Biomedical engineering is a highly interdisciplinary field integrating engineering and the life sciences to support the prevention, diagnosis, and treatment of disease. The role of the biomedical engineer is to provide answers to problems arising from the study of living systems by employing the methodology and principles of engineering. Biomedical engineers often serve as integrators in multidisciplinary teams of engineers, scientists, and healthcare professionals in the medical device and biotechnology industries as well as government regulatory agencies. Our program challenges students with practical, hands-on problem-solving and design experiences throughout the curriculum. Graduates of our program have obtained the strong foundation necessary to address the complex healthcare challenges of the twenty-first century.

The Wallace H. Coulter Department of Biomedical Engineering at Georgia Tech and Emory University (the Coulter Department) is a unique partnership between a public institution and a private university—Georgia Tech's College of Engineering and Emory's School of Medicine. The formation of the Department in 1997 was the culmination of collaborative efforts in the field of biomedical engineering that dates back to the 1980s. In 2000, the Department assumed the name of Wallace H. Coulter, who was recognized as one of the most influential engineers in the twentieth century through his entrepreneurial efforts in shaping the fields of automated cell analysis and hematology.

Research in the Coulter Department encompasses long-range fundamental research and direct clinical applications through translational research. The department has identified nine thrust areas in which to focus research and educational programs:

- biomaterials and regenerative medicine,
- biomedical imaging and instrumentation,
- biomedical informatics and systems modeling,
- biomedical robotics,
- cancer technologies,
- cardiovascular engineering,
- engineering education,
- immunoengineering, and
- neuroengineering.

Research initiatives in these areas are resulting in major breakthroughs in medicine, basic science, and applied technology.

The Coulter Department offers both undergraduate and graduate degree programs that attract outstanding students who wish to have an education that prepares them to be the leaders in this field in the twenty-first century. Additionally, to meet the needs of a rapidly changing society and global economy, the Coulter Department has forged a new partnership with Peking University to offer a joint doctoral degree in biomedical engineering. The program offers a unique means for U.S. and Chinese students who want to learn and work in a global economy and in global health settings.

**Minor**
- Minor in Biomedical Engineering

**Bachelor's Degree**
- Bachelor of Science in Biomedical Engineering

**Master's Degree**
- Master of Biomedical Innovation and Development
- Master of Science in Robotics
- Master of Biomedical Engineering (MS BMED) Program

**Doctoral Degree**
- Doctor of Philosophy with a Major in Bioengineering
- Doctor of Philosophy with a Major in Bioinformatics
- Doctor of Philosophy with a Major in Biomedical Engineering
- Doctor of Philosophy with a Major in Computational Science and Engineering
- Doctor of Philosophy with a Major in Machine Learning
- Doctor of Philosophy with a Major in Robotics
- M.D./Ph.D. Program

**BMED 1000. Introduction to Biomedical Engineering. 1 Credit Hour.**
An introduction to the field of biomedical engineering, with an emphasis on career preparation.

**BMED 1300. Problems in Biomedical Engineering I. 3 Credit Hours.**
Biomedical engineering problems from industrial and clinical applications are addressed and solved in small groups using problem-based learning methodologies.

**BMED 1750. Introduction to Bioengineering. 3 Credit Hours.**
An introduction to the field of bioengineering, including the application of engineering principles and methods to problems in biology and medicine, the integration of engineering with biology, and the emerging industrial opportunities. Crosslisted with AE, CHE, ECE, ME, and MSE 1750.

**BMED 1801. Special Topics. 1 Credit Hour.**
Courses in special topics of current interest not included in the regular course offerings.

**BMED 1802. Special Topics. 2 Credit Hours.**
Courses in special topics of current interest not included in the regular course offerings.

**BMED 1803. Special Topics. 3 Credit Hours.**
Courses in special topics of current interest not included in the regular course offerings.

**BMED 1804. Special Topics. 4 Credit Hours.**
Courses in special topics of current interest not included in the regular course offerings.

**BMED 1805. Special Topics. 5 Credit Hours.**
Courses in special topics of current interest not included in the regular course offerings.

**BMED 1811. Special Topics. 1 Credit Hour.**
Courses in special topics of current interest not included in the regular course offerings.
BMED 1812. Special Topics. 2 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 1813. Special Topics. 3 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 1814. Special Topics. 4 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 1815. Special Topics. 5 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 1XXX. Bioengineering Elective. 1-21 Credit Hours.

