

COMMUNITY OUTREACH

Workforce readiness is a top priority for Georgia Tech Professional Education (GTPE). As such, we advocate for STEM exploration to improve appreciation, diversity, and performance in STEM fields, with many of our outreach programs offered in partnership with the Center for Education Integrating Science, Mathematics, and Computing (CEISMC).

From summer camp programs to professional development for STEM educators and distance math classes, we offer programs specifically engineered to give students the tools to solve real-world problems while also taking advantage of the resources and expertise of the Georgia Tech community. By providing these opportunities to students in STEM, we are ensuring tomorrow's innovators and educators have the skills to succeed in the workplace.
