# School of Chemistry and Biochemistry

Chemistry has been taught at the Georgia Institute of Technology since the late 1800s with the first Bachelor of Science degree in a chemical subject awarded in 1913. The Lyman Hall building (1905) was the first location on campus to be dedicated to chemistry instruction, but our activities are now spread over six buildings. Today, the School of Chemistry and Biochemistry provides rigorous, engaging, and meaningful training programs in the chemical and biochemical sciences for undergraduate students, graduate students, and postdoctoral scholars. Our community members develop new chemical knowledge and understanding through cutting-edge research that provides a foundation for future intellectual growth and stimulates technological developments that improve the quality of life. The School has had many accomplished students and faculty members. Our graduates have earned prestigious awards such as Fulbright and Rhodes Scholarships, gone on to executive positions in corporate America, and a B.S. graduate won the 1993 Nobel Prize in Chemistry for the invention of the polymerase chain reaction (PCR) method. Our faculty members have won many accolades for their teaching and research. Notably, Prof. Mostafa El-Sayed was awarded the National Medal of Science in 2007.

The School offers coursework, research, and degrees in Chemistry (B.S., M.S. and Ph.D.) and Biochemistry (B.S.). Some of our courses are offered as components of study abroad programs, which our faculty teach in Lyon, France (Summer), Barcelona, Spain (Fall), and New Zealand (Spring). Students can also pursue study abroad opportunities offered by partner universities around the world. All Bachelor of Science in Chemistry students and most Bachelor of Science Biochemistry students undertake research as part of their degree programs. Graduate students in our school can also pursue interdisciplinary degrees in Computational Science and Engineering (M.S. and Ph.D.), Quantitative Biosciences (Ph.D.) and Bioinformatics (Ph.D.). Our undergraduate degrees provide excellent preparation for students interested in direct employment after graduation, medical, dental, and pharmacy school, and for students who wish to pursue a graduate degree in the chemical or biochemical sciences. Our Ph.D. degree provides excellent preparation for careers in research and development, consulting, intellectual property law, and faculty roles at universities and colleges.

All undergraduate concentrations in our Bachelor of Science in Chemistry program (except the Pre-health Option) meet the certification requirements of the American Chemical Society (ACS).

## Minors
- Minor in Chemistry & Biochemistry

## Bachelor’s Degrees
- Bachelor of Science in Chemistry
- Bachelor of Science in Biochemistry

## Master’s Degrees
- Master of Science in Chemistry
- Master of Science in Computational Science and Engineering

## Doctoral Degrees
- Doctor of Philosophy with a Major in Bioinformatics
- Doctor of Philosophy with a Major in Chemistry
- Doctor of Philosophy with a Major in Computational Science and Engineering
- Doctor of Philosophy with a Major in Quantitative Biosciences

### CHEM 1211K. Chemical Principles I. 4 Credit Hours.
First course in a two-semester sequence covering the fundamental principles and applications of chemistry designed for science majors. Topics to be covered include composition of matter, stoichiometry, periodic relations, and nomenclature. Laboratory exercises supplement the lecture material. Credit not allowed for both CHEM 1310 and CHEM 1211K.

### CHEM 1211R. Chemical Principles I Recitation. 0 Credit Hours.
Recitation to support the conceptual and algorithmic foundations of Chemical Principles I with additional focus on study skills and general problem-solving approaches.

### CHEM 1212K. Chemical Principles II. 4 Credit Hours.
Second course in a two-semester sequence covering the fundamental principles and applications of chemistry designed for science majors. Laboratory exercises supplement the lecture material.

### CHEM 1212R. Chemical Principles II Recitation. 0 Credit Hours.
Recitation to support the conceptual and algorithmic foundations of Chemical Principles II with additional focus on study skills and general problem-solving approaches.

### CHEM 12X1. Transfer General Chem. 4 Credit Hours.

### CHEM 1310. Principles of General Chemistry for Engineers. 4 Credit Hours.
A first course in chemistry, surveying its fundamental laws and theories, for some engineering majors. It can serve as the first course in a two course sequence where CHEM 1315 is the second course. Topics include atomic structure; bonding theory; stoichiometry; properties of solids, liquids and gases; chemical thermodynamics; electrochemistry; and kinetics. Credit not allowed for both CHEM 1310 and CHEM 1211K.

### CHEM 1315. Survey of Organic Chemistry for Engineers. 3 Credit Hours.
Second or third course in chemistry for some engineering majors. It can serve as the first course in a two-semester sequence covering the fundamental principles and applications of chemistry designed for science majors. Laboratory exercises supplement the lecture material.

