TABLE OF CONTENTS

2023-2024 Catalog 13

Governance 14

- Member Institutions 14
- Office of the President 14
- Deans 14
- Accreditation 15

Colleges and Schools 17

- College of Computing 17
  - Research Centers 17
  - School of Computational Science and Engineering 17
    - Graduate Study in Computational Science and Engineering 18
  - School of Computer Science 18
    - Graduate Study in Computer Science 19
  - School of Interactive Computing 20
    - Graduate Study in Interactive Computing 20
    - Undergraduate Study in Interactive Computing 21
- College of Design 21
  - School of Architecture 21
    - Graduate Study in Architecture 22
    - Undergraduate Study in Architecture 22
  - School of Building Construction 23
    - Graduate Study in Building Construction 24
    - Undergraduate Study in Building Construction 24
  - School of City and Regional Planning 24
    - Graduate Study in City and Regional Planning 25
    - Undergraduate Study in City and Regional Planning 26
  - School of Industrial Design 26
    - Graduate Study in Industrial Design 26
    - Undergraduate Study in Industrial Design 27
  - School of Music 27
    - Undergraduate Study in Music Technology 27
    - Graduate Study in Music Technology 27
    - School of Music Humanities Credit Information 27
    - Vocal and Instrumental Ensembles 28
- College of Engineering 28
  - Guggenheim School of Aerospace Engineering 29
    - Graduate Study in Aerospace Engineering 29
    - Undergraduate Study in Aerospace Engineering 30
  - H. Milton Stewart School of Industrial and Systems Engineering 30
    - Graduate Study in Industrial & Systems Engineering 30
    - Undergraduate Study in Industrial & Systems Engineering 31
  - Multidisciplinary Activities and Programs 31
  - School of Chemical and Biomolecular Engineering 32
    - Graduate Study in Chemical and Biomolecular Engineering 33
    - Undergraduate Study in Chemical and Biomolecular Engineering 33
  - School of Civil and Environmental Engineering 34
    - Graduate Study in Civil and Environmental Engineering 35
    - Undergraduate Study in Civil and Environmental Engineering 35
  - School of Electrical and Computer Engineering 35
    - Graduate Study in Electrical and Computer Engineering 36
    - Undergraduate Study in Electrical and Computer Engineering 36
  - School of Materials Science and Engineering 36
    - Graduate Study in Materials Science and Engineering 37
    - Undergraduate Study in Materials Science and Engineering 38
  - Transfer Programs in the College of Engineering 39
  - Wallace H. Coulter Department of Biomedical Engineering at Georgia Tech and Emory University 39
    - Graduate Study in Biomedical Engineering 39
    - Undergraduate Study in Biomedical Engineering 40
  - Woodruff School of Mechanical Engineering 40
    - Graduate Study in Mechanical Engineering 41
      - Distance Learning Programs 42
      - Georgia Tech-Lorraine 42
      - Multidisciplinary Programs 42
    - Undergraduate Study in Mechanical Engineering 42
- College of Sciences 43
  - School of Biological Sciences 44
    - Graduate Study in Biological Sciences 44
    - Undergraduate Study in Biological Sciences 44
  - School of Chemistry and Biochemistry 45
    - Graduate Study in Chemistry and Biochemistry 45
    - Undergraduate Study in Chemistry and Biochemistry 45
  - School of Earth and Atmospheric Sciences 46
    - Graduate Study in Earth and Atmospheric Sciences 46

Undergraduate Study in Earth and Atmospheric Sciences 46
School of Mathematics 46
Graduate Study in Mathematics 47
Undergraduate Study in Mathematics 47
School of Physics 47
Graduate Study in Physics 47
Undergraduate Study in Physics 48
School of Psychology 48
Graduate Study in Psychology 48
Undergraduate Study in Psychology 48
Ivan Allen College of Liberal Arts 49
Department of Air Force Aerospace Studies 49
Air Force ROTC Cross Registration 50
Air Force ROTC Program Overview 50
Air Force ROTC Scholarship Program 51
Department of Military Science/Army ROTC 51
Army ROTC - Additional Training Offered 52
Army ROTC - Program Overview 52
Army ROTC - Scholarship Programs 53
Army ROTC - Student Advisory Services 53
Department of Naval Science / NROTC 54
NROTC - College Program Students 54
NROTC - Program Overview 54
NROTC - Scholarship Students 54
NROTC - Two-Year Scholarship Program 55
School of Economics 55
Graduate Study in Economics 55
Undergraduate Study in Economics 56
School of History and Sociology 56
Graduate Study in History and Sociology 56
Undergraduate Study in History and Sociology 57
School of Literature, Media, and Communication 57
Graduate Study in Literature, Media, and Communication 58
Undergraduate Study in Literature, Media, and Communication 58
School of Modern Languages 59
Undergraduate Study in Modern Languages 59
School of Public Policy 62
Graduate Study in Public Policy 63
Undergraduate Study in Public Policy 65
The Sam Nunn School of International Affairs 65
Graduate Study in International Affairs 66
Undergraduate Study in International Affairs 66
Scheller College of Business 67
Graduate Study in Business 68
Undergraduate Study in Business 68
Academics 69
Academic Resources 69
Colleges and Schools 69
Courses 69
Distance Learning and International Sites 69
Graduate Academics 69
Graduate Policies and Regulations 70
Graduate Student Work Loads 71
Doctoral Degree Programs 168
Requirements for the Doctoral Degree 71
Master's Degree Programs 168
Requirements for the Master's Degree 72
Professional Education 74
Community Outreach 74
English as a Second Language 74
Professional Education Degree Programs 75
Professional Education Short Programs 75
Research Support Facilities 75
Advanced Technology Development Center (ATDC) 75
Georgia Tech Research Corporation 76
Georgia Tech Research Institute 76
Joint CNRS Research Laboratory 76
Logistics Innovation Centers 76
Oak Ridge Associated Universities 77
Skidaway Institute of Oceanography 77
VentureLab 77
Special Academic Programs 77
Academic Common Market 77
Bachelor of Science and Master of Science Degree Options (BS/MS Option) 78
Center for Teaching and Learning (CTL) 78
Experiential Education 79
Georgia Tech Career Center 79
Graduate Cooperative Plan 79
Paid and Unpaid Internships 79
Georgia Tech-Lorraine 80
Dual Enrollment Program for High School Students 80

Learning Support Policies 80
Living Learning Communities 80
Preprofessional Programs 80
President's Scholarship Program 81
ROTC 81
Summer Language Programs 81
The International Plan 81
Transfer Programs 85
Dual Degree Program 85
Regents' Engineering Transfer Program 85
Undergraduate Research Opportunities Program 86
Undergraduate Academics 86
Bachelor's Degree Programs 167
BS/MS Degree Programs 86
Cooperative Agreements 86
Core Curriculum 86
Constitution and History: US and Georgia 87
Core Area A1 88
Core Area A2 89
Core Area B 89
Core Area C 89
Core Area D 93
Core Area E 94
Core Area F 97
Ethics 97
Global Perspectives 98
U.S. Perspectives 98
Wellness 98
Credit, Tests, and Scores 98
Advanced Levels (A-Levels) 98
Advanced Placement Exams 99
Advanced Standing 100
Departmental Exams 101
French Baccalaureat 101
German Language Exams (DSD) 101
International Baccalaureate Exams 101
Regents' Testing Program 105
ROTC Credit 105
SAT II Subject Tests 105
Transfer Courses with 'X' Numbers 106
Transfer Credit 106
Undergraduate Students Taking Graduate Courses 107
New Sequence of Math Core Courses 107
Undergraduate-Level Courses 107
Undergraduate Minors 107
Admissions 109
Graduate Admissions 109
Admissions Information 109
Graduate Record Examinations (GRE) 109
Orientation - New Students 109
Reactivation of Application 109
Readmission 109
TOEFL for Int'l Students 110
Transfer of Credit 110
Types of Standing 110
Undergraduate Admissions 110
First-Year Admission 110
Transfer Admissions 111
Policy on the Competitive Admission of Transfer Applicants 111
Academic Advising 111
Required Computer Ownership 112
International Students 112
FASET (New Student Orientation) 112
Regents' Testing Program 112
Sophomore Programs 112
Transfer Credit 112
Readmission 113
Academic Advising 114
Readmission Immunization Requirements 114
Regents' Testing Program 114
Transfer Credit 114
Financial 116
Assistance 116
Graduate Financial Assistance 116
Assistantships 116
Fellowships 116
Out-of-State Tuition Waivers 117
Outside Sponsorships 118
Veterans Services 118
DoD Tuition Assistance (TA) 120
62 and Older Student Waiver 120
Undergraduate Financial Assistance 120
Out-of-State Tuition Waivers 121

Outside Sponsorships 122
62 and Older Student Waiver 122
President's Scholarship Program 122
Veterans Services 122
Billing 124
Cancellation of Registration 124
Fees 125
Payment 125
Refunds 126
Student Financial Agreement 126
Tuition 127
Out-of-State Tuition Waivers 127
Tuition Classification 129
VA Compliance Statement 130
Verification of Participation 130
Policies 131
Academic Honor Code 131
Alcohol and Drug Policy 131
Certificate Guidelines 133
Graduate Certificate Guidelines 133
Undergraduate Certificate Guidelines 134
Disabled Persons Assistance 135
Discrimination 135
Family Educational Rights and Privacy Act (FERPA) and Applicant Records 135
Grading & GPA 137
Academic Average 137
Auditing 137
Final Examinations 137
Grade Substitution 139
Grading System 139
Pass/Fail Grading 141
Progress Reports 141
Health Policies 142
Institute Commitment to Diversity, Equity, and Inclusion 142
Intellectual Property Policy 142
Required Computer Ownership 143
Sexual Misconduct Policy 143
Student Absence from Class Due to Illness or Personal Emergencies 143
Rules and Regulations 145
I. Purpose 145
II. Academic Calendar 145
III. Notices 146
IV. Attendance 146
V. Grades / Average 147
VI. Scholastic Regulations 150
VII. Deficiencies 152
VIII. Withdrawal/Readmission 153
IX. Scheduling 154
X. Pass/Fail Grading 155
XI. Cross Enrollment and Concurrent Registration 156
XII. Examinations 156
XIII. Undergraduate Degrees 158
XIV. Graduate Degrees 160
XV. Medical Regulations 161
XVI. Extracurricular Activities 161
XVII. Academic Honor Code 162
XVIII. Code of Conduct 162
XIX. Grievance Procedures 162
XX. Exceptions 164
XXI. Student-Faculty Expectations 164
Programs 166
Bachelor of Science in Aerospace Engineering 171
Bachelor of Science in Applied Languages & Intercultural Studies 173
Bachelor of Science in Applied Languages and Intercultural Studies - Chinese 174
Bachelor of Science in Applied Languages and Intercultural Studies - French 175
Bachelor of Science in Applied Languages and Intercultural Studies - German 176
Bachelor of Science in Applied Languages and Intercultural Studies - Japanese 176
Bachelor of Science in Applied Languages and Intercultural Studies - Korean 177
Bachelor of Science in Applied Languages and Intercultural Studies - Russian 178
Bachelor of Science in Applied Languages and Intercultural Studies - Spanish 179
Bachelor of Science in Applied Physics 181
Bachelor of Science in Applied Physics - General 181
Bachelor of Science in Applied Physics - Business Option 182
Bachelor of Science in Architecture 184
Bachelor of Science in Atmospheric and Oceanic Sciences 186
Bachelor of Science in Biochemistry 187
Bachelor of Science in Biochemistry - Business Option 188

Bachelor of Science in Biochemistry - General 189
Bachelor of Science in Biochemistry - Pre-Health Option 190
Bachelor of Science in Biology 192
Bachelor of Science in Biology - Business Option 192
Bachelor of Science in Biology - General 194
Bachelor of Science in Biomedical Engineering 196
Bachelor of Science in Building Construction 199
Bachelor of Science in Business Administration 200
Bachelor of Science in Business Administration - Accounting 200
Bachelor of Science in Business Administration - Finance 201
Bachelor of Science in Business Administration - General Management 202
Bachelor of Science in Business Administration - Information Technology Management 203
Bachelor of Science in Business Administration - Leadership and Organizational Change 204
Bachelor of Science in Business Administration - Marketing 205
Bachelor of Science in Business Administration - Operations and Supply Chain Management 206
Bachelor of Science in Business Administration — Strategy and Innovation 207
Bachelor of Science in Chemical and Biomolecular Engineering 208
Bachelor of Science in Chemical and Biomolecular Engineering - Biotechnology Option 208
Bachelor of Science in Chemical and Biomolecular Engineering - Standard Option 209
Bachelor of Science in Chemistry 211
Bachelor of Science in Chemistry - General 212
Bachelor of Science in Chemistry - Biochemistry Option 212
Bachelor of Science in Chemistry - Business Option 213
Bachelor of Science in Chemistry - Polymers and Materials Option 214
Bachelor of Science in Chemistry - Pre-Health Option 215
Bachelor of Science in Civil Engineering 218
Bachelor of Science in Civil Engineering (Standard) 219
Bachelor of Science in Civil Engineering - Construction and Infrastructure Systems Engineering 220
Bachelor of Science in Computational Media 222
Bachelor of Science in Computational Media - Intelligence-Film & Media Studies 223
Bachelor of Science in Computational Media - Intelligence - Games 224
Bachelor of Science in Computational Media - Intelligence-Interaction Design 225
Bachelor of Science in Computational Media - Media-Film & Media Studies 226
Bachelor of Science in Computational Media - Media-Games 227
Bachelor of Science in Computational Media - Media-Interaction Design 228
Bachelor of Science in Computational Media - People-Film & Media Studies 229
Bachelor of Science in Computational Media - People-Games 230
Bachelor of Science in Computational Media - People-Interaction Design 231
Bachelor of Science in Computer Engineering 232
Bachelor of Science in Computer Engineering - Computing Hardware & Emerging Architectures and Devices 233
Bachelor of Science in Computer Engineering - Computing Hardware & Emerging Architectures and Information Internetworks 235
Bachelor of Science in Computer Engineering - Computing Hardware & Emerging Architectures and Robotics & Autonomous Systems 236
Bachelor of Science in Computer Engineering - Computing Hardware & Emerging Architectures and Signal & Information Processing 238
Bachelor of Science in Computer Engineering - Computing Hardware & Emerging Architectures and Systems & Architecture 239
Bachelor of Science in Computer Engineering - Computing Hardware & Emerging Architectures and Telecommunications 240
Bachelor of Science in Computer Engineering- Cybersecurity and Computing Hardware & Emerging Architectures 242
Bachelor of Science in Computer Engineering - Cybersecurity and Devices 243
Bachelor of Science in Computer Engineering - Cybersecurity and Distributed System & Software Design 245
Bachelor of Science in Computer Engineering - Cybersecurity and Information Internetworks 246
Bachelor of Science in Computer Engineering - Cybersecurity and Robotics & Autonomous Systems 247
Bachelor of Science in Computer Engineering - Cybersecurity and Signal & Information Processing 249
Bachelor of Science in Computer Engineering - Cybersecurity and Systems & Architecture 250
Bachelor of Science in Computer Engineering - Cybersecurity and Telecommunications 252
Bachelor of Science in Computer Engineering - Distributed System & Software Design and Devices 253
Bachelor of Science in Computer Engineering - Distributed System & Software Design and Information Internetworks 254
Bachelor of Science in Computer Engineering - Distributed System & Software Design and Robotics & Autonomous Systems 256
Bachelor of Science in Computer Engineering - Distributed System & Software Design and Signal & Information Processing 257
Bachelor of Science in Computer Engineering - Distributed System & Software Design and Systems & Architecture 259

Bachelor of Science in Computer Engineering - Distributed System & Software Design and Telecommunications 260
Bachelor of Science in Computer Science 262
Bachelor of Science in Computer Science - Thread: Devices & Information Internetworks 265
Bachelor of Science in Computer Science - Thread: Devices & Intelligence 266
Bachelor of Science in Computer Science - Thread: Devices & Media 267
Bachelor of Science in Computer Science - Thread: Devices & People 269
Bachelor of Science in Computer Science - Thread: Devices & Systems and Architecture 270
Bachelor of Science in Computer Science - Thread: Devices & Theory 271
Bachelor of Science in Computer Science - Thread: Information Internetworks & Intelligence 272
Bachelor of Science in Computer Science - Thread: Information Internetworks & Media 273
Bachelor of Science in Computer Science - Thread: Information Internetworks & People 275
Bachelor of Science in Computer Science - Thread: Information Internetworks & Systems and Architecture 276
Bachelor of Science in Computer Science - Thread: Intelligence & Media 277
Bachelor of Science in Computer Science - Thread: Intelligence & People 279
Bachelor of Science in Computer Science - Thread: Intelligence & Systems and Architecture 280
Bachelor of Science in Computer Science - Thread: Media & People 281
Bachelor of Science in Computer Science - Thread: Media & Systems and Architecture 282
Bachelor of Science in Computer Science - Thread: Modeling-Simulation & Devices 284
Bachelor of Science in Computer Science - Thread: Modeling-Simulation & Intelligence 285
Bachelor of Science in Computer Science - Thread: Modeling-Simulation & People 286
Bachelor of Science in Computer Science - Thread: Modeling - Simulation & Systems and Architecture 287
Bachelor of Science in Computer Science - Thread: Modeling-Simulation & Theory 288
Bachelor of Science in Computer Science - Thread: Modeling and Simulation & Media 289
Bachelor of Science in Computer Science - Thread: Modeling-Simulation & Information Internetworks 290
Bachelor of Science in Computer Science - Thread: People & Systems and Architecture 292
Bachelor of Science in Computer Science - Thread: Theory & Information Internetworks 293
Bachelor of Science in Computer Science - Thread: Theory & Intelligence 294
Bachelor of Science in Computer Science - Thread: Theory & Media 295
Bachelor of Science in Computer Science - Thread: Theory & People 296
Bachelor of Science in Computer Science - Thread: Theory & Systems and Architecture 298
Bachelor of Science in Earth and Atmospheric Sciences 300
Bachelor of Science in Earth and Atmospheric Sciences - Business Option 300
Bachelor of Science in Earth and Atmospheric Sciences - General 301
Bachelor of Science in Economics 303
Bachelor of Science in Economics and International Affairs 305
Bachelor of Science in Electrical Engineering 308
Bachelor of Science in Electrical Engineering - Signal & Information Processing and Bioengineering 309
Bachelor of Science in Electrical Engineering - Signal & Information Processing and Circuit Technology 311
Bachelor of Science in Electrical Engineering - Signal & Information Processing and Electronic Devices 312
Bachelor of Science in Electrical Engineering - Signal & Information Processing and Robotics & Autonomous Systems 314
Bachelor of Science in Electrical Engineering - Signal & Information Processing and Sensing & Exploration 315
Bachelor of Science in Electrical Engineering - Signal & Information Processing and Telecommunications 317
Bachelor of Science in Electrical Engineering - Electric Energy Systems and Signal & Information Processing 318
Bachelor of Science in Electrical Engineering - Robotics & Autonomous Systems and Electric Energy Systems 320
Bachelor of Science in Electrical Engineering - Robotics & Autonomous Systems and Bioengineering 321
Bachelor of Science in Electrical Engineering - Robotics & Autonomous Systems and Circuit Technology 322
Bachelor of Science in Electrical Engineering - Robotics & Autonomous Systems and Electronic Devices 324
Bachelor of Science in Electrical Engineering - Robotics & Autonomous Systems and Sensing & Exploration 325
Bachelor of Science in Electrical Engineering - Robotics & Autonomous Systems and Telecommunications 326
Bachelor of Science in Electrical Engineering - Electric Energy Systems and Telecommunications 328
Bachelor of Science in Electrical Engineering - Sensing & Exploration and Telecommunications 329

Bachelor of Science in Electrical Engineering - Bioengineering and Telecommunications 331
Bachelor of Science in Electrical Engineering - Electronic Devices and Telecommunications 332
Bachelor of Science in Electrical Engineeering - Electronic Devices and Sensing & Exploration 334
Bachelor of Science in Electrical Engineering - Electronic Devices and Circuit Technology 335
Bachelor of Science in Electrical Engineering - Electronic Devices and Bioengineering 336
Bachelor of Science in Electrical Engineering - Electric Energy Systems and Electronic Devices 338
Bachelor of Science in Electrical Engineering - Circuit Technology and Bioengineering 339
Bachelor of Science in Electrical Engineering - Electric Energy Systems and Circuit Technology 340
Bachelor of Science in Electrical Engineering - Electric Energy Systems and Bioengineering 342
Bachelor of Science in Electrical Engineering - Bioengineering and Sensing & Exploration 343
Bachelor of Science in Electrical Engineering - Electric Energy Systems and Sensing & Exploration 345
Bachelor of Science in Electrical Engineering - Circuit Technology and Sensing & Exploration 346
Bachelor of Science in Electrical Engineering - Circuit Technology and Telecommunications 347
Bachelor of Science in Environmental Engineering 350
Bachelor of Science in Environmental Science 353
Bachelor of Science in Global Economics and Modern Languages 355
Bachelor of Science in Global Economics and Modern Languages - Chinese 355
Bachelor of Science in Global Economics and Modern Languages - French 356
Bachelor of Science in Global Economics and Modern Languages - German 357
Bachelor of Science in Global Economics and Modern Languages - Japanese 358
Bachelor of Science in Global Economics and Modern Languages - Korean 358
Bachelor of Science in Global Economics and Modern Languages - Russian 359
Bachelor of Science in Global Economics and Modern Languages - Spanish 360
Bachelor of Science in History, Technology, and Society 361
Bachelor of Science in Industrial Design 365
Bachelor of Science in Industrial Engineering 367
Bachelor of Science in Industrial Engineering - Analytics and Data Science 368
Bachelor of Science in Industrial Engineering - Quality and Statistics 370
Bachelor of Science in Industrial Engineering - Advanced Studies in Operations Research and Statistics 372
Bachelor of Science in Industrial Engineering - Economic and Financial Systems 374
Bachelor of Science in Industrial Engineering - General 376
Bachelor of Science in Industrial Engineering - Operations Research 378
Bachelor of Science in Industrial Engineering - Supply Chain Engineering 380
Bachelor of Science in International Affairs and Modern Language 383
Bachelor of Science in International Affairs and Modern Language - Chinese 383
Bachelor of Science in International Affairs and Modern Language - French 384
Bachelor of Science in International Affairs and Modern Language - German 385
Bachelor of Science in International Affairs and Modern Language - Japanese 387
Bachelor of Science in International Affairs and Modern Language - Korean 388
Bachelor of Science in International Affairs and Modern Language - Russian 389
Bachelor of Science in International Affairs and Modern Language - Spanish 391
Bachelor of Science in International Affairs 393
Bachelor of Science in Literature, Media, and Communication 396
Bachelor of Science in Literature, Communication, and Media: Thread - Communication & Design 397
Bachelor of Science in Literature, Media, and Communication - Thread: Communication & Science, Technology, and Culture 398
Bachelor of Science in Literature, Media, and Communication - Thread: Communication & Social Justice 400
Bachelor of Science in Literature, Communication, and Media: Thread - Design & Science, Technology, & Culture 401
Bachelor of Science in Literature, Communication, and Media: Thread - Design & Social Justice 403
Bachelor of Science in Literature, Media, and Communication - Thread: Literature & Communication 404
Bachelor of Science in Literature, Media, and Communication - Thread: Literature & Design 406
Bachelor of Science in Literature, Media, and Communication - Thread: Literature & Media 407
Bachelor of Science in Literature, Media, and Communication - Thread: Literature & Science, Technology, and Culture 409
Bachelor of Science in Literature, Media, and Communication - Thread: Literature & Social Justice 410

