students may use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

To apply, complete the BS/MS application form, a biographical statement, and two letters of recommendation.

EAS Undergraduate Information (http://www.eas.gatech.edu/undergrad/5-year-bsms)

Bachelor of Science in Economics
The program of study provides a thorough grounding in science, the humanities, and mathematics as well as the tools of economic analysis and decision making. In addition, the curriculum provides ample opportunities for career-oriented studies in fields such as accounting, finance, management science, public policy, and international affairs. Life-enriching studies in history and literature are also available.

Pass-fail only allowed for Free Electives.

Students must complete 39 hours of upper level (3000-/4000-level) courses. This requirement may be satisfied with a combination of major requirements, ECON electives, Non-Major Cluster courses and/or free electives.

1. 1000- or 2000-level course from the College of Engineering or College of Sciences. Please consult with advisor.
2. Must be selected from: AE 1770 or CEE 1770 or CS 1316 or CS 1331 or CS 1332 or ECE 2030 or ME 1770 or ME 2016 or MGT 2200.
Minimum grade of C required.

All twelve credit hours must come from the same discipline, or be part of a coherent theme. Please consult with advisor on course selection.

Courses may be applied toward completion of a minor.

International Plan
All degree programs offered by the School of Economics including the BS degree in Economics offer an International Plan (IP) Designation. In general the IP designation can be obtained by completing courses in three specified area:

1. Students are required to complete a general course in Global Economics.
2. Students are also required to complete a region specific course. Any number of International Affairs course can be used to fulfill this requirement.
3. Student are also required to complete a capstone course rounding out the international experience. The IP designation also requires students to become proficient in a language as well as spending at least twenty-six weeks in a foreign culture enrolled in school and/or participating in an internship experience.

Research Option
The School of Economics also participates in the Research Option plan offered by the Undergraduate Research Opportunities Program (UROP). The Research Option offers students the opportunity for in-depth research experience working under the guidance of a faculty mentor. Requirements for participation in the Research Option include completing nine hours of undergraduate research, at least six of which are on the same topic, writing a research proposal, taking two 1-hour courses: LMC 4701 (typically taken during the first or second semester of research) and LMC 4702 (taken during the term in which the thesis is written), and completing the thesis.

Bachelor of Science in Economics and International Affairs
The primary objectives of the Bachelor of Science degree in Economics and International Affairs are to provide students with:

1. a detailed understanding of economic theory and practice in the contemporary world;
2. an understanding of the global, interdependent, and multicultural environment in which they live; and
3. a set of quantitative and qualitative analytical skills centered around policy-oriented issue areas in economics and international affairs.

These skills will provide graduates with the capabilities to engage in strategic planning and analysis efforts in economic and international contexts.

Bachelor of Science in Electrical Engineering

The School of Electrical and Computer Engineering offers two undergraduate degree programs:

- electrical engineering (EE) and
- computer engineering (CmpE).

Both programs include elective hours, enabling students to individually tailor their programs to provide emphasis in a particular specialization or exposure to a broad range of subjects. Engineering analysis and design concepts are integrated throughout both programs, culminating in a common major design experience involving a broad range of issues including economic and societal considerations.

The EE program offers elective courses in a wide variety of specializations including analog electronics, bioengineering, computer engineering, systems and controls, microsystems and nanosystems, electronics packaging, digital signal processing, optics and photonics, electrical energy, electromagnetics, and telecommunications. Additionally, students may elect to take advanced courses in other programs such as computer science, mathematics, physics, or management.

Program Objectives

The School of Electrical and Computer Engineering has established the following student educational objectives for its undergraduate programs:

1. Graduates will be successful in the professional practice of engineering or other related fields. They will obtain employment appropriate to their background, interests, and education and will advance in their career field.

2. Graduates will engage in life-long learning; e.g., advanced education/degrees, professional development activities, and/or other career-appropriate options.

3. Graduates who are employed within engineering fields will demonstrate technical competence, such as identifying, formulating, analyzing, and creating engineering solutions using appropriate current engineering techniques, skills, and tools.

4. As appropriate to their professional or educational positions, graduates will
   a. effectively communicate technical information in multiple formats,
   b. function effectively on teams, and
   c. develop and apply electrical/computer engineering solutions within global, societal, and environmental contexts.

Additional information about program assessment (http://www.ece.gatech.edu/academics/accreditation.html) for all of the School's programs is available on the ECE website.

- **ECE 3025** Electromagnetics 3 3
- **ECE 3040** Microelectronic Circuits 3 4
- **ECE 3043** Circuits & Electronics Lab 3 3
- **ECE 3072** Elec Energy Systems 3 3
- **ECE 3084** Signals and Systems 3 3
- **ECE 4011** ECE Culminating Design 1 3 2
- **ECE 4012** ECE Culminating Design 2 3

### ECE Electives
- Senior Lab Elective 3,10
- **ECE 3-4000-Level Electives** 6,14 20

### Non-ECE Engineering Electives
- Electives 11,12,13 5

### Approved Electives
- **Approved Electives** 1,7 12

### Total Credit Hours 132

Pass-fail only allowed for Approved Electives, Humanities, and Social Sciences.

Courses that are cross-listed with ECE must be taken under the ECE number.

1. Students must complete an Ethics requirement. For a complete list of Ethics courses, please see: /academics/undergraduate/core-curriculum/ethics/ (p. 100)
2. If PHYS 2231 is taken, extra hour goes to Free Electives.
3. Minimum grade of C required.
4. Science Elective must be chosen from the following list: APH 3751, BIOL 1510, BIOL 1520, BIOL 3751, CHEM 1210, CHEM 1315, EAS 1600, EAS 1601, EAS 2600, PHYS 2021, PHYS 2022, or PHYS 2213.
5. Students must complete one Ethics course during their program. For a complete list of Ethics courses, please see: /academics/undergraduate/core-curriculum/ethics/ (p. 100)
6. ECE 3811, ECE 3812, ECE 3901, ECE 3902, ECE 3903, ECE 4699, ECE 4811, ECE 4812, ECE 4901, ECE 4902, and ECE 4903 not allowed.
7. The following courses are not allowed: HPS 1XXX, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113, MUSI 1008, MUSI 1009, MUSI 2008, MUSI 3008, MUSI 3009, MUSI 4008, and MUSI 4009, PHYS 2XXX (AP Credit). Maximum of six credit hours of Special Problems.
8. CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (Must be taken on Letter/Grade basis)
9. ECE 3005 or ECE 3006
10. ECE 4043 or ECE 4180 or ECE 4185 or ECE 4446 or ECE 4452 or ECE 4502 or ECE 4550 or ECE 4612 or ECE 4752 or ECE 4881 or ECE 4884 (with title ‘Optical Fiber Communications’)

Non-ECE Engineering Electives (5 credit hours; 2 Courses) 2000-level or above. Each course must be at least a 2 credit hour course. Allow only subject codes of AE, BMED, CEE, CHBE, COE, ISYE, ME, MSE, or NRE.

11. Cannot include BMED 2400, BMED 4781, BMED 4782, BMED 4783, BMED 4784, CHBE 2120, CHBE 4752, COE 3002, ISYE 2027, ISYE 2028, ME 2110, ME 4781, or ME 4782.
12. Cannot include any 28XX Special Topics courses or any Special Problems courses. Can only include one Thermodynamics course and one Dynamics course.
13. 9 credit hours must be 4000-level

### Cooperative Plan

The Georgia Tech Undergraduate Cooperative Education Program allows students to combine classroom study with paid practical work experience directly related to the academic major. Co-ops alternate semesters of on-campus study with semesters of full-time employment, normally beginning the program as freshmen or sophomores. Over 30 percent of ECE undergraduates participate in the co-op program.

The degree requirements for students in the co-op program are the same as those for other students in the major. The Cooperative Plan...
Research Option

The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in electrical engineering. This option includes three or four semesters of structured research and provides an open evaluation of a student's research capabilities, viewable by the public via a required Web-based research portfolio. Students who complete this option receive a designation on their transcript.

The electrical engineering aspects of the BS EE - Research Option degree requirements are identical to those for the regular BS EE. Please refer to the BS EE catalog description for general information about the degree program. Students may be able to satisfy the additional requirements imposed for the Research Option designation through appropriate choices of electives without additional credit hours to complete the degree. The Research Option designation may be pursued separately, or in combination with the Cooperative Plan and/or the International Plan.

The School of Electrical and Computer Engineering (ECE) offers a two-semester Undergraduate Research Opportunity Program (UROP), which may be completed to provide a less-intensive research experience or as the initial phase of the Research Option. Contact the ECE Academic Office for additional information about the Research Option, including specific Institute and ECE requirements, and assistance in planning your schedule to allow participation in this program.

BS/MS Electrical and Computer Engineering

This program allows highly qualified students to receive the Bachelor of Science in either Electrical Engineering or Computer Engineering and a master's degree in Electrical and Computer Engineering. The joint BS/MS degree program affords undergraduate electrical or computer engineering majors the opportunity to broaden their studies and improve their career prospects.

Eligible Georgia Tech undergraduates normally apply for this program during their junior year. Contact the Electrical and Computer Engineering Graduate Affairs Office for program information, eligibility requirements, and applications.

BS/MS Information (5 Year) (https://www.ece.gatech.edu/current-students/undergraduate/joint-bsms)

Dual BS in Electrical Engineering

Georgia Tech & Korea Advanced Institute of Science and Tech

Students may pursue the BSEE degree from the Korea Advanced Institute of Science and Technology (KAIST) as they earn the BSEE or BSCmpE from Georgia Tech. KAIST offers one of the top engineering programs in Korea and the Far East. All lectures at KAIST are given in English to better serve a growing number of students from overseas. While earning their dual degrees, students spend two years each at both Georgia Tech and KAIST.