### CHEM 1316. Quantitative Chemical Analysis. 4 Credit Hours.
A first course in quantitative chemical analysis, surveying its fundamental laws and theories, for some engineering majors. It can serve as the first course in a two-course sequence where CHEM 1315 is the second course. Topics include acid-base titrations; complexometry; gravimetry; Beer’s law; and spectral analysis. Credit not awarded for both CHEM 1315 and CHEM 2311.

### CHEM 1801. Special Topics. 1 Credit Hour.

### CHEM 1802. Special Topics. 2 Credit Hours.

### CHEM 1803. Special Topics. 3 Credit Hours.

### CHEM 1XXX. Chemistry Elective. 1–21 Credit Hours.

### CHEM 2211. Introduction to Quantitative Analysis. 3 Credit Hours.
Laboratory experimentation emphasizing quantitative chemical analysis. Credit not allowed for both CHEM 2211 and CHEM 1313.

### CHEM 2214. Quantitative Chemical Analysis. 4 Credit Hours.
Theory and laboratory of quantitative chemical analysis.

### CHEM 2214R. CHEM 2214 Recitation. 0 Credit Hours.
Recitation for Theory and laboratory of quantitative chemical analysis.

### CHEM 2216. Quantitative Chemical Analysis. 2 Credit Hours.
Theory of quantitative chemical analysis.

### CHEM 2216L. Quantitative Chemical Analysis Laboratory. 2 Credit Hours.
Laboratory practice of quantitative chemical analysis.
CHEM 2216R. Quantitative Chemical Analysis Recitation. 0 Credit Hours.
Recitation to support the theory of quantitative chemical analysis.

CHEM 2311. Organic Chemistry I. 3 Credit Hours.
An introduction to structure and reactivity of organic molecules. Credit not awarded for both CHEM 2311 and CHEM 1315.

CHEM 2312. Organic Chemistry II. 3 Credit Hours.
The second course in the series dealing with the structure and reactivity of organic molecules. Credit not awarded for both CHEM 2312 and CHEM 2313.

CHEM 2313. Organic and Bioorganic Chemistry. 3 Credit Hours.
A second course in organic chemistry that extends the study to topics in biochemistry. Credit not awarded for both CHEM 2313 and CHEM 2312.

CHEM 2380. Synthesis Laboratory I. 2 Credit Hours.
Methods for preparation, isolation, and characterization of complex organic molecules, natural products, and polymers.

CHEM 2380U. Synthesis Laboratory I. 2 Credit Hours.
Methods for preparation, isolation, and characterization of complex organic molecules, natural products, and polymers. Please note: This is the summer version of CHEM 2380-Synthesis Lab I.

CHEM 2601. Professional Skills for Chemists and Biochemists. 1 Credit Hour.
An introduction to technical and communication skills utilized in upper level chemistry and biochemistry courses with additional focus on resume building and professional development.

CHEM 2694. Internship (Undergraduate Internship for Pay). 1-21 Credit Hours.
Undergraduate Internship for which the student is paid, Freshmen and Sophomores only.

CHEM 2695. Undergraduate Internship (Undergraduate Internship for Academic Credit). 1-21 Credit Hours.
Undergraduate Internship for academic credit, Freshmen and Sophomores only.

CHEM 2698. Undergraduate Research Assistantship. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

CHEM 2699. Undergraduate Research. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

CHEM 2801. Special Topics. 1 Credit Hour.
Lecture course in current special topics in chemistry and biochemistry. Topics will vary from year to year.

CHEM 2802. Special Topics. 2 Credit Hours.
Lecture course in current special topics in chemistry and biochemistry. Topics will vary from year to year.

CHEM 2803. Special Topics. 3 Credit Hours.
Lecture course in current special topics in chemistry and biochemistry. Topics will vary from year to year.

CHEM 2804. Special Topics. 4 Credit Hours.
Lecture course in current special topics in chemistry and biochemistry. Topics will vary.

CHEM 2812. Special Topics. 2 Credit Hours.
Lecture course in current special topics in chemistry and biochemistry. Topics will vary from year to year.

CHEM 2832. Special Topic. 2 Credit Hours.
Lecture course in current special topics in chemistry and biochemistry. Topics will vary.

CHEM 2901. Special Problems in Chemistry. 1-21 Credit Hours.
Course of individual instruction, which will include library conference and laboratory experience.

CHEM 2902. Special Problems in Chemistry. 1-21 Credit Hours.
Course of indivuduated instruction, which will include library, conference and laboratory experience.

CHEM 2903. Special Problems in Chemistry. 1-21 Credit Hours.
Course of individual instruction, which will include library conference and laboratory experience.