Bachelor of Science in Literature, Media, and Communication - Thread: Media & Communication 412
Bachelor of Science in Literature, Media, and Communication - Thread: Media & Design 413
Bachelor of Science in Literature, Media, and Communication - Thread: Media & Science, Technology and Culture 415
Bachelor of Science in Literature, Media, and Communication - Thread: Media & Social Justice 416
Bachelor of Science in Literature, Media, and Communication - Thread: Social Justice and Science, Technology, and Culture 418
Bachelor of Science in Materials Science and Engineering 420
Bachelor of Science in Materials Science and Engineering - Biomaterials 421
Bachelor of Science in Materials and Science Engineering - Structural 422
Bachelor of Science in Materials and Science Engineering - Materials 422
Bachelor of Science in Materials Science and Engineering - Polymer and Fiber Materials 422
Bachelor of Science in Mathematics 424
Bachelor of Science in Mathematics - Business Option 425
Bachelor of Science in Mathematics - Discrete Mathematics 426
Bachelor of Science in Mathematics - General 427
Bachelor of Science in Mathematics - Pure Mathematics 429
Bachelor of Science in Mathematics - Probability and Statistics 430
Bachelor of Science in Mechanical Engineering 431
Bachelor of Science in Mechanical Engineering - Automation and Robotic Systems 432
Bachelor of Science in Mechanical Engineering - Automotive 433
Bachelor of Science in Mechanical Engineering - General 434
Bachelor of Science in Mechanical Engineering - Design 435
Bachelor of Science in Mechanical Engineering - Manufacturing 436
Bachelor of Science in Mechanical Engineering - Mechanics of Materials 437
Bachelor of Science in Mechanical Engineering - Micro- and Nanoengineering 438
Bachelor of Science in Mechanical Engineering - Nuclear and Radiological Engineering 440
Bachelor of Science in Mechanical Engineering - Thermal, Fluid, & Energy Systems 441
Bachelor of Science in Music Technology 443
Bachelor of Science in Music Technology - Electrical and Computer Engineering: Signal Processing 443
Bachelor of Science in Music Technology - General 444
Bachelor of Science in Music Technology - Mechanical Engineering: Acoustics and Vibrations 445
Bachelor of Science in Music Technology - Mechanical Engineering: Controls and Robotics 446
Bachelor of Science in Neuroscience 448
Bachelor of Science in Nuclear and Radiological Engineering 450
Bachelor of Science in Nuclear and Radiological Engineering - Nuclear Engineering Concentration 451
Bachelor of Science in Nuclear and Radiological Engineering - Radiological Science and Engineering concentration 452
Bachelor of Science in Physics 454
Bachelor of Science in Physics - Astrophysics 454
Bachelor of Science in Physics - Business Option 455
Bachelor of Science in Physics - General 456
Bachelor of Science in Psychology 458
Bachelor of Science in Psychology - Business Option 458
Bachelor of Science in Psychology - General 459
Bachelor of Science in Public Policy 461
Bachelor of Science in Solid Earth and Planetary Sciences 464
Doctor of Philosophy with a Major in Aerospace Engineering 465
Doctor of Philosophy with a Major in Algorithms, Combinatorics, and Optimization 466
Doctor of Philosophy with a Major in Applied Physiology 467
Doctor of Philosophy with a Major in Architecture 468
Doctor of Philosophy with a Major in Bioengineering 470
Doctor of Philosophy with a Major in Bioinformatics 474
Doctor of Philosophy with a Major in Biology 476
Doctor of Philosophy with a Major in Biomedical Engineering 477
Doctor of Philosophy with a Major in Building Construction 480
Doctor of Philosophy with a Major in Chemical Engineering 482
Doctor of Philosophy with a Major in Chemistry 483
Doctor of Philosophy with a Major in City and Regional Planning 485
Doctor of Philosophy with a Major in Civil Engineering 486
Doctor of Philosophy with a Major in Computational Science and Engineering 487
Doctor of Philosophy with a Major in Computer Science 488
Doctor of Philosophy with a Major in Digital Media 489
Doctor of Philosophy with a Major in Earth and Atmospheric Sciences 490
Doctor of Philosophy with a Major in Economics 491
Doctor of Philosophy with a Major in Electrical and Computer Engineering 492
Doctor of Philosophy with a Major in Engineering Science and Mechanics 494
Doctor of Philosophy with a Major in Environmental Engineering 495

Doctor of Philosophy with a Major in History and Sociology of Technology and Science 496
Doctor of Philosophy with a Major in Human-Centered Computing 497
Doctor of Philosophy with a major in Industrial Engineering 499
Doctor of Philosophy with a Major in Industrial Engineering - System Informatics & Control Track 502
Doctor of Philosophy with a Major in International Affairs, Science and Technology 507
Doctor of Philosophy with a major in Machine Learning 508
Doctor of Philosophy with a Major in Management 511
Doctor of Philosophy with a Major in Materials Science and Engineering 513
Doctor of Philosophy with a Major in Mathematics 514
Doctor of Philosophy with a Major in Mechanical Engineering 515
Doctor of Philosophy with a Major in Music Technology 518
Doctor of Philosophy with a Major in Nuclear Engineering 519
Doctor of Philosophy with a Major in Nuclear Engineering - Medical Physics Option 520
Doctor of Philosophy with a major in Ocean Science and Engineering 521
Doctor of Philosophy with a Major in Operations Research 522
Doctor of Philosophy with a Major in Physics 524
Doctor of Philosophy with a major in Psychology 525
Doctor of Philosophy with a Major in Public Policy 527
Doctor of Philosophy with a Major in Quantitative BioSciences 528
Doctor of Philosophy with a Major in Robotics 531
Graduate Embedded Certificate in Astrobiology 533
Graduate Embedded Certificate in BioRobotics 534
Graduate Embedded Certificate in Geographic Information Systems 535
Graduate Embedded Certificate in Industrial Design Fundamentals ... 536
Graduate Embedded Certificate in Mechanical Properties of Materials 537
Graduate Embedded Certificate in Micro Electro Mechanical Systems 538
Graduate Embedded Certificate in Public Policy 539
Graduate Embedded Certificate in Remote Sensing 540
Graduate Embedded Certificate in Science, Technology, and Society 541
Graduate Stand-Alone Certificate in Business Analytics 542
Graduate Stand-Alone Certificate in Data Science for the Chemical Industry 543
Graduate Stand-Alone Certificate in Emerging Technologies and Proliferation 544
Graduate Stand-Alone Certificate in International Security and Aerospace Systems 545
Graduate Stand-Alone Certificate in Global Development 546
Graduate Stand-Alone Certificate in Sustainable Energy and Environmental Management 547
Graduate Stand-Alone Certificate in Leveraging Digital Technology 549
Graduate Stand-Alone Certificate in Medical Physics 550
Master of Science in Aerospace Engineering 550
Master of Science in Analytics 550
Master of Architecture (M.Arch.) 551
Master of Science in Architecture 553
Master of Science in Applied Languages and Intercultural Studies 554
Master of Science in Applied Languages and Intercultural Studies - Spanish 554
Master of Science in Bioengineering 554
Master of Science in Bioinformatics 558
Master of Science in Biomedical Engineering 558
Master of Science in Biology 559
Master of Biomedical Innovation and Development 559
Master of Science in Building Construction and Facility Management 560
Master of Business Administration (MBA) 560
Master of Business Administration - Global Business 564
Master of Business Administration in Management of Technology 565
Master of Science in Chemical Engineering 566
Master of Science in Chemistry 566
Master of City and Regional Planning 568
Master of Science in Civil Engineering 570
Master of Science in Computational Science and Engineering 570
Master of Science in Computer Science 571
Master of Science in Cybersecurity 576
Master of Science in Digital Media 577

2023-2024 CATALOG

The statements set forth in the Catalog are for informational purposes only and should not be construed as the basis of a contract between a student and the Institute.

While the provisions of the Catalog will ordinarily be applied as stated, Georgia Tech reserves the right to change any provision listed in the Catalog, including but not limited to academic requirements for graduation, without actual notice to individual students. Every effort will be made to keep students advised of any such changes. Information regarding any changes will be available through the Office of the Registrar, the Office of the Vice President for Student Life and Dean of Students, and the Schools and Colleges. It is especially important for each student to note that it is their own responsibility to be aware of current requirements for a chosen degree program.

This edition of the Catalog takes effect in Summer Session 2023 and shall remain in effect through Spring Semester 2024.

Accreditation

Georgia Institute of Technology is accredited by the Southern Association of Colleges and Schools Commission on Colleges (SACSCOC) to award baccalaureate, masters, and doctorate degrees. Georgia Institute of Technology also may offer credentials such as certificates and diplomas at approved degree levels.

Questions about the accreditation of Georgia Institute of Technology may be directed in writing to the Southern Association of Colleges and Schools Commission on Colleges at 1866 Southern Lane, Decatur, GA 30033-4097, by calling (404) 679-4500, or by using information available on SACSCOC's website (www.sacscoc.org).

College of Computing

The founding of the College of Computing in 1990 as a focal point for the interdisciplinary advancement of computing caps a history that began in 1963 with the establishment of the School of Information Science. In 1972, this school was succeeded by the School of Information and Computer Science, the immediate predecessor of the current College of Computing. The College of Computing at Georgia Tech is one of the first college-level units devoted to the study of computing in the country.

Computing is an important basis for many activities and is a natural and powerful partner with a variety of other disciplines. The College offers instructional and research programs in many areas, including algorithms and data structures; intelligent systems, machine learning, artificial intelligence, and robotics; computer architecture; cognitive science; databases; distributed and parallel systems; educational technology; graphics and visualization; human-computer interaction; cybersecurity; social computing; networking and telecommunications; operating systems; parallel architectures; programming languages; software engineering; and theories of automata and computation.

Beginning in Fall 2006, the College's undergraduate program was organized around the Threads program developed by College of Computing faculty. A Thread is an intuitive, flexible, and mutually strengthening set of courses that allows students to craft a distinctive future in any computing-related field. Based on their particular interests, students pursuing a BS in Computer Science will choose two Threads—from: modeling and simulation; devices; theory; information internetworks; intelligence; media; people; or systems and architecture—in order to weave a technical degree with a broad collection of skills and learning experiences they need to thrive in a globally competitive world. This approach allows the computing program to retain its strong computing foundations yet encourages partnerships with the multitude of disciplines affected by computing and technology. The Threads also represent minors for students outside of computing who wish to pursue a focused computing minor. Undergraduates who want an even stronger foundation without earning a BS in Computer Science may pursue one of our joint degrees… which are also threaded:

- bachelor's degrees in computer science (CS),
- bachelor's degrees in computational media (jointly with the School of Literature, Media, and Communication and the School of Music), and
- bachelor's degrees in computer engineering (jointly with the School of Electrical and Computer Engineering)

In addition to our undergraduate degrees and minors, the College also offers over a dozen Master's degrees and PhDs in fields as diverse as human-computer interaction; Algorithms, Combinatorics, and Optimization; Robotics; and Machine Learning. All but one of these degrees crosses Schools in the College and more than half are joint with other Colleges.

This interdisciplinary nature is also reflected in our interdisciplinary research programs. For more information, please visit our web pages at: https://www.cc.gatech.edu/

The following undergraduate computing programs are accredited by the Computing Accreditation Commission of ABET, www.abet.org:

- Bachelor of Science in Computer Science
- Bachelor of Science in Computational Media

- Algorithms, Combinatorics, and Optimization. PhD
- Analytics. MS
- Bioengineering. MS, PhD
- BioInformatics. MS, PhD
- Computational Media. BS
- Computational Science and Engineering. MS, PhD
- Computer Science. BS, MS, PhD
- Computing and Business. Minor
- Computing and Devices. Minor
- Computing and Information Internetworks. Minor
- Computing and Intelligence. Minor
- Computing and People. Minor
- Computing & Systems and Architecture. Minor
- Computing and Theory. Minor
- Cybersecurity. MS
- Human-Computer Interaction. MS
- Human-Centered Computing. PhD
- Machine Learning. PhD
- Robotics. MS, PhD

School of Computational Science and Engineering

The School of Computational Science and Engineering (CSE) was established in 2005 to strengthen and better reflect the critical role that computation plays in the science and engineering disciplines at Georgia Tech and the broader technology community. At Georgia Tech, CSE is *the academic discipline devoted to the systematic study and application of computer-based models of natural and engineered systems*. This definition contains two significant elements. First, it acknowledges the essential role that computing and data play in scientific discovery and design and innovation in engineering. Secondly, by referring to CSE as a *discipline*, it recognizes that CSE has its own distinct body of knowledge.

As a school in the College of Computing, CSE supports interdisciplinary research and education in computer science, data science, and applied mathematics. CSE is designed to innovate and create new expertise, technologies, and practitioners.

CSE bridges the gap between traditional computer science (CS) and computational research in science, engineering, medical, and social domains. The School is currently developing programs that immerse students in computing with real-world computational problems and applications. Developing solutions to difficult computation problems that allow all the richness, subtleties, and requirements of the domain to be adequately considered or addressed is crucial.

CSE is concerned with those technologies that lie at the boundary between computer science, data science, and science and engineering. These areas include:

- high performance computing
- scientific and numerical computing
- modeling and simulation
- discrete algorithms
- large-scale data and visual analytics

CSE involves deep collaboration with scientists and engineers, as well as traditional computer scientists. Therefore, school faculty team up with researchers and educators working in high impact areas both at Georgia Tech and at peer research organizations, including national laboratories and industry research labs. Current projects span the following areas:

- aerospace engineering
- computational chemistry
- computational biology and genomics
- civil and environmental engineering
- earth sciences
- health sciences and healthcare informatics
- industrial and systems engineering
- materials science and manufacturing
- mechanical engineering
- neuroscience
- social good and sustainable development
- urban systems and smart cities

Master's Degrees

- Master of Science in Computational Science and Engineering
- Master of Science in Computer Science
- Master of Science in Analytics
- Master of Science in Bioengineering
- Master of Science in BioInformatics

Doctoral Degrees

- Doctor of Philosophy with a Major in Computational Science and Engineering
- Doctor of Philosophy with a Major in Computer Science
- Doctor of Philosophy with a Major in Machine Learning
- Doctor of Philosophy with a Major in Bioengineering
- Doctor of Philosophy with a Major in Bioinformatics

Graduate Study in Computational Science and Engineering

Master's Degrees

- Master of Science in Computational Science and Engineering
- Master of Science in Computer Science
- Master of Science in Analytics
- Master of Science in Bioengineering

Doctoral Degrees

- Doctor of Philosophy with a Major in Computational Science and Engineering
- Doctor of Philosophy with a Major in Computer Science
- Doctor of Philosophy with a Major in Machine Learning
- Doctor of Philosophy with a Major in Bioengineering
- Doctor of Philosophy with a Major in Bioinformatics

Graduate Cooperative Programs

The Graduate Cooperative Education Program provides master's and doctoral degree students majoring in any discipline at Georgia Tech the opportunity to supplement their graduate studies with specialized work experience. Graduate co-op students gain experience with top employers, earn competitive salaries to help defray educational expenses, and expand post-graduation career options while on semester-long work assignments.

The Graduate Co-op Program is available to enrolled Georgia Tech students and is based upon academic achievement. Internships related to a student's field of study can receive academic approval as a graduate cooperative work assignment allowing students to work summer, fall, or spring semesters, full-time or part-time.

There are no fees associated with the Graduate Co-op Program and students are provided full-time enrollment status through their registration in a Graduate Co-op course. This permits students to retain all privileges of full-time enrolled students while on work assignments.

To participate in the Graduate Co-op Program, a student must

- have a 3.0 or better GPA,
- complete an online orientation session, and
- obtain a program participation letter from their major school.

Students normally identify their own job opportunities, but the Graduate Co-op Office provides access to a job posting database and can assist with career guidance, job searches, resumes, and cover letters. Graduate students accepting a graduate co-op/internship opportunity should see a Graduate Co-op Program advisor regarding offer letters, required academic approvals, registration permits, and any necessary work authorizations. Enrollment in a 6000-level co-op course, a noncredit/no-cost audit course with no student or Institute fees attached, is also required.

International students are eligible to participate, but F-1 visa holders must be enrolled for a minimum of nine months before being able to work off campus. All international students on F-1, J-1, and other appropriate visas must work with the Office of International Education to secure work authorization documentation.

For more information on the Georgia Tech Graduate Co-op and Internship Program, visit: www.gradcoop.gatech.edu.

School of Computer Science

Computing is an increasingly important and central field for any endeavor. The College represents the breadth and depth of all of Computing. Within the College, the School of Computer Science is home to a group of faculty and researchers with breadth and strength in all aspects of the computational process itself:

- Computer Architecture
- Databases
- Information Security
- Programming Languages and Compilers
- Networks
- Software Engineering
- Systems
- Theory

tThe SCS mission is produce the people, tools, and ideas to power computation into the future.

At the undergraduate level, SCS is an integral part of the College's BS in Computer Science as well as the CoC threads affiliated with the Computer Engineering degree housed in the School of Electrical and Computer Engineering. At the graduate level School of Computer Science students can pursue Master's and PhD degrees in Computer Science, Machine Learning, and as well as many others.

Master's Degrees

- Master of Science in Computer Science
- Master of Science in Cybersecurity
- Master of Science in BioInformatics

Doctoral Degrees

- Doctor of Philosophy with a Major in Computer Science
- Doctor of Philosophy with a Major in Algorithms, Combinatorics & Optimization
- Doctor of Philosophy with a Major in Bioengineering
- Doctor of Philosophy with a Major in BioInformatics
- Doctor of Philosophy with a Major in Machine Learning

Graduate Study in Computer Science

Master's Degrees

- Master of Science in Computer Science
- Master of Science in Cybersecurity
- Master of Science in BioInformatics

Doctoral Degrees

- Doctor of Philosophy with a Major in Computer Science
- Doctor of Philosophy with a Major in Algorithms, Combinatorics & Optimization
- Doctor of Philosophy with a Major in Bioengineering
- Doctor of Philosophy with a Major in BioInformatics

Bioengineering Programs

In response to the increased need for engineers and medical scientists with advanced training in bioengineering, Georgia Tech now offers master's and PhD degrees in bioengineering. The purpose of bioengineering as a research discipline is

- to develop new and better physical and mathematical concepts and techniques that may be applied to problems in medicine and biology,
- to the development of new medical technologies, and
- to the organization and delivery of cost-effective healthcare.

Interdisciplinary graduate programs in Bioengineering are offered by the College of Computing in conjunction with the Bioengineering Center in the Office of Interdisciplinary Programs, the College of Engineering, and the College of Sciences. The student's home unit will be the College of Computing, which, upon completion of the student's requirements, will recommend the degree. This interdisciplinary approach has been approved by the faculty in the Schools of Aerospace Engineering, Chemical and Biomolecular Engineering, Electrical and Computer Engineering, Materials Science and Engineering, Mechanical Engineering, and Polymer, Textile and Fiber Engineering, and by the deans of the Colleges of Computing, Engineering, and Sciences.

The program is for computer science or engineering graduates who wish to pursue a degree in bioengineering rather than in a traditional field of computing or engineering, or who have done bioengineering research in other disciplines. In addition, those interested students with non-engineering backgrounds (with degrees in such fields as physics, chemistry, biology, or mathematics) who meet the admission requirements will be admitted to the program. Applications from physicians with undergraduate degrees in engineering or the physical sciences will also be considered. All applications will be processed through the Bioengineering Center.

Additional information is available at www.bme.gatech.edu.

Master of Science in Bioengineering

Doctor of Philosophy with a Major in Bioengineering

Graduate Cooperative Programs

The Graduate Cooperative Education Program provides master's and doctoral degree students majoring in any discipline at Georgia Tech the opportunity to supplement their graduate studies with specialized work experience. Graduate co-op students gain experience with top employers, earn competitive salaries to help defray educational expenses, and expand post-graduation career options while on semester-long work assignments.

The Graduate Co-op Program is available to enrolled Georgia Tech students and is based upon academic achievement. Internships related to a student's field of study can receive academic approval as a graduate cooperative work assignment allowing students to work summer, fall, or spring semesters, full-time or part-time.

There are no fees associated with the Graduate Co-op Program and students are provided full-time enrollment status through their registration in a Graduate Co-op course. This permits students to retain all privileges of full-time enrolled students while on work assignments.

To participate in the Graduate Co-op Program, a student must

All international students on F-1, J-1, and other appropriate visas must work with the Office of International Education to secure work authorization documentation.

For more information on the Georgia Tech Graduate Co-op and Internship Program, visit: www.gradcoop.gatech.edu.

School of Interactive Computing

Interactive and intelligent computing is an emerging discipline on the frontier of ways computation impacts the external world. The School of Interactive Computing advances computing-mediated interactions by encompassing fields ranging from artificial intelligence and machine learning to graphics and computer vision to interface design and empirical methods. We don't just evaluate technology, we create technology that makes interactions better. Much of the research within the School of Interactive Computing produces new artifacts that embody new capabilities or methods. Examples include:

- Individuals working with traditional computers
- Groups of people using ubiquitous computing capabilities throughout various environments
- Researchers visualizing scientific data
- Students developing and altering middle school physics simulations
- Automated intelligent surveillance systems monitoring airport tarmacs
- Robots delivering pharmaceuticals to patients in hospitals

Whether an advance is in robotics, augmented reality, or ubiquitous computing, it is developed in the context of a prototype. School of Interactive Computing students become proficient in many areas such as mechanical or electrical engineering, and industrial design. The School of Interactive Computing develops practitioners, future innovators and researchers by offering numerous degree programs.

At the undergraduate-level, the School of Interactive Computing is an integral part of the College's BS in Computer Science, and oversees aspects of Computational Media's Bachelor's degree-offered jointly with the School of Literature, Communication and Culture (LMC) and the School of Music. The School of Interactive Computing also administers the interdisciplinary Master's in Human Computer Interaction (HCI) program in which students from the School of Interactive Computing, LMC, and Psychology participate. At the graduate-level the School of Interactive Computing students can pursue Master's and PhD degrees in Computer Science, or a PhD in Human-Centric Computing—the first of its kind in the nation—a Robotics PhD, and others.

Master's Degrees

- Doctor of Philosophy with a Major in Human-Computer Interaction
- Doctor of Philosophy with a Major in Machine Learning
- Doctor of Philosophy with a Major in Robotics

Graduate Cooperative Programs

The Graduate Cooperative Education Program provides master's and doctoral degree students majoring in any discipline at Georgia Tech the opportunity to supplement their graduate studies with specialized work experience. Graduate co-op students gain experience with top employers, earn competitive salaries to help defray educational expenses, and expand post-graduation career options while on semester-long work assignments.

The Graduate Co-op Program is available to enrolled Georgia Tech students and is based upon academic achievement. Internships related to a student's field of study can receive academic approval as a graduate cooperative work assignment allowing students to work summer, fall, or spring semesters, full-time or part-time.

There are no fees associated with the Graduate Co-op Program and students are provided full-time enrollment status through their registration in a Graduate Co-op course. This permits students to retain all privileges of full-time enrolled students while on work assignments.

To participate in the Graduate Co-op Program, a student must

- have a 3.0 or better GPA,
- complete an online orientation session, and
- obtain a program participation letter from their major school.

Students normally identify their own job opportunities, but the Graduate Co-op Office provides access to a job posting database and can assist with career guidance, job searches, resumes, and cover letters. Graduate students accepting a graduate co-op/internship opportunity should see a Graduate Co-op Program advisor regarding offer letters, required academic approvals, registration permits, and any necessary work authorizations. Enrollment in a 6000-level co-op course, a noncredit/ no-cost audit course with no student or Institute fees attached, is also required.

International students are eligible to participate, but F-1 visa holders must be enrolled for a minimum of nine months before being able to work off campus. All international students on F-1, J-1, and other appropriate visas must work with the Office of International Education to secure work authorization documentation.

