

# LOGISTICS INNOVATION CENTERS

---

Due to an increasing need for the comprehensive examination of trade-chains and in light of the success of the Supply Chain and Logistics Institute in partnering with the National University of Singapore and various agencies of the government of Singapore, a global network of Trade-chain Innovation & Production (TIP) Centers has developed. This network of centers enables a comprehensive program focused on (1) developing insights, strategies, and methodologies to improve the productivity of existing trade-chains, (2) promoting innovation for identifying and enabling new trade-chain opportunities, and (3) providing education related to trade-chain infrastructure, innovation, and productivity.

- Georgia Tech Panama Logistics Innovation and Research Center
- Georgia Tech Costa Rica Center for Productivity
- Trade and Logistics Innovation Center of Mexico
- The Logistics Institute - Asia Pacific