BMED 2110. Conservation Principles in Biomedical Engineering. 3 Credit Hours.
A study of material and energy balances applied to problems in biomedical engineering.

BMED 2250. Problems in Biomedical Engineering. 3 Credit Hours.
Biomedical engineering problems from industrial and clinical applications are addressed and solved in small groups using problem-based learning methodologies. Credit will not be awarded for both BMED 2250 and BMED 1300.

BMED 2300. Problems in Biomedical Engineering II. 3 Credit Hours.
Biomedical engineering problems from industrial and clinical applications are addressed and solved in small groups using problem-based learning methods.

BMED 2310. Intro to Biomedical Engineering Design. 3 Credit Hours.
In small teams students will apply problem-based learning and human centered design to reverse engineer, analyze, and redesign medical devices. Credit will not be awarded for both BMED 2310 and BMED 2300.

BMED 2400. Introduction to Bioengineering Statistics. 3 Credit Hours.
Introduction to statistical modeling and data analysis in bioscientific and bioengineering applications. Topics include estimation, testing, regression, and experimental design.

BMED 2698. Undergraduate Research Assistantship. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

BMED 2699. Undergraduate Research. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

BMED 2801. Special Topics. 1 Credit Hour.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2802. Special Topics. 2 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2803. Special Topics. 3 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2804. Special Topics. 4 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2805. Special Topics. 5 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2811. Special Topics. 1 Credit Hour.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2812. Special Topics. 2 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2813. Special Topics. 3 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2814. Special Topics. 4 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2815. Special Topics. 5 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 2XXX. Bioengineering Elective. 1-21 Credit Hours.

BMED 3100. Systems Physiology. 3 Credit Hours.
An introduction to human physiology emphasizing biomedical engineering approaches to the understanding of basic organ function, disease states, and medical intervention.

BMED 3101. Introduction to Biomedical Data Science and Engineering. 3 Credit Hours.
Practical/hands-on experience in performing biomedical-related data processing/computation/analysis with a variety of computer tools, platforms, and applications.

BMED 3110. Quantitative Engineering Physiology Laboratory I. 2 Credit Hours.
A hands-on lab providing an active learning team environment to reinforce selected engineering principles of physiology, emphasizing a quantitative model-oriented approach to physiological systems.

BMED 3300. Biotransport. 4 Credit Hours.
Fundamental principles of fluid, heat, and mass transfer with particular emphasis on physiological and biomedical systems.

BMED 3310. Biotransport. 3 Credit Hours.
Fundamental principles of fluid, heat, and mass transfer with particular emphasis on physiological and biomedical systems. Credit will not be awarded for both BMED 3310 and BMED 3300.

BMED 3400. Introduction to Biomechanics. 4 Credit Hours.
An introduction to the basic concepts and methods in biomechanics, including statistics and the mechanics of biomaterials. The biomedical applications of mechanics will be illustrated.

BMED 3410. Introduction to Biomechanics. 3 Credit Hours.
Introduces concepts and approaches for biomedical deformation and dynamics problems using the application of simple models from statics, mechanics of materials, kinematics, and dynamics.

BMED 3500. Biomedical Sensors and Instrumentation. 3 Credit Hours.
A study of basic concepts and design of electronic sensors and instrumentation used in biomedical measurements. Standard clinical measurement techniques will also be examined.

BMED 3510. Biomedical Systems and Modeling. 4 Credit Hours.
Basic concepts, modeling tools and analysis techniques for the study of biochemical, bioelectrical and biomedical systems.
BMED 3520. Biomedical Systems and Modeling. 3 Credit Hours.
Introduction of computational systems biology, including the modeling process, various types of models, standard analysis and simulation of systems, and applications in real-world biological systems. Credit will not be awarded for both BMED 3520 and BMED 3510.

BMED 3600. Physiology of Cellular and Molecular Systems. 3 Credit Hours.
In depth cell and molecular physiology focused on cellular responses to stimuli, including cell organization/reorganization, membrane transport/kinetics, cell signaling/molecular biology, mechanobiology and energy requirements.

BMED 3610. Quantitative Engineering Physiology Laboratory II. 2 Credit Hours.
This lab provides an active learning team environment, incorporating common cell/molecular biology techniques, to reinforce selected engineering principles in an in vitro cell culture setting.