For more information on the Georgia Tech Graduate Co-op and Internship Program, visit: www.gradcoop.gatech.edu.

College of Design

Location:
East Architecture Building
245 Fourth Street NW
Atlanta, Georgia 30332-0155

Phone: 404.894.3880
Fax: 404.894.2678

Website: www.design.gatech.edu
Faculty: www.design.gatech.edu/people/faculty

College established in 1975. Renamed in 2016.

General Information

The College of Design is comprised of five schools – Architecture, Building Construction, City and Regional Planning, Industrial Design, and Music. As a multidisciplinary venue for teaching, research, and service, the College brings together a distinct array of undergraduate and graduate degree offerings that address the designed, built, and lived environments. Through its seven research centers, the College drives innovation in education and professional practice by solving critical problems in building and cities, and improving the quality of life for diverse populations.

The College of Design offers four undergraduate degrees, eleven master's degrees, and four doctoral degrees. Detailed descriptions of these programs can be found under the appropriate school headings.

- Architecture. Minor, BS, M.Arch, MS, PhD
- Building Construction. BS, PhD
- Building Construction and Facility Managment. MS
- City and Regional Planning. MCRP, PhD
- Computational Media. BS
- Geographic Information Science and Technology. MS
- Human-Computer Interaction. MS
- Industrial Design. Minor, BS, M.ID
- Occupational Safety and Health. PMOSH
- Real Estate Development. MRED
- Music Technology. Minor, BS, MS, PhD
- Sustainable Cities. Minor
- Urban Design. MS

The College of Design also offers opportunities for credit sharing between the programs listed below to earn two degrees. Click here for more information.

- Master of City & Regional Planning and Master of Architecture
- Master of City & Regional Planning and Master of Science in Civil Engineering
- Master of City & Regional Planning and Master of Science in Public Policy
- Master of City & Regional Planning and JD in Planning Law (cooperative agreement with Georgia State)

School of Architecture

Location:
East Architecture Building
245 Fourth Street NW
Atlanta, Georgia 30332-0155

Phone: 404.894.4885
Fax: 404.894.2678

Website: www.arch.gatech.edu
Faculty: www.arch.gatech.edu/people

Architecture was established as a discipline at Georgia Tech in 1908, and the graduates of the program have helped shape the growth and physical climate of Atlanta, the region and the world. As the largest of the five units in the College of Design, the School of Architecture has several distinct degree programs, a reflection of its multiple missions. The undergraduate program, the Bachelor of Science in Architecture, advances Georgia Tech's general education mission through a studio-based design curriculum providing a thorough grounding in liberal and technological knowledge.

At the core of the School is the professional program in architecture, the Master of Architecture, one requirement leading to licensure as a practicing architect. In addition, advanced study and research programs, including the Master of Science with a major in Architecture, the Master of Science in Urban Design, and the Doctor of Philosophy with a major in Architecture, build linkages with practice and industry and exploit the creative tensions between research and design that drives innovation in the field.

Resources such as the Digital Building Laboratory, the Digital Fabrication Laboratory, and the SimTigrate Lab for health and design, support a culture of research focused on building performance and innovation in the field.

All work produced in the College of Design as part of a degree program becomes the property of the College; it may be retained or returned at the discretion of the faculty. The faculty also reserves the right to refuse for credit any project executed outside the precincts of the College or otherwise produced without proper coordination with the faculty.

In the United States, most registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit professional degree programs in architecture offered by institutions with U.S. regional accreditation, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted an eight-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Doctor of Architecture and Master of Architecture degree programs may require a preprofessional undergraduate degree in architecture for admission. However, the preprofessional degree is not, by itself, recognized as an accredited degree.

The Georgia Institute of Technology, School of Architecture, offers the following NAAB-accredited degree programs:

- M.Arch. (preprofessional degree in Architecture + 60 graduate credits)
- M.Arch. (non-preprofessional degree + 102 credits)

Next accreditation visit for all programs: 2022

Minors

- Minor in Architecture

Bachelor's Degrees

- Bachelor of Science in Architecture

Master's Degrees

- Master of Architecture
  - Click here for credit sharing opportunity with Master of City and Regional Planning

Doctoral Degrees

- Doctor of Philosophy with a Major in Architecture

Graduate Study in Architecture

Graduate studies in architecture at Georgia Tech are comprised of four distinct degree-granting programs:

- Master of Architecture (M.Arch) STEM-designated
- Master of Science in Urban Design (MSUD) STEM-designated
- Master of Science in Architecture (MS Arch) with several possible research emphases. STEM-designated
- Doctor of Philosophy with a major in Architecture (PhD).

The M.Arch program is the professional program in architecture leading to the NAAB-accredited Master of Architecture degree. This program accommodates both a two-year curriculum for those students with a four-year, pre-professional degree in architecture and a three-and-a-half-year curriculum for those students without a pre-professional degree in architecture.

The MSUD is oriented to those who wish to expand upon their previous professional education and professional experience, as architects, landscape architects, city planners, or civil engineers, and to enter urban design practices either in private firms or public agencies. The program is interdisciplinary in nature, offering an interdisciplinary experience, with required courses in urban design, architecture, and city planning, with additional opportunities in civil and environmental engineering, real estate development, heritage preservation, and other fields. Students in the MSUD program are in daily contact with architecture and planning students and faculty throughout the College of Architecture. The MSUD program requires a minimum of 39 credit hours of coursework.

The MS Arch is a nonprofessional, research-oriented degree program that requires a minimum of 30 credit hours of coursework. Current research areas are available in Advanced Production, High Performance Buildings, Design & Health, Design Computation and Building Information Systems. These MS program provides a rich array of studios and courses that engage particular aspects of architectural knowledge and practice.

Within the School of Architecture, the Ph.D with a major in Architecture develops knowledge and technologies:

- enhances design imagination, design evaluation, and the design process;
- articulates design choices and predicts the consequences of design decisions;
- helps to learn from precedents;
- supports better building performance; and
- situates the practice of architecture within a critical understanding of culture, history, and the profession

Our program includes research emphases in:

- Design Computation
- Architecture Culture and Behavior/Evidence-based Design
- Building Technology and Performance
- History and Culture
- Urban Design

In each of these research areas, we intersect the perspectives of architectural design, science, technology, and the humanities even as we expect individual research projects to rigorously pursue specific disciplinary agendas.

For more information about graduate programs in the School of Architecture, please contact

Robin Tucker, Academic Advising Manager -

School of Architecture, 245 Fourth Street
Georgia Institute of Technology
Atlanta, Georgia 30332-0155
website: www.arch.gatech.edu

The School of Architecture encourages foreign study for all students to prepare them professionally and personally for successful lives in the global environment of the twenty-first century. Students may participate in an immersive experience at another institution or participate in a Georgia Tech faculty-led program.

The School of Architecture sponsors several international programs organized and led by its own faculty:

- Modern Architecture and the Modern City - Graduate Students
- Greece-Italy Study Abroad Program - Undergraduate/Graduate Students
- Tongji University-Georgia Tech Exchange Program- Master of Architecture Students
- Design Develop Build Program in Africa - Undergraduate/Graduate Students

For current offerings, visit https://arch.gatech.edu/international-education

Undergraduate Study in Architecture

Minors

- Minor in Architecture

Bachelor's Degrees

- Bachelor of Science in Architecture

The School of Architecture offers three certificate programs for which undergraduate students may apply:

1. **Architecture and Society** – provides an opportunity to explore the technological and formal innovations of architecture and infrastructure within their socio-political and cultural contexts. Students will learn not only about buildings' technical systems – and their material, structural and climatic performance – but also about their formal order, siting, use, funding/patronage, relation to nature or the city, decoration, and multiple interpretive contexts.
2. **Sustainable Architecture** – provides undergraduate students the opportunity to specialize in design and technical innovations that will increase building energy performance, reduce emissions, use eco-friendly materials, and thereby increase the durable societal value of the built environment.
3. **Computational Design** – prepares students to develop a skill set in computer-aided design and fabrication built upon an integrated application of design research, architectural geometry, digital theory and digital design technologies in contemporary architectural practice and research.

Certificates will be granted only to students who, in addition to the certificate program requirements, have satisfied requirements for a Georgia Tech degree. Each certificate requires a minimum of twelve credit hours, at least nine of which are at the 3000 level or higher in the designated area. Courses required by a student's program of study may not be credited by that student toward a certificate. Courses counting toward a certificate must be taken on a letter-grade basis, and a "C" or better must be received in each course.

Interested students should visit the Georgia Tech Catalog for more information.

The School of Architecture encourages foreign study for all students to prepare them professionally and personally for successful lives in the global environment of the twenty-first century. Students may participate in an immersive experience at another institution or participate in a Georgia Tech faculty-led program.

The School of Architecture currently runs the following faculty-led programs:

- Summer Study in Greece and Italy (open to students of all majors)
- Undergraduate International Studio (restricted to students in the B.S in Architecture program)
- Design Develop Build Program in Africa (restricted to students majoring in Architecture)
- International Urban Design Studio (restricted to students majoring in Architecture)
- Barcelona Study Abroad Program in Spain (open to students of all majors)

School of Building Construction

Graduates of the School of Building Construction manage construction sites with new technologies and access to Georgia Tech's global research and education influence.

While we certainly understand how to build buildings, we see the job as so much more than that. Where others might see a wall of numbers, we look at efficiency studies and forecasting methods and see how lives are changed by the built environment. Whether we're using drones to perform safety inspections or developing new models to predict investment values, we are creating the next generation of sustainable, cost-effective construction practices.

Our academic programs in building construction — the Bachelor of Science in Building Construction , the Master of Science in Building Construction and Facility Management, the Master in Real Estate Development, the Professional Master's in Occupational Safety and Health, the undergraduate certificate in construction management, and our Ph. D. in Building Construction — address entire life cycles of building projects. From site selection through architectural design, engineering, financing, facilities management, sustainability, and energy/resource footprint to eventual renovation or demolition, we merge the creative with the practical to deliver the built environment.

We study how building projects address the needs of their society, the environment, and the economy, and how the built environment shapes those areas in turn. We work across multiple disciplines — architecture, engineering, finance, city planning, and public policy — to meet advancing needs for efficient, sustainable building practices.

The Facility Management program within the Master of Science in Building Construction and Facility Management is accredited by the Accreditation Board for Engineering and Technology (ABET). The accreditation ensures the School continues to meet the standards set by the International Facility Management Association (IFMA) for quality facility management education.

Bachelor's Degree

- Bachelor of Science in Building Construction

Master's Degree

- Master of Science in Building Construction and Facility Management
- Master of Real Estate Development
- Professional Master's in Occupational Safety and Health

Doctoral Degree

- Doctor of Philosophy with a Major in Building Construction

Certificate Programs

The School of Building Construction offers a certificate in Construction Management, which is available to students in all majors at Georgia Tech. The certificate is designed to provide a specialized education in evolving integrated management approaches to the delivery of built environment, from concept to implementation. The certificate exposes students to the multi-disciplinary nature of construction project development and management and introduces them to the latest technologies and processes developed to enhance interdisciplinary collaboration and integration.

Certificates will be granted only to students who, in addition to the certificate program requirements, have satisfied requirements for a Georgia Tech degree. Each certificate requires a minimum of twelve credit hours, at least nine of which are at the 3000 level or higher in the designated area. Courses required by a student's program of study may not be credited by that student toward a certificate. Courses counting toward a certificate must be taken on a letter-grade basis, and a C or better must be received in each course.

Interested students should consult http://bc.gatech.edu/content/undergraduate-certificate and consult with an academic advisor for more details.

School of City and Regional Planning

Founded in 1952, Georgia Tech's planning school is one of the oldest professional planning programs in the United States, with more than 1,500 alumni. Graduates are employed in public, private, and third sectors, including all levels of government, real estate development firms, planning consultancies, banks, public utilities, community development corporations, universities, research organizations, and public interest groups. The School's Master of City and Regional Planning program is fully accredited by the Planning Accreditation Board.

Our institutional setting within the College of Design and one of the world's premiere technology universities enables students to acquire expertise in every area of the urban development process, including planning, design, construction/engineering, and management. The School of City and Regional Planning is home to four research centers:

- Georgia Center for Quality Growth and Regional Development
- Center for Spatial Planning Analytics and Visualization
- Sino-U.S. Eco-urban Lab
- Urban Climate Lab

These centers plus Georgia Tech's Economic Innovation Institute, Georgia Transportation Institute, Brook Byers Institute for Sustainable Systems, and renowned co-op program, provide hands-on practice and research experience for many of our graduate students.

The Master of City and Regional Planning (MCRP) program offered by the School of City and Regional Planning is fully accredited by the Planning Accreditation Board, a joint accrediting body of the American Institute of Certified Planners, the American Planning Association, and the Association of Collegiate Schools of Planning.

The MCRP degree is the recognized basis for a career as a professional planner.

Master's Degrees

- Master of City and Regional Planning
  - Click here for credit sharing/cooperative agreements with the following programs to earn two degrees.
    - Master of City & Regional Planning and Master of Architecture
    - Master of City & Regional Planning and Master of Science in Civil Engineering
    - Master of City & Regional Planning and Master of Science in Public Policy
    - Master of City & Regional Planning and JD in Planning Law (cooperative agreement with Georgia State)
- Master of Science in Geographic Information Science and Technology

Doctoral Degree

- Doctor of Philosophy with a Major in City and Regional Planning

Certificate in Real Estate Development

Georgia Tech undergraduates in good standing may complete a Certificate in Real Estate Development offered by the School of City and Regional Planning in collaboration with the School of Building Construction and the Scheller College of Business. The certificate is designed to provide specialized education in land real estate development making our students more competitive in securing employment and in advancing to graduate education. Students must complete twelve credit hours in required and restricted elective courses,

and maintain a minimum grade point average of 2.7. The certificate is awarded upon graduation or the next semester after graduation.

Certificate in Real Estate Development

Certificate in Geographic Information Systems

The Certificate in Geographic Information Systems is open to both MCRP students and students from other programs. The certificate is structured around three sets of courses, including a foundational course in GIS, two skills related courses, and one policy context course. For City and Regional Planning graduate students, coursework for this certificate can be counted toward the MCRP or PhD degree. Students must complete twelve credit hours in required and restricted elective courses taken on letter-grade basis, and completed with a minimum grade point average of 3.0 or higher. The certificate is awarded upon graduation or the next semester after graduation.

Certificate in Geographic Information Systems

Graduate Study in City and Regional Planning

Graduate Programs

- Master of City and Regional Planning (MCRP)
- Master of Science in Geographic Information Science and Technology
- Doctor of Philosophy with a Major in City and Regional Planning

Rules and Regulations

The Catalog is the authoritative source of Rules and Regulations and other Policies for Georgia Tech students.

Dual Degrees

The School of City and Regional Planning offers several dual degree programs pairing the Master of City and Regional Planning with allied professional studies. By enrolling in a dual degree program, students are able to obtain two degrees in less time than it would take if the degrees were being pursued separately. Both degrees are awarded simultaneously upon completion of the program of study. Dual degrees position graduates to tackle urban and regional policy problems that would benefit from a multidisciplinary perspective. Dual degrees also position graduates to be competitive for work settings that traditionally involve professionals from multiple fields.

Candidates seeking dual degree program admission should apply to each of the two degree programs separately, indicating in their statements that they are seeking dual degree admission. The two schools involved will each make their decisions independently so that the applicant will have the option to pursue only one degree if not admitted to both degree programs. Please refer to the catalog listings of both degree programs involved, as admissions requirements and deadlines may differ.

- Dual Degree Information

Graduate Certificate Program in Historic Preservation

MCRP students in good standing may cross-enroll at Georgia State University to earn a certificate in heritage preservation with an emphasis on historic preservation. Coursework may be counted toward the MCRP degree.

- Graduate Certificate in Historic Preservation

Graduate Certificate in Geographic Information Systems

The certificate in Geographic Information Systems is open to both MCRP students and students from other graduate programs on campus. The certificate is structured around three sets of courses, including a foundation course in GIS, two skills related courses, and one policy context course. For City and Regional Planning graduate students, coursework for this certificate can be counted toward the MCRP or PhD degree.

School of Industrial Design

Industrial design is the professional service of creating and developing concepts and specifications that optimize the function, value, and appearance of products and systems for the mutual benefit of both user and manufacturer. An industrial designer's work touches all of our lives in the form of home products and furnishings, communication devices, healthcare equipment, rehabilitation technologies, and a myriad of other consumer and industrial products and services. While giving form to the efforts of industry, an industrial designer is at the same time a consumer advocate, providing the humanizing link between technology and people. As such, an industrial designer's central responsibilities include fitting the artifact, system, or service to the person through considering appropriate aesthetics and ergonomics, technical processes, requirements for manufacture, marketing opportunities, and economic constraints.

The Georgia Tech School of Industrial Design offers a well-rounded course of study with early emphasis on basic design and design skills. Design projects stress realistic design situations. The program encourages students to develop a diverse background in order to expand individual talents and to respond to changing opportunities in the field. Most faculty members are practicing designers with extensive experience in the field.

Resources such as the Interactive Product Design Lab, the Body Scan Lab, the Human Machine Interaction Transportation Lab and the Digital Fabrication Lab support a culture of research-focused teaching and learning.

The faculty reserves the right to refuse credit for any project executed outside the precincts of the College or otherwise executed without proper coordination with the instructor.

The Bachelor of Science in Industrial Design and the Master of Industrial Design degree programs offered by the School of Industrial Design are accredited by the National Association of Schools in Art and Design (NASAD). Georgia Tech is recognized by the Industrial Designers Society of America (IDSA) as a NASAD-accredited institution.

Minors

- Minor in Industrial Design

Bachelor's Degrees

- Bachelor of Science in Industrial Design

Master's Degrees

- Master of Industrial Design
- Master of Science in Human-Computer Interaction

Graduate Study in Industrial Design

Master's Degrees

The School of Industrial Design at Georgia Tech offers two graduate degree programs.

- Master of Industrial Design
- Master of Science in Human-Computer Interaction

Georgia Tech's Master's of Industrial Design (MID) focuses on an inclusive design approach that is dedicated to the creation and development of products, systems, services and environments that are usable by all segments of the population. With the growing diversity of the population, inclusive design is becoming increasingly important to designers of tomorrow to ensure that design is responsive to the individual and collective needs of all people.

Capitalizing on Georgia Tech's rich traditions in technology and research, the MID program stresses a user-centered design process and evidence-based design practice that offers students unique opportunities to explore the design of new and existing technologies. Faculty members, who are practicing designers and experts in their fields, maintain active research programs in tangible products within communication technologies, enabling environments, supportive product systems, rehabilitation technologies, and healthcare systems technologies.

The interdisciplinary Master of Science in Human-Computer Interaction (HCI) degree program is a cooperative effort of the School of Interactive Computing; the School of Literature, Media and Communication; the School of Industrial Design, and the School of Psychology. The program provides students with the practical *and* interdisciplinary skills and theoretical understanding they will need to become leaders in the design, implementation, and evaluation of the computer interfaces of the future.

School of Music

The School of Music offers degree programs in music technology at the bachelors, masters, and doctoral levels; a wide range of performance ensembles serving students from all majors on campus; and a series of general education courses about music and music technology, most of which carry the humanities attribute.

The School's bachelors, masters, and doctoral degrees in music technology approach this emerging, interdisciplinary field from scientific, engineering, and creative perspectives. In these programs, students develop their fundamental skills in the analysis, creation, and performance of music; their knowledge of the theory and application behind areas such as acoustics, cognition, signal processing, and interaction design; their ability to use state-of-the-art technologies to create and perform music; their experience in designing and implementing next-generation music technology tools; and their capacity to conduct research studies that expand our knowledge of how humans and machines engage with music. The School also offers a general minor and music technology minor program.

Students across campus participate in the School of Music's vocal and instrumental ensemble courses, including marching, concert, and symphonic bands, jazz ensembles and combos, symphony and chamber orchestras, multiple choirs, and a rock / pop ensemble. Some ensembles require an audition while others are open to all who wish to enroll.

The School also offers general education courses, many of which fulfill the humanities requirement for undergraduates. These courses do not generally have prerequisites or require any prior experience in music.

Much of the research in the School of Music is focused in the Center for Music Technology, which aims to transform the ways we create and experience music through next generation technology for composition, performance, consumption, and education. Research areas in the Center include robotic musicianship, music informatics, brain music, and computational and cognitive musicology.

School of Music Humanities Credit Information

Core Area C

For more information, see "Core Curriculum, Core C, General Education" in this Catalog.

Humanities Credit for Ensemble Participation

Students can earn Humanities credit for participation in one or more specified School of Music ensembles. Each ensemble course is repeatable for credit and the following ensembles carry the humanities attribute:

Code	Title	Credit Hours
MUSI 3121	Concert Band	1
MUSI 3131	Symphonic Band	1
MUSI 3231	Chamber Choir	1
MUSI 3241	Chorale	1
MUSI 3251	Glee Club	1
MUSI 3261	Treble Choir	1
MUSI 3311	Jazz Ensemble	1
MUSI 3511	Percussion Ensemble	1
MUSI 3531	New Music Ensemble	1
MUSI 3551	Rock and Pop Ensemble	1
MUSI 3611	Symphony Orchestra	1

Vocal and Instrumental Ensembles

Ensembles

More information on ensembles: https://music.gatech.edu/ensembles

The Chamber Choir

The Chamber Choir is an elite vocal ensemble chosen by audition and performs on campus and community concerts throughout the academic year. The choir rehearses and performs challenging choral music literature written especially for smaller choirs.

The Chorale

A mixed ensemble focused upon the rehearsal, study and performance of choral music. Repertoire may include accompanied and unaccompanied works from all style eras and genres, modern music, world music, and performances of multiple mediums. Choral music experience is recommended. No audition is required.

Glee Club

The Glee Club was organized in 1906 and is the oldest student organization on campus. The Glee Club performs frequently on and off campus. Repertoire includes traditional chorus music, contemporary vocal percussion, and original compositions.

Treble Choir

The Treble Choir performs a variety of accompanied and a cappella music across classical and popular music styles.

Jazz Program

The Georgia Tech Jazz Program provides a great opportunity to study one of America's greatest and most unique art forms. The Jazz Ensembles explore music from the late 1920's through the present day, including works by composers such as Duke Ellington, Bill Holman, Sammy Nestico, Charles Mingus and Pat Metheny. Emphasis in these groups is focused on ensemble playing and the art of improvisation, an essential element in jazz tradition. Typically, two large jazz ensembles are offered each semester, as well as the opportunity to perform in small jazz combos. Each ensemble presents several concerts during an academic semester, in addition to numerous on and off-campus events throughout the year. The Jazz Program also strives to bring professional artists to campus on a regular basis, and students will often have the opportunity to perform with these musicians and clinicians in concert during the year.

Percussion Ensemble

The percussion ensembles meet in the Fall and Spring and focus on traditional and contemporary ensemble literature as well as transcriptions of popular music. These ensembles are offered to students with prior percussion background. Interested students should contact Chris Moore (chris.moore@music.gatech.edu) for permission.

Athletic Bands

The Yellow Jacket Marching Band and Basketball Pep Bands are elements of the Georgia Tech Band Program. The Marching Band and Pep Bands perform at all home games and travel to several out-of-state events, including the ACC Tournament, NCAA Tournament, football games, and bowl appearances. These trips are financed by the Georgia Tech Athletic Association. Tryouts for the auxiliary units are held each spring. Wind and percussion auditions occur at the mandatory band camp held the week before the start of fall classes. More information on athletic bands: http://marchingband.gatech.edu/

Symphonic Band and Concert Band

The Symphonic Band and Concert Band perform masterworks as well as contemporary wind literature designed for the rich sonorities of an expanded instrumentation. The Concert Band provides ensemble performance experiences in a wide range of musical styles and periods for all students at GT. Symphonic Band performs the latest contemporary music as well as standards of the repertoire. Symphonic Band has been involved in commissions of new music from many composers, including Andy Akiho, James David, Steven Bryant, and Julie Giroux. The music performed in these organizations varies from semester to semester and is selected to provide a challenging opportunity for musical growth. By rehearsing and performing at the highest possible level of artistry, each student will be challenged to improve their individual musicianship and ensemble skills. The highest quality repertoire for wind instruments will be the core of the curriculum, allowing for a wide variety in the musical, educational, and philosophical foundations of the course. Auditions are required and take place on the first Tuesday of each semester.