Bachelor of Science in Environmental Engineering

The School of Civil and Environmental Engineering (CEE) offers a BS degree in Environmental Engineering (BS EnvE). The curriculum is
designed to provide students with fundamental knowledge of scientific disciplines and engineering principles that are used to address emerging environmental issues such as sustainable air, water, and land resources; human health; and environmental restoration. In the first and second years, students take courses in physics, chemistry, biology, mathematics, English composition, and introductory engineering. The third year incorporates advanced engineering topics, including solid and fluid mechanics, thermodynamics, and laboratories in engineering materials, hydraulic engineering, and environmental monitoring and process engineering. The fourth year is elective based, allowing students to select courses from specific focus areas, including biological processes, sustainability, air pollution, and water resources, in addition to technical and design electives. A senior-level capstone design course serves to integrate principles from a range of disciplines. The curriculum is intended to provide students with the flexibility to develop tailored sequences of electives to meet individual education and career objectives, while ensuring a comprehensive engineering design experience.

Prerequisites and Other Requirements

Although students are not required to take courses during the indicated semester, all prerequisites must be satisfied. In addition to Institute academic requirements for graduation with a BS degree, the following requirements must be satisfied for the BS EnvE:

1. A letter grade of C or better must be earned in
   - MATH 1501 Calculus I 4
   - MATH 1502 Calculus II 4
   - PHYS 2211 Intro Physics I 4
   - CHEM 1310 General Chemistry 4
   - COE 2001 Statics 2

2. The total number of quality points earned in CEE courses used to satisfy degree requirements must be at least twice the number of credit hours in those courses. If a course is repeated, the most recent grade will be used in applying this rule. No CEE courses may be repeated for the purpose of satisfying this rule if the original grade was a C or higher.

Program Objectives

Graduates will pursue a diverse range of careers that build on their engineering education. During the initial years of their careers, graduates will:

A. apply technical proficiency in the principles and methods essential to modern environmental engineering practice.
B. demonstrate understanding of global, societal, environmental, and sustainability issues related to environmental engineering.
C. exhibit effective communication, teamwork, entrepreneurial, and leadership skills.
D. engage in ethical and responsible practice while pursuing professional growth.

International Plan

The International Plan is a challenging and coherent academic program for undergraduates that develops global competence within the context of a student's major. It is a degree-long program that integrates international studies and experiences into any participating major at Georgia Tech. It helps to prepare Georgia Tech graduates professionally and personally for successful lives in the twenty-first century.

The International Plan is not intended to replace current international programs; it supplements them. Existing study abroad opportunities continue to be offered. It is also not intended to be an add-on to the current degree programs. It is intended to be another curriculum path to earn a degree in which international competence is integrated into the program of study. The plan can be completed within the normal timeframe of four years of undergraduate study.

The overarching model for the International Plan has four components:

1. International coursework: Three courses to include one from each of the following categories:
   a. International relations
   b. Global economics
   c. A course about a specific country or region

2. International experience: Two terms abroad (not less than 26 weeks) engaged in any combination of study abroad, research, or internship

3. Second language proficiency: All students in the program are expected to reach at least the proficiency level equivalent to two years of college-level language study. Students who use the language to study, conduct research, or participate in an internship during their international experience are expected to attain a higher level

Cooperative Plan

Since 1912, Georgia Tech has offered a five-year Undergraduate Cooperative Program to those students who wish to combine career-related experience with classroom studies. The program is the fourth oldest of its kind in the world and the largest optional co-op program in the country.

Students alternate between work assignments and classroom studies until they complete four or five semesters of work. Co-op students with an environmental engineering major complete the same coursework on campus that is completed by regular four-year students. Most co-op students begin the program as freshmen or sophomores and are classified as full time students regardless of whether they are attending classes on campus or are full time at an employer's location.

Students who participate in the program have the opportunity to develop career interests, become more confident in their career choices, and develop human relations skills through their work experience. Graduates of the program receive a bachelor's degree with a Cooperative Plan Designation.

The Undergraduate Professional Internship Program is for environmental engineering students who do not participate in the Cooperative Program, but want some career-related experience before graduation. Students generally work for one semester, usually in the summer, with an option for more work experiences. Students must have completed at least 30 hours of coursework at Georgia Tech before they can participate in the program.

For more information about all of the programs in the Center for Career Discovery and Development, visit www.careerdiscovery.gatech.edu

For more information about all of the programs in the Center for Career Discovery and Development, visit www.careerdiscovery.gatech.edu (http://careerdiscovery.gatech.edu).
of proficiency. Language proficiency is determined by testing (not course credits).

4. Culminating course: A capstone course in the major designed to tie the international studies and experiences together with the student's major

Completion of the International Plan is recognized by a designation on the student's diploma indicating completion of the degree with global competence.

For additional information about the International Plan visit www.oie.gatech.edu/internationalplan (http://www.internationalplan.gatech.edu).

Research Option
The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in environmental engineering. In order to graduate with a BS EnVE – Research Option degree, the students must:

Complete at least nine units of undergraduate research (over at least two, preferably three terms). Research may be for either pay (CEE 2698 or CEE 4698) or credit (CEE 2699 or CEE 4699). Research for credit may be used towards the BS EnVE approved elective requirements. Write an undergraduate thesis/report of research on their findings. This is usually done during the graduating term. The thesis will be published in the Georgia Tech Library.

Take two 1-hour classes: LMC 4701 (typically taken during the first or second semester of research) and LMC 4702 (taken during the thesis-writing semester).

At least six of the nine required credit hours of research should be on the same topic. A research proposal must be approved by a faculty advisor and one other faculty member. This proposal will be completed in LMC 4701 which serves as a prerequisite for LMC 4702. Completion of Research Option is noted on the student's transcript.

Joint BS/MS Degree Program
The joint BS/MS program is designed to attract the best-of-the-best undergraduate students and is especially intended for students who demonstrate an interest in, and ability for, additional education beyond the bachelor's degree.

Students will be eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech and appropriate progress in their degree program. As a practical matter, students should apply for the program at least three semesters prior to graduation in order to take graduate-level courses prior to receiving their BS degree. Students must have a Georgia Tech GPA of 3.5 or higher for admission into the BS/MS Program in Environmental Engineering.

This program is available only to those completing a Bachelor’s degree with majors of Civil Engineering or Environmental Engineering.

The key components of this program are intense interaction among students and faculty, including mentoring and undergraduate research, and careful advising and course planning to enable students to begin challenging coursework in their fourth year of study.

Students in the joint BS/MS program remain undergraduates until they meet the requirements for the bachelor's degree, at which point they will receive the BSEnvE degree. Their status will then be changed to graduate status. Graduate school application fees and the GRE requirements are waived.

Once admitted, a GPA of at least 3.0 must be maintained to remain in the program. Additionally, students in the BS/MS program are eligible to use the Graduate Course Option (http://www.catalog.gatech.edu/academics/graduate/masters-degrees/graduate-course-option) even if their cumulative grade-point average is below 3.5 at the time they complete their bachelor's degree.

Bachelor of Science in Global Economics and Modern Languages
In partnership with the School of Modern Languages (http://www.modlangs.gatech.edu), the School of Economics offers a Bachelor of Science in Global Economics and Modern Languages with language concentrations in Chinese, French, German, Japanese, Russian, or Spanish. Global Economics and Modern Language graduates are especially attractive to employers with long-term interests outside the United States who demand employees prepared to successfully navigate the challenges and opportunities presented by global, economically interdependent, multilingual, and multicultural environments. Through a variety of coursework and the opportunity to spend a semester abroad, students have in-depth knowledge not only of their own cultures but also have the capacity to function effectively in a second culture. Coursework focuses on rigorous training in economics combined with extensive foreign language study. Students are expected to develop advanced communication skills and professional competency in the language of choice through courses and extracurricular opportunities that focus on current issues, classic literature, business applications, and cross-cultural perspectives.

Students pursuing this degree must complete forty-five semester hours of general education requirements, twenty-four semester hours of French, German, or Spanish courses at or above the 3000 level or twenty-four semester hours of Chinese, Japanese, or Russian courses at or above the 2002 level, and twenty-four semester hours of Economics. This degree program provides significant flexibility for students through eleven hours of free electives and six semester hours of non-major cluster electives.

Note: Non-credit requirement

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in Global Economics and Modern Languages, all GEML students are required to fulfill an International Experience as part of their graduation requirements. This requirement can met through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a country whose primary language is in the student’s language of study, the student must justify and receive prior approval.

2. Complete a 15-week internship or similar experience of at least 10 hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

1 Any 1000- or 2000-level course with the following prefixes: AE, APHP, BIOL, BMED, CEE, CHBE, CHEM, EAS, ECE, ISYE, MATH, ME, MSE, NRE, PHYS.

2 Students must complete 21 credit hours of Chinese electives at 2002 level or above. Six credit hours are counted in Humanities, six in Core Area F, and 9 in Modern Languages Requirements.

3 Minimum grade of C required.

4 ECON and CHIN courses not allowed for cluster electives.

5 One course from MATH 3215, ISYE 3770 or (MGT 2250 - minimum B)
Six credit hours of Econ Electives must be chosen from one of the following Specialization areas:

- Industrial Organization: ECON 4340 or ECON 4180 or ECON 4360 or
- International Economics: ECON 4311 or ECON 4350 or ECON 4355 or ECON 4610 or
- Environmental Economics: ECON 3300 or ECON 4421 or ECON 4440

CHIN courses below 2002 may count toward the free elective courses.