BMED 3801. Special Topics. 1 Credit Hour.
BMED 3802. Special Topics. 2 Credit Hours.
Special Topics in Biomedical Engineering.

BMED 3811. Special Topics. 1 Credit Hour.
BMED 3853. Special Topics. 3 Credit Hours.
Special topics in BMED.

BMED 3XXX. Bioengineering Elective. 1-21 Credit Hours.

BMED 4000. The Art of Telling Your Story. 1 Credit Hour.
Students will create a professional portfolio and develop the ability to pitch themselves to an audience to prepare themselves to begin their professional careers.

BMED 4400. Neuroengineering Fundamentals. 4 Credit Hours.
Lab and lecture on current topics in Neuroengineering, including electrophysiology, clinical and diagnostic neuroengineering, neural prosthetics, sensory-motor integration, neuromorphic VLSI, neurodynamics and neurorobotics.

BMED 4477. Biological Networks and Genomics. 3 Credit Hours.
Introduction to modeling of biological networks involved in gene regulation, cell signaling and metabolism. Mathematical modeling of cellular processes, such as gene expression, using genomic data.

BMED 4500. Cell and Tissue Engineering Laboratory. 3 Credit Hours.
The principles of cell and tissue engineering will be presented as a laboratory course to give students a hands-on experience. Cell engineering topics include receptor/ligand interactions, cell cycle/metabolism, cell adhesion, cellular mechanics, cell signal transduction, and cell transfection. Tissue engineering topics include applications, biomaterials/scaffolds and cells for reparative medicine, bioreactors and bioprocessing, functional assessment, in vivo issues.

BMED 4600. Senior Design Project I. 2 Credit Hours.
Team-oriented major design project in biomedical engineering, incorporating engineering standards and realistic design constraints. Credit not allowed for BMED 4600 and BMED 4603 (or BMED 4601).

BMED 4601. Senior Design Project II. 3 Credit Hours.
Team-oriented major design project in biomedical engineering, incorporating engineering standards and realistic design constraints. Credit not allowed for both BMED 4601 and BMED 4603 (or BMED 4600).

BMED 4602. Capstone Design. 3 Credit Hours.
Team-oriented design project in biomedical engineering, incorporating engineering standards and realistic design constraints. Includes introduction to relevant regulatory, intellectual property, and business management topics.

BMED 4603. Advanced Design. 3 Credit Hours.
Continuation of a team-oriented design experience initiated in BMED 4602 Capstone Design. Includes more advanced relevant regulatory, intellectual property, and business management topics. Credit not allowed for both BMED 4603 and BMED 4600 (or BMED 4601).

BMED 4698. Undergraduate Research Assistantship. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

BMED 4699. Undergraduate Research. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

BMED 4723. Interdisciplinary Capstone Design. 3 Credit Hours.
Interdisciplinary Capstone Design, Industry projects or CREATE-X section.

BMED 4739. Medical Robotics. 3 Credit Hours.
An interdisciplinary course focusing on fundamental understanding of robot kinematics and dynamics as well as the design, development, and evaluation of a medical robotic system.

BMED 4740. Biologically Inspired Design. 3 Credit Hours.
We examine evolutionary adaptation as a source for engineering design inspiration, utilizing principles of scaling, adaptability, and robust multifunctionality that characterize biological systems.

BMED 4750. Diagnostic Imaging Physics. 3 Credit Hours.
Physics and image formation methods for conventional X-ray, digital X-ray CT, nuclear medicine, and magnetic resonance and ultrasound imaging. Crosslisted with MP 4750 and NRE 4750.

BMED 4751. Introduction to Biomaterials. 3 Credit Hours.
Introduction to different classes of biomaterials (polymers, metals, ceramics) and physiological responses to biomaterial implantation. Topics include material properties, host response, and biomaterial characterization techniques. Crosslisted with MSE 4751.

BMED 4752. Introductory Neuroscience. 3 Credit Hours.
Goals are to understand the components of the nervous system and their functional interactions, and appreciate the complexity of higher order brain functions and pathways. Crosslisted with BIOL 4752.

BMED 4757. Biofluid Mechanics. 3 Credit Hours.

BMED 4758. Biosolid Mechanics. 3 Credit Hours.