Orchestra

The School of Music currently offers two orchestral ensembles: the Georgia Tech Symphony Orchestra (GTSO, advanced), and Concert Orchestra (intermediate). The orchestra program also provides access to master classes, professional engagements, and recording opportunities. Students are encouraged to pre-register for orchestra and then audition during the first week of each semester.

Rock / Pop Ensemble

The Georgia Tech Rock/Pop ensemble performs repertoire drawn from all styles of American vernacular music from roughly 1950 onwards, as well as derivative genres from overseas. Each semester, the group divides into multiple bands, each exploring one style or era of Rock/Pop music. Each band also performs their own original songs. Guitarists, bassists, drummers/percussionists, keyboardists, brass players, and singers are all invited to audition.

Laptop Orchestra

The Georgia Tech Laptop Orchestra consists primarily of music technology majors. Students in the ensemble learn about audio synthesis, sound design, approaches to notation and improvisation in experimental music, and interactive music programming and instrument design. They present concerts which include music arranged for laptop orchestra, music composed for laptop orchestra, and music created by the students in the ensemble.

College of Engineering

The College of Engineering comprises eight academic units of instruction and research. These units offer programs of study and research leading to bachelor's, master's, and doctoral degrees. Some also offer programs in one or more subdisciplines or subspecialties.

The programs in engineering are designed to provide a fundamental understanding of the engineering sciences (which are based on mathematics and the natural sciences), of the basic concepts of the humanities and social sciences, and an understanding of the manner in which these elements are interwoven in engineering practice. Each curriculum provides enough flexibility through elective course

opportunities to permit a certain amount of program individualism while meeting basic requirements.

The following undergraduate engineering programs are accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

- Bachelor of Science in Aerospace Engineering
- Bachelor of Science in Biomedical Engineering
- Bachelor of Science in Chemical and Biomolecular Engineering
- Bachelor of Science in Civil Engineering
- Bachelor of Science in Computer Engineering
- Bachelor of Science in Electrical Engineering
- Bachelor of Science in Environmental Engineering
- Bachelor of Science in Industrial Engineering
- Bachelor of Science in Materials Science and Engineering
- Bachelor of Science in Mechanical Engineering
- Bachelor of Science in Nuclear and Radiological Engineering

The Master of Science in Medical Physics and the PhD with a major in Nuclear Engineering - Medical Physics Option programs are accredited by the Commission on Accreditation of Medical Physics Educational Programs, CAMPEP, www.campep.org/campeplstgrad.asp.

- Aerospace Engineering. Minor, BS, MS, PhD
- Algorithms, Combinatorics, and Optimization. PhD
- Analytics. MS
- Applied Systems Engineering. PMASE
- Bioengineering. MS, PhD
- Bioinformatics. PhD
- Biomedical Engineering. Minor, BS, MS, PhD
- Biomedical Innovation and Development. MBID
- Chemical and Biomolecular Engineering. BS
- Chemical Engineering. MS, PhD
- Civil Engineering. BS, MS, PhD
- Computational Science and Engineering. MS, PhD
- Computer Engineering. BS, BS/MS
- Cybersecurity. MS
- Electrical Engineering. BS, BS/MS
- Electrical and Computer Engineering. MS, PhD
- Energy Systems. Minor
- Engineering and Business. Minor
- Engineering Science and Mechanics. MS, PhD
- Environmental Engineering. BS, MS, PhD
- Global Development. Minor
- Health Systems. MS
- Industrial Engineering. BS, MS, PhD
- Leadership Studies. Minor
- Machine Learning. PhD
- Manufacturing Leadership. PMML
- Materials Science and Engineering. Minor, BS, BS/MS, MS, PhD
- Mechanical Engineering. BS, MS, MS (undesignated), PhD
- Medical Physics. MS
- Nuclear Engineering. MS, PhD
- Nuclear and Radiological Engineering. Minor, BS
- Ocean Science and Engineering. PhD
- Operations Research. MS, PhD
- Quantitative and Computational Finance. MS
- Robotics. MS, PhD
- Statistics. MS
- Supply Chain Engineering. MS
- Sustainable Electrical Energy. PMSEE

Guggenheim School of Aerospace Engineering

The Guggenheim School of Aerospace Engineering prepares students at the bachelor's, master's, and doctoral levels for a career in vehicle engineering with primary emphasis on flight vehicles. A combined BS/MS honors program (BS/MS in Aerospace Engineering) is also offered, preparing students for graduate studies. In addition, the School offers research opportunities (Research Opportunities), a minor in aerospace engineering, and interdisciplinary minors in the fields of energy systems and scientific and engineering computing. The School is housed in five buildings with a total of approximately 122,000 square feet, most of which is devoted to instructional and research laboratories. Additional information may be found at https://aerospace.gatech.edu/undergraduate-curriculum

Minor

- Minor in Aerospace Engineering

In partnership with other units on campus, the School also offers interdisciplinary minors in the areas of energy systems, and scientific and engineering computing.

Bachelor's Degree

- Bachelor of Science in Aerospace Engineering

Master's Degrees

- Master of Science in Aerospace Engineering
- Master of Science in Computational Science and Engineering

H. Milton Stewart School of Industrial and Systems Engineering

Industrial engineering is a branch of engineering that designs and improves systems and processes to enhance efficiency and productivity. The field uses technology to properly manage resources of all kinds, including human beings, around the world. Industrial engineering involves designing and analyzing complex systems that integrate technical, economic, and social factors for all types of organizations. The methodologies involved in industrial engineering are probability, optimization, capital investment analysis, statistics, and computer science. The important application domains are supply-chain systems, manufacturing, planning, quality control, economics, and financial systems, among others. Graduates can be found in a host of settings including transportation, telecommunications, hospitals, banking, environmental systems, retailing, government, and consulting.

Bachelor's Degree

- Bachelor of Science in Industrial Engineering

Master's Degrees

- Master of Science in Analytics
- Master of Science in Computational Science and Engineering
- Master of Science in Health Systems
- Master of Science in Industrial Engineering
- Master of Science in Operations Research
- Master of Science in Quantitative and Computational Finance
- Master of Science in Statistics
- Master of Science in Supply Chain Engineering

Doctoral Degrees

- Doctor of Philosophy with a Major in Algorithms, Combinatorics, and Optimization
- Doctor of Philosophy with a Major in Bioinformatics
- Doctor of Philosophy with a Major in Computational Science and Engineering
- Doctor of Philosophy with a Major in Industrial Engineering
- Doctor of Philosophy with a Major in Machine Learning
- Doctor of Philosophy with a Major in Operations Research

Graduate Study in Industrial & Systems Engineering

Master's Degrees

- Master of Science in Analytics
- Master of Science in Computational Science and Engineering
- Master of Science in Health Systems
- Master of Science in Industrial Engineering
- Master of Science in Operations Research
- Master of Science in Quantitative and Computational Finance
- Master of Science in Statistics
- Master of Science in Supply Chain Engineering

Doctoral Degrees

- Doctor of Philosophy with a Major in Algorithms, Combinatorics, and Optimization
- Doctor of Philosophy with a Major in Bioinformatics
- Doctor of Philosophy with a Major in Computational Science and Engineering
- Doctor of Philosophy with a Major in Industrial Engineering
- Doctor of Philosophy with a Major in Machine Learning
- Doctor of Philosophy with a Major in Operations Research

Doctoral Study in Industrial Engineering

The PhD Program in Industrial Engineering is intended for qualified individuals for whom past accomplishments and evaluation indicate a high potential for successful completion of the program requirements and a subsequent creative intellectual contribution to the field. Admitted students may pursue their work in various concentrations related to common themes associated with industrial engineering:

- supply chain logistics and manufacturing,
- economic decision analysis,
- applied statistics, and
- human-integrated systems.

Admission is dependent upon student qualification rather than educational background in any specified discipline. Consideration for admission is based largely upon performance in prior academic work, the Graduate Record Examination (GRE), and credible letters of reference.

Distance Learning

The School of Industrial and Systems Engineering offers off-campus working professionals the opportunity to enroll in many of its graduate courses through video technologies. Qualified individuals can complete the requirements for the MS IE or MS OR utilizing the video-based delivery system. Admission as a degree-seeking student in the video program is based upon the same criteria as for regular students. See Distance Learning and Professional Education for more information.

Financial Aid

Financial aid for PhD study is available in the form of traineeships, fellowships, sponsored externships, and research and teaching assistantships.

Undergraduate Study in Industrial & Systems Engineering

Bachelor's Degree

- Bachelor of Science in Industrial Engineering

Exceptional Students Options

Program activities and options are available to encourage and reward students with superior records and abilities. Participation in these programs requires demonstrated scholastic excellence and prior arrangement with the student's advisor and/or the Associate Chair for Undergraduate Studies.

Graduate-Level Courses

With approval, students with a cumulative grade-point average of 3.0 or above may take up to 9 credit hours of graduate-level courses. Students who would get both BS and MS in ISYE may use up to 6 credit hours of graduate-level course for both degrees. To take a graduate-level course for both degrees, the grade-point average must be 3.5 or higher.

Honors Courses

When faculty resources permit, the School offers honors versions of some of the required courses for the BS IE Students with a cumulative grade-point average of at least 3.3 are allowed to enroll in these courses and use them as replacements for the analogous course requirements in the curriculum.

Visiting Scholar/Practitioner Offerings

Occasionally, the School brings to campus selected individuals of unique accomplishment for course offerings built around their special areas of activity, thus making available a broader range of course materials than regularly provided. Prominent in this regard is the James C. Edenfield Executive-in-Residence program, which brings highly successful executives to the School. Participating much like visiting faculty, these executives bring to a classroom setting, both graduate and undergraduate, the benefit of their work experiences as they support the ISYE curriculum.

The Bachelor of Science in Industrial Engineering is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

Multidisciplinary Activities and Programs

The College of Engineering encourages cross-unit collaboration within the College and supports the interdisciplinary culture of Georgia Tech and the merging of disciplines that is the trait of modern technology development. Engineering faculty provide leadership for such activities through their involvement in more than thirty research centers and institutes on campus.

The College also provides opportunities for engineering students to participate in interdisciplinary activities by working with faculty in the centers as research assistants, by taking part in interdisciplinary design projects and competitions, and by completing one or more of the College's multidisciplinary certificate programs.

Any student in good academic standing who is pursuing a degree in one of the participating schools of the College of Engineering or a participating school in any of the other colleges may select elective courses and the subjects of special problems to satisfy simultaneously both the requirements of their major degree program and those of a specialized multidisciplinary program. Upon graduation, the student receives both the degree in the major field of study and a certificate attesting to successful completion of the particular related multidisciplinary program.

The following table shows available program offerings and the degree levels of the programs:

Program	Degree Level
Biomaterials	BS
Composites Engineering	BS, MS, PhD

Geohydrology	MS, Phd
Manufacturing	MS, Phd
Mechanical Properties of Materials	MS, PhD
Nanomaterials	BS
Pulp and Paper Engineering	BS
Technology & Management	BS

General Requirements of Undergraduate Multidisciplinary Programs

The specific design of the multidisciplinary program of any participating undergraduate student, while individualized, must meet certain general requirements as well as requirements that are specific to that multidisciplinary area. The general (minimum) undergraduate multidisciplinary requirements are as follows:

1. The program must relate the student's major area to the given multidisciplinary area.
2. Courses must be taken under more than one academic unit.
3. At least twelve credit hours (not required by name and number in the student's major) must be taken in a coherent program.
4. At least nine credit hours must be at the 3000 level or higher.
5. At least three credit hours must be outside the major field. (Cross-listed courses may be counted outside the student's major)
6. Courses must be taken on a letter-grade basis, and a C or better must be earned in each course counting toward a multidisciplinary certificate.

General Requirements of Graduate Multidisciplinary Programs

The specific design of the multidisciplinary program of any participating graduate student, while individualized, must meet certain general requirements as well as requirements that are specific to that multidisciplinary area. The general (minimum) graduate multidisciplinary requirements are the same as those listed previously for the undergraduate programs, with the following exceptions:

1. At least three of the coherent multidisciplinary program courses as well as nine credit hours must be at the 6000 level or higher
2. Students at the doctoral level must, on an individual basis, meet additional requirements specified by the student's doctoral committee, consistent with a program beyond the master's level that has as it's objective the development of a doctoral-level multidisciplinary program.

Interested students may obtain detailed information on the various undergraduate-level and graduate-level multidisciplinary programs from the main office of their academic advisors and from the links below.

Certificate Procedures

Petitions for multidisciplinary program certificates are processed as follows:

1. During the semester in which the student expects to graduate, the student completes a Petition for Multidisciplinary Certificate form and obtains the signature the chair of the certificate program.
2. When complete, the petition is forwarded to the Office of the Dean of Engineering.
3. At the end of the semester in which all graduation requirements have been met, the certificate will be signed by the dean of the College of Engineering and mailed to the student.

Biomaterials Certificate

Composites Engineering Certificate

Geohydrology Certificate Program

Mechanical Properties of Materials Certificate

Nanomaterials Certificate

Pulp and Paper Engineering Certificate

Technology & Management Program

School of Chemical and Biomolecular Engineering

Chemical and Biomolecular Engineering is a branch of engineering that prepares students for an enormously varied set of career paths. Graduates have become corporate executives, plant engineers, professors, inventors, lawyers, researchers, physicians, consultants, and financial officers. They have found employment with oil & gas, chemical, biomedical, pharmaceutical, microelectronics, environmental, pulp & paper, food, textile, fertilizer, fragrance, and automobile companies, as well as in academia, government, consulting and financial services companies. Chemical and biomolecular engineers have led the development of biomedicine and biotechnology, and they have been crucial to the materials revolution, especially in computer chip manufacturing, nanotechnology, and plastics and fibers. Additionally, they are essential in addressing the energy needs of the nation. Chemical and biomolecular engineering emphasizes environmentally benign manufacturing and sustainable development.

The "What do chemical engineers do?" website celebrates the many significant advancements that chemical engineers have made to our world. Explore the site to learn more about chemical engineering's contributions in many areas.

Undergraduate Program

Chemical and biomolecular engineering principles are taught as the foundation of the B.S. degree; however, students are also expected to solve all kinds of problems, to view systems in their entirety, and to formulate and test solutions irrespective of the framework of the problem. Completion of the B.S. degree prepares students for entry into the workforce or advanced study in a variety of graduate programs.

Degrees Offered:

- **B.S. in ChBE**—Standard Option: provides the basics of biomolecular engineering but allows much more flexibility for students to pursue other areas of chemical engineering, such as microelectronics, materials, and the environment. Special opportunities exist for students wishing to pursue minors or certificates in fields of particular interest, and students are encouraged to participate in faculty-directed research.
- **B.S. in ChBE**—Biotechnology Option: allows students to focus their education on the biomolecular aspects of chemical and biomolecular engineering. This option includes the core chemical engineering

courses, specialized biomolecular engineering courses, biochemistry, and technical electives focused in the biotechnology area.

- **Five-year B.S./M.S. in ChBE**: seeks to engage undergraduate students who indicate an interest in, and ability for, additional education beyond the B.S. degree. Students with significant AP credit will be especially well positioned to take advantage of this opportunity.

Both curriculum tracks offer special opportunities for students wishing to pursue minors or certificates in fields of particular interest, and students are encouraged to explore the frontiers of knowledge through involvement in faculty-directed research.

Graduate Program

The School of Chemical & Biomolecular Engineering offers graduate programs involving advanced-level coursework and independent research leading to M.S. and Ph.D. degrees in chemical engineering. The M.S. degree can usually be obtained by coursework only, without a thesis. Course selection for both the M.S. and doctoral degrees is quite flexible, with individual plans of study developed for each student.

Research opportunities exist in a broad range of areas of importance to chemical engineers and society, including catalysis, reaction kinetics, complex fluids, microelectronics, microfluidics, optimization, bioinformatics, polymers, sustainable development, pulp and paper, separations, CO_2 capture, biomedicine, solar energy, thermodynamics, MEMS, environmental science, reaction engineering, cancer diagnostics and therapeutics, biofuels, air quality, modeling, and process synthesis and control.

Furthermore, the School of Chemical and Biomolecular Engineering participates with other schools in offering M.S. and Ph.D. degrees in Bioengineering.

The Georgia Institute of Technology is accredited by the Southern Association of Colleges and Schools Commission on Colleges to award baccalaureate, masters, and doctoral degrees.

Rules and Regulations

The Catalog is the authoritative source of Rules and Regulations and other Policies for Georgia Tech students.

Undergraduate Study in Chemical and Biomolecular Engineering

Chemical engineering is a discipline that traditionally has been based in the application of chemistry as an enabling science. The strength of that foundation has resulted in enormous advances in the chemical, petroleum, and related industries that have relied on chemical engineering to provide much of the intellectual capital on which they depend. Over time, and with increasing speed, the discipline has expanded so that biological sciences and chemistry now fill the position once uniquely held by chemistry. Georgia Tech's School of Chemical

& Biomolecular Engineering is a national leader in restructuring its curriculum and research initiatives to reflect that evolution.

The chemical and biomolecular engineering undergraduate curriculum leads to a Bachelor of Science in Chemical and Biomolecular Engineering. Chemical and biomolecular engineering principles are taught as the foundation of that degree but students also are expected to develop an ability to solve all kinds of problems, to view systems in their entirety, and to formulate and test solutions irrespective of the framework of the problem. Completion of the B.S. degree prepares students for entry into the workforce, for advanced study in chemical and biomolecular engineering, or for countless other graduate programs.

Program Educational Objectives

The mission of the School of Chemical & Biomolecular Engineering is to provide students with the intellectual basis to be educated citizens, to prepare them for successful professional careers, and to advance the science and technology that form the basis of chemical and biomolecular engineering. In pursuit of this mission, the School has adopted the following program educational objectives.

- Graduates will be recognized for excellence and leadership and selected for high-impact industrial, academic, government, and other professional positions
- Graduates will be intellectual leaders in solving global problems in a diverse and evolving landscape of technology, environment, and public policy
- Graduates will demonstrate critical-thinking and problem-solving abilities in developing creative, innovative, and ethical solutions to contemporary challenges using the tools of chemical and biomolecular engineering
- Graduates will engage in self-initiated, life-long learning for professional growth in their chosen career paths.

Student Outcomes

In pursuit of its educational objectives, the School has adopted the following student outcomes. Upon graduation students are expected to be able to demonstrate:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics;
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors;
3. an ability to communicate effectively with a range of audiences;
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts;
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives;
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

In pursuit of these outcomes, the curriculum is designed to provide coverage of core areas of chemical and biomolecular engineering, and to allow students opportunities to explore the breadth of the discipline. The curriculum requires a total of 132 credit hours for the B.S. degree. The biotechnology option allows the student to focus intensely in this rapidly emerging area of chemical engineering. The standard option provides the flexibility to explore other areas of chemical engineering practice while providing an understanding of the biomolecular aspects of modern chemical engineering. The standard program will also allow chemical and biomolecular engineering students to tailor their educations to their particular interests and plans for their professional careers. Students are encouraged to use the required elective hours to earn a minor or certificate, or at least to focus their electives in an area of particular interest.

Many graduates have found international experience obtained as a student to be valuable later in their careers. The School is developing special initiatives to facilitate such experiences, and it has a longstanding five-week summer program at Imperial College London in which students receive six credit hours of elective credit and credit for CHBE 4200.

Finally, although the focus of the curriculum is development of technical skills, it has elements geared to enhance communication, teamwork, and business skills.

Minors and Certificates

Special opportunities exist for students wishing to pursue minors or certificates in fields of particular interest. The School of Chemical and Biomolecular Engineering participates in the interdisciplinary Energy Systems minor and offers a Pulp & Paper certificate.

General information regarding minors at Georgia Tech can be found here: Minor Program of Study & Guidelines.

Bachelor's Degrees

- Bachelor of Science in Chemical and Biomolecular Engineering

Transfer Students

Due to the sequence of courses and the order in which they must be taken, students who transfer into the school of Chemical and Biomolecular Engineering (ChBE) from another university should expect to be enrolled for a minimum of six semesters (Fall, Spring, Summer). If, for financial aid purposes, insurance, etc., students are required to be full-time, they should transfer to Georgia Tech having sufficient non-chemical and biomolecular engineering courses remaining to enroll full-time for six terms. All prerequisites and co-requisites must be followed.

The B.S. in Chemical and Biomolecular Engineering degree program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

School of Civil and Environmental Engineering

The School of Civil and Environmental Engineering offers courses in civil engineering, environmental engineering, and engineering science and mechanics, as well as programs leading to the following degrees:

- Bachelor of Science in Civil Engineering,
- Bachelor of Science in Environmental Engineering,

- Master of Science in Civil Engineering,
- Master of Science in Engineering Science and Mechanics,
- Master of Science in Environmental Engineering, and
- Doctor of Philosophy.

The School participates in the interdisciplinary graduate programs in Bioengineering, Computational Science & Engineering, and Ocean Science and Engineering. The School also offers a dual program leading to the following degrees:

- Master of Science in Civil Engineering, with a concentration in transportation systems engineering, and
- Master of City and Regional Planning.

School of Electrical and Computer Engineering

Electrical engineers have defined, shaped, and driven the information technology revolution that we are experiencing today. Building on the fundamental cornerstones of electrical engineering—the control of information and electric power—electrical engineers have been responsible for innovations and technological breakthroughs that have altered the fabric and face of modern life. Cell phones, tablets, modern hearing aids, the Internet, digital cameras, global positioning systems, and hybrid cars all are based on electrical engineering. Georgia Tech's School of Electrical and Computer Engineering (ECE) is consistently ranked nationally among the top ten of all electrical engineering programs, and its graduates are pioneering such life-altering innovations as biomedical devices that save lives, and improve everyday living for disabled people, as well as environmentally friendly technologies such as solar energy and wind power. The electrical engineering program encompasses all major areas of this dynamic field, including analog electronics, bioengineering, digital signal processing, electric power, electromagnetics, microelectronics and microsystems, nanosystems, optics and photonics, systems and controls, and telecommunications.

Combining the study of computer systems with traditional aspects of electrical engineering, computer engineering is one of the fastest growing fields in the country, with projected demand over the next decade expected to grow by as much as 150 percent. The computer engineering program in ECE is at the forefront of this new and dynamic field, with national rankings consistently in the top ten. Rapid advances in underlying technologies have resulted in ever smaller, less costly, and higher-performance computer systems, making computers omnipresent

in our everyday lives and fueling exciting developments in areas like robotics, wired and wireless networking, embedded processing, network security, and data storage. It is this ever-expanding capacity of computers that empowers us to communicate, learn, transact business, receive medical treatment, and explore space in new ways.

The School of Electrical and Computer Engineering (ECE) provides undergraduate and graduate programs that prepare students to participate in a broad range of career opportunities. Modern facilities and laboratories support experimental and theoretical programs of instruction and research. Additional information about the School is available at https://ece.gatech.edu/ or upon request by calling 404.894.2901.