International Plan

The degree requirements for the Global Economics and Modern Languages (Chinese, French, German, Japanese, Russian and Spanish)-International Plan are basically the same as for the GEML degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese or Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad may typically consist of one semester of study plus a significant amount of time spent with a research or work project abroad. Students may also opt for a second semester. GEML-IP majors are also strongly encouraged to enroll in the LBAT intensive summer programs offered by the School of Modern Languages.

In addition to gaining advanced global competence, the International Plan designation will set you apart from other applicants with recruiters from top companies and governmental agencies.

Other Required Courses include the following, and these can easily be obtained within the regular required curriculum offerings of ECON and Modern Languages. These requirements can also be met with courses taken abroad, upon consultation with ECON degree advisors.

1. At least one course focused on international relations historically and theoretically, including topics such as
   a. the role of state sovereignty and nationalism and non-state actors in the international system;
   b. international conflict, peace, security, intervention, and nation-building;
   c. international organizations, law, and ethics;
   d. transnational problems of the environment, terrorism, health, and migration;
   e. among other issues (see INTA courses).

2. At least one course that provides a historical and theoretical understanding of the global economy, including topics such as
   a. international trade, finance, investment, and production;
   b. regional economic integration (such as the EU);
   c. economic development and modernization;
   d. questions of natural resource sustainability.

3. At least one course that provides familiarity with an area of the world or a country that allows them to make systematic comparisons with their own society and culture. This course could come from various disciplinary perspectives, including history, public policy, philosophy, international affairs, literature, economics, management, architecture, among others. Upper division Modern Language course will count here.

4. A culminating course, occurring either at the end of or after the international experience that integrates knowledge of the discipline and the international experience in a global context.

Bachelor of Science in Global Economics and Modern Languages - French

- Environmental Economics: ECON 3300 or ECON 4421 or ECON 4440

FREN courses below 2002 may count toward the free elective courses.

### International Plan

The degree requirements for the Global Economics and Modern Languages (Chinese, French, German, Japanese, Russian and Spanish) - International Plan are basically the same as for the GEML degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese or Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad may typically consist of one semester of study plus a significant amount of time spent with a research or work project abroad. Students may also opt for a second semester. GEML-IP majors are also strongly encouraged to enroll in the LBAT intensive summer programs offered by the School of Modern Languages.

In addition to gaining advanced global competence, the International Plan designation will set you apart from other applicants with recruiters from top companies and governmental agencies.

Other Required Courses include the following, and these can easily be obtained within the regular required curriculum offerings of ECON and Modern Languages. These requirements can also be met with courses taken abroad, upon consultation with ECON degree advisors.

1. Complete a minimum 6-week overseas experience. If this is not a program offered by the School of Modern Languages. IP majors are also strongly encouraged to enroll in the LBAT intensive summer programs offered by the School of Modern Languages.
2. At least one course focused on international relations historically and theoretically, including topics such as
   a. the role of state sovereignty and nationalism and non-state actors in the international system;
   b. international conflict, peace, security, intervention, and nation-building;
   c. international organizations, law, and ethics;
   d. transnational problems of the environment, terrorism, health, and migration;
   e. among other issues (see INTA courses).
3. At least one course that provides a historical and theoretical understanding of the global economy, including topics such as
   a. international trade, finance, investment, and production;
   b. regional economic integration (such as the EU);
   c. economic development and modernization; and
   d. questions of natural resource sustainability.
4. A culminating course, occurring either at the end of or after the international experience that integrates knowledge of the discipline and the international experience in a global context.

### Course Requirements

- **ECON 3110  Adv Microeconomic Analysis**
- **ECON 3120  Advanced Macroeconomics**
- **ECON 3150  Econ & Finance Modeling**
- **ECON 3161  Econometric Analysis**
- **ECON 4311  Global Enterprise**
- **ECON 4910  Individual Research**

**ECON Electives**

- **ECON Electives**

**Non-Major Cluster**

- **Cluster Electives**

**Modern Languages**

- **FREN 4500  Intercultural Seminar**
- **Modern Languages**

**Free Electives**

- **Free Electives**

Note: Non-credit requirement

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in Global Economics and Modern Languages, all GEML students are required to fulfill an International Experience as part of their graduation. This requirement can be met through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a program offered by the School of Modern Languages. IP majors are also strongly encouraged to enroll in the LBAT intensive summer programs offered by the School of Modern Languages.
2. Complete a 15-week internship or similar experience of at least 10 hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

Any 1000- or 2000-level course with the following prefixes: AE, APPH, BIOL, BMED, CEE, CHBE, CHEM, EAS, ECE, ISYE, MATH, ME, MSE, NRE, PHYS.

Students must complete 21 credit hours of French electives at 2002 level or above. Six credit hours are counted in Humanities, six in Core Area F, and 9 in Modern Languages Requirements.

Minimum grade of C required.

ECON and FREN courses not allowed for cluster electives.

One course from MATH 3215, ISYE 3770 or (MGT 2250 - minimum B)

Six credit hours of Econ Electives must be chosen from one of the following Specialization areas:

- Industrial Organization: ECON 4340 or ECON 4180 or ECON 4360 or
- International Economics: ECON 4311 or ECON 4350 or ECON 4355 or ECON 4610 or
- Environmental Economics: ECON 3300 or ECON 4421 or ECON 4440

FREN courses below 2002 may count toward the free elective courses.
Bachelor of Science in Global Economics and Modern Languages - German

In partnership with the School of Modern Languages (http://www.modlangs.gatech.edu), the School of Economics offers a Bachelor of Science in Global Economics and Modern Languages with language concentrations in Chinese, French, German, Japanese, Russian, or Spanish. Global Economics and Modern Language graduates are especially attractive to employers with long-term interests outside the United States who demand employees prepared to successfully navigate the challenges and opportunities presented by global, economically interdependent, multilingual, and multicultural environments. Through a variety of coursework and the opportunity to spend a semester abroad, students have in-depth knowledge not only of their own cultures but also have the capacity to function effectively in a second culture. Coursework focuses on rigorous training in economics combined with extensive foreign language study. Students are expected to develop advanced communication skills and professional competency in the language of choice through courses and extracurricular opportunities that focus on current issues, classic literature, business applications, and cross-cultural perspectives.

Students pursuing this degree must complete forty-five semester hours of general education requirements, twenty-four semester hours of French, German, or Spanish courses at or above the 3000 level or twenty-four semester hours of Chinese, Japanese, or Russian courses at or above the 2002 level, and twenty-four semester hours of Economics. This degree program provides significant flexibility for students through eleven hours of free electives and six semester hours of non-major cluster electives.

### Major Requirements

- **ECON Electives**: 3 credit hours
- **ECON Electives**: 6 credit hours
- **Non-Major Cluster**: 12 credit hours
- **Modern Languages**: 3 credit hours
- **Free Electives**: 9 credit hours

**Total Credit Hours**: 122

**Note**: Non-credit requirement

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in Global Economics and Modern Languages, all GEML students are required to fulfill an International Experience as part of their graduation requirements. This requirement can be met through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a country whose primary language is in the student’s language of study, the student must justify and receive prior approval.
2. Complete a 15-week internship or similar experience of at least 10 hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

This requirement can be fulfilled through the following courses:

- Any 1000- or 2000-level course with the following prefixes: AE, APPH, BIOL, BMED, CEE, CHBE, CHEM, EAS, ECE, ISYE, MATH, ME, MSE, NRE, PHYS.

- Students must complete 21 credit hours of Russian electives at 2002 level or above. Six credit hours are counted in Humanities, six in Core Area F, and 9 in Modern Languages Requirements.

- Minimum grade of C required.

- ECON and RUSS courses not allowed for cluster electives.

- One course from MATH 3215, ISYE 3770 or (MGT 2250 - minimum B)
Six credit hours of Econ Electives must be chosen from one of the following Specialization areas:

- Industrial Organization: ECON 4340 or ECON 4180 or ECON 4360 or ECON 4610 or ECON 4421

RUSS courses below 2002 may count toward the free elective courses.

Bachelor of Science in History, Technology, and Society

The bachelor’s degree in History, Technology, and Society (BS-HTS) is comparable to traditional degrees in history and sociology, but has several attributes that make it unique and give our students an edge over other liberal arts majors. A degree in HTS requires broad-based training in humanities, mathematics, computing, science, and social sciences, giving our majors a truly rigorous and broad education. The program’s focus on global issues related to the origin and impact of technology and science is also distinctive, providing students with the critical tools needed to understand the development of the modern world. Students earning a degree in HTS may participate in both the International Plan and the Research Option, which enhance the undergraduate experience. Finally, the HTS curriculum allows one of the largest numbers of free electives of any major at Georgia Tech, giving our students a chance to pursue minor degrees, certificates, and other interests that prepare them for the broadest possible range of careers, from government and politics to law and medicine to journalism and business.

Custom Specialization

Non-Major Cluster
Non-Major Cluster 4.5 12

Free Electives
Free Electives 5 18

Total Credit Hours 122

Pass/fail: Students can do pass/fail for HTS electives, non-major cluster, and free electives. However, students who complete at least 91 credit hours at Georgia Tech are limited to 6 pass/fail credit hours in HTS electives and students who complete less than 90 credit hours at Tech are limited to 3 pass/fail credit hours in HTS electives.

All courses in the HTS core must be taken for a letter grade and the student must earn a C or better.

One grade of D (three credits) is allowed in HTS electives.