CHEM 2XXX. Chemistry Elective. 1-21 Credit Hours.

CheM 3111. Inorganic Chemistry. 3 Credit Hours.
A study of the reactions and structures of inorganic compounds and principles, generalizations and theories that assist in understanding their behavior.

CHEM 3211. Analytical Chemistry. 5 Credit Hours.
Introduction to the theory and practice of modern chemical analysis.

CHEM 3216. Analytical Chemistry Lecture. 3 Credit Hours.
Introduction to the theory of modern chemical analysis.

CHEM 3216L. Analytical Chemistry Laboratory. 2 Credit Hours.
Introduction to the practice of modern chemical analysis.

CHEM 3281. Instrumental Analysis for Engineers. 4 Credit Hours.
Provides a background to modern analytical chemistry and instrumental methods of analysis with applications to engineering and other areas.

CHEM 3371. Organic Chemistry Laboratory. 2 Credit Hours.
Multi-step organic synthesis and inorganic synthesis. Use of chemical literature and advanced spectroscopic techniques.

CHEM 3380. Synthesis Laboratory II. 3 Credit Hours.
Multi-step organic and inorganic synthesis. Use of the chemical literature and advanced spectroscopic techniques.

CHEM 3411. Physical Chemistry I. 3 Credit Hours.
Chemical thermodynamics, energetics of chemical reactions, changes of state, and electrochemistry.

CHEM 3412. Physical Chemistry II. 3 Credit Hours.
Quantum mechanics, atomic and molecular structure, bonding theory, molecular spectroscopy, statistical mechanics.

CHEM 3481. Physical Chemistry Laboratory I. 2 Credit Hours.
Laboratory investigations of physical principles applied to chemical systems.

CHEM 3482. Physical Chemistry Laboratory II. 2 Credit Hours.
Laboratory investigations of physical principles applied to chemical systems.

CHEM 3511. Survey of Biochemistry. 3 Credit Hours.
Introductory course in biochemistry dealing with the chemistry and biochemistry of proteins, lipids, carbohydrates, nucleic acids, and other biomolecules. Credit not awarded for both CHEM 3511 and (CHEM 4511 or CHEM 3521).

CHEM 3521. Biochemistry I. 3 Credit Hours.
The chemistry and biochemistry of proteins, lipids, carbohydrates, nucleic acids, and other biomolecules. Credit not awarded for both CHEM 3521 and (CHEM 4511 or CHEM 3511).

CHEM 3522. Biochemistry II. 3 Credit Hours.
The chemistry and biochemistry of proteins, lipids, carbohydrates, nucleic acids, and other biomolecules.
CHEM 3700. The Science of Alternative Energy. 3 Credit Hours.
Scientific principles governing the current and future approaches in solar photo-voltaics, fuel cells, biomass conversion, nuclear energy and wind power.

CHEM 3812. Special Topics. 2 Credit Hours.
Special Topics in Chemistry.

CHEM 3XXX. Chemistry Elective. 1-21 Credit Hours.

CHEM 4113. Applications of Inorganic Chemistry in Current Energy Research. 3 Credit Hours.
The principles of coordination chemistry applied to theories and mechanisms of energy conversion and storage in chemistry and biology. Students cannot receive credit for CHEM 4113 and CHEM 6171.

CHEM 4311. Advanced Organic Chemistry. 3 Credit Hours.
Construction reactions and functional group interconversions as applied to multistep organic synthesis.

CHEM 4341. Applied Spectroscopy. 3 Credit Hours.
Theory and application of NMR, mass spectrometry, and infrared spectroscopy in the determination of organic structures.

CHEM 4401. Molecular Spectroscopy. 3 Credit Hours.
Introduction to the theory and applications of molecular spectroscopy, including electronic, vibrational, rotational transitions, and selections rules.

CHEM 4452. Chemistry of the Solid State. 3 Credit Hours.
Application of the concepts of physical and inorganic chemistry to the structure of solids and their chemical and physical properties.

CHEM 4485. Computational Chemistry. 3 Credit Hours.
Introductory course in computational chemistry discussing electronic structure theory, semi-empirical methods, molecular mechanics, transition-state searching, and computation of thermodynamic quantities.

CHEM 4511. Biochemistry I. 3 Credit Hours.
The chemistry and biochemistry of proteins, lipids, carbohydrates, nucleic acids, and other biomolecules. Credit not awarded for both CHEM 4511 and (CHEM 3511 or CHEM 3521).

CHEM 4512. Biochemistry II. 3 Credit Hours.
The chemistry and biochemistry of proteins, lipids, carbohydrates, nucleic acids, and other biomolecules.