School of Materials Science and Engineering

Established in 1985
(School of Textile Engineering established in 1897)
(School of Ceramic Engineering established in 1924)

General Information

The School of Materials Science and Engineering provides high-quality academic programs focused on developing a fundamental understanding of all forms of materials and the creation of new materials in different environments for the next generation of engineering applications and functions. A discipline on the forefront of innovations in both science and engineering, the BSMSE degree offers students three separate concentrations:

- Polymer and Fiber materials;
- Structural and Functional materials, and
- Biomaterials.

The BSMSE degree involves studies of engineering materials, such as metals, ceramics, polymers, fibers, textiles, composites, biomaterials, nanomaterials and electronic materials, from a fundamental point of view, emphasizing the relationships between the atomic- and micro-scale structure, with the processing, properties, and performance of the materials.

Completion of the BS degree prepares students for entry into the workforce in diverse technology sectors, or for advanced study in materials science and engineering, or for other graduate programs. Materials scientists and engineers have many career options available, such as in aerospace, automotive, biomedical, chemical, defense, electronics, materials processing, textiles, consumer products, and recreational and sporting equipment industries, as well as in universities, government, and industrial laboratories, and even in consulting, legal, business, and medical disciplines

Academic instruction and research in the School of Materials Science and Engineering at Georgia Tech spans the following areas:

1. Synthesis and processing focusing on development of advanced and traditional materials with novel compositions and tailored microstructures;
2. Characterization and evaluation of structure and properties using advanced techniques and state-of-the-art instrumentation; and
3. Computational modeling of processing-structure-property-performance relationships emphasizing correlation of properties with the structure across nano-, micro-, meso-, and macro-length scales.
4. Design of materials through fundamental theoretical and experimental understanding of materials behavior to address societal challenges in energy, infrastructure, environment, security, health and welfare, and transportation.

MSE faculty participate in collaborative research projects with faculty from other schools in the Colleges of Engineering and Sciences, and the Georgia Tech Research Institute. Several interdisciplinary centers are led by MSE faculty. The external sponsored research funding brought in by the FTE faculty in the School of Materials Science and Engineering exceeds $15 million per year and comes from a wide variety of sources including industry, private foundations, and federal agencies including AFOSR, ARO, DARPA, DoE, DTRA, NSF, NIH, and ONR. A significant number of materials specialists are required to meet the present and future opportunities and challenges of this field, which makes MSE graduates sought after in practically every aspect of technological advancement.

The school offers a Bachelor of Science in Materials Science and Engineering degree. An undergraduate minor in materials science and engineering is available for non-MSE majors. Graduate degrees (MS and PhD) are offered in materials science and engineering, paper science and engineering, and in the interdisciplinary bioengineering program. Certificate programs are also available in biomaterials, composite materials, nanomaterials, and computational materials science and engineering.

Graduate Study in Materials Science and Engineering

Materials graduates are essential to the economic growth of the country. They contribute to the development, selection, and use of materials in all engineering and scientific applications. Master's and doctoral degrees in materials science and engineering are offered. An excellent selection of undergraduate courses is also offered in preparation and support of graduate studies. Course offerings and research activities cover a diversity of subjects in the broad field of materials. Subjects include biomaterials, nanotechnology, computational materials science, physical metallurgy, mechanical properties, fracture mechanics, corrosion phenomena, processing, thermodynamics and phase equilibria, non-destructive testing, X-ray analysis, phase transformations, glass science, electronic/technical ceramics, thin-film semiconductors, electronic and optical microscopy, dispersions and rheology, refractories, surface analysis, fiber science, polymerization reaction engineering, polymer process simulation, mechanical properties of polymers, and process-structure-property characterization of polymers. State-of-the-art research facilities in the School of Materials Science and Engineering contribute to the strength of both the academic and research programs.

MSE graduates find employment with manufacturing firms in light and heavy industry, in research laboratories of private firms and federal agencies, and in academic institutions. Several recent graduates have filled positions of high responsibility in these areas and have been instrumental in advancing the level of materials engineering practice in the United States. The MSE faculty participate in numerous multidisciplinary programs including manufacturing engineering, surface science technology, microelectronics, electronic packaging, and composites.

The Master's Degree

MSE offers graduate work leading to the degrees of Master of Science in Materials Science and Engineering, Master of Science in Paper Science and Engineering, and Master of Science with a major in Materials Science and Engineering. The student admitted for graduate work will normally have completed an undergraduate program in materials, ceramics, metallurgy, or polymers. However, students with undergraduate degrees or backgrounds in other fields (e.g., physics, chemistry, geology, and chemical, mechanical, nuclear, or geological engineering) may qualify by taking certain minimum prerequisites during the early part of their graduate studies. To assure a smooth transition into the graduate program, the student should select appropriate electives during his or her undergraduate studies.

Students in the MS program must complete a core of graduate materials courses and prepare an individualized program of study for this degree in consultation with their graduate advisors. The proposed program must receive the approval of the graduate coordinator and the School chair. Thesis, non-thesis, and industrial internship options are available. The minimum credit hour requirements for the MS degree with include eighteen credit hours of courses and a minimum of twelve credit hours of thesis research, with a total minimum of 30 credit hours, or 30 credit hours of courses, or twenty-five hours of courses and six hours of project work conducted as part of an industrial internship. A total of twelve course hours must be in the major, and twelve course hours must be at the 6000 level or higher. A minimum GPA of 2.7 is required for graduation.

The Doctoral Degree

The Doctor of Philosophy degree is directed to attain proficiency in the pursuit of independent scholarly work. The degree comprises coursework in the general principles of materials, with emphasis on metallurgy, polymers, ceramics, paper science and engineering, or electronic materials. Additional requirements include specialized core courses and elective courses both in the area of the doctoral thesis and in one or two other areas, passing comprehensive examinations, and an independent research investigation.

Candidates for the doctoral degree are required to complete at least sixteen credit hours of graduate-level coursework beyond the MS degree, with a minimum GPA of 3.0, and pass the PhD qualification examination. Each student must also earn 9 credit hours in a coherent minor field, chosen in consultation with the advisor, to satisfy the School of Material Science and Engineering's core course requirements. Students should commence participation in the School's research programs early in their graduate careers.

Financial Aid

A number of fellowships and research assistantships from outside sources and industry are available to provide financial assistance for qualified graduate students. In addition, a limited number of presidential fellowships, as well as research assistantships, are available from the Institute. Further information can be obtained by contacting the director of graduate programs in the School of Materials Science and Engineering.

Mechanical Properties Research Laboratory

The Mechanical Properties Research Laboratory (MPRL) is an interdisciplinary College of Engineering laboratory that supports education and research with emphasis on structural materials. Its principal activities are directed toward the measurement and modeling of the mechanical properties of engineering materials, primarily related to deformation, fatigue, and fracture. The MPRL has an international reputation for excellence in areas of:

- fatigue and fracture studies of structural materials, structures and joints
- development of constitutive equations for deformation and damage, incorporating these advances into life prediction methodologies
- characterization and quantitative analysis of microstructure and damage in engineering materials such as structural alloys, composites, metal foams, biomaterials and nanostructured materials and alloys
- development of improved constitutive models for material deformation, fatigue and fracture behaviors
- multiscale simulation of materials and microstructure-sensitive fatigue and fraction approaches
- durability and degradation of aging materials and structures

Master's Degrees

- Bachelor of Science/Master of Science in Materials Science and Engineering
- Master of Science in Bioengineering
- Master of Science in Materials Science and Engineering

Doctoral Degrees

- Doctor of Philosophy with a Major in Bioengineering
- Doctor of Philosophy with a Major in Materials Science and Engineering

Undergraduate Study in Materials Science and Engineering

Minor

- Minor in Material Science and Engineering

Bachelor's Degree

- Bachelor of Science in Materials Science and Engineering

The BS in Materials Science and Engineering program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

Certificate in Biomaterials

The School of Materials Science and Engineering offers certificates in biomaterials (jointly with BME), polymers, composites, and nanomaterials. Students may fulfill the certificate requirements by taking twelve credit hours[1] of approved courses. By appropriate choice of technical and free electives, only one course outside of those required for the BS MSE degree is required for any certificate and up to 3 hours of related undergraduate research credit may be applied towards a certificate. Contact the Associate Chair for Undergraduate Programs or visit http://www.mse.gatech.edu/undergraduate/certificates for eligibility requirements and a updated list of approved courses.

[1] BIOL 1510 is required for the Biomaterials certificate. Since this is a four-credit hour course, thirteen hours are often taken by MSE students who obtain this certificate.

Transfer Programs in the College of Engineering

To encourage and accommodate students who desire to study engineering but may prefer to attend a community college, a Historically Black College and University (HBCU), or a gender specific college, the College of Engineering offers the opportunity to transfer to Georgia Tech via the Dual Degree Engineering Program (DDEP) or the Regents' Engineering Pathway Program (REPP).

For further information concerning these programs, please access the following sections of the College of Engineering website:

Dual Degree Engineering Program (DDEP)
Regents' Engineering Pathway Program (REPP)

Wallace H. Coulter Department of Biomedical Engineering at Georgia Tech and Emory University

Established in 1997

Biomedical engineering is a highly interdisciplinary field integrating engineering and the life sciences to support the prevention, diagnosis, and treatment of disease. The role of the biomedical engineer is to provide answers to problems arising from the study of living systems by employing the methodology and principles of engineering. Biomedical engineers often serve as integrators in multidisciplinary teams of engineers, scientists, and healthcare professionals in the medical device and biotechnology industries as well as government regulatory agencies. Our program challenges students with practical, hands-on problem-solving and design experiences throughout the curriculum. Graduates of our program have obtained the strong foundation necessary to address the complex healthcare challenges of the twenty-first century.

The Wallace H. Coulter Department of Biomedical Engineering at Georgia Tech and Emory University (the Coulter Department) is a unique partnership between a public institution and a private university—Georgia Tech's College of Engineering and Emory's School of Medicine. The formation of the Department in 1997 was the culmination of collaborative efforts in the field of biomedical engineering that dates back to the 1980s. In 2000, the Department assumed the name of Wallace H. Coulter, who was recognized as one of the most influential engineers in the twentieth century through his entrepreneurial efforts in shaping the fields of automated cell analysis and hematology.

Research in the Coulter Department encompasses long-range fundamental research and direct clinical applications through translational research. The department has identified nine thrust areas in which to focus research and educational programs:

- biomaterials and regenerative medicine,
- biomedical imaging and instrumentation,
- biomedical informatics and systems modeling,
- biomedical robotics,
- cancer technologies,
- cardiovascular engineering,
- engineering education,
- immunoengineering, and
- neuroengineering.

Research initiatives in these areas are resulting in major breakthroughs in medicine, basic science, and applied technology.

The Coulter Department offers both undergraduate and graduate degree programs that attract outstanding students who wish to have an education that prepares them to be the leaders in this field in the twenty-first century. Additionally, to meet the needs of a rapidly changing society and global economy, the Coulter Department has forged a new partnership with Peking University to offer a joint doctoral degree in biomedical engineering. The program offers a unique means for U.S. and Chinese students who want to learn and work in a global economy and in global health settings.

Rules and Regulations

The Catalog is the authoritative source of Rules and Regulations and other Policies for Georgia Tech students.

Undergraduate Study in Biomedical Engineering

The BS in Biomedical Engineering program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

The Department of Biomedical Engineering participates in an undergraduate Multidisciplinary Certificate in "Biomaterials".

See http://www.mse.gatech.edu/undergraduate-program/bio-cert for more details.

Woodruff School of Mechanical Engineering

Established in 1885

Mechanical Engineering (ME) was the first academic program established at Georgia Tech. On September 20, 1985, the School of Mechanical Engineering celebrated its centennial by assuming the name of one of its most distinguished alumni, Atlanta businessman and philanthropist George W. Woodruff (Class of 1917).

Today, the Woodruff School offers undergraduate degrees in mechanical engineering and nuclear and radiological engineering, and graduate degrees in mechanical engineering, nuclear and radiological engineering, medical physics, bioengineering, robotics, paper science and engineering.

Mechanical engineering embraces the generation, conversion, transmission, and utilization of thermal and mechanical energy; the design and production of tools and machines and their products; the consideration of fundamental characteristics of materials as applied to design; and the synthesis and analysis of mechanical, thermal, and fluid systems, including the automation of such systems.

Design, production, manufacture, operation, administration, economics, and research are functional aspects of mechanical engineering.

The undergraduate program in ME allows 15 credit hours of free electives, thereby allowing students to elect one of six concentration areas within in ME or any of the Institute's approved minors.

ME concentrations include:

- Automation and Robotics
- Thermal, Fluid, and Energy Systems
- Micro and Nano Engineering
- Mechanics of Materials
- Manufacturing
- Nuclear Energy

The Nuclear & Radiological Engineering (NRE) and Medical Physics (MP) programs are within the George W. Woodruff School of Mechanical Engineering. NRE and MP are based on a symbiotic group of related areas of knowledge of a common set of science, engineering, and mathematical disciplines and their applications to the development of nuclear power and the utilization of radiation in industry and medicine.

Nuclear engineering field is broad with a unique nuclear core that includes physics of neutron chain (fission) and fusion reactors, radiation production, transport, and interaction with matter, radiation damage of materials, nuclear fuel and structural materials, large-scale numerical modeling, and simulation of nuclear systems. Radiological engineering is the application of the radiation related disciplines to radiation safety (protection), medical application (medical physics), security and detection of nuclear material. The multidisciplinary aspects of nuclear engineering includes topics in

- ChBE (separation/processing),
- ECE (electronics, instrumentation, electromagnetics),
- ME (heat transfer, fluids, thermodynamics),
- MSE (mechanics and properties of material), and
- physics (nuclear, atomic, and radiation).

Medical physics encompasses the therapeutic and diagnostic applications of radiation in medicine. It involves the application of physical principles to medicine, particularly in the diagnosis and treatment of human diseases. Medical physics includes diagnostic radiology, the diagnosis of disease with X-rays, ultrasound, and magnetic resonance imaging; health physics, the study of radiation hazards and radiation protection; nuclear medicine, the diagnosis and treatment of diseases with injected radio-pharmaceuticals; and radiation oncology, the treatment of cancer by ionizing radiation.

School Facilities

The Woodruff School is housed in a multi-building classroom/research complex. Included in this complex are modern classrooms and seminar conference rooms that serve the entire Institute.

The School has many types of specialized instruments and other equipment associated with its laboratories in mechanical engineering for the study of acoustics and dynamics; automation and mechatronics; bioengineering; computer-aided engineering and design; fluid mechanics; heat transfer, combustion, and energy systems; manufacturing; mechanics of materials; micro and nano engineering; and tribology. The Nuclear and Radiological Engineering Program has special facilities for

the study of computational reactor physics; fast reactors; fusion; medical physics; and radiation detection.

Modern facilities and laboratories support experimental and theoretical programs of instruction and research. Special facilities in the Woodruff School include:

- Automation and Robotics
- Thermal, Fluid, and Energy Systems
- Micro and Nano Engineering
- Mechanics of Materials
- Manufacturing
- Nuclear Energy

The Georgia Tech Invention Studio is also housed in the Woodruff School. It is a design-build-play space open to all Georgia Tech students, faculty, and staff, regardless of year, major, or prior experience. It is staffed by the University Lab Instructors, student volunteers who are always on hand to provide machine training and help with projects.

The facilities available for the nuclear and radiological engineering and medical physics programs include the

- Radiological Science and Engineering Laboratory (RSEL),
- AREVAL Radiation Detection Laboratory,
- Varian Computational Treatment Planning Laboratory,
- Microchannel Test Facility, and
- Plasma-facing Components Thermal-hydraulic Test Facility.

The RSEL houses the Variant Clinical Accelerator (VCLA) Laboratory, Southern Nuclear Radiation Physics Laboratory which houses a graphite subcritical assembly, a neutron reference field laboratory, a thermoluminscent detector laboratory, a radiation sources laboratory housing various radioisotopes generating neutrons and photons, a nuclear materials laboratory, and a vault which houses a neutron generator.

Graduate Study in Mechanical Engineering

The graduate program in mechanical engineering offers advanced study and research in the areas of acoustics and dynamics; automation and mechatronics; bioengineering; computer-aided engineering and design; fluid mechanics; heat transfer, combustion, and energy systems; manufacturing; mechanics of materials; microelectromechanical systems; and tribology. The graduate programs lead to the degrees of

- Master of Science in Mechanical Engineering,
- Master of Science,
- Master of Science in Bioengineering,
- Master of Science in Paper Science and Engineering, and
- Doctor of Philosophy for qualified graduates having backgrounds in engineering, mechanics, mathematics, the physical sciences, or the biological sciences.

The master's degree requires a minimum of thirty approved credit hours. Students may elect to earn nine of these hours by writing a thesis, or they may earn all credit toward the degree through coursework. Six hours of credit for graduate courses taken as an undergraduate at Georgia Tech and used for credit toward the BS ME may be included in the MS program of study if the student graduated with an undergraduate grade-point average of at least 3.5. Students must earn a graduate grade-point average of at least 3.0 and satisfy all remaining requirements to be certified for the master's degree.

Candidates for the Doctor of Philosophy degree must earn a graduate grade-point average of at least 3.3. Students may obtain additional information about the programs by viewing the Woodruff School Handbook for Graduate Students. Every student enrolled must consult this source of information with respect to special rules and degree requirements.

The graduate program in nuclear and radiological engineering/medical physics leads to the degrees of

- Master of Science in Nuclear Engineering,
- Master of Science in Medical Physics,
- Master of Science, and
- Doctor of Philosophy.

In nuclear and radiological engineering, students with a bachelor's degree in engineering pursue the Master of Science in Nuclear Engineering degree, while students with a Bachelor of Science degree in other fields enroll for the Master of Science degree. Depending on the career objectives of the student, the Woodruff School may encourage a thesis as part of the Master of Science program. Nuclear and radiological engineering students must earn a graduate grade-point average of at least 3.0 and satisfy all remaining requirements to be certified for the master's degree.

The doctoral program is designed with great latitude to capitalize on variations in experience and interests of individual students. Candidates

for the Doctor of Philosophy degree must earn a graduate grade-point average of at least 3.3.

Master's Degrees

- Master of Science in Bioengineering
- Master of Science in Mechanical Engineering
- Master of Science in Medical Physics
- Master of Science in Nuclear Engineering
- Master of Science in Robotics
- Master of Science - Undesignated

Doctoral Degrees

- Doctor of Philosophy with a Major in Bioengineering
- Doctor of Philosophy with a Major in Mechanical Engineering
- Doctor of Philosophy with a Major in Nuclear Engineering
- Doctor of Philosophy with a Major in Nuclear Engineering - Medical Physics Option
- Doctor of Philosophy with a Major in Nuclear Engineering - Nuclear Enterprise Management Option
- Doctor of Philosophy with a Major in Robotics

Educational Objectives

The educational objectives of the doctoral programs in the Woodruff School are:

- to prepare students for successful careers in industry and/or academia and to promote and instill an ethic for lifelong learning;
- to educate students in methods of advanced analysis, including the mathematical, computational, and experimental skills appropriate for professionals to use when solving problems;
- to provide a substantial depth of knowledge in a particular field or subfield of study that allows the student to be recognized as an expert;
- to provide a breadth of knowledge in a minor field of study that fosters an awareness of and skill in interdisciplinary approaches to problem solving;
- to develop the skills pertinent to the research process, including the students' ability to formulate problems, to synthesize and integrate information, to work collaboratively, to communicate effectively, and to publish the results of their research; and
- to promote a sense of scholarship, leadership, and service among our graduates.

The educational objectives of the master's degree programs in the Woodruff School are:

- to prepare students for successful careers in industry and to promote and instill an ethic for lifelong learning;
- to educate students in methods of advanced analysis appropriate for professionals to use when solving problems;
- to provide a depth of knowledge in a particular field of study that allows the student to apply innovative techniques to solve problems;
- to provide a breadth of knowledge that fosters an awareness of and skill in interdisciplinary approaches to problem solving; and
- to develop the skills pertinent to the research process, including the students' ability to formulate problems, to synthesize and integrate information, to work collaboratively, to communicate effectively, and to publish the results of their research (MS thesis students).

The M.S. in Medical Physics and the Ph.D. in Nuclear and Radiological Engineering-Medical Physics Option programs are accredited by the Commission on Accreditation of Medical Physics Educational Programs, CAMPEP, www.campep.org/campeplstgrad.asp.

Distance Learning Programs

The Woodruff School offers working professionals the opportunity to enroll in many of its graduate courses through video, CD-ROM, or Internet technologies. The distance-learning program has the same admission, course, and degree requirements as those for graduate students attending classes at the Atlanta campus or at Georgia Tech-Lorraine. Qualified individuals may complete the requirements for the master's degrees in mechanical engineering (MS ME) and medical physics (MS MP) by utilizing the distance-learning mode.

Distance Learning & Professional Education

Georgia Tech-Lorraine

The Woodruff School's program at Georgia Tech-Lorraine in Metz, France has a number of components. In addition to the master's of science degree in mechanical engineering (MS ME) there is also a doctoral program, which has grown as a result of major funding from CNRS and Georgia Tech; a new fall/spring semester undergraduate program; and the undergraduate summer program. Most graduate students focus on the MS ME French students from partner institutions, such as ENSAM and the Ecole des Mines, take courses at Georgia Tech-Lorraine, typically for two semesters, before coming to the Atlanta campus to finish their master's degree. U.S. students take classes at GTL as well as at ENSAM for three semesters and receive both the MS ME and the Master Professionel of ENSAM. Students must also complete an internship in France during the summer. The mechanical engineering programs offered at GTL have the same admission, course, and degree requirements as those for graduate students in mechanical engineering attending classes on the Atlanta campus or through the distance-learning program. ENSAM is a leading institution for the study of mechanical and industrial engineering with eight campuses across France, including one in Metz. For more information on the Georgia Tech-Lorraine program, view www.georgiatech-metz.fr.

Multidisciplinary Programs

Mechanical engineering students may plan electives that satisfy simultaneously the requirements of the degree program and a designated multidisciplinary field within the College of Engineering, thus earning both a graduate degree and a certificate indicating expertise in a related specialty. For a complete description of these and other multidisciplinary programs, contact the School.

Undergraduate Research

Georgia Tech encourages undergraduate students to participate in quality and substantive research. There are several options in the Woodruff School for both mechanical engineering and nuclear and radiological engineering majors to do special problem courses or undergraduate research courses. Students can do a non-research special problem course. This is usually a design course and it might be combined with the capstone design class for a two-semester design problem. There are two types of undergraduate research courses; an ME or NRE class; and research internships, where students are paid for working on a project either part time or full time. For both options, the course appears on the transcript. In all cases, the student must find a faculty member to work with. Each special problem and research course requires a written final report, which is to be submitted to the faculty advisor for grading. All special problems courses taken for credit receive a letter grade and appear on the transcript. Funding opportunities are available through the President's Undergraduate Research Awards.

For more information on undergraduate research at Georgia Tech, visit www.undergradresearch.gatech.edu and for specific ME/NRE program information, visit www.me.gatech.edu.

The following undergraduate engineering programs are accredited by the Engineering Accreditation Commission of ABET, www.abet.org.

- Bachelor of Science in Mechanical Engineering

College of Sciences

College established in 1990
First Science Program in 1888

The College of Sciences comprises six schools

- Biological Sciences,
- Chemistry and Biochemistry,
- Earth and Atmospheric Sciences,
- Mathematics,
- Physics, and
- Psychology.

All schools offer BS, MS, and PhD degree programs.

In addition, the College of Sciences offers a BS program in Neuroscience.

The Center for Education Integrating Science, Mathematics, and Computing (CEISMC), which works with K-12 schools and teachers in the state of Georgia to improve science and mathematics education, is also a unit of the College of Sciences.