1 This must be a different class from that used to satisfy the Legislative Requirement.
2 Any HTS course that carries a Social Science attribute.
3 Minimum grade of C required.
4 12 credits required in either the same prefix or part of a coherent theme. Please consult with advisor on course selection.
5 Free Electives and Non-Major Cluster electives can be satisfied with a minor, certificate, or other coursework. Please consult with the advisor on course selection.
6 In consultation with an advisor, students choose three HTS classes with a coherent theme that is not reflected in the other seven pre-approved areas of specialization.
7 Please see an advisor for additional Math sequence options for Core D Math requirement.

International Plan

This degree program combines the traditional benefits of an HTS degree with the additional benefits of international education. The School of History and Sociology strongly encourages study abroad programs and believes that international experiences greatly enhance one’s undergraduate education.

The number of credit hours needed for this degree (BS in History, Technology, and Society-International Plan, or BSHTS-IP) is the same as for the traditional bachelor’s degree in HTS. However, the International Plan (IP) degree has different requirements. These requirements are discussed briefly in the next paragraph. In most cases, HTS majors will be able to use their non-major cluster and free-elective hours to fulfill the HTS-IP requirements.

There are two IP tracks:

• the English Language Option and
• the Foreign Language Option.

The HTS degree supports both options, which the Institute deems to be equal in difficulty and value. Both tracks require a total of twenty-
six weeks in residence in a specific foreign country or region. These weeks must be accumulated in one or two trips abroad; any combination of coursework, research, internship, or work may apply to this twenty-six week total, given the approval of the advisor. Both IP tracks require a minimum of twelve credit hours in one foreign language and demonstration of proficiency in that language. Both require participants to take a cluster of courses from a menu of IP-designated electives; both require completion of a capstone course, which will be offered through the HTS degree program.

For more complete information, see the official Institute IP website through Georgia Tech's Office of International Education.

Office of International Education (http://www.oie.gatech.edu)

Research Option

The School of History and Sociology Research Option allows students to incorporate additional research, writing, and presentation experiences into the HTS major program of study. Students interested in going on to graduate or professional school are encouraged to consider the research option, which allows a student to complete a significant scholarly work for presentation at a professional conference and/or publication.

In addition to the courses required of all HTS majors, including eight credit hours of research seminars and the three-credit HTS research methods course, students enrolled in the Research Option will also complete six hours of supervised individual undergraduate research and two 1-hour writing courses: LMC 4701 (typically taken during the first or second semester of research) and LMC 4702 (taken during the term in which the thesis is written).

Bachelor of Science in Industrial Design

Undergraduate education in industrial design at Georgia Tech leads to the Bachelor of Science Degree in Industrial Design that is accredited by the National Association of Schools of Art and Design (NASAD). The undergraduate program prepares students for a career in design practice as well as for graduate education in industrial design and in related fields. The School of Industrial Design at Georgia Tech offers the only industrial design degree program in the University System of Georgia.

Industrial design is the professional practice of creating products that enhance the function, usability, value, and appearance of products with the goal of benefiting the user, manufacturer, community, and the environment. Also known as product design, industrial design education prepares students to design systems and tangible artifacts including consumer and recreational products, business and industrial products, medical and computer equipment, and transportation and environments. Both generalist and specialist, industrial designers tend to be part artist, part entrepreneur and engineer.

Cross-disciplinary education is the primary focus of the four-year industrial design program. The university education provides:

1. an understanding of the arts (liberal and visual arts), technology (engineering and sciences), humanities (sociology and psychology), and management (marketing and branding).
2. a collaborative and shared education through an emphasis on the design studio, and
3. an opportunity to periodically participate in real-life design projects through sponsored studio projects.

The undergraduate program offers a well-rounded course of study with an emphasis on critical thinking, basic design, design skills, and design communication. There are 6 industrial design studios after the first year suite of introductory design classes. The industrial design studios focus on a sequential learning path which begins with form making to product design to post design that involves development and manufacturing. Design projects stress developing a broad education through an exposure to academic and professional considerations. The School encourages students to develop a diverse background in order to expand individual talents and respond to emerging opportunities in the field. Faculty members are scholars and design practitioners, giving students the opportunity to learn about both.

All work executed in the College becomes the property of the College and will be retained or returned at the discretion of the faculty. The faculty also reserves the right to refuse credit for any project executed outside the precincts of the College or otherwise executed without proper coordination with the instructor.

Grade Requirements

All required industrial design courses must be completed with a grade of C or higher. A student may not enter a more advanced studio design course until this requirement is met; students with such academic deficiencies may be required to delay their studies for one year. Studio design courses must be taken in sequence beginning fall semester. A minimum of 9 credit hours may be taken on a pass/fail basis. Only courses taken as free electives in the undergraduate curriculum maybe taken for pass/fail credit. See "Information for Undergraduate Students" for Institute regulations regarding pass/fail courses.

is structured to allow for the Fall and Spring third year semester to be completed at an industrial design program in another country. Students are responsible for locating those courses at the host institution that will serve as equivalents to the courses listed in the curriculum.

Degree requirements are not modified but are satisfied with specialized courses and appropriate choices of elective courses, which includes globally focused courses within the major area and a capstone Senior Studio: Global Awareness. Consult with the Industrial Design Program for the suggested curriculum.

All International Plan participants must develop proficiency in a language other than English. Unless otherwise approved, the language chosen to fulfill this requirement will have a relationship to the country or region in which the student plans to fulfill the 26 week requirement. Any variance will require approval from the IP faculty representative and the IP Committee.

**Admission Requirements**

- Applicants must be undergraduate degree-seeking Georgia Tech students in one of the participating majors.
- Students must submit an application via the International Plan website. Notification of acceptance will be communicated via the student’s Georgia Tech e-mail address.
- There is no GPA requirement for first-semester freshmen applying to the International Plan. All other applicants must have at least a 2.5 GPA at the time of application.

International Plan (http://www.internationalplan.gatech.edu)
Industrial Design International Studies (http://www.id.gatech.edu/academics/international-studies)

**Bachelor of Science in Industrial Engineering**

The principal strength of the academic program leading to the Bachelor of Science in Industrial Engineering (BS IE) is its blend of mathematics, physical sciences and business applications. The methodology foundation is built on probability, optimization, statistics, computing, and economics. The program features a unique concentration system that allows students to get a broad industrial engineering education and to specialize in areas such as

- Economic and Financial Systems (p. 364),
- Operations Research (p. 369),
- Quality and Statistics (p. 361),
- Supply Chain Engineering (p. 371), and
- General Industrial Engineering (p. 366).

This blend produces the flexibility that is inherent in the field of industrial and systems engineering, and that affords BSIE graduates a wide array of career options. Our graduates are constantly looking for ways to make anything in life work better, more efficiently and more productively.

**Program Educational Objectives**

The Stewart School of Industrial & Systems Engineering expects our graduates (in 3 to 6 years):

- to become successful Industrial Engineers;
- to take leadership in their endeavors;

**International Plan**

The International Plan offers a challenging academic program that develops global competence within the context of Industrial Design.

The International Plan is a four-year program that builds global competence by requiring students to spend two full terms at an Industrial Design program in another country to develop a proficiency in a second language, and to take internationally oriented coursework. This experience provides students a deeper global competency than traditional international opportunities. The eight-semester sequence
The major components of International Plan include:

1. Twenty six weeks of international experience (work, research or study)
2. Foreign language requirements. This can be satisfied by oral proficiency measured tested by an exam by the American Council for the Teaching of Foreign Languages (ACTFL). The foreign language requirement can also be satisfied by course work. It means the passing of two 2XXX level language classes.
3. Three internationally oriented courses plus an addendum in the capstone design on international perspective.

Cooperative Plan

The Co-op Program enhances the student’s education, employability and earnings potential. For more details, visit co-op pages from Georgia Tech's co-op Website [http://www.coop.gatech.edu](http://www.coop.gatech.edu).

- Co-op courses are designated in the schedule of classes as co-op. All students interested in registering for this course(s) must have been accepted into the co-op Program. Students must have met with their co-op advisor to be issued a permit to register for restricted course(s). Students must register for the co-op course every semester they are at work in order to receive credit for the work term.
- Students who are in the Co-op Program (U.S. citizens and Permanent Residents) and are returning to work should automatically receive a permit but are advised to remain in close contact with their co-op advisor.
- International students must receive work authorization from the Office of International Education prior to each work term before a course registration permit will be issued.
- Neither co-op nor internship courses count for credit towards the industrial engineering degree; however, successful completion of the Co-op Program leads to a degree designator.

For more information about all of the programs in the Center for Career Discovery and Development, visit Center for Career Discovery and Development [http://www.careerdiscovery.gatech.edu](http://www.careerdiscovery.gatech.edu).

International Plan

The Georgia Tech International Plan is designed to prepare graduates to develop significant global competence. Many Industrial Engineers work in consulting companies, supply chain, economic decision systems, etc. Global perspectives are very important. The significant global competence will give them an additional advantage on the job market and on the jobs.

The major components of International Plan include:

- to be self-learners and starters;
- to succeed in professional and educational advancement.
- Bachelor of Science in Industrial Engineering - General (p. 366)
- Bachelor of Science in Industrial Engineering - Economic and Financial Systems (p. 364)
- Bachelor of Science in Industrial Engineering - Operations Research (p. 369)
- Bachelor of Science in Industrial Engineering - Quality and Statistics (p. 361)
- Bachelor of Science in Industrial Engineering - Supply Chain Engineering (p. 371)

BS/MS Program

A combined BS/MS program that will allow students to graduate with a Bachelor of Science in Industrial Engineering and a Master of Science in Supply Chain Engineering. Contact the School of Industrial Engineering for more information.