CHEM 4521. Biophysical Chemistry. 3 Credit Hours.
The physical chemistry of biological systems, biological macromolecules, and biological aggregates.

CHEM 4581. Biochemistry Laboratory I. 3 Credit Hours.
Modern biochemical techniques including methods for protein, nucleic acid, and lipid isolation and characterization; enzyme assays; chromatography; electrophoresis; and use of databases.

CHEM 4582. Biochemistry Laboratory II. 3 Credit Hours.
Laboratory techniques in the isolation and characterization of biological molecules with special emphasis on modern techniques.

CHEM 4601. Chemistry Seminar. 2 Credit Hours.
Student presentations of recent research topics in chemistry or biochemistry based on lab experience and/or literature searches.

CHEM 4684. Advanced Chemistry Lab. 4 Credit Hours.
A modular laboratory involving a series of multipart experiments that build upon chemical principles and experimental techniques introduced in earlier courses and instructional laboratories. Credit not allowed for both CHEM 4684 and CHEM 4681.

CHEM 4694. Intern Assistantship (Undergraduate Internship for Pay). 1-21 Credit Hours.
Undergraduate Internship for which the student is paid, Juniors and Seniors only.

CHEM 4695. Undergraduate Internship (Undergraduate Internship for Academic Credit). 1-21 Credit Hours.
Undergraduate Internship for academic credit, Juniors and Seniors only.

CHEM 4696. Teaching Assistantship. 3 Credit Hours.
Chemistry and biochemistry teaching carried out under the guidance of a faculty member. Non-Billable for Pay.

CHEM 4698. Undergraduate Research Assistantship. 1-4 Credit Hours.
Independent research conducted under the guidance of a faculty member.

CHEM 4699. Undergraduate Research. 1-12 Credit Hours.
Independent research conducted under the guidance of a faculty member.

CHEM 4740. Atmospheric Chemistry. 3 Credit Hours.
An elective class for senior-level students interested in electrochemical storage and conversion, including the fundamentals of electrochemistry and practical battery and fuel cells.

CHEM 4759. Electrochemical Energy Storage and Conversion. 3 Credit Hours.
This course provides a general chemical description of the Earth's atmospheric system with a major focus on the two lowest layers of the atmosphere, i.e., the troposphere and the stratosphere. Crosslisted with EAS 4740.

CHEM 4762. Protein Engineering. 3 Credit Hours.
This course covers the theory and practice of protein engineering methods, including specific examples of engineered proteins and their applications from the literature.

CHEM 4765. Drug Design, Development, and Delivery. 3 Credit Hours.
Introduction to the pharmaceutical development process, including design of new drugs, synthesis and manufacturing issues, and methods for delivery into the body. Includes student presentations. Crosslisted with CHBE and BMED 4765.

CHEM 4775. Polymer Science and Engineering I: Formation and Properties. 3 Credit Hours.
An introduction to the chemistry, structure, and formation of polymers, physical states and transitions, physical and mechanical properties of polymer fluids and solids. Crosslisted with CHE, ME, MSE, and PTFE 4775.

CHEM 4776. Polymer Science and Engineering II: Analysis, Processing, and Laboratory. 3 Credit Hours.
Polymer fabrication processes and methods of characterization and identification of polymers are presented. Experiments in polymerization, processing, and property evaluation of polymers. Crosslisted with CHE, ME, MSE, and TFE 4776.

</tbody>
</table>
CHEM 6481. Statistical Mechanics. 3 Credit Hours.
Statistical thermodynamics, lattice statistics, molecular distribution and correlation functions, the theories of liquids and solutions, phase transitions, cluster theory, and measurement.

CHEM 6482. Chemical Kinetics and Reaction Dynamics. 3 Credit Hours.
Modern theoretical and experimental methods for studying macroscopic and microscopic bimolecular and unimolecular processes are discussed, as are methods for describing complex kinetic systems.

CHEM 6483. Chemistry of Electronic Organic Materials. 3 Credit Hours.
This course provides a broad description of the basic chemical and physical concepts that determine the properties of electrically active materials.

CHEM 6484. Chemistry of Optical Organic Materials. 3 Credit Hours.
Course description includes synthesis, electronic structure, physico-chemical characterization, and device applications of optically active organic materials.

CHEM 6485. Computational Chemistry. 3 Credit Hours.
Introductory course in computational chemistry, discussing electronic structure theory, semiempirical methods, molecular mechanics, transition-state searching, and computation of thermodynamic quantities.