The College of Sciences provides the courses in mathematics and the natural sciences that are necessary for all Tech undergraduates to acquire skills and basic principles for their majors. A detailed description of each degree program in the College of Sciences is located under the appropriate school heading, as are descriptions of the courses offered. The College of Sciences' courses required or recommended by degree programs in the other five colleges at Georgia Tech are listed under the curricula for those degrees.

The American Chemical Society has certified the curriculum leading to the Bachelor of Science in Chemistry.

The Human Factors and Ergonomics Society has accredited the curriculum leading to the PhD in Engineering Psychology.

The Master of Science in Prosthetics and Orthotics (MSPO) program is accredited by the Commission on Accreditation of Allied Health Education Programs (CAAHEP) upon the recommendation of the National Commission on Orthotic and Prosthetic Education (NCOPE). Accreditation for the MSPO program is effective 2010 to 2015.

School of Biological Sciences

Programs of study offered by the School of Biological Sciences allow students to gain competence in several different areas of modern biological sciences. The curricula in all degree programs in the School encourage breadth by incorporating course selections from other schools and departments. The Institute, with its strengths in science, computing, mathematics, and engineering, provides unique opportunities for careers in the biological sciences and related areas.

The Bachelor of Science degree program consists of a combination of requirements and electives that ensure a balanced background in the fundamental areas of biology, while providing an opportunity to emphasize an area of interest in the junior and senior years. The School also offers graduate programs leading to MS and PhD degrees, as well as five-year BS/MS degrees in Biology and Bioinformatics. The degree programs include coursework, faculty and student seminars, and independent research. Faculty members are actively engaged in research fields such as bioinformatics, biophysics, ecology, evolutionary biology, genetics, mathematical biology, marine science, microbiology, and molecular cell biology.

The Master of Science Degree Program in Prosthetics and Orthotics is accredited by the Commission on Accreditation of Allied Health Education Programs (www.caahep.org) upon the recommendation of the National Commission of Orthotic and Prosthetic Education (NCOPE).

Rules and Regulations

The Catalog is the authoritative source of Rules and Regulations and other Policies for Georgia Tech students.

Health Sciences Requirement

All Georgia Tech students must satisfactorily complete the health and wellness requirement for graduation.

The requirement can be satisfied by completing one of three course options in Applied Physiology: APPH 1040, APPH 1050, or APPH 1060 . APPH 1040 is a two-credit-hour lecture-based course. APPH 1050 is a lecture and physical activity course that meets once per week for 1.5 credit hours of lecture and once per week at the Campus Recreations Center for 1.5 credit hours of structured physical activity. APPH 1060 is a two-credit-hour lecture-based course consisting of both lecture and team-based discussions/activities.

School of Chemistry and Biochemistry

Chemistry has been taught at the Georgia Institute of Technology since the late 1800s with the first Bachelor of Science degree in a chemical subject awarded in 1913. The Lyman Hall building (1905) was the first location on campus to be dedicated to chemistry instruction, but our activities are now spread over six buildings. Today, the School of Chemistry and Biochemistry provides rigorous, engaging, and meaningful training programs in the chemical and biochemical sciences for undergraduate students, graduate students, and postdoctoral scholars. Our community members develop new chemical knowledge and understanding through cutting-edge research that provides a foundation for future intellectual growth and stimulates technological developments that improve the quality of life. The School has had many accomplished students and faculty members. Our graduates have earned prestigious awards such as Fulbright and Rhodes Scholarships, gone on to executive positions in corporate America, and a B.S. graduate won the 1993 Nobel Prize in Chemistry for the invention of the polymerase chain reaction (PCR) method. Our faculty members have won many accolades for their teaching and research. Notably, Prof. Mostafa El-Sayed was awarded the National Medal of Science in 2007.

The School offers coursework, research, and degrees in Chemistry (B.S., M.S. and Ph.D.) and Biochemistry (B.S.). Some of our courses are offered as components of study abroad programs, which our faculty teach in Lyon, France (Summer), Barcelona, Spain (Fall), and New Zealand (Spring). Students can also pursue study abroad opportunities offered by partner universities around the world. All Bachelor of Science in Chemistry students and most Bachelor of Science Biochemistry students undertake research as part of their degree programs. Graduate students in our school can also pursue interdisciplinary degrees in Computational Science and Engineering (M.S. and Ph.D.), Quantitative Biosciences (Ph.D.) and Bioinformatics (Ph.D.). Our undergraduate degrees provide excellent preparation for students interested in direct employment after graduation, medical, dental, and pharmacy school, and for students who wish to pursue a graduate degree in the chemical or biochemical sciences. Our Ph.D. degree provides excellent preparation for careers in research and development, consulting, intellectual property law, and faculty roles at universities and colleges.

All undergraduate concentrations in our Bachelor of Science in Chemistry program (except the Pre-health Option) meet the certification requirements of the American Chemical Society (ACS).

Financial Aid

Financial support is available for graduate study in the School of Chemistry and Biochemistry. The usual form of financial aid for first-year graduate students is a teaching assistantship. Most students beyond their first year are appointed as research assistants. Both teaching and research assistants receive full tuition waivers and a stipend. Additional information on the School's graduate programs is available by contacting the Graduate Coordinator at chemgrad.ask@gatech.edu (Kenyetta.johnson@chemistry.gatech.edu) or or by visiting www.chemistry.gatech.edu.

School of Earth and Atmospheric Sciences

Established in 1970

The School of Earth and Atmospheric Sciences (EAS) is an interdisciplinary program that studies Earth's physical and chemical environment. EAS takes an integrated Earth system science approach in which all components of Earth's system are studied and analyzed as parts of the larger coupled system. The curriculum is designed to provide its graduates with the intellectual insights needed to understand the evolution of Earth's environment and its possible future changes. This integrated approach provides the context for professional training in environmental science and meteorology, as well as specialization for research careers in atmospheric chemistry, aerosols, and clouds; dynamics of weather and climate; geochemistry; geophysics; oceanography; paleoclimate; planetary science; and remote sensing.

School of Mathematics

Established in 1952

Mathematics forms an integral part of the curricula of most students at Georgia Tech. Consequently, the School of Mathematics offers a wide range of courses serving students in the various engineering, science, and management disciplines. The School offers programs of study leading to bachelor's, master's, and doctoral degrees in mathematics. Such programs of study serve as preparation for mathematics careers, professional schools, and graduate studies.

In addition to basic courses in mathematics, the School offers a variety of specialized courses at the undergraduate and graduate levels, emphasizing areas related to the research activities of the faculty. These include mathematical analysis, applied mathematics, differential equations and partial differential equations, dynamical systems, geometry, scientific computing, probability, statistics, combinatorics, mathematical physics, topology, and algebra.

The School of Mathematics has excellent computer facilities that are used in conjunction with an increasing number of courses and programs of study. A cooperative plan for students who wish to combine practical experience with academic work is available for mathematics majors.

Undergraduate Study in Mathematics

The School of Mathematics offers a Bachelor of Science degree in Mathematics. Students have the option of completing the BS in Mathematics or completing the BS in Mathematics with a concentration in one of five areas:

- Applied Mathematics
- Discrete Mathematics
- Probability and Statistics
- Pure Mathematics.
- Data Science

The BS in Mathematics program emphasizes the study of core mathematics, as well as its application. It provides an excellent preparation for employment, as well as for graduate study in mathematics and related fields.

School of Physics

Established in 1939

Physics involves the study of matter and radiation from the subatomic to the cosmological scale. Revolutionary 20th century advances in quantum physics led to technological breakthroughs including the transistor and laser. Physics has become increasingly important as a fundamental basis for interdisciplinary research in engineering, biophysics, materials science and information. In an increasingly technically oriented society, a physics degree provides an important foundation for a range of careers.

The School of Physics offers basic service courses to freshmen and sophomores, some advanced service courses for students in other units of the Institute, and advanced studies leading to the bachelor's, master's, and PhD degrees in physics. The School seeks to provide elective freedom in its degree programs in order to enable students with a wide variety of goals to construct programs of study suitable for them.

In addition to offering courses in the fundamentals of physics, the School provides numerous specialized courses at all levels, particularly in those areas related to the research interests of the faculty. These areas of research currently include:

- astrophysics (including cosmology, and particle and gravitational astrophysics);
- atomic, molecular, and optical physics;
- condensed matter physics (experimental, theoretical, and computational);
- nonlinear physics and chaos;
- soft matter physics;
- physics education;
- and physics of living systems.

Opportunities exist in all these areas and in other areas through collaboration with faculty of other schools and colleges for Special Problems courses, master's theses, and doctoral dissertations.

Supplementary program planning is available from the School of Physics. Opportunities for graduate study and research are also available at www.physics.gatech.edu.

School of Psychology

Established in 1959

The School of Psychology offers programs of study leading to the Bachelor of Science in Psychology, Master of Science in Psychology, and Doctor of Philosophy with a major in Psychology. It also offers training in the basic and applied aspects of the science of behavior for the student majoring in architecture, engineering, management, and natural sciences. The undergraduate curriculum provides a broad-based natural science approach to the study of psychology. Courses in mathematics, biology, and chemistry, for instance, complement the psychology courses. The curriculum also stresses methodological issues so that students learn the fundamentals for carrying out solid research.

Graduate Study in Psychology

Doctoral candidates take a core curriculum in general psychology and quantitative methods. Doctoral candidates will complete all requirements for the master's degree, which includes writing a research thesis.

The doctoral program provides the student with an opportunity for advanced study in cognitive aging, cognition and brain science, engineering, industrial-organizational, or quantitative psychology. Each of these curricula consists of additional courses and programs of individual study and research beyond the core curriculum, which contribute to a strong background in general experimental psychology and the student's area of specialization. The doctoral program will ordinarily require at least four years for students who enter immediately after obtaining a bachelor's degree.

Admission to graduate study in psychology with full graduate standing in the School of Psychology requires the equivalent of an undergraduate major in psychology or a related field with courses in general and experimental psychology, as well as psychological statistics. All applicants should submit scores from the Graduate Record Examination.

The psychology faculty will consider admissions applications from competent students who have majored in subjects other than psychology.

Ivan Allen College of Liberal Arts

The Ivan Allen College of Liberal Arts, established in 1990, consists of six schools, three ROTC units and several research centers, and exemplifies strengths in humanities and social sciences. The six schools are: Economics; History and Sociology; Literature, Media, and Communication; Modern Languages; Public Policy; and the Sam Nunn School of International Affairs.

Ivan Allen College provides innovative, human-centered perspectives at the intersections of humanities, social sciences, arts and STEM, developing leaders who advance technology and improve the human condition. Nearly 350 tenured, tenure-track, non-tenure track and permanent research faculty, prepare students to be leaders capable of balancing a richly defined base of expertise with a well-grounded sense of responsibility. Our programs encompass traditional fields as well as unique and professional disciplines. Many of our faculty members engage in groundbreaking, interdisciplinary research to solve complex issues of the world.

We offer 16 bachelor's degrees, including six bachelor-master degree programs, 14 master's degrees, and six Ph.D. programs, including innovative, professionally oriented graduate degrees in sustainability, cybersecurity, applied languages and cultures, global media, digital media, and international affairs.

Joint Degrees

Public Policy Joint Degree with Georgia State University. PhD

Department of Air Force Aerospace Studies

Established in 1946

The Air Force Reserve Officer Training Corps, Air Force ROTC, is a three- or four-year educational program designed to give men and women the opportunity to become Air Force officers while completing a degree. It involves an elective curriculum taken along with required college classes. Students participating in the program will attend Air Force ROTC classes on Tuesdays and Thursdays. Students earn a college degree and an officer's commission in the U.S. Air Force at the same time.

Air Force ROTC offers competitive four, three and a half, three, two and a half, and two year college scholarships to qualified college students based on merit. Non-competitive scholarships are also available based on major, including certain foreign languages and engineering specialties. Scholarships vary from $3,000, $9,000, $15,000, all the way up to full tuition and required fees. Scholarship winners also receive a stipend of up to $500 for each academic month, in addition to a $900 allowance for books and other educational items. Non-scholarship students also receive the stipend and book allowance as Professional Officer Course cadets in the program.

The curriculum is divided into two courses:

- a General Military Course open to all freshmen and sophomores, and
- a Professional Officer Course for qualified juniors, seniors, and graduate students.

Students undecided about pursuing a commission can participate in the General Military Course without incurring a military obligation.

Successful completion of the General Military Course, a minimum 2.0 GPA, and the appropriate physical and medical qualifications are prerequisites for enrollment in the Professional Officer Course. Successful completion of both courses with the award of a bachelor's degree allows students to become commissioned second lieutenants in the United States Air Force.

Air Force ROTC Cross Registration

Cross Registration is available to students from ARCHE participating schools. As a cross-town cadets students will participate in Air Force ROTC activities at Georgia Tech every Tuesday and Thursday. Scholarship opportunities are available to students from schools with Air Force Education Service Agreements. Stipends and other incentives are available to all students. Students graduating with a degree from their home institution will receive a commission in the United States Air Force. Contact the Detachment 165 Unit Admissions Officer at 404.894.4175 for more information. For more information on the cross registration process and ARCHE participating schools, visit www.atlantahighered.org.

Air Force ROTC Website

Air Force ROTC Program Overview

Students entering the program enroll in Air Force ROTC courses in the same manner in which they register for other undergraduate courses. A formal application is not required. Students enrolled in the General Military Course (GMC) incur no military obligation unless they are on an Air Force ROTC scholarship. Those students desiring to become commissioned officers in the Air Force must compete for entry into the Professional Officer course (POC), which is normally the last two years of college. In the summer between the sophomore and junior years, cadets attend a four- or six-week field training session conducted at an Air Force base.

Air Force ROTC Website

Field Training

Field Training is, in most cases, a cadet's first exposure to a working Air Force environment. The program is designed to develop military leadership and discipline, and to provide Air Force officer orientation and motivation. At the same time, the Air Force evaluates each cadet's potential as an officer. Field training includes Air Force professional development orientation, marksmanship training, junior officer training, physical fitness, and survival training.

ROTC Credit
Air Force ROTC Website

General Military Course (GMC)

Courses are offered during fall and spring semesters with two credit hours awarded for each freshman and sophomore course, and 3 credit hours for each junior and senior course. Four hours of basic ROTC courses may be applied as elective credits toward degree requirements at the school. Classes normally meet two hours a week. A one-hour leadership laboratory and participation in physical conditioning training are also required.

Students in the GMC do not incur military obligation unless they have received an ROTC scholarship.

AS 1000 Level Class Schedule for Freshman Year

A survey course designed to introduce students to United States Air Force and Air Force Reserve Officer Training Corps.

Code	Title	Credit Hours
Fall		
AS 1110	Heritage and Values of the Air Force I	1
AS 1000	Air Force Leadership-Lab	1
Spring		
AS 1120	Heritage and Values of the Air Force II	1
AS 1000	Air Force Leadership-Lab	1

AS 2000 Level Class Schedule for Sophomore Year

This course provides the students with a level of understanding for the general element and employment of air and space power.

Code	Title	Credit Hours
Fall		
AS 2210	U.S. Air and Space Power Fundamentals I	1
AS 1000	Air Force Leadership-Lab	1
Spring		
AS 2220	U.S. Air and Space Power Fundamentals II	1
AS 1000	Air Force Leadership-Lab	1

Air Force ROTC Website

Leadership Laboratory (AS 1000)

Leadership Laboratory is a separate course requiring two hours per week throughout the cadet's enrollment in Air Force ROTC. It involves a study of Air Force customs and courtesies, drill and ceremony, professional development opportunities in the Air Force, and the life and work of an Air Force junior officer. Students develop their leadership potential in a practical, supervised laboratory that may include field trips to Air Force installations and presentations by Air Force personnel. Physical Training (PT) is a key part of officer development. Cadets are expected to PT twice per week.

ROTC Credit

Air Force ROTC Website

Professional Officer Course (POC)

Courses are offered during fall and spring semesters with 3 credit hours for each junior and senior course. Classes normally meet 3 hours a week. A one-hour leadership laboratory and participation in physical conditioning training are also required.

AS 3000 Level Class Schedule for Junior Year

A study of leadership, management fundamentals, professional knowledge, and communication skills required of an Air Force junior officer

Code	Title	Credit Hours
Fall		
AS 3310	Leading People and Effective Communication I	3
AS 1000	Air Force Leadership-Lab	1
Spring		
AS 3320	Leading People and Effective Communication II	3
AS 1000	Air Force Leadership-Lab	1

AS 4000 Level Class Schedule for Senior Year

Examines the national security process, Air Force structure, and doctrine with emphasis on developing top-level management skills required of an Air Force junior officer.

Code	Title	Credit Hours
Fall		
AS 4410	National Security and Preparation for Active Duty I	3
AS 1000	Air Force Leadership-Lab	1
Spring		
AS 4420	National Security and Preparation for Active Duty II	3
AS 1000	Air Force Leadership-Lab	1

Air Force ROTC Website

Air Force ROTC Scholarship Program

Air Force ROTC can help students with the high cost of getting a degree. As an Air Force ROTC cadet, students are entitled to many benefits.

- Up to $15,000 per academic year to cover tuition, lab, and incidental fees;
  $750 for textbooks; and $250-$400 a month tax-free allowance
- Free Air Force uniforms and textbooks
- Management training and opportunities to apply leadership principles
- At most schools, academic credit for Air Force ROTC classes
- Travel on military aircraft on a space-available basis for students on Air Force ROTC scholarships or in the Professional Officer course

In-College Scholarship Program (ICSP)

The Air Force ROTC In-College Scholarship Program (ICSP) is a highly competitive scholarship program aimed primarily at college freshmen and sophomores in ANY MAJOR. Detachment commanders nominate and rank/order cadets in their program using the 'whole-person' concept. All ICSP scholarships activate the following fall term.

Historically Black Colleges and Universities (HBCU)

Scholarships are available for any Clark Atlanta, Morehouse, or Spelman student. The objective of the HBCU scholarship program is to encourage outstanding HBCU students to enroll in the Air Force ROTC program. To compete for the scholarship, students must:

- be full-time,
- be physically and medically qualified,
- have at least a 2.5 GPA, and
- meet all other eligibility criteria.

Depending on the situation, HBCU scholarships can be activated in the same term.

Foreign Language Express Scholarship

Foreign Language Express scholarships provide preapproved scholarships to individuals in certain areas of study for which the United States Air Force projects a critical need in a few years. Scholarships in these areas are guaranteed if students meet all minimum requirements. Air Force ROTC provides an outstanding opportunity for students to receive a three-, or two-year scholarship. Depending on the situation, Foreign Language scholarships can be activated in the same term. In order to receive an Express Scholarship students must be in one of the areas of study: Arabic, Chinese, Persian-Iranian/Persian-Afghan, Hindi, Indonesian, Japanese, Pashtu, Russian, Turkish, Urdu/Punjabi, Azerbaijani, Bengali, Cambodian, Hausa, Kazakh, Kurdish, Malay, Serbo-Croatian, Swahili, Thai, Uighur, Uzbek, or Vietnamese.

Nursing Scholarships

Air Force ROTC offers a variety of scholarships for nursing students that cover most tuition, books, and lab fees. The goal of the Nursing scholarships is to allow nursing students to complete their degree debt-free, while acquiring valuable resource knowledge about the Air Force and become part of the Air Force's medical staff. Air Force nurses may enter in any number of different nursing fields including clinical nurse, operating room nurse, flight nurse, or nurse anesthetist. Depending on the situation, Nursing scholarships can be activated in the same term.

Pre-Health Professions and Armed Forces Health Professions Program

A Pre-Health Professions Program designation is offered to encourage students to earn commissions through Air Force ROTC and continue their education in medical or osteopathic school. You must apply before the end of the sophomore year. The Armed Forces Health Professions Scholarship Program provides up to four years of medical school and it covers tuition and fees, textbooks. It also pays the student a taxable monthly allowance of $938. Students accepted to the graduate-level health professions school, will be granted the scholarship and transferred into the Air Force Medical Corps. Armed Forces Health Professions scholarship participants incur an additional active-duty service commitment.

ROTC Credit
Air Force ROTC Website

Department of Military Science/Army ROTC

Established in 1917

The purpose of the Army ROTC is to prepare students for commissioning as officers in the Active Army, Army Reserve, or Army National Guard. The overall program is designed to aid students in developing the abilities and attitudes that will make them academically successful and to develop well-educated junior officers.

The curriculum is divided into two courses:

- a basic course that is open to all freshmen and sophomores and
- an advanced course for qualified juniors, seniors, and graduate students.

Students who are undecided about pursuing a commission have the option of participating in the basic course without incurring a military obligation. Successful completion of the basic course (or commensurate training), a minimum 2.0 cumulative grade-point average, and the appropriate medical and physical qualifications are prerequisites for enrollment in the advanced course. Successful completion of both courses and the award of a bachelor's degree constitute the normal progression to gaining a commission as a second lieutenant. Courses are available to both men and women.

The overall Army ROTC curriculum prepares students to become effective leaders and managers in a variety of responsible and challenging commissioned officer fields, thus facilitating early middle-management career development and progression.

Army ROTC - Additional Training Offered

Leadership Training Course (LTC)

Those academically qualified students who are unable to fulfill the requirements of the Basic Course during their freshman and sophomore years may qualify for admission to the Advanced Course by successfully completing the Leadership Training Course (LTC). This option is primarily designed to meet the needs of transfer students, those completing the sophomore year, and others, including graduate students, who have four semesters remaining at the Institute. This option provides a two-year program in lieu of the standard four-year curriculum. The LTC option consists of a four-week training period conducted at Fort Knox, Kentucky, during the summer months. During each summer, various cycles will be available to meet student needs. Students choosing this option are required to submit a formal application and pass a physical examination.

Students selected to attend the LTC training program will receive approximately $800 in addition to travel expenses to and from the LTC. Uniforms, housing, medical care, and meals are furnished by the government during the training. Interested students should contact the Military Science Department.

Cadet Professional Development Training (CPDT) Program

The CPDT program supplements campus training with practical leader development experiences and some additional skill identifier awarding courses. Cadets train in Army schools and with Active and Reserve units. CPDT consists of two subprograms, Cadet Troop Leader Training (CTLT) and Cadet Practical Field Training (CPFT).

Basic Airborne School (BAC)

The Basic Airborne Course is a three-week training program conducted by the Airborne Department, USAIC, Fort Benning, Georgia that trains students in the use of the parachute as a means of combat deployment. Successful completion qualifies cadets to wear the Parachutist Badge.

Air Assault School (AAS)

Located at Ft. Campbell, Kentucky, the AAS is a 10 day course of instruction that trains cadets on Combat Assault Operations involving associated equipment and U.S. Army rotary-wing aircraft. Successful completion qualifies cadets to wear the Air Assault Badge. This eleven day course is very demanding both physically and mentally, involving obstacle courses and several long ruck marches. You will learn the basics of aircraft familiarization and recognition, slingload operations, and rappelling.

Mountain Warfare School (MWS)

This is a two-week program conducted at the Ethan Allen Firing Range in Jericho, Vermont. The course teaches cadets the skills needed to operate in a mountainous environment during the summer and fall. Mountain Warfare introduces you to the techniques and tactics required to operate in a mountainous environment under hostile conditions. The emphasis is on field exercises where you learn mountain-related skills.

Cadet Troop Leadership Training (CTLT)

Cadet Troop Leadership Training (CTLT) offers the MS III cadet the opportunity to perform the duties of a Second Lieutenant for up to one month with an active duty unit. MS III graduates of the ROTC Advanced Camp may attend CTLT for 3 to 4 weeks immediately following attendance at the Leadership Development and Assessment Course (LDAC) in the summer following their MS III year. Actual duties performed will vary by branch and unit but will generally be those duties expected of a Second Lieutenant in that unit. Many cadets will serve as either platoon leaders or assistant platoon leaders.