Bachelor of Science in Industrial Engineering - Quality and Statistics

The principal strength of the academic program leading to the Bachelor of Science in Industrial Engineering (BS IE) is its blend of mathematics, physical sciences and business applications. The methodology foundation is built on probability, optimization, statistics, computing, and economics. The program features a unique concentration system that allows students to get a broad industrial engineering education and to specialize in areas such as:

- Economic and Financial Systems (p. 364),
- Operations Research (p. 369),
- Quality and Statistics (p. 361),
- Supply Chain Engineering (p. 371), and
- General Industrial Engineering (p. 366).

This blend produces the flexibility that is inherent in the field of industrial and systems engineering, and that affords BSIE graduates a wide array of career options. Our graduates are constantly looking for ways to make anything in life work better, more efficiently and more productively.

Program Educational Objectives

The Stewart School of Industrial & Systems Engineering expects our graduates (in 3 to 6 years):

- to become successful Industrial Engineers;
- to take leadership in their endeavors;
- to be self-learners and starters;

Free Electives

Total Credit Hours 128

Pass-fail only allowed for Free Electives, Humanities, and the Social Sciences elective.

Students must achieve a minimum GPA of 2.0 in the BSIE Major.

1. Students must earn a C or better in all required MATH courses in the BSIE curriculum.
2. Students may also complete MATH 1554 and MATH 2550 to satisfy math requirements. If MATH 1554/MATH 2550 combination is taken, then two hours from MATH 1554 may be used in Area F to give Area F 18 hours.
3. Only one EAS course can be used toward ISYE Lab Science requirements.
4. PSYC 1101 will satisfy the Ethics requirement.
5. Students must choose from the following to meet the Environmental requirement: BIOL 1510, BIOL 2335, CEE 2300, CEE 4300, EAS 1600, EAS 1601, EAS 2600, EAS 2750, EAS 3110, EAS 4480, ECON 4440, ISYE 4803 titled "Energy and Environmental Analysis," ISYE 4501, SLS 3120, or PHYS 2750.
6. Students must complete courses from two different eligible engineering elective subjects.
7. Only one computing course (CX or CS) may count toward engineering elective requirements, unless given approval from ISyE Associate Chair.
8. Students must take at least 9 credits of engineering electives. Three credits must be chosen from ECE 2020, ECE 2026, or ECE 3710/ECE 3741. For the remaining 6 credits, at least 2 credits must be from Group 1.
9. To count toward the Engineering Elective Group 2 requirement, all Vertically-Integrated Projects (VIP) courses must be approved by the ISyE Associate Chair.
10. Students must complete 6 concentration courses: 3 depth courses and 3 breadth courses. A minimum of 5 of the 6 required concentration courses must be ISYE courses.
11. These 3 courses must be from least 2 of the following groups:
    - Supply Chain Engineering (ISYE 3103 or ISYE 3104 or ISYE 4111 or ISYE 4803 titled "Advanced Manufacturing" or ISYE 4803 titled "Facility Layout and Warehousing")
    - Economic and Financial Systems (ISYE 4301 or ISYE 4311 or ECON 3150 or ECON 4340 or ECON 4350 or MGT 3078)
    - Operations Research (ISYE 4133 or ISYE 4232 or ISYE 4803 titled "Advanced Simulation")
12. ISYE 4803 must be titled "Advanced Manufacturing" or "Advanced Simulation" or "Facility Layout and Warehousing" or "Supply Chain Project" or "Linear and Convex Optimization" or "Energy and Environmental Analysis."
13. MATH 1113, MGT 2250, ISYE 3770, and PHYS 2XXX (AP credit) not allowed.

Cooperative Plan

The Co-op Program enhances the student's education, employability and earnings potential. For more details, visit co-op pages from Georgia Tech's co-op Website (http://www.coop.gatech.edu).

- Co-op courses are designated in the schedule of classes as co-op. All students interested in registering for this course(s) must have been accepted into the co-op Program. Students must have met with their co-op advisor to be issued a permit to register for restricted course(s). Students must register for the co-op course every semester they are at work in order to receive credit for the work term.
- Students who are in the Co-op Program (U.S. citizens and Permanent Residents) and are returning to work should automatically receive a permit but are advised to remain in close contact with their co-op advisor.
- International students must receive work authorization from the Office of International Education prior to each work term before a course registration permit will be issued.
- Neither co-op nor internship courses count for credit towards the industrial engineering degree; however, successful completion of the Co-op Program leads to a degree designator.

International Plan

The Georgia Tech International Plan is designed to prepare graduates to develop significant global competence. Many Industrial Engineers work in consulting companies, supply chain, economic decision systems, etc. Global perspectives are very important. The significant global competence will give them an additional advantage on the job market and on the jobs.
The major components of International Plan include

1. Twenty six weeks of international experience (work, research or study)
2. Foreign language requirements. This can be satisfied by oral proficiency measured tested by an exam by the American Council for the Teaching of Foreign Languages (ACTFL). The foreign language requirement can also be satisfied by course work. It means the passing of two 2XXX level language classes.
3. Three internationally oriented courses plus an addendum in the capstone design on international perspective.

For more details of the International Plan, including application materials, visit the Office of International Education (http://www.internationalplan.gatech.edu). Please also see The International Plan Option in ISyE (http://www.isye.gatech.edu/academics/undergraduate/international/isyemainplan.pdf).

**BS/MS Program**

A combined BS/MS program that will allow students to graduate with a Bachelor of Science in Industrial Engineering and a Master of Science in Supply Chain Engineering. Contact the School of Industrial Engineering for more information.

### Bachelor of Science in Industrial Engineering - Economic and Financial Systems

The principal strength of the academic program leading to the Bachelor of Science in Industrial Engineering (BS IE) is its blend of mathematics, physical sciences and business applications. The methodology foundation is built on probability, optimization, statistics, computing, and economics. The program features a unique concentration system that allows students to get a broad industrial engineering education and to specialize in areas such as

- Economic and Financial Systems
- Operations Research
- Quality and Statistics
- Supply Chain Engineering
- General Industrial Engineering

This blend produces the flexibility that is inherent in the field of industrial and systems engineering, and that affords BSIE graduates a wide array of career options. Our graduates are constantly looking for ways to make anything in life work better, more efficiently and more productively.

### Program Educational Objectives

The Stewart School of Industrial & Systems Engineering expects our graduates (in 3 to 6 years):

- to become successful Industrial Engineers;
- to take leadership in their endeavors;
- to be self-learners and starters;
- to succeed in professional and educational advancement.

Free Electives 13
Free Electives 11
Total Credit Hours 128

Pass-fail only allowed for Free Electives, Humanities, and the Social Sciences elective.

Students must achieve a minimum GPA of 2.0 in the BSIE Major Requirements to graduate.

1 Students must earn a C or better in all required MATH courses in the BSIE curriculum.
2 Students may also complete MATH 1554 and MATH 2550 to satisfy Math requirements. If MATH 1554/MATH 2550 combination is taken, then two hours from MATH 1554 may be used in Area F to give Area F 18 hours.
3 Only one EAS course can be used toward ISYE Lab Science requirements.
4 PSYC 1101 will satisfy the Ethics requirement.
Students should choose from the following for Environmental Requirement: BIOL 1510, BIOL 2335, CEE 2300, CEE 4300, EAS 1600, EAS 1601, EAS 2600, EAS 2750, EAS 3110, EAS 4480, ECON 4440, ISYE 4803 titled "Energy and Environmental Analysis", ISYE 4501, SLS 3120, or PHYS 2750.

Students must complete courses from two different eligible engineering elective subjects.

Only one computing course (CX or CS) may count toward engineering elective requirements, unless given approval from ISyE Associate Chair.

Students must take at least 9 credits of engineering electives. Three credits must be chosen from ECE 2020, ECE 2026, or ECE 3710/ECE 3741. For the remaining 6 credits, at least 2 credits must be from Group 1.

To count toward the Engineering Elective Group 2 requirement, all Vertically-Integrated Projects (VIP) courses must be approved by the ISyE Associate Chair.

Students must complete 6 concentration courses: 3 depth courses and 3 breadth courses. A minimum of 5 of the 6 required concentration courses must be ISYE courses.

These 3 courses must be from at least 2 of the following groups:

- Supply Chain Engineering (ISYE 3103 or ISYE 3104 or ISYE 4111 or ISYE 4803 titled "Advanced Manufacturing," or ISYE 4803 titled "Facility Layout and Warehousing") or
- Quality and Statistics (ISYE 3039 or ISYE 4031 or ISYE 4034 or ISYE 4803 titled "Business Analytics" or CS 4641 or CX 4010 or CX 4210 or CX 4240 or CX 4242 or MATH 4262) or
- Operations Research (ISYE 4133 or ISYE 4232 or ISYE 4803 titled "Advanced Simulation")

ISYE 4803 must be titled "Advanced Manufacturing" or "Advanced Simulation" or "Facility Layout and Warehousing" or "Supply Chain Project" or "Business Analytics" or "Linear and Convex Optimization" or "Energy and Environmental Analysis".

MATH 1113, MGT 2250, ISYE 3770, and PHYS 2XXX(AP credit) not allowed.

Cooperative Plan

The Co-op Program enhances the student’s education, employability and earnings potential. For more details, visit co-op pages from Georgia Tech’s co-op Website (http://www.coop.gatech.edu).

Co-op courses are designated in the schedule of classes as co-op. All students interested in registering for this course(s) must have been accepted into the co-op Program. Students must have met with their co-op advisor to be issued a permit to register for restricted course(s). Students must register for the co-op course every semester they are at work in order to receive credit for the work term.

Students who are in the Co-op Program (U.S. citizens and Permanent Residents) and are returning to work should automatically receive a permit but are advised to remain in close contact with their co-op advisor.

International students must receive work authorization from the Office of International Education prior to each work term before a course registration permit will be issued.