BMED 4765. Drug Design, Development and Delivery. 3 Credit Hours.
Introduction to the pharmaceutical development process, including design of new drugs, synthesis and manufacturing issues, and methods for delivery into the body. Includes student presentations. Crosslisted with CHEM and CHBE 4765.
BMED 4781. Biomedical Instrumentation. 3 Credit Hours.
A study of medical instrumentation from a systems viewpoint. Pertinent physiological and electro-physiological concepts will be covered. Credit not allowed for both BMED 4781 and (CHE 4781 or ME 4781 or CHBE 4781 or ECE 4781).

BMED 4782. Biosystems Analysis. 3 Credit Hours.
Analytical methods for modeling biological systems, including white-noise protocols for characterizing nonlinear systems. Crosslisted with CHE, ECE, and ME 4782.

BMED 4783. Introduction to Medical Image Processing. 3 Credit Hours.
A study of mathematical methods used in medical image acquisition and processing. Concepts, algorithms, and methods associated with acquisition, processing, and display of two- and three-dimensional medical images are studied. Crosslisted with ECE 4783.

BMED 4784. Engineering Electrophysiology. 3 Credit Hours.
Basic concepts of electrophysiology from an engineering perspective. Functionality of relevant organs and systems; instrumentation tools which monitor electrophysiology function. Crosslisted with ECE 4784.

BMED 4801. Special Topics. 1 Credit Hour.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4802. Special Topics. 2 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4803. Special Topics. 3 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4804. Special Topics. 4 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4805. Special Topics. 5 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4811. Special Topics. 1 Credit Hour.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4812. Special Topics. 2 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4813. Special Topics. 3 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4814. Special Topics. 4 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4815. Special Topics. 5 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4823. Special Topics. 3 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4833. Special Topics. 3 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4863. Special Topics. 3 Credit Hours.
Courses in special topics of current interest not included in the regular course offerings.

BMED 4873. Special Topics. 3 Credit Hours.

BMED 4883. Special Topics. 3 Credit Hours.

BMED 4893. Special Topics. 3 Credit Hours.

BMED 4900. Special Problems. 1-21 Credit Hours.
Individualized studies in certain specialized areas of interest in biomedical engineering.

BMED 4901. Special Problems. 1-21 Credit Hours.
Individualized studies in certain specialized areas of interest in biomedical engineering.

BMED 4902. Special Problems. 1-21 Credit Hours.
Individualized studies in certain specialized areas of interest in biomedical engineering.

BMED 4903. Special Problems. 1-21 Credit Hours.
Individualized studies in certain specialized areas of interest in biomedical engineering.

BMED 4904. Bioengineering Elective. 1-21 Credit Hours.

BMED 6041. Analytical Methods for Biomedical Engineering. 3 Credit Hours.
Basic analytical approaches to solve mathematical problems involved in biomedical engineering applications. Course focuses on ordinary and partial differential equations and on integral transform methods.

BMED 6042. Systems Physiology. 3 Credit Hours.
Regulation of physiological functions in the cardio-respiratory-renal, musculoskeletal, and gastrointestinal systems, and their interactions with the neural, endocrine, and immune systems.

BMED 6210. Magnetic Resonance Imaging. 3 Credit Hours.
This course covers the basic physics and engineering principles, advanced techniques and major applications of magnetic resonance imaging.

BMED 6501. Fundamentals of Biomedical Innovation and Development Processes. 3 Credit Hours.
Key steps, multiple stakeholders and interdependencies in the design and commercialization process for medical products.

BMED 6502. BioID Clinical Literacy and Experience. 3 Credit Hours.
Education in interfacing with medical healthcare professionals, medical terminology, on-site clinical observations, needs-finding, case analysis, creating design solutions for improved methods, products and procedures.

BMED 6503. Medical Markets and Clinical Specialties. 3 Credit Hours.
Introduction to medical device and biologics industries, interdependencies of commercial companies, vendors and suppliers required for development, commercialization and sales of products and equipment.

BMED 6504. Financial Planning for Development Projects. 3 Credit Hours.
Finance planning for development projects including: costing, forecasting, time value of money, breakeven analysis, return on investment analysis, capital budgeting, risk and return, working capital management.
BMED 6505. Product Planning and Project Management. 3 Credit Hours. Strategy and analysis techniques to evaluate and manage new product innovations, product improvements and product line extensions in context of an entity's mission and goals.

BMED 6506. Professional Communications for Biomedical Innovation and Development. 3 Credit Hours. Techniques and practice of effective oral presentations/project/grant proposal writing, technical and project report writing to support medical device engineering, design and business.