ROTC Credit
Army ROTC Website

Army ROTC - Program Overview

The Basic Course Curriculum

The Basic Course consists of a four-semester block of instruction taken during the freshman and sophomore years. Successful completion of all four semesters satisfies the military science requirements for progression to the Advanced Course. These courses provide a foundation in basic military subjects such as customs and traditions, history, leadership, and map reading. They round out a student's academic life, provide a challenge, foster confidence, and facilitate personal growth and development.

Courses are offered during fall and spring semesters with 3 credit hours awarded for each freshman and sophomore course and four credit hours for each junior and senior course. Four hours of basic ROTC courses may be applied as elective credits toward degree requirements at the school. Courses normally meet two hours a week. A one-hour leadership laboratory and participation in physical conditioning training are also required for contracted cadets.

Students in the Basic Course do not incur military obligation unless they have received an ROTC scholarship. Scholarship cadets are required to participate in a field training exercise twice per school year. They are issued uniforms and may participate in other ROTC-related events and training, such as Airborne School, Air Assault School, and Northern Warfare Training.

The Basic Course consists of the following:

Code	Title	Credit Hours
First Year		
MSL 1001	Leadership and Personal Development	3
MSL 1002	Introduction to Tactical Leadership	3
Second Year		
MSL 2001	Innovative Team Leadership	3
MSL 2002	Foundations of Tactical Leadership	3

ROTC Credit
Army ROTC Website

The Advanced Course Curriculum

The Advanced Course is designed to fully develop a cadet's leadership and management potential, physical stamina, and self-confidence, as well as those Army values required of an Army officer. The objective is to produce the highest caliber junior officers fully capable of discharging a wide spectrum of command and management responsibilities in the modern Army and in the business world.

The Advanced Course consists of four semesters of instruction normally taken during the junior and senior years. Successful completion of the four courses fulfills the military science academic requirements for award of an officer's commission. Each student must also participate in a regular physical conditioning program and successfully pass the Army Physical Fitness Test. All Advanced Course students must participate in field training exercises twice a school year. twelve credit hours are earned, six of which may be applied as elective credits toward any degree at the Institute. Advanced Course students receive a subsistence allowance up to $500 a month. Service veterans and service academy cadets may qualify for direct entry into the Advanced Course. Certain Advanced Course students are eligible to participate in the Simultaneous Membership Program with the Army Reserve or Army National Guard. Students in this program affiliate with an Army unit as officer trainees.

Students enrolled in the Advanced Course are also required to complete a five-week Advanced Camp at Fort Lewis, Washington, to become eligible for commissioning. Attendance at Advanced Camp normally occurs during the summer between the junior and senior years. Students may also participate in additional voluntary training, such as Airborne School or Cadet Troop Leader Training. In addition to completing the military science academic requirements of both the Basic and Advanced Courses, the student must complete at least one undergraduate course from each of five designated fields of study:

- Written Communications: Select any course offered by the Institute in English composition or creative writing.
- Human Behavior: Select any course offered by the Institute in psychology, sociology, anthropology, or ethics.
- Military History/National Security Studies: Select course approved by the Professor of Military Science.
- Computer Literacy: Select any course offered by the College of Computing except CS 1000 (Information and Society).
- Mathematics Reasoning: Select any course offered by the School of Mathematics.

Students who successfully complete the Army ROTC curriculum and earn a bachelor's degree can be commissioned as second lieutenants. Subsequent military service may be on active duty or with the Army Reserve or Army National Guard. The following courses constitute the Advanced Course:

Code	Title	Credit Hours
Third Year		
MSL 3001	Adaptive Tactical Leadership	4
MSL 3002	Leadership in Changing Environments	4
Fourth Year		
MSL 4001	Developing Adaptive Leaders	4
MSL 4002	Leadership in a Complex World	4
MSL 4901	Special Problems (restricted)	4

Army ROTC Website

Army ROTC - Scholarship Programs

Each year, the Army offers a variety of full scholarship programs to those young men and women who have demonstrated outstanding academic scholarship and leadership potential. Four-, three-, and two-year scholarships are available to qualified students. Scholarships are competitive and awarded based on the student's merit. The Professor of Military Science receives an allocation of scholarships each year. Scholarships provide full tuition/fees or room/board to both resident and out-of-state students, $1,200 allowance for textbooks and supplies, and a $300 to $500-a-month tax-free stipend. Scholarship students serve either on active duty, in the Army reserves, or Army National Guard.

Options

Students who wish to obtain a commission as an officer but do not want to serve on active duty may request a Guaranteed Reserve Forces Duty (GRFD) scholarship. Reserve Forces Duty scholarships are available, but are limited in number. Affiliation with an Army Reserve or Army National Guard unit is required to participate in either the scholarship or nonscholarship program. In this program, students are guaranteed in writing that they will not be placed on active duty and can fulfill their entire commitment in the Army Reserve or Army National Guard.

ROTC Credit
Army ROTC Website

Army ROTC - Student Advisory Services

Faculty members are available throughout the academic year and during each summer orientation session in the Department of Military Science for academic counseling, schedule planning, and career guidance. Students and their parents are encouraged to seek advice on the overall Army ROTC program, scholarship opportunities, and officer career development. Appointments may be made in person, by calling 404.894.4760/9938, or by e-mail via the ROTC home page, www.armyrotc.gatech.edu. Students should also check the homepage for the latest updates on course requirements and other important information.

Academic Mentorship Program

The Academic Mentorship program aims to sustain an atmosphere where all cadets recognize the importance of academic success for commissioning, obtaining their degrees, and other future endeavors.

Every cadet should have the resources and encouragement to succeed in the classroom through an established mentorship support system. An aggressive attitude toward meeting the academic standard is highly encouraged. Academic Mentorship also offers a Study Hall program which offers additional mentorship opportunities by offering students hands on academic instruction and tutelage.

Department of Naval Science / NROTC

Established in 1926

The NROTC program offers students the opportunity to qualify for service as commissioned officers in the United States Navy or Marine Corps. The program's objectives are to provide students with an understanding of the basic concepts and principles of naval science, associated professional knowledge, and the requirements for national security. NROTC students receive an educational background that allows them to later undertake advanced education in the naval service.

The NROTC program is an officer accession program for the unrestricted line communities (Surface Warfare, Submarines, Aviation, Marine Corps). Upon graduation, the student is commissioned as an officer in the Navy or Marine Corps. Naval officers are ordered to active duty in submarines, surface combatants, or the aviation community. Marines undergo training leading to a variety of specialties. NROTC students are enrolled in one of the following three categories: three-year or four-year scholarship students, college programmers, or two-year scholarship students.

The NROTC Program was established to develop midshipmen mentally, morally and physically and to imbue them with the highest ideals of duty, and loyalty, and with the core values of honor, courage and commitment in order to commission college graduates as naval officers who possess a basic professional background, are motivated toward careers in the naval service, and have a potential for future development in mind and character so as to assume the highest responsibilities of command, citizenship and government.

NROTC - College Program Students

Non-scholarship students may seek a naval commission through the NROTC College Program. Interested students may apply at the NROTC unit in the O'Keefe building on campus. The process includes a review of previous academic performance and interviews with staff personnel. Students accepted into the College Program must complete the naval science curriculum and take a summer assignment between the junior and senior years.

The Navy provides naval science texts. Students who enter advanced standing in the junior year receive a subsistence allowance of $350-$400 per month. College program students are eligible to compete for scholarships ranging from one to three years. Selection criteria are based on academic performance at Georgia Tech and military performance as a College Program student. For information, contact the Naval Science Department at 404.894.4771.

NROTC - Program Overview

Naval Science Classes

All Navy Option Scholarship students must take:

Code	Title	Credit Hours
Required Courses		
NS 1321	Introduction to Naval Sciences	3
NS 1323	Naval Maritime History	3
NS 2321	Naval Leadership and Management	3
NS 2323	Navigation (Naval only)	3
NS 3323	Evolution of Warfare (Marine only)	3
NS 3324	Marine Weapons and Tactics	3
NS 3325	Naval Weapons Systems (Naval only)	3
NS 3326	Naval Engineering Systems (Naval only)	3
NS 4320	Naval Operations and Seamanship (Naval only)	3
NS 4322	Naval Leadership and Ethics	3
NS 4333	Fundamentals of Maneuver Warfare	3
Additional Courses		
MATH 1551 & MATH 1552	Differential Calculus and Introduction to Linear Algebra Integral Calculus	
Select one of the following:		8-10
PHYS 2211 & PHYS 2212	Introductory Physics I and Introductory Physics II	
PHYS 2231 & PHYS 2232	Honors Physics I and Honors Physics II	
One term of INTA (contact NROTC unit for required class)		
One term of a cultures studies course (contact NROTC unit for required class)		

All students must attend weekly Drill Periods in addition to above courses.

Marine Option

Marine Option students must only take the previously listed international affairs and cultural studies courses or their equivalent as approved by the professor of naval science.

Any additional requirements are based on whether or not the student is in a technical or nontechnical major, a Navy Option or Marine Option student, and a scholarship or nonscholarship recipient. Each student must obtain from the NROTC Department a complete description of program requirements since the above statement is only a general outline. Students may apply a maximum of 4 credit hours in basic ROTC courses and six credit hours in advanced ROTC courses toward meeting the free elective requirements for any degree.

ROTC Credit
Navy ROTC Website

NROTC - Scholarship Students

Four-year and three-year scholarship students are selected through nationwide competition. Selection criteria include SAT or ACT scores, high school academic performance, and extracurricular activities. The selection process is administered by the chief of Naval Education

and Training; however, the NROTC unit will provide guidance and information to applicants. An online application is available at http://www.nrotc.navy.mil.

The NROTC scholarship pays for tuition (and applicable fees) and textbooks. The Navy also provides uniforms and a $250-$400 per month subsistence allowance. The Naval Science Department conducts an orientation program (INFORM) for all new NROTC scholarship students during the week prior to the start of the fall semester. Scholarship students must complete the naval science curriculum and also participate in summer assignments from four to six weeks during the summers between academic years.

ROTC Credit
Navy ROTC Website

NROTC - Two-Year Scholarship Program

Sophomores may apply and compete nationally for two-year NROTC scholarships. Those selected attend six weeks of training in Newport, Rhode Island, during the summer between the sophomore and junior years. Upon successful completion, the student joins the NROTC program on an equal footing with other students in the junior year naval science classes. Interested students should contact the Naval Science Department.

School of Economics

The School of Economics provides high-quality programs of study leading to a Bachelor of Science in economics. The School also offers a minor in economics and a minor in the microeconomics of strategic analysis for students in other disciplines. The school participates in the International Plan and the Research Option for undergraduate students. The economics curriculum focuses on skills and knowledge critical for a life of learning and leads to careers in business, banking, consulting, management, non-profits and the public sector. A degree in economics is also a strong foundation for students intending to pursue advanced degrees in the social sciences and professional degrees in management (MBA), law, and public administration.

Modern economics is analytically rigorous and requires a background in mathematics and statistics. At the same time, it is critically linked with the other social sciences and humanities, as well as to applied management and policy studies. The undergraduate curriculum provides a strong, in-depth understanding of economic thought and policy in a wide variety of fields including health, environmental management, global development and international economics, and business economics, and is intended to prepare students for productive careers, for useful roles in society, and for satisfying personal lives in a technologically complex, culturally diverse world.

The School of Economics offers

- a STEM Certified Bachelor of Science in Economics
- a Bachelor of Science in Economics and International Affairs in cooperation with the Sam Nunn School of International Affairs
- a Bachelor of Science in Global Economics and Modern Languages in cooperation with the School of Modern Languages

These programs provide students an opportunity to broaden their educational experience and to enhance their marketability in these areas.

The School of Economics also offers a STEM Certified Master of Science in Economics and a STEM Certified PhD in Economics.

Graduate Certificate in Science, Technology, and Society

The Graduate Certificate in Science, Technology, and Society Graduate is designed for students already enrolled in a graduate degree program at Georgia Tech. This certificate is for graduate students who would like to demonstrate additional competence in some aspect of STS or special competence in STS in their home discipline. The certificate is open to students in good standing in any graduate program at Georgia Tech.

The 12-credit hour certificate program helps students to:

- Understand the social, cultural, and epistemic dynamics of science and technology
- Explore these dynamics across world societies and cultures
- Develop sensitivity to issues of gender, race, and justice across areas of knowledge, including: engineering, medicine, environment, cognition, security, innovation, design
- Employ STS approaches as scholars or practitioners (e.g. engineers, scientists, or policy makers)

School of History and Sociology

Established in 1990

The School of History and Sociology, dedicated to the ideal of a well-rounded education at a technological university, provides instruction in the social sciences to every student at Georgia Tech. The School offers courses in history and sociology leading to three degrees:

- Bachelor of Science in History, Technology, and Society (BS-HTS);
- Master of Science in History and Sociology of Technology and Science (MS-HSTS); and
- Doctor of Philosophy in History and Sociology of Technology and Science (PHD-HSTS).

The School of History and Sociology also offers minors or participates in interdisciplinary minors in:

- History;
- Sociology;
- Health, Medicine, and Society;
- Science, Technology, and Society;
- Social Justice;
- Sports, Society, and Technology; and
- Women, Science, and Technology.

The School of History and Sociology also offers several certificate programs for students in other undergraduate majors. In addition, the School of History and Sociology participates in the International Plan and Research Option.

- African American Studies
- Asian Affairs
- European Affairs
- History
- Sociology

For more information on the certificate programs, go to https://hsoc.gatech.edu/undergraduate/certificates.

School of Literature, Media, and Communication

Established in 1990

The School of Literature, Media, and Communication (LMC) is engaged in rethinking the role of humanities education in an increasingly technological and global environment. The faculty is committed to generating humanistic perspectives on a technological world through interdisciplinary research in cultural studies and new media studies at both theoretical and applied levels. In providing humanities and communication courses for all Georgia Tech undergraduates, LMC's curriculum focuses on the scientific and technologically oriented aspects of the humanities, as well as on the incorporation of new electronic media (visual, aural, and textual) into humanities and communication education.

LMC offers a BS in Literature, Media, and Communication (LMC), a BS in Computational Media (CM) jointly administered with the College of Computing; a BS/MS combination in LMC and DM; a MS in Global Media and Cultures jointly offered with Modern Languages; and an MS and a PhD in Digital Media (DM). The School also participates in the interdisciplinary MS in Human-Computing Interaction (HCI), in conjunction with the Schools of Interactive Computing, Industrial Design, and Psychology. Graduates from LMC's undergraduate and graduate programs are positioned to assume important roles in the exciting new fields developing in the interface between technology and culture.

The BS in LMC (formerly the BS Science, Technology, and Culture) is the oldest undergraduate degree program in the Ivan Allen College for the Liberal Arts at Georgia Tech. This program offers a thorough education in the different modes of representation that structure our increasingly technological and global world. Program graduates will have both significant theoretical and hands-on experience with novels, films, games, comic books, web pages, and scientific documents. By learning the modes of communication common to science, technology, and the humanities, LMC graduates are prepared to become leaders in education, business, and the arts.

CM is one of Georgia Tech's fastest-growing programs, going from three students in 2004 to 230 today. The BSCM curriculum gives students a grasp of the computer as a medium: the technical, the historical-critical, and the applied. Students gain significant hands-on and theoretical knowledge of computing, as well as an understanding of visual design and the history of media. CM graduates are uniquely positioned to plan, create, and critique new digital media forms for entertainment, education, and business.

The DM program provides students with a foundational, theoretical background in digital media and the opportunity to practice what is learned in the classroom through active participation in labs and research. MS DM students follow a studio-based curriculum with three core themes (Creativity & Knowledge, Arts & Entertainment, and Civic Media) that prepare students for professional careers in digital media, including: interaction and information design, game design and production, and interactive media design. The PhD program educates

research-oriented theorists/practitioners who bring the traditions of the humanities and arts to the design of digital media. Graduates of the program are prepared to work in industry, public service, and universities, shaping the emerging digital genres and expanding our understanding and mastery of the representational power of the computer.

The MS HCI degree program is a cooperative effort of the School of Interactive Computing; the School of Literature, Media and Communication; the School of Industrial Design, and the School of Psychology. The program provides students with the practical and interdisciplinary skills and theoretical understanding they will need to become leaders in the design, implementation, and evaluation of the computer interfaces of the future.

The newest MS program in LMC is the MS in Global Media and Culture. Offered jointly by LMC and Modern Language, this degree provides students with essential skills in communication, knowledge of media, and global expertise. Students in the program will choose to study one of the following languages (Chinese, French, German, Japanese, Russian, or Spanish) and will also create a portfolio through internships, research, media production, and study abroad.

Writing and Communication Intensive Courses

A number of majors require students to complete writing intensive and communication intensive courses. Several LMC classes may be counted toward this requirement. Consult course offerings each semester to determine which courses may be counted toward this requirement.

Advanced Placement

- Students with a score of 4 or 5 on the College Board Advanced Placement Exam (taken in conjunction with high school classes) in Composition and Literature or Language and Composition receive credit for ENGL 1101.
- Students with a score of 750 or higher on the SAT II Subject Test in English receive credit for ENGL 1101.
- Students with a score of four or higher on the International Baccalaureate Exam receive credit for ENGL 1101.
- Advanced placement credit is not ordinarily given for ENGL 1102.

More Adv Placement Information

Certificate Programs

LMC and the School of History and Sociology cooperate in providing a certificate in African American Studies. Students should consult either school for detailed information concerning requirements. Courses for this certificate are selected from among those listed in "Courses of Instruction" and from the list offered by the department.

School of Modern Languages

The School of Modern Languages: "Change the Conversation: Cross-Cultural Expertise for Global Leadership"

The School of Modern Languages is a national leader in the study of cultures, languages, linguistics, and media. For more than a century, we have offered applied studies in foreign languages that are designed to develop advanced communication skills and professional competency in the language. We champion Georgia Tech's mission of "creating the next…" and believe that the next world leaders, entrepreneurs, scientists, engineers, doctors, and creative thinkers should be globally conscious. Learning applicable language, intercultural, and interdisciplinary skills is essential for meeting today's global challenges and fostering sustainable communities. We thus encourage all students from all disciplines to be curious and to expand their capacities within our variety of programs, which include 3 B.S. degrees, 12 minors, and 8 certificates:

Bachelor of Science Degrees:

Applied Languages and Intercultural Studies (ALIS)

International Affairs and Modern Languages (IAML)

Global Economics and Modern Languages (GEML)

Language Minors: Chinese, French, German, Japanese, Korean, Russian, and Spanish as well as Linguistics

Area Studies Minors: African Studies, East Asian Studies, International Business, Language, and Culture, Latin American and LatinX Studies, and Middle Eastern and North African Studies

Certificates: Chinese, French, German, Japanese, Korean, Russian, and Spanish as well as Linguistics.

Our faculty are consistently recognized for their impactful and interdisciplinary research, artistic creation, innovations in curriculum development, expertise in study abroad, and close collaboration with industry professionals. As scholars and educators, we are proud of our established strengths in equipping the next generation of global leaders with the essential knowledge, skills, and professional opportunities necessary to foster meaningful communicative and cultural interactions. Our cross-disciplinary partnerships enable the exchange of diverse perspectives. We support the pursuit of purposeful and innovative scholarship, education, and careers that generate lasting and positive social change.

- Minor in Russian
- Minor in Spanish

Bachelor's Degrees

- Bachelor of Science in Applied Language & Intercultural Studies
- Bachelor of Science in Global Economics and Modern Languages
- Bachelor of Science in International Affairs and Modern Language

College Credit for High School Study

Modern Languages will grant 6 to 8 hours of credit in any language taught by the School for high school study in that language, provided the student has two or more years of high school credit in the language in question and has completed six credit hours at the 2000, 3000, or 4000 level with an average grade of C or higher. To have the credit entered on their records, students must submit the Modern Languages Proficiency Credit (Advanced Standing) form http://www.registrar.gatech.edu/docs/pdf/advstanding-ml.pdf to the School of Modern Languages for its approval, and pay $90 for each 3 or 4 hours of credit. No grade is attached to this credit, but the credit can fulfill the humanities requirement for graduation.

- Students submitting a score of four or five on the Advanced Placement (AP) Examination in French, German, or Spanish "Language Level III" or "Literature Level III" may receive six hours of credit for courses numbered 2001-2 in the respective language.
- For the Japanese AP exam, students who receive
  - a score of three can earn three hours of credit for JAPN 2002;
  - a score of four can earn six hours of credit for JAPN 2002 and JAPN 3001;
  - a score of five can earn six hours of credit for JAPN 3001 and JAPN 3002.
- For the Chinese exam, students who receive
  - a score of three can earn three hours of credit for CHIN 2002;
  - a score of four can earn six hours of credit for CHIN 2002 and CHIN 3003;
  - a score of five can earn six hours of credit for CHIN 3003 and CHIN 3004.
- Students who submit language scores of five or above for courses taken at the higher level from a certified high school International Baccalaureate program may also receive credit for courses numbered 2001-2 in French, German, or Spanish, for 3001-2 in Japanese, and for 3003-4 in Chinese.

Students with credit for the DSD German language exam may receive the following credit: DSD I: GRMN 3XXX (3 hours); DSD II: GRMN 3XXX (6 hours). Students may not receive credit for both the DSD I and DSD II.

Official scores should be sent to the Registrar's office for processing.

The School will not grant credit for high school study in a foreign language to students who have taken 1000 level courses in that language or the equivalent at Georgia Tech, or at other college-level institutions for which they have received transfer credit.

Graduate Course Option

Under the Graduate Course Option, undergraduate students with a final grade-point average of 3.5 or higher may count six credit hours of their undergraduate credits toward a master's degree at Georgia Tech in the same field. This means that qualified IAML students could complete the Master of Science in International Affairs with thirty additional credit hours rather than 36 credit hours if they chose to further their study in International Affairs; likewise, qualified GEML students could complete the MS in Economics with thirty additional credit hours in ECON courses.

Graduate Course Option Information

Humanities Credits

Each course is essentially a unit in itself, but beginning students are encouraged to pursue at least the elementary two-semester sequence (1001 and 1002) in order to achieve a minimum level of proficiency and to receive humanities credit for both courses. Humanities credit is awarded for Modern Languages 1001 classes upon successful completion of the corresponding 1002 classes. In some instances, students may complete a Modern Languages course at 1001 and then be placed at the second-semester level and complete the 2001 level course. Therefore, the sequence that will warrant HUM credit for Modern Languages courses may be either the 1001-1002 or the 1001-2001 sequence. Students may not enroll in or receive advanced standing for 1000 level courses after the successful completion of any 2000, 3000 or 4000 level course; nor can credit be earned for 2000 level courses after successful completion of any 3000 or 4000 level course. Courses at the 3000 and 4000 level do not have to be taken in chronological order, provided prerequisites are fulfilled.

With minor exceptions, students can fulfill their humanities requirement for graduation by taking courses in the School of Modern Languages, including linguistics courses and courses taught as ML courses (courses in a language not yet included in the General Catalog). Students should consult the Catalog course descriptions and the section of this catalog titled "Humanities and Social Sciences Requirements," in order to determine which courses are classified as humanities in their respective colleges. With the approval of their major schools, students may take any course offered by the School of Modern Languages on a pass/fail basis.

Humanities Information

Minor Programs

The School of Modern Languages offers minors in Chinese, French, German, Japanese, Korean, and Spanish as well as in Russian Studies. This program is designed for students who wish to develop their language skills to at least an intermediate level and to provide themselves with a greater depth than possible with a certificate program.

1. Students must earn 15 credit hours of language electives in a single language beyond the 2002 course.
   a. Students may include the 2002 course for CHIN/JAPN/KOR/RUSS (or the 2011 course in CHIN)
   b. All 15 hours of 3/4000-level courses for FREN/GRMN/SPAN
   c. Students pursuing a minor in Russian Studies should take their electives in at least two different departments/schools (Modern Languages, International Affairs, and/or Literature, Media, and Communication)
2. A maximum of 9 semester hours of transfer credit is allowed in each minor. All courses counting toward a minor must be taken on a letter-grade basis, and a grade of C or better must be received in each course.