Neither co-op nor internship courses count for credit towards the industrial engineering degree; however, successful completion of the Co-op Program leads to a degree designator.

For more information about all of the programs in the Center for Career Discovery and Development, visit Center for Career Discovery and Development (http://www.careerdiscovery.gatech.edu).

International Plan

The Georgia Tech International Plan is designed to prepare graduates to develop significant global competence. Many Industrial Engineers work in consulting companies, supply chain, economic decision systems, etc. Global perspectives are very important. The significant global competence will give them an additional advantage on the job market and on the jobs.

The major components of International Plan include

1. Twenty six weeks of international experience (work, research or study)
2. Foreign language requirements. This can be satisfied by oral proficiency measured tested by an exam by the American Council for the Teaching of Foreign Languages (ACTFL). The foreign language requirement can also be satisfied by course work. It means the passing of two 2XXX level language classes.
3. Three internationally oriented courses plus an addendum in the capstone design on international perspective.

For more details of the International Plan, including application materials, visit the Office of International Education (http://www.internationalplan.gatech.edu). Please also see The International Plan Option in ISyE (http://www.isye.gatech.edu/academics/undergraduate/international/isyointplan.pdf).

BS/MS Program

A combined BS/MS program that will allow students to graduate with a Bachelor of Science in Industrial Engineering and a Master of Science in Supply Chain Engineering. Contact the School of Industrial Engineering for more information.

Bachelor of Science in Industrial Engineering - General

The principal strength of the academic program leading to the Bachelor of Science in Industrial Engineering (BS IE) is its blend of mathematics, physical sciences and business applications. The methodology foundation is built on probability, optimization, statistics, computing, and economics. The program features a unique concentration system that allows students to get a broad industrial engineering education and to specialize in areas such as

- Economic and Financial Systems (p. 364),
- Operations Research (p. 369),
- Quality and Statistics (p. 361),
- Supply Chain Engineering (p. 371), and
- General Industrial Engineering (p. 366).

This blend produces the flexibility that is inherent in the field of industrial and systems engineering, and that affords BSIE graduates a wide array of career options. Our graduates are constantly looking for ways to make anything in life work better, more efficiently and more productively.
Program Educational Objectives

The Stewart School of Industrial & Systems Engineering expects our graduates (in 3 to 6 years):

- to become successful Industrial Engineers;
- to take leadership in their endeavors;
- to be self-learners and starters;
- to succeed in professional and educational advancement.

Free Electives 15

Free Electives 11

Total Credit Hours 128

Pass-fail only allowed for Free Electives, Humanities, and the Social Sciences elective.

Students must achieve a minimum GPA of 2.0 in the BSIE Major Requirements to graduate.

1 Students must earn a C or better in all required MATH courses in the BSIE curriculum.
Students may also complete MATH 1554 and MATH 2550 to satisfy math requirements. If MATH 1554/MATH 2550 combination is taken, then two hours from MATH 1554 may be used in Area F to give Area F 18 hours.

Only one EAS course can be used toward ISYE Lab Science requirements.

PSYC 1101 will satisfy the Ethics requirement.

Students must choose from the following to meet the Environmental requirement: BIOL 1510, BIOL 2335, CEE 2300, CEE 4300, EAS 1600, EAS 1601, EAS 2600, EAS 2750, EAS 3110, EAS 4480, ECON 4440, ISYE 4803 titled "Energy and Environmental Analysis," ISYE 4501, SLS 3120, or PHYS 2750.

Students must complete courses from two different eligible engineering elective subjects.

Only one computing course (CX or CS) may count toward engineering elective requirements, unless given approval from ISyE Associate Chair.

Students must take at least 9 credits of engineering electives. Three credits must be chosen from ECE 2020, ECE 2026, or ECE 3710/ECE 3741. For the remaining 6 credits, at least 2 credits must be from Group 1.

To count toward the Engineering Elective Group 2 requirement, all Vertically-Integrated Projects (VIPS) courses must be approved by the ISyE Associate Chair.

Students must complete 6 concentration courses: 3 depth courses and 3 breadth courses. A minimum of 5 of the 6 required concentration courses must be ISYE courses.

ISYE 4803 must be titled "Linear and Convex Optimization."

ISYE 4803 must be titled "Advanced Simulation."

These 3 courses must be from at least 2 of the following groups:

- Supply Chain Engineering (ISYE 3103 or ISYE 3104 or ISYE 4111 or ISYE 4803 titled "Advanced Manufacturing" or ISYE 4803 titled "Facility Layout and Warehousing")
- Economic and Financial Systems (ISYE 4301 or ISYE 4311 or ECON 3150 or ECON 4340 or ECON 4350 or MGT 3078)
- Quality and Statistics (ISYE 3039 or ISYE 4031 or ISYE 4034 or ISYE 4803 titled "Business Analytics" or CS 4641 or CS 4010 or CS 4210 or CS 4240 or CX 4242 or MATH 4262)

ISYE 4803 must be titled "Advanced Manufacturing" or "Facility Layout and Warehousing" or "Supply Chain Project" or "Business Analytics" or "Energy and Environmental Analysis."

MATH 1113, MGT 2250, ISYE 3770, and PHYS 2XXX (AP credit) not allowed.

### Cooperative Plan

The Co-op Program enhances the student's education, employability and earnings potential. For more details, visit co-op pages from Georgia Tech's co-op Website (http://www.coop.gatech.edu).

- Co-op courses are designated in the schedule of classes as co-op. All students interested in registering for this course(s) must have been accepted into the co-op Program. Students must have met with their co-op advisor to be issued a permit to register for restricted course(s). Students must register for the co-op course every semester they are at work in order to receive credit for the work term.
- Students who are in the Co-op Program (U.S. citizens and Permanent Residents) and are returning to work should automatically receive a permit but are advised to remain in close contact with their co-op advisor.
- International students must receive work authorization from the Office of International Education prior to each work term before a course registration permit will be issued.
- Neither co-op nor internship courses count for credit towards the industrial engineering degree; however, successful completion of the Co-op Program leads to a degree designator.

For more information about all of the programs in the Center for Career Discovery and Development, visit Center for Career Discovery and Development (http://www.careerdisccovery.gatech.edu).

### International Plan

The Georgia Tech International Plan is designed to prepare graduates to develop significant global competence. Many Industrial Engineers work in consulting companies, supply chain, economic decision systems, etc. Global perspectives are very important. The significant global competence will give them an additional advantage on the job market and on the jobs.

The major components of International Plan include

1. Twenty six weeks of international experience (work, research or study)
2. Foreign language requirements. This can be satisfied by oral proficiency measured tested by an exam by the American Council for the Teaching of Foreign Languages (ACTFL). The foreign language requirement can also be satisfied by course work. It means the passing of two 2XXX level language classes.
3. Three internationally oriented courses plus an addendum in the capstone design on international perspective.

For more details of the International Plan, including application materials, visit the Office of International Education (http://www.internationalplan.gatech.edu). Please also see The International Plan Option in ISyE (http://www.isye.gatech.edu/academics/undergraduate/international/isyeintplan.pdf).

### BS/MS Program

A combined BS/MS program that will allow students to graduate with a Bachelor of Science in Industrial Engineering and a Master of Science in Supply Chain Engineering. Contact the School of Industrial Engineering for more information.

### Bachelor of Science in Industrial Engineering - Supply Chain Engineering

The principal strength of the academic program leading to the Bachelor of Science in Industrial Engineering (BS IE) is its blend of mathematics, physical sciences and business applications. The methodology foundation is built on probability, optimization, statistics, computing, and economics. The program features a unique concentration system that allows students to get a broad industrial engineering education and to specialize in areas such as

- Economic and Financial Systems (p. 364),
- Operations Research (p. 369),
• Quality and Statistics (p. 361),
• Supply Chain Engineering (p. 371), and
• General Industrial Engineering (p. 366).

This blend produces the flexibility that is inherent in the field of industrial and systems engineering, and that affords BSIE graduates a wide array of career options. Our graduates are constantly looking for ways to make anything in life work better, more efficiently and more productively.

Program Educational Objectives
The Stewart School of Industrial & Systems Engineering expects our graduates (in 3 to 6 years):

• to become successful Industrial Engineers;
• to take leadership in their endeavors;
• to be self-learners and starters;
• to succeed in professional and educational advancement.

   - Operations Research (ISYE 4137 or ISYE 4232 or ISYE 4803 titled “Advanced Simulation”)
13. ISYE 4803 must be titled “Supply Chain Project” or “Business Analytics” or “Advanced Simulation” or “Linear and Convex Optimization” or “Energy and Environmental Analysis.”
Bachelor of Science in International Affairs

14 MATH 1113, MGT 2250, ISYE 3770, and PHYS 2XXX (AP credit) not allowed.

Cooperative Plan
The Co-op Program enhances the student’s education, employability and earnings potential. For more details, visit co-op pages from Georgia Tech’s co-op Website (http://www.coop.gatech.edu).

- Co-op courses are designated in the schedule of classes as co-op. All students interested in registering for this course(s) must have been accepted into the co-op Program. Students must have met with their co-op advisor to be issued a permit to register for restricted course(s). Students must register for the co-op course every semester they are at work in order to receive credit for the work term.
- Students who are in the Co-op Program (U.S. citizens and Permanent Residents) and are returning to work should automatically receive a permit but are advised to remain in close contact with their co-op advisor.
- International students must receive work authorization from the Office of International Education prior to each work term before a course registration permit will be issued.
- Neither co-op nor internship courses count for credit towards the industrial engineering degree; however, successful completion of the Co-op Program leads to a degree designator.