CHEM 6491. Quantum Mechanics. 3 Credit Hours.
Important concepts and applications of quantum mechanics at the intermediate level, including operators, perturbation and variational methods applied to atoms and molecules.

CHEM 6492. Molecular Spectroscopy. 3 Credit Hours.

CHEM 6501. Biochemistry I. 3 Credit Hours.
The chemistry and biochemistry of proteins, lipids, carbohydrates, nucleic acids, and other biomolecules.

CHEM 6502. Biochemistry II. 3 Credit Hours.
The chemistry and biochemistry of proteins, lipids, carbohydrates, nucleic acids, and other biomolecules.

CHEM 6571. Enzymology and Metabolism. 3 Credit Hours.
Structure and chemistry of enzymes, enzyme mechanism, enzyme kinetics, enzyme inhibitors, and medicinal chemistry.

CHEM 6572. Macromolecular Structure. 3 Credit Hours.

CHEM 6573. Molecular Biochemistry. 3 Credit Hours.
Advanced topics in synthetic polymerization methodology, polymer structure, and polymer properties in solution and the solid state.

CHEM 6574. Contemporary Biochemistry. 3 Credit Hours.
Topics vary from year to year, but will include subjects from the biochemical literature, such as in Journal of Biological Chemistry.

CHEM 6575. Theoretical Chemistry of Polymers. 3 Credit Hours.
Thermodynamics and microscopic dynamics of polymers. Fundamental concepts, including scaling concepts, governing anisotropy of polarizability, phase transitions, morphology, time-dependent correlations, etc. are discussed. Crosslisted with CHE, MSE, and PTFE 6755.

CHEM 6576. Discovery of Signaling Molecules. 3 Credit Hours.
The diversity of chemical signals between organisms and their structural specificities will be presented along with chemical and biological methods for isolating signaling molecules. Crosslisted with BIOL 6756 and CEE 6756.

CHEM 6577. Advanced Polymer Chemistry. 3 Credit Hours.
Advanced topics in polymer chemistry, with emphasis on application of principles of chemistry and biology to the creation of new therapeutic agents.

CHEM 6583. Drug Design and Discovery. 3 Credit Hours.
Application of principles of chemistry and biology to the discovery of new therapeutic agents.
CHEM 6XXX. Chemistry Elective. 1-21 Credit Hours.

CHEM 7000. Master's Thesis. 1-21 Credit Hours.

CHEM 7001. Introduction to Research. 3 Credit Hours.
Introduction to laboratory techniques, experimental design, library and database searching, presentations.

CHEM 8000. Seminar in Chemistry. 1 Credit Hour.

CHEM 8001. Faculty Seminar. 1-3 Credit Hours.

CHEM 8002. Information Resources for Chemists and Biochemists. 2 Credit Hours.

CHEM 8003. Student Seminar. 1-3 Credit Hours.

CHEM 8801. Special Topics. 1 Credit Hour.
Special Topics.

CHEM 8802. Special Topics. 2 Credit Hours.

CHEM 8803. Special Topics. 3 Credit Hours.

CHEM 8812. Special Topics. 2 Credit Hours.

CHEM 8813. Special Topics in Inorganic Chemistry. 3 Credit Hours.
Topics from the inorganic chemistry research literature.

CHEM 8823. Special Topics in Analytical Chemistry. 3 Credit Hours.
Topics from the analytical chemistry research literature.

CHEM 8831. Special Topics. 1 Credit Hour.

CHEM 8833. Special Topics in Organic Chemistry. 3 Credit Hours.
Topics from the organic chemistry research literature.

CHEM 8843. Special Topics in Physical Chemistry. 3 Credit Hours.
Topics from the physical chemistry research literature.

CHEM 8853. Special Topics in Biochemistry. 3 Credit Hours.
Topics from the biochemistry research literature.

CHEM 8863. Special Topics. 3 Credit Hours.
Topics from the polymer chemistry research literature.

CHEM 8873. Special Topics in Polymer Chemistry. 3 Credit Hours.
Topics from the polymer chemistry research literature.

CHEM 88X2. Xfer-Spec Top-Org Chem. 2 Credit Hours.

CHEM 8901. Special Problems. 1-21 Credit Hours.

CHEM 8902. Special Problems. 1-21 Credit Hours.

CHEM 8903. Special Problems. 1-21 Credit Hours.

CHEM 8997. Teaching Assistantship. 1-9 Credit Hours.
For graduate students holding graduate teaching assistantships.

CHEM 8998. Research Assistantship. 1-9 Credit Hours.
For graduate students holding graduate research assistantships.

CHEM 9000. Doctoral Thesis. 1-21 Credit Hours.