BMED 6507. Medical Device Regulatory Requirements. 3 Credit Hours. FDA Regulations for medical devices including clearance-approval pathways to commercialization, Quality Systems Regulations and ISO Standards for medical devices in the European Economic Community.

BMED 6508. BiOd Team Masters Project I. 3 Credit Hours. Team project to address an unmet medical need and develop an innovative solution including the engineering design document package and proof-of-concept prototype.

BMED 6509. BiOd Masters Project II. 6 Credit Hours. Teams will construct prototypes for Course I biomedical device project solution, conduct and analyze performance testing, prepare FDA 510(k) submission, and prepare project commercialization plan.

BMED 6517. Machine Learning in Biosciences. 3 Credit Hours. Introduces machine learning concepts and methods, including supervised and unsupervised learning, dimension reduction and visualization. Topics are accompanied by bioinformatics and systems biology applications.

BMED 6700. Biostatistics. 3 Credit Hours. An introduction to fundamental ideas and techniques in Biostatistics, with an emphasis on conceptual understanding and on the analysis of real data sets.

BMED 6710. Rational Design of Biomaterials. 3 Credit Hours. The goal of this course is to give graduate students the ability to rationally design new biomaterials by integrating organic chemistry concepts with molecular biology.

BMED 6711. Rational Design of Biomaterials Lab. 3 Credit Hours. The goal of this course is to teach students the laboratory skills needed to design and synthesize new biomaterials.

BMED 6720. Biotransport. 3 Credit Hours. This graduate level course covers the analysis of fluid flow phenomena in the human body, cardiovasculature, respiratory system and other organ systems.

BMED 6730. Materials Science of Cellular Components. 3 Credit Hours. Addresses structure-property relationship of cellular components. Credit not allowed for both BMED 6730 and MSE 6730.

BMED 6739. Medical Robotics. 3 Credit Hours. This interdisciplinary course focuses on a fundamental understanding of robot kinematics and dynamics as well as the design, development, and evaluation of a medical robotic system.

BMED 6740. Living System Modeling & Analysis. 3 Credit Hours. The purpose of this course is to introduce graduate students to living system models as pre-clinical test beds for a wide variety of biotechnologies.

BMED 6743. Biosolid Mechanics. 3 Credit Hours. Structure-function relationships and constitutive models for a variety of biological tissues, with an emphasis on understanding the mechanical behaviors of normal and pathological tissues. Credit not given for both BMED/ME 6783 and BMED/ME 6743. Crosslisted with ME 6743.

BMED 6753. Principles of Management for Engineers. 3 Credit Hours. The course will provide an introduction to selected topics needed to be successful in the technology industries. Cannot count toward major area requirements in M.S. or Ph.D. programs of study.

BMED 6760. Information Processing Models in Neural Systems. 3 Credit Hours. This course will examine "top down" modeling approaches for sensoroneural systems, where an optimal computational principle used in engineering (e.g., information theory, Bayesian inference, control theory) explains observed information processing.

BMED 6765. Drug Design, Development and Delivery. 3 Credit Hours. Introduction to the pharmaceutical development process, including design of new drugs, synthesis and manufacturing issues, and methods of delivery into the body. Includes student presentations. Crosslisted with BMED 6765 and CHBE 6765.

BMED 6774. Biomaterials: Structure and Function. 3 Credit Hours. Structure-function relationships of biomaterials and biomaterial characterization will be covered. Materials for medial implants, tissue engineering, biosensing, imaging, and drug delivery will be covered. Crosslisted with CHE, ME, and MSE 6774.

BMED 6777. Advanced Biomaterials. 3 Credit Hours. Advanced topics of biomaterials performance and engineering, including biointerfaces, host reactions to materials, and bio-inspired/smart-materials strategies. Crosslisted with CHE, ME, and MSE 6777.

BMED 6779. Bioprocess Engineering. 3 Credit Hours. Study of enzymes and microbial and mammalian cells for production of biochemicals and protein therapeutics in bioreactors; downstream separation and purification; integrated view of bioprocesses. Crosslisted with CHE 6779.

BMED 6780. Medical Image Processing. 3 Credit Hours. A study of methods for enhancing, analyzing, interpreting, and visualizing information from two- and three-dimensional data obtained from a variety of medical imaging modalities. Crosslisted with ECE and CS 6780.