For more information about all of the programs in the Center for Career Discovery and Development, visit Center for Career Discovery and Development (http://www.careerdiscovery.gatech.edu).

International Plan
The Georgia Tech International Plan is designed to prepare graduates to develop significant global competence. Many Industrial Engineers work in consulting companies, supply chain, economic decision systems, etc. Global perspectives are very important. The significant global competence will give them an additional advantage on the job market and on the jobs.

The major components of International Plan include

1. Twenty six weeks of international experience (work, research or study)
2. Foreign language requirements. This can be satisfied by oral proficiency measured tested by an exam by the American Council for the Teaching of Foreign Languages (ACTFL). The foreign language requirement can also be satisfied by course work. It means the passing of two 2XXX level language classes.
3. Three internationally oriented courses plus an addendum in the capstone design on international perspective.

For more details of the International Plan, including application materials, visit the Office of International Education (http://www.internationalplan.gatech.edu). Please also see The International Plan Option in ISyE (http://www.isye.gatech.edu/academics/undergraduate/international/isyeintplan.pdf).

BS/MS Program
A combined BS/MS program that will allow students to graduate with a Bachelor of Science in Industrial Engineering and a Master of Science in Supply Chain Engineering. Contact the School of Industrial Engineering for more information.

Bachelor of Science in International Affairs
The Bachelor of Science in International Affairs (BS INTA) program includes instruction in international affairs, foreign languages, ethics and philosophy, social and natural sciences, and computer science. Upper-division coursework provides training in four substantive areas:

- technology, and scientific analysis, and ethics;
- international security and diplomacy;
- comparative politics, cultures, and societies; and
- international political economy.

Graduates of the BS INTA program are prepared for advanced graduate and professional study and are ready for employment in internationally oriented firms, government agencies, and nonprofit organizations.

International Affairs majors are expected to enhance their education through participation in the International Plan, study abroad programs, internships, and a host of on- and off-campus programs. In addition to the numerous opportunities afforded through Georgia Tech’s Office of International Education, the Sam Nunn School sponsors rigorous summer study abroad programs in the European Union (Brussels), East Asia (China, Japan, Taiwan), South Asia (Cambodia, Singapore, Thailand), Latin America (Argentina and Brazil), and Iberia (Portugal and Spain). Recognizing the importance of professional experience in enhancing a student’s education, the Sam Nunn School encourages majors to pursue an internship or participate in the Cooperative Plan in their field of interest. In addition, students are strongly encouraged to get involved in a range of extracurricular activities, including Model United Nations; AIESEC; Sigma Iota Rho (the International Affairs honor society); the Center for International Strategy, Technology, and Policy; the International Affairs Student Organization; and student conferences. Students are actively involved in the guest lecture series and participate in the biennial Sam Nunn/Bank of America Policy Forum.

Total Credit Hours 122

1 Students must complete twelve credit hours of the same language. Six credit hours are counted in Humanities, and six in major requirements.
2 Minimum grade of C required.
3 15 credits required in either the same prefix or part of a coherent theme. Please consult with advisor on course selection.
4 Technical elective.

Research Option
The Sam Nunn School of International Affairs also participates in the Research Option plan offered by the Undergraduate Research Opportunities Program (UROP). The Research Option offers students the opportunity for in-depth research experience working under the guidance of a faculty mentor. Requirements for participation in the Research Option include completing nine hours of undergraduate research, at least six of which are on the same topic, writing a research proposal, taking two 1-hour courses: LMC 4701 Undergraduate Research Proposal Writing (typically taken during the first or second semester of research) and LMC 4702 Undergraduate Research Thesis Writing (taken during the term in which the thesis is written), and completing the thesis. Students are also required to send a weekly update of progress of research to the faculty mentor. Along with their application, students must explain
how the faculty mentor’s research experience will benefit the student’s research.

**International Plan**

International Affairs majors with the International Plan are engaged in a combination of study, research, or internship abroad for a total of twenty-six weeks. This overseas experience must be obtained over two terms (a summer and semester, or two semesters). In addition to gaining advanced global competence, the International Plan designation will set INTA students apart from other applicants with recruiters from top companies and governmental agencies. Required coursework for the International Plan is easily satisfied by the International Affairs core curriculum as follows:

1. focuses on international relations historically and theoretically
2. provides a historical and theoretical understanding of the global economy, including topics such as international trade, finance, investment, and production; regional economic integration, economic development and modernization; and questions of natural resource sustainability
3. provides familiarity with an area of the world or a country that allows students to make systematic comparisons with their own society and culture
4. A culminating course, occurring either at the end of or after the international experience that integrates knowledge of the discipline and the international experience in a global context.

**BS/MS International Affairs**

The Sam Nunn School of International Affairs offers a joint Bachelor of Science in International Affairs and Modern Language (IAML) with separate concentrations in Chinese, French, German, Japanese, Russian, and Spanish. Students in this program take the same required core courses as for the Bachelor of Science in International Affairs, but also receive intensive foreign language training and learn the fundamentals of dealing with foreign cultures and societies. IAML students learn how to formulate the policy decisions that must be made in an increasingly multilingual and multicultural global forum. Our graduates are prepared for advanced graduate and professional study and are ready for employment in a large arena of globally oriented businesses, government agencies, as well as social service and not-for-profit organizations.

Students in the BS/MS program will remain undergraduates until they meet requirements for the undergraduate degree, at which point they will receive their BS degree and be changed to graduate status. Students will be eligible to apply for the program after completion of 45 semester credit hours at Georgia Tech (i.e., at the end of their third semester), and if they show appropriate progress in their degree program thereafter. Any student in good standing in the BS INTA program is eligible to apply to the program. Admissions decisions will be based on GPA and judgments of the faculty who have served as advisors or instructors. Continuation in the program will require the student to maintain a GPA of 3.5 or higher in Ivan Allen College courses. The program will not penalize students who opt out after the bachelor’s degree. Students participating in this program will be eligible for the six semester credit-hour Graduate Course Option, which allows students completing both the bachelor’s and master’s in the same discipline to use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

The Graduate-level Credits Required in the BS/MS Program are usually as follows:

<table>

International Plan

The degree requirements for the International Affairs and Modern Language (Chinese, French, German, Japanese, Russian, and Spanish) are basically the same as for the IAML degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese, Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad must total a minimum of twenty-six weeks; typically these consist of one semester of study plus a significant amount of time spent with a research or work project abroad. Only one summer semester abroad will count in this total. IAML-IP majors are strongly encouraged to enroll in the Language for Business and Technology (LBAT) intensive summer programs offered by the School of Modern Languages.

In addition to gaining advanced global competence, the International Plan designation will set IAML majors apart from other applicants with recruiters from top companies and governmental agencies. Other required courses include the following, which can easily be obtained within the regular required curriculum offerings of INTA and Modern Languages (these requirements can also be met with courses taken abroad, upon consultation with IAML degree advisors):

1. INTA 1110 focuses on international relations historically and theoretically, including topics such as the role of state sovereignty and nationalisms and non-state actors in the international system; international conflict, peace, security, intervention, and nation-building; international organizations, law, and ethics; and transnational problems of the environment, terrorism, health, and migration; among other issues.

2. INTA 3301 provides a historical and theoretical understanding of the global economy, including topics such as international trade, finance, investment, and production; regional economic integration (such as the EU); economic development and modernization; and questions of natural resource sustainability.

3. INTA 3203 or approved INTA elective or upper-division Modern Language courses provide familiarity with an area of the world or a country that allows them to make systematic comparisons with their own society and culture.
A culminating course, occurring either at the end of or after the international experience that integrates knowledge of the discipline and the international experience in a global context.

Degree Information (http://www.modlangs.gatech.edu/degrees)

**BS in International Affairs and Modern Languages/MS in International Affairs**

Students with a GPA of 3.5 or higher in IAC courses are eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech, but before the completion of 75 semester credit hours, including transfer and advanced placement credits. Students who have more than 75 credit hours will be considered for the program on a case-by-case basis. Depending on demand, the required minimum GPA may be higher. Admissions decisions will be based on GPA and judgments of the Graduate Committee and faculty who have served as advisors or instructors. Continuation in the program will require the student to maintain a GPA of 3.5 or higher in IAC courses. The program will not penalize students who opt out after the bachelor’s degree.

Visit International Affairs and Modern Languages (https://modlangs.gatech.edu/degrees/iaml)/International Affairs (https://inta.gatech.edu) for more information.

*Note: Non-credit requirement*

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in International Affairs and Modern Language, all IAML students are required to fulfill an International Experience as part of their graduation requirements. This requirement can be met through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a country whose primary language is in the student's language of study, the student must justify and receive prior approval.

2. Complete a 15-week internship or similar experience of at least 10 credit hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

Students must complete 39 hours of upper division coursework (3000/4000-level courses). Fifteen hours of free electives, language, or technology requirements must be upper division (3000/4000-level courses).

1. Students must complete 21 credit hours of FREN electives from 3000- or 4000-level courses. Six credit hours are counted in Humanities, and 15 in Modern Languages Electives.

2. Minimum grade of C required.

3. FREN courses below 3000 may count toward the free elective courses.

4. Technical elective.

5. Approved instances of CS 2803 may be applied here by advisor.

**Research Option**

The Sam Nunn School of International Affairs also participates in the Research Option plan offered by the Undergraduate Research Opportunities Program (UROP). The Research Option offers students the opportunity for in-depth research experience working under the guidance of a faculty mentor. Requirements for participation in the Research Option include completing nine hours of undergraduate research, at least six of which are on the same topic, writing a research proposal, taking two 1-hour courses: LMC 4701 Undergraduate Research Proposal Writing (typically taken during the first or second semester of research) and LMC 4702 Undergraduate Research Thesis Writing (taken during the term in which the thesis is written), and completing the thesis. Students are also required to send a weekly update of progress of research to the faculty mentor. Along with their application, students must explain how the faculty mentor's research experience will benefit the student's research.

**International Plan**

The degree requirements for the International Affairs and Modern Language (Chinese, French, German, Japanese, Russian, and Spanish) International Plan (IAML - IP) are basically the same as for the IAML degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese, Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad must total a minimum of twenty-six weeks; typically these consist of one semester of study plus a significant amount of time spent with a research or work project abroad. Only one summer semester abroad will count in this total. IAML-IP majors are strongly encouraged to enroll in the Language for Business and Technology (LBAT) intensive summer programs offered by the School of Modern Languages.

In addition to gaining advanced global competence, the International Plan designation will set IAML majors apart from other applicants with recruiters from top companies and governmental agencies. Other required courses include the following, which can easily be obtained within the regular required curriculum offerings of INTA and Modern Languages (these requirements can also be met with courses taken abroad, upon consultation with IAML degree advisors):

**Required Courses**
and multicultural global forum. Our graduates are prepared for advanced graduate and professional study and are ready for employment in a large arena of globally oriented businesses, government agencies, as well as social service and not-for-profit organizations.

Degree Information (http://www.modlangs.gatech.edu/degrees)

**BS in International Affairs and Modern Languages/MS in International Affairs**

Students with a GPA of 3.5 or higher in IAC courses are eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech, but before the completion of 75 semester credit hours, including transfer and advanced placement credits. Students who have more than 75 credit hours will be considered for the program on a case-by-case basis. Depending on demand, the required minimum GPA may be higher. Admissions decisions will be based on GPA and judgments of the Graduate Committee and faculty who have served as advisors or instructors. Continuation in the program will require the student to maintain a GPA of 3.5 or higher in IAC courses. The program will not penalize students who opt out after the bachelor's degree.

Visit International Affairs and Modern Languages (https://modlangs.gatech.edu/degrees/iaml//International Affairs (https://inta.gatech.edu)) for more information.

**Bachelor of Science in International Affairs and Modern Language - German**

In partnership with the Sam Nunn School of International Affairs, the School of Modern Languages offers a joint Bachelor of Science in International Affairs and Modern Language (IAML) with separate concentrations in Chinese, French, German, Japanese, Russian, and Spanish. Students in this program take the same required core courses as for the Bachelor of Science in International Affairs, but also receive intensive foreign language training and learn the fundamentals of dealing with foreign cultures and societies. IAML students learn how to formulate the policy decisions that must be made in an increasingly multilingual

Note: Non-credit requirement

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in International Affairs and Modern Language, all IAML students are required to fulfill an International Experience as part of their graduation requirements. This requirement can be met through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a country whose primary language is in the student’s language of study, the student must justify and receive prior approval.

2. Complete a 15-week internship or similar experience of at least 10 credit hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

Students must complete 39 hours of upper division coursework (3000/4000-level courses). Fifteen hours of free electives, language, or technology requirements must be upper division (3000/4000-level courses).

1. Students must complete 21 credit hours of GRMN electives from 3000- or 4000-level courses. Six credit hours are counted in Humanities, and 15 in Modern Languages Electives.

2. Minimum grade of C required.

3. GRMN courses below 3000-level may count toward the free elective courses.

4. Technical elective.

5. Approved instances of CS 2803 may be applied here by advisor.

Research Option
The Sam Nunn School of International Affairs also participates in the Research Option plan offered by the Undergraduate Research Opportunities Program (UROP). The Research Option offers students the opportunity for in-depth research experience working under the guidance of a faculty mentor. Requirements for participation in the Research Option include completing nine hours of undergraduate research, at least six of which are on the same topic, writing a research proposal, taking two 1-hour courses: LMC 4701 Undergraduate Research Proposal Writing (typically taken during the first or second semester of research) and LMC 4702 Undergraduate Research Thesis Writing (taken during the term in which the thesis is written), and completing the thesis. Students are also required to send a weekly update of progress of research to the faculty mentor. Along with their application, students must explain how the faculty mentor’s research experience will benefit the student’s research.

International Plan
The degree requirements for the International Affairs and Modern Language (Chinese, French, German, Japanese, Russian, and Spanish) - International Plan (IAML - IP) are basically the same as for the IAML degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese, Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad must total a minimum of twenty-six weeks; typically these consist of one semester of study plus a significant amount of time spent with a research or work project abroad. Only one summer semester abroad will count in this total. IAML-IP majors are strongly encouraged to enroll in the Language for Business and Technology (LBAT) intensive summer programs offered by the School of Modern Languages.
In addition to gaining advanced global competence, the International Plan designation will set IAML majors apart from other applicants with recruiters from top companies and governmental agencies. Other required courses include the following, which can easily be obtained within the regular required curriculum offerings of INTA and Modern Languages (these requirements can also be met with courses taken abroad, upon consultation with IAML degree advisors):

Total Credit Hours 15

1 INTA 1110 focuses on international relations historically and theoretically, including topics such as the role of state sovereignty and nationalism and non-state actors in the international system; international conflict, peace, security, intervention, and nation-building; international organizations, law, and ethics; and transnational problems of the environment, terrorism, health, and migration; among other issues.

2 INTA 3301 provides a historical and theoretical understanding of the global economy, including topics such as international trade, finance, investment, and production; regional economic integration (such as the EU); economic development and modernization; and questions of natural resource sustainability.

3 INTA 3203 or approved INTA elective or upper-division Modern Language courses provide familiarity with an area of the world or a country that allows them to make systematic comparisons with their own society and culture.

4 A culminating course, occurring either at the end of or after the international experience that integrates knowledge of the discipline and the international experience in a global context.

Note: Non-credit requirement

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in Global Economics and Modern Languages, all GEML students are required to fulfill an International Experience as part of their graduation requirements. This requirement can meet through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a country whose primary language is in the student’s language of study, the student must justify and receive prior approval.
2. Complete a 15-week internship or similar experience of at least 10 hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

Any 1000- or 2000-level course with the following prefixes: AE, APPH, BIOL, BMED, CEE, CHBE, CHEM, EAS, ECE, ISYE, MATH, ME, MSE, NRE, PHYS.

Students must complete 21 credit hours of Japanese electives at 2002 level or above. Six credit hours are counted in Humanities, six in Core Area F, and 9 in Modern Languages Requirements.

Minimum grade of C required.

ECON and JAPN courses not allowed for cluster electives.

One course from MATH 3215, ISYE 3770 or (MGT 2250 - minimum B)

Six credit hours of Econ Electives must be chosen from one of the following Specialization areas:
- Industrial Organization: ECON 4340 or ECON 4180 or ECON 4360 or ECON 4361 or
- International Economics: ECON 4311 or ECON 4350 or ECON 4355 or ECON 4610 or
- Environmental Economics: ECON 3300 or ECON 4421 or ECON 4440

JAPN courses below 2002 may count toward the free elective courses.
1. INTA 1110 focuses on international relations historically and theoretically, including topics such as the role of state sovereignty and nationalism and non-state actors in the international system; international conflict, peace, security, intervention, and nation-building; international organizations, law, and ethics; and transnational problems of the environment, terrorism, health, and migration; among other issues.

2. **Note:** Non-credit requirement

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in International Affairs and Modern Languages, all IAML students are required to fulfill an International Experience as part of their graduation requirements. This requirement can be met through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a country whose primary language is in the student's language of study, the student must justify and receive prior approval.
2. Complete a 15-week internship or similar experience of at least 10 credit hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

Students must complete 39 hours of upper division coursework (3000/4000-level courses). Fifteen hours of free electives, language, or technology requirements must be upper division (3000/4000-level courses).

1. Students must complete 21 credit hours of RUSS electives from 2002, 3000- 4000-level courses. Six credit hours are counted in Humanities, and 15 in Modern Languages Electives.
2. Minimum grade of C required.
3. RUSS courses below 2002 may count toward the free elective courses.
4. Technical elective.
5. Approved instances of CS 2803 may be applied here by advisor.

**Research Option**

The Sam Nunn School of International Affairs also participates in the Research Option plan offered by the Undergraduate Research Opportunities Program (UROP). The Research Option offers students the opportunity for in-depth research experience working under the guidance of a faculty mentor. Requirements for participation in the Research Option include completing nine hours of undergraduate research, at least six of which are on the same topic, writing a research proposal, taking two 1-hour courses: LMC 4701 Undergraduate Research Proposal Writing (typically taken during the first or second semester of research) and LMC 4702 Undergraduate Research Thesis Writing (taken during the term in which the thesis is written), and completing the thesis. Students are also required to send a weekly update of progress of research to the faculty mentor. Along with their application, students must explain how the faculty mentor’s research experience will benefit the student’s research.

**International Plan**

The degree requirements for the International Affairs and Modern Language (Chinese, French, German, Japanese, Russian, and Spanish) - International Plan (IAML - IP) are basically the same as for the IAML degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese, Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad must total a minimum of twenty-six weeks; typically these consist of one semester of study plus a significant amount of time spent with a research or work project abroad. Only one summer semester abroad will count in this total. IAML-IP majors are strongly encouraged to enroll in the Language for Business and Technology (LBAT) intensive summer programs offered by the School of Modern Languages.

In addition to gaining advanced global competence, the International Plan designation will set IAML majors apart from other applicants with recruiters from top companies and governmental agencies. Other required courses include the following, which can easily be obtained within the regular required curriculum offerings of INTA and Modern
Languages (these requirements can also be met with courses taken abroad, upon consultation with IAML degree advisors):