BMED 6782. Cellular Engineering. 3 Credit Hours. Engineering analysis of cellular systems. Crosslisted with CHE and ME 6782.

BMED 6784. Cardiovascular Biomechanics. 3 Credit Hours. Mechanical analysis of the cardiovascular system emphasizing the normal and pathologic function in relation to clinical cardiovascular medicine. Crosslisted with CHE and ME 6784.

BMED 6786. Medical Imaging Systems. 3 Credit Hours. A study of the principles and design of medical imaging systems such as X-ray, ultrasound, nuclear medicine, and nuclear magnetic resonance. Crosslisted with ECE 6786.

BMED 6787. Quantitative Electrophysiology. 3 Credit Hours. A quantitative presentation of electrophysiological systems in biological organisms, emphasizing the electrical properties and modeling of neural and cardiac cells and systems. Crosslisted with PHYS and ECE 6787.

BMED 6789. Technology Ventures. 3 Credit Hours. Team discussion and case studies in biomedical engineering technology transfer, including licensing, financial capital, safety and efficacy studies, clinical trials, and strategic planning. Crosslisted with ECE, CHE, ME, and MGT 6789.
BMED 6790. Information Processing Models in Neural Systems. 3 Credit Hours.
Examines "top-down" modeling approaches for sensorineural systems, where optimal computational principles used in engineering (e.g., information theory, Bayesian inference, control theory) explain observed information processing.

BMED 6793. Systems Pathophysiology. 3 Credit Hours.
Overview of human pathophysiology from a quantitative perspective. A brief introduction to the application of quantitative models to the understanding of biological systems. Crosslisted with CHE, ECE, and ME 6793.

BMED 6794. Tissue Engineering. 3 Credit Hours.
Biological, engineering, and medical issues in developing tissue engineered constructs. Emphasis in the integration of these disciplines at a basic molecular and cell biology level. Crosslisted with CHE and ME 6794.

BMED 6799. Legal Issues in Technology Transfer. 3 Credit Hours.
Study and analysis of U.S. law as it applies to the patenting and licensing processes. Crosslisted with CHE, ME, and MGT 6799.

BMED 6XXX. Bioengineering Elective. 1-21 Credit Hours.

BMED 7000. Master's Thesis. 1-21 Credit Hours.

BMED 7001. Biomedical Engineering Seminar. 1 Credit Hour.
Graduate students of the Biomedical Engineering department (all programs) participate in seminars involving current research projects presented by faculty and invited speakers.

BMED 7002. Teaching Practicum I. 1 Credit Hour.
This course provides discipline-specific training that addresses intellectual problems and teaching strategies from the perspective of the discipline. Credit not allowed for both BMED 7002 and BMED 8696.

BMED 7003. Teaching Practicum II. 1 Credit Hour.
This course provides discipline-specific training that addresses intellectual problems and teaching strategies from the perspective of the discipline. Credit not allowed for both BMED 7003 and BMED 8697.

BMED 7004. Teaching & Research Practicum I. 1 Credit Hour.
This course provides the practical framework for understanding challenges faced during teaching, research, and academic life. This course includes topical materials required for BME RCR requirements.

BMED 7005. Teaching & Research Practicum II. 1 Credit Hour.
This course provides the practical framework for understanding challenges faced during teaching, research, and academic life.

BMED 7011. Integrative Core: Introduction to Modeling and Experimentation in Biomedical Engineering. 3 Credit Hours.
An introduction to how engineers approach problems - via conceptual models that are then used to create wet lab models and in silico models.

BMED 7012. Integrative Core: Experimental Design-Measurements at the Right Spatial and Temporal Scales. 3 Credit Hours.
This integrative core course focuses on the design of experiments to answer scientific questions, with an emphasis on the spatial and temporal scales of measurements.

BMED 7013. Integrative Core: Problem Solving with Computational Models. 3 Credit Hours.
An introduction to computational model methodologies for complex biomedical/biological systems. Emphasis is placed on developing well-posed scientific hypotheses through the use of simulations.

BMED 7101. Advanced Seminar: Biomaterials & Regenerative Medicine. 3 Credit Hours.
This course is intended to promote critical review of the "State-of-the-art" biomaterial technologies to identify knowledge gaps that must be overcome to further biomaterials development.

BMED 7201. Advanced Seminar: Cardiovascular Biology & Biomechanics. 3 Credit Hours.
To review current topics in cardiovascular engineering, biology and diseases through critical literature review. In addition, each student will develop and present a "Proposal" by the end of the class.

BMED 7301. Advanced Seminar: Cellular & Biomolecular Engineering. 3 Credit Hours.
This seminar course illustrates the development of micro- and nano-scale engineering approaches for studies of biomolecules and cells and their applications to medicine.

BMED 7310. Stem Cell Engineering. 3 Credit Hours.
Fundamentals for the application of analytical engineering approaches to the quantitative study of stem cell biology and translation into cell therapies and diagnostics.

BMED 7410. Introduction to Multiscale Analysis in Systems. 3 Credit Hours.
The class explores modeling analyses spanning multiple levels of biological organization at different resolutions of detail. Emphasis is placed on control in complex biological systems.

BMED 7411. Mathematical Models in Biology & Medicine. 3 Credit Hours.
The course introduces the student to a representative set of models that elucidate the nature of biological and medical phenomena.

BMED 7413. Biochemical Systems Analysis. 3 Credit Hours.
The course introduces BME students interested in mathematical modeling and systems biology to the computational analysis of metabolic and other dynamic systems in biology.

BMED 7601. Advanced Seminar: Neuroengineering and Neuropathology. 3 Credit Hours.
Current issues in neuroengineering. Focus is placed on neuropathological complexity across cellular and organ level scales through literature reading, discussion, and independent study.

BMED 7610. Quantitative Neuroscience. 3 Credit Hours.
A quantitative presentation of neural signal processing and information coding, emphasizing the circuitry of sensory and motor pathways of the brain.

BMED 7741. Robotics Professional Preparation. 1 Credit Hour.

BMED 7742. Robotics Professional Preparation 2. 1 Credit Hour.

BMED 7743. Robotics Professional Preparation 3. 1 Credit Hour.

BMED 7785. Introduction to Robotics Research. 3 Credit Hours.
Familiarizes students with the core of robotics: mechanics, control, perception, AI, and autonomy. Provides an introduction to the mathematical tools required in robotics research. Cross-listed with AE 7785, ECE 7785, and CS 7785.
BMED 8740. Robotics Internship. 1-21 Credit Hours.
Graduate Internship at a partner company, GTRI or a GT Robotics lab.

BMED 8741. Robotics Capstone Project. 3 Credit Hours.
Teams or individuals apply the knowledge and skills acquired throughout the MS program to a faculty supervised robotics project.

BMED 8750. Multidisciplinary Robotics Research I. 3 Credit Hours.
Multidisciplinary research course supervised by two robotics faculty from different schools participating in the robotics Ph.D. program. Cross-listed with AE, CS, and ECE 8750.

BMED 8751. Multidisciplinary Robotics Research II. 3 Credit Hours.
Continuation of BMED 8750 (Multidisciplinary Robotics Research I). Cross-listed with AE, CS, and ECE 8751.

BMED 8811. Special Topics. 1 Credit Hour.
Topics of current interest in biomedical engineering.

BMED 8812. Special Topics. 2 Credit Hours.
Topics of current interest in biomedical engineering.

BMED 8813. Special Topics. 3 Credit Hours.
Topics of current interest in biomedical engineering.

BMED 8814. Special Topics. 4 Credit Hours.
Topics of current interest in biomedical engineering.

BMED 8815. Special Topics. 5 Credit Hours.
Topics of current interest in biomedical engineering.

BMED 8823. Special Topics. 3 Credit Hours.
Topics of current interest in biomedical engineering.

BMED 8833. Special Topics. 3 Credit Hours.
Special Topics.

BMED 8843. Special Topics. 3 Credit Hours.
Special Topics.

BMED 8853. Special Topics. 3 Credit Hours.
Topics of current interest in biomedical engineering.

BMED 8901. Special Problems. 1-21 Credit Hours.
Individual studies and/or experimental investigations of problems of current interest in bioengineering.

BMED 8902. Special Problems. 1-21 Credit Hours.

BMED 8903. Special Problems. 1-21 Credit Hours.

BMED 8997. Teaching Assistantship. 1-9 Credit Hours.
For graduate students holding a teaching assistantship.

BMED 8998. Research Assistantship. 1-9 Credit Hours.
For graduate students holding a research assistantship.

BMED 9000. Doctoral Thesis. 1-21 Credit Hours.