Students wishing to pursue one or more of these minors should declare the minor by filling out the minor change form with the Director of Undergraduate Studies in Modern Languages

Minor Program of Study & Guidelines

Modern Language Minor Information

Study Abroad

The School of Modern Languages offers special summer immersion programs in China, France, Senegal, Germany, Japan, Korea, Russia, Ecuador, Mexico, Peru, and Spain. These intensive programs in Languages for Business and Technology (LBAT) consist of six to eight weeks of study abroad in which classroom lessons in business, culture, and technology are combined with field work, cultural events, excursions, and visits to area businesses — all conducted in the target language. The LBAT experience offers a unique opportunity for rapid growth in proficiency, to build a deeper appreciation for the cultures and lifestyle patterns of other peoples, and to make lifelong social and professional contacts. Students will earn nine to fifteen credit hours (depending on the language program and the options available) at the 3000 level; in some programs, lower-division language courses are offered. These credits count toward a certificate, a minor, or the joint majors with International Affairs and Economics or ALIS degree. Program costs vary according to the country visited and the length of the program.

Study Abroad Information

Study Abroad and Internships

In collaboration with the Colleges of Engineering and Computing, the School of Modern Languages has initiated a Study Abroad and International Internship program that incorporates intensive applied language acquisition and cultural study. Students who participate in this program can expect to become versed in a foreign culture, fluent in a second language on professional and social levels, and gain advanced practical experience in their field. This program will prepare students for leadership positions in the global workforce in business, industry, and government.

Modern Languages works with international companies and with the Georgia Tech Center for Career Discovery and Development to establish internships and jobs abroad. Programs generally include one semester of study followed by a six month internship with a global company (some limitations as to language and field of study exist). The LBAT summer immersion course or equivalent is recommended, since students will need to take classes in the language spoken. HOPE scholarships and other financial aid apply. Additional language classes are available abroad. Students retain regular status at Georgia Tech by enrolling in FS 4000 during the semester of study and in INTN 3011, INTN 3015, INTN 3018, and in the Modern Language or Co-op International Internship (INTN 3011 or COOP 3011) during the internship. Students participating in this program are encouraged to contact their academic advisors, the International Division in the Center for Career Discovery and Development, the Office of International Education, and Modern Languages advisors. See www.modlangs.gatech.edu for more information.

Study Abroad Information

Suggested Placement

Students who have never completed any course for high school or college credit in the language should begin in a 1001 course. Students with previous study in Chinese, French, German, Japanese, Russian, and Spanish should take the placement test found at www.modlangs.gatech.edu in order to determine their optimal beginning placement. Students interested in any of the other languages should consult with a language advisor for beginning placement. See www.modlangs.gatech.edu for more information.

Linguistics Certificate

The Linguistics Certificate consists of 12 credit hours.

Track A: General Linguistics

Code	Title	Credit Hours
Required Course		
LING 2100	Introduction to Linguistics	3
Additional Courses		
Select nine credit hours from the following:		9
LING 3813/4813	Special Topics [1]	
SPAN 4170	Spanish Applied Linguistics	
PSYC 2760	Human Language Processing	
PSYC 3011	Cognitive Psychology	
PSYC 3790	Introduction to Cognitive Science	
PSYC 4200	Advanced Topics in Cognitive Psychology	
FREN 3030	French Phonetics	
JAPN 4750	Japanese Discourse and Grammar	
JAPN 4780	Japanese Applied Linguistics	
SPAN 4165	Bilingualism in the Spanish Speaking World	
SPAN 4170	Spanish Applied Linguistics	
Total Credit Hours		**12**

[1] Three credit hours maximum; focus on the linguistic system(s) of selected languages; must be approved by Linguistics advisor

Track B: Language Processing

Track B: Language Processing is a joint collaboration between the School of Modern Languages and the College of Computing. This certificate is designed with computer science majors in mind who have an interest in linguistics and natural language processing.

Code	Title	Credit Hours
Required Course		
LING 2100	Introduction to Linguistics	3
Additional Courses		
Select nine credit hours from the following:		9
CS 3240	Languages and Computation	
CS 3600	Introduction to Artificial Intelligence	
CS/PSYC 3790	Introduction to Cognitive Science	
CS 3803	Special Topics [1]	
or CS 4803/ LING 381	Special Topics	
CS 4641	Machine Learning	
CS 4650	Natural Language Understanding	
PSYC 2760	Human Language Processing	
Total Credit Hours		**12**

[1] Three credit hours maximum; must be approved by Linguistics advisor

For Track B students, other courses listed under the AI thread or in Linguistics may also count with prior approval from the linguistics advisor.

All courses counting towards a LING certificate must be taken on a letter grade basis and a grade of C or better must be received in each course.

Other information:

1. The School of Modern Languages may also accept one linguistics course on the 3000- or 4000-level taken at other accredited universities for either Track A or Track B. Students wanting to take such a course need to clear its acceptability with the LING advisor at Georgia Tech.
2. A 2000-level course may be accepted by the LING advisor if its contents are based upon examples from another language, given the possible difficulty involved in having enough command of the language to deal with more complex materials.
3. Students who wish to use a course taken abroad to obtain credit towards the LING certificate must submit a copy of the syllabus of the course and petition to obtain approved form the LING advisor prior to travelling abroad.
4. Some CS and ML courses may have language prerequisites.

Certificate Information

School of Public Policy

Established in 1990

The School of Public Policy is a research intensive, globally engaged school offering BS, MS, and PhD degrees in Public Policy, an MS in Cybersecurity degree with a policy specialization, and a master's degree and stand-alone graduate certificate in Sustainable Energy and Environmental Management. Our programs appeal to students intrigued by complex problem-solving in the public interest.

The School houses one of the world's top programs in the field of science and technology (S&T) policy, and hosts a major international conference on S&T policy. It is at the center of a wide range of important international, national, and state policy questions related to the environment, information and communications technology, transportation, biotechnology and health, regional development, workforce and education. Governance of the internet, STEM education and careers, climate change policy, national and international innovation policy, economic development, risk analysis and management, renewable energy, smart growth, conflict resolution, and business-government relationships – these are a few of the topics addressed in our courses and research projects.

Our faculty members are research oriented, with more than $6 million in externally funded research underway. Our degrees are analytically oriented, developing skills increasingly in demand in the policy world as data and powerful software become more readily available and policy challenges grow more complex. The School conducts rigorous analyses of policy problems, bringing sophisticated methodologies to bear on research questions. At the same time, we are unusual among policy schools in having an active research program at the intersection of philosophy, ethics, and policy. Our location at Georgia Tech allows for a wide array of collaborative opportunities with faculty and students in science, engineering, business, computing, and city planning.

Students at all levels routinely become involved in research, from undergraduate students helping on faculty research projects or pursuing their own questions, to the opportunities our Master's degree and PhD students have to present or publish their work in scholarly settings. Internships in Atlanta, Washington, and other locales allow students to explore their interests in the public, nonprofit, and business sectors.

Public Policy students are taught by award-winning teachers. They experience policy development in internships, research projects, and capstone projects that use our location in Atlanta as a source of real-world policy problems and contacts. There are numerous opportunities for national and international engagement, with research conducted jointly with partners around the world, by internationally oriented faculty and students, and with opportunities for international exchange in undergraduate and graduate programs. We offer a unique and forward-looking environment.

Minors

- Minor in Public Policy
- Minor in Health, Medicine, and Society
- Minor in Law, Science, and Technology
- Minor in Leadership Studies
- Minor in Philosophy
- Minor in Political Science
- Minor in Women, Science, and Technology

Bachelor's Degree

- Bachelor of Science in Public Policy

Graduate Stand-Alone Certificate

- Certificate in Sustainable Energy and Environmental Management

Master's Degree

- Dual Degree - MCRP/Master of Science in Public Policy
- Master of Science in Public Polic
- Master of Science in Cybersecurity - Policy Track
- Master of Sustainable Energy and Environmental Management

Doctoral Degrees

- Doctor of Philosophy with a Major in Public Policy
- Doctor of Philosophy with a Major in Public Policy (Joint Degree with Georgia State University)

Pre-law Certificate

The School of Public Policy is home to Georgia Tech's Law, Science, and Technology/Pre-Law Program. This program offers a wide range of curricular opportunities as well as pre-law advising and support services for students considering law school and careers in law.

The program introduces students to selected areas of law that they are likely to study in law school. Students will begin to develop the skills that they will need to succeed in law school and in law practice. Some of the courses are taught by full-time faculty, while others are taught by

attorneys from the Atlanta area, thereby exposing students to academic and practical perspectives on the practice of law.

The program welcomes students from every college and major. Students majoring in the sciences and engineering may be surprised to learn that their undergraduate background gives them a strong start toward specializations such as intellectual property law, products liability law, and construction law. The pre-law program can supplement a student's scientific or engineering background by developing the reading and writing skills that are fundamental to a successful legal career.

For additional curricular requirements or any other information, see the pre-law section of the website www.prelaw.gatech.edu; or contact the pre-law program director (contact information listed at website).

Intellectual Property Certificate

The School of Public Policy is home to Georgia Tech's Intellectual Property Program. This program offers a wide range of curricular opportunities as well as networking opportunities for students considering a career in intellectual property or in other areas where knowledge of intellectual property would be helpful.

While earning the certificate, students will have the opportunity to learn about the protections and the limits on those protections of intellectual property: including patents, copyrights, trademarks and other forms of intellectual property. Taking an interdisciplinary approach, the certificate in IP will teach students about law, business strategies, and public policies affecting intellectual property. Some of the courses are taught by full-time faculty, while others are taught by attorneys from the Atlanta area, thereby exposing students to academic and practical perspectives on the practice of law.

Graduate Study in Public Policy

Graduate Stand-Alone Certificate

- Certificate in Sustainable Energy and Environmental Management

Master's Degree

- Dual Degree - MCRP/Master of Science in Public Policy
- Master of Science in Public Policy
- Master of Science in Cybersecurity - Policy Track
- Master of Sustainable Energy and Environmental Management

Doctoral Degrees

- Doctor of Philosophy with a Major in Public Policy
- Doctor of Philosophy with a Major in Public Policy (Joint Degree with Georgia State University)

Graduate Certificate in Public Policy

The School of Public Policy offers a certificate in public policy to PhD students from other Schools around campus. The goal of the certificate program is to provide a basic but well-rounded introduction to public policy thinking to Georgia Tech graduate students. The program is designed to address the needs of scientists, engineers, management scholars and others who seek to be more aware of policy, regulatory, ethical, and societal implications of science, technology and innovation. The program will provide breadth and context for those entering employment in any sector. The courses in the program explore the processes through which policy is made.

Although this certificate is not available to policy students, the courses are open to all graduate students, creating an opportunity for students to gain value from divergent perspectives. Students who complete this certificate are eligible to participate in the School's PRIME international graduate student exchange program.

Eligibility

Graduate students from all programs may take the courses offered as part of this certificate. The certificate will be awarded by the School of Public Policy to any non-public policy graduate student who successfully complete the program requirements and earns a graduate degree from one of Georgia Tech's degree granting academic units. The requirements for the Graduate Certificate in Public Policy will typically satisfy the minor requirements for the Georgia Tech PhD degree.

Please contact Diana Hicks at dhicks@gatech.edu with any questions.

Certificate Requirements

Students are required to earn at least a B in every course that counts toward the certificate. The credit requirements for the Certificate in Public Policy are 12 credit hours.

Code	Title	Credit Hours

Public Policy Graduate Certificate

Graduate Certificate in Science, Technology and Society

The Science, Technology and Society Graduate Certificate is designed for students already enrolled in a graduate degree program at Georgia Tech. This certificate is for graduate students who would like to demonstrate additional competence in some aspect of STS or special competence in STS in their home discipline. The certificate is open to students in good standing in any graduate program at Georgia Tech.

The 12-credit hour certificate program helps students to:

- Understand the social, cultural, and epistemic dynamics of science and technology
- Explore these dynamics across world societies and cultures
- Develop sensitivity to issues of gender, race, and justice across areas of knowledge, including: engineering, medicine, environment, cognition, security, innovation, design
- Employ STS approaches as scholars or practitioners (e.g. engineers, scientists, or policy makers)

Undergraduate Study in Public Policy

Minors

- Minor in Public Policy
- Minor in Health, Medicine, and Society
- Minor in Law, Science, and Technology/Pre-Law
- Minor in Leadership Studies
- Minor in Philosophy
- Minor in Political Science
- Minor in Women, Science, and Technology

Bachelor's Degree

- Bachelor of Science in Public Policy

The School of Public Policy offers undergraduate certificates and minors in five areas:

- **Public Policy**: featuring courses on government and business decision processes, especially those involving science, technology, environment, or regional development.
- **Law, Science, and Technology/Pre-Law**: preparing students to make informed decisions about law school and careers in law through selected courses in public policy, business administration, international affairs, history, and other fields.
- **Leadership studies**: providing students with an in-depth knowledge of leadership theory, skills, experience, and application through a rigorous program of study that is multi-disciplinary in nature
- **Philosophy:** providing broad perspectives and critical thinking about science and technology, emphasizing values and ethics.
- **Political Science:** focusing on how government works, from the local to the national level.
- **Women, Science, and Technology**: Links science and technology issues with those issues associated with the study of women and gender in society.

The certificates enrich any Georgia Tech degree and particularly serve students who are planning graduate studies in law, medicine, business, or the social sciences. All the certificates require a minimum of twelve semester hours of concentration.

Minors are for students wishing a concentration outside their major that provides greater depth than the certificate programs. Each minor requires a minimum of fifteen hours of credit (twelve semester hours at the 3000 level or higher with a **C** or better in each. Completion of a minor will be recognized on the student's final university transcript.

Students interested in planning a certificate or minor program in one of the five areas should contact the School of Public Policy for further information. A faculty advisor assists each student in planning a program of study to meet their needs and interests.

Minor Program of Study & Guidelines

The Sam Nunn School of International Affairs

The Sam Nunn School of International Affairs draws on its unique setting at one of the world's premier institutes of technology and the unparalleled integrity and insight of former Senator Sam Nunn. It delivers innovative programs and cutting-edge research by integrating technology and science with the study of international affairs.

At a time of rapid change, the School is dedicated to public outreach that provides a greater understanding of factors that shape the world in which we live and work. The School strives to connect learning and experience through its interdisciplinary degree programs, policy-relevant research with a strong theoretical foundation, and regular interaction with practitioners. Over the last several years, the School has introduced a series of one-year MS degrees, inter-disciplinary graduate certificates (with Aerospace Engineering, Nuclear Engineering, School of City and Regional Planning, and Economics), and undergraduate minor in Global Develop to complement long-standing BS, MS, and PhD degree programs in International Affairs.

Founded in 1990, the School enrolls undergraduate students in three bachelor's degrees, three minors, and five certificate programs. It also matriculates graduate students in its three master's degrees, doctoral program, and three certificates. What makes the Nunn School unique is that it awards bachelor of science and master of science degrees, which means our courses integrates topics in science and technology with international affairs.

Twenty-three full-time faculty members, eight distinguished professors of the practice, five lecturers, and one postdoctoral fellow teach and research a broad array of topics. Several Nunn School faculty are jointly appointed to the College of Computing (including new School of Cybersecurity & Privacy) and School of City and Regional Planning, and there are courtesy faculty appointments from the Schools of Civil and Mechanical Engineering. School faculty also direct Global Social Change Entrepreneurship VIPs, Military Fellows Program, and the Freshman Program at GT Lorraine.

Faculty research addresses the drivers and the consequences of global challenges and opportunities using qualitative/quantitative methods,

visual analytical tools, and regional perspectives. Core areas of synergy between faculty research, teaching, and practical outreach include:

- International Security: exploring the drivers and consequences of emerging technologies for issues related to conflict, cooperation, and governance in international security
- Global Development: assessing topics in sustainability, environmental issues, global energy, political economy, and international economic governance/regulation
- International Affairs, Science, and Technology: examining space, national and strategic/military innovation, comparative economic competitiveness and regulation, international financial technology and institutions, and assorted topics related to global governance and ethics.

The School offers overseas programs in Europe, Asia, and Latin America and a variety of outreach programs, including the Sam Nunn Bank of America Policy Forum. The School also houses the Center for International Strategy, Technology, and Policy and Center for European Studies—two policy-relevant, action-oriented research centers.

- Minor in Global Development
- Minor in European Studies

Bachelor's Degrees

- Bachelor of Science in Economics and International Affairs
- Bachelor of Science in International Affairs
- Bachelor of Science in International Affairs and Modern Language

Graduate Course Option

Under the Graduate Course Option, undergraduate students with a final grade-point average of 3.5 or higher may count six hours of their graduate credits completed at the undergraduate level toward a master's degree at Georgia Tech in the same field. This applies to EIA, IAML, and INTA majors. This means that qualified students could complete the Master of Science in International Affairs with thirty-six additional credit hours rather than forty-two credit hours if completed within two years of earning a bachelor's degree.

BS/MS International Affairs

The Sam Nunn School of International Affairs offers a BS/MS program for students enrolled in the International Affairs, International Affairs and Modern Language, or Economics and International Affairs undergraduate programs who demonstrate an interest in and ability for additional education beyond the BS degree.

Students in the BS/MS program will remain undergraduates until they meet requirements for the undergraduate degree, at which point they will receive their BS degree and be changed to graduate status. Students will be eligible to apply for the program after completion of 45 semester credit hours at Georgia Tech (i.e., at the end of their third semester), and if they show appropriate progress in their degree program thereafter. Any student in good standing in the BS INTA, BS IAML, or BS EIA program is eligible to apply to the program. Admissions decisions will be based on GPA and judgments of the faculty who have served as advisors or instructors. Continuation in the program will require the student to maintain a GPA of 3.5 or higher in Ivan Allen College courses. The program will not penalize students who opt out after the bachelor's degree. Students participating in this program will be eligible for the six-semester credit-hour Graduate Course Option, which allows students completing both the bachelor's and master's in the same discipline to use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

Contact the BS/MS program director for further information. https://inta.gatech.edu/programs/graduate/five-year-bsms-inta

The Sam Nunn School, often in conjunction with other units of the Ivan Allen College, administers five certificate programs. These programs enable students to pursue a focused program of study in a specific area of regional/international specialization. The School awards the following certificates:

- Asian Affairs Certificate (available to majors and non-majors)
- Latin American Affairs Certificate (available to majors and non-majors)
- European Affairs Certificate (available to majors and non-majors)
- International Affairs Certificate (available only to non-majors)
- Scenarios, Modeling and Military Games (available to majors and non-majors)

A certificate is awarded upon successful completion of a predetermined 12 credit hour cluster of courses approved by the academic advisor or a specific faculty member. All courses must be taken on a letter-grade basis, and a **C** or better must be received in each course. Certificates will be granted only to students who, in addition to the Certificate program requirements, have satisfied requirements for an undergraduate degree. Detailed information concerning these programs and their requirements is available through the School.

Scheller College of Business

Established in 1912 as the School of Commerce, the school now known as the Scheller College of Business has a distinguished history as a part of a world-renowned technical research university. Scheller College of Business offers a full range of undergraduate and graduate programs. The undergraduate program in business administration leads to the Bachelor of Science in Business Administration degree. The College also offers several Master's degree programs:

- the Master of Business Administration (MBA), which can be completed in two years as a full-time program or in two to three years as a part-time evening program;
- the Master of Business Administration in Management of Technology, which is offered in a weekend format and can be completed in less than two years;
- the Master of Business Administration in Global Business, which is offered in a weekend format and can be completed in less than two years;
- the Master of Science in Analytics;
- the Master of Science in Quantitative and Computational Finance; and
- an undesignated Master of Science degree.

The College also offers a doctoral program that leads to a PhD in Management.

Students admitted to the graduate programs are admitted only on a degree-seeking basis. The College is accredited by the Association to Advance Collegiate Schools of Business (AACSB) International.

Scheller College is a recognized leader in developing business leaders to succeed in today's high-tech business world. Programs combine excellence in the functional areas of business education with the multidisciplinary focus on management of technology, international business, and entrepreneurial and innovative processes for a global economy. Students learn to create value that will make a social and economic difference in the lives of individuals, groups, communities, and societies. With a curriculum that emphasizes collaborative learning based on real-world experience, the College offers the resources of centers focusing on business analytics, sustainability, leadership, and entrepreneurship to foster research, teaching excellence, and discussion across the major functional areas of business.

The College of Business and all of its degrees are accredited by the Association to Advance Collegiate Schools of Business (AACSB) International.

Transfer Credit Policy for Undergraduate Students

Students may transfer business and management courses taken at another accredited institution if the courses are passed with a "C" or better and are deemed by the College of Business to be equivalent to a Georgia Tech course. Such courses will be transferred for the same number of credits as the corresponding College of Business courses, provided they are equal to three or more semester hours of credit. Transfer credits will be accepted from newly-formed institutions of the University System of Georgia prior to accreditation.

Junior- or senior-level courses with three or more semester hours of credit that have no corresponding College of Business course may transfer as electives in management if they are approved by the College of Business.

Because of the difference in the intellectual level of various courses, freshman- or sophomore-level courses taken at other institutions may only be transferred for equivalent freshman- or sophomore-level courses offered at Georgia Tech. Before taking courses at other institutions, students should refer to the Georgia Tech transfer credit policies at www.registrar.gatech.edu/students/transfercredit.php. Business students considering taking courses at other institutions should keep in mind Georgia Tech's 36-hour Residency Rule, which states that "no student may be considered a candidate for a degree unless the final 36 credit hours required for the degree are earned in residence at Georgia Tech and approved by the major school."

In addition to its degree programs, the College of Business offers students in good standing an opportunity to broaden their areas of expertise or acquire skills or information beyond their major degree requirements. Students who satisfactorily complete this special program will receive a certificate of recognition. Certificates are only available to degree-seeking Georgia Tech undergraduates. Certificates are awarded upon graduation from a Georgia Tech undergraduate program. For certificate requirements, please see the College of Business Website: www.scheller.gatech.edu

The following certificate programs are available for undergraduate students:

- Accounting
- Business Analytics
- Business Law and Ethics
- Entrepreneurship
- Finance
- Information Technology Management
- International Business
- Leadership and Organizational Change
- Marketing
- Operations and Supply Chain Management
- Strategy and Innovation
- Sustainable Business

Distance Learning and International Sites

Academic content delivered through distance learning is in accordance with the course descriptions as approved by the Institute Curriculum Committee. All courses require approval by the Institute Curriculum Committee and the Academic Senate. All offerings for academic credit delivered through the Division of Professional Education have been approved in this manner.

Academic content delivered at our international sites, such as GT-Europe and GT-Shenzhen, is in accordance with the course descriptions as approved by the Institute Curriculum Committee. All courses require approval by the Institute Curriculum Committee and the Academic Senate regardless of where they are delivered. All Study Abroad Programs are approved on a yearly basis by the Institute Undergraduate Curriculum Committee as recommended by the Study Abroad Subcommittee.

Graduate Academics

The faculty of Georgia Tech grants advanced degrees in engineering, science, business, computing, architecture, city and regional planning, public policy, and other technology-related areas. The goals for graduate studies and research are to establish an educational environment that will strengthen students' personal and professional development, to encourage students and faculty to pursue the discovery and generation of new knowledge through research, to investigate ways of applying such knowledge for the benefit of society and humanity, and to foster the development of new tools, objects, and ideas.

Students whose interests and aptitudes lead them beyond the limits of the traditional undergraduate curriculum may broaden their knowledge

of a given field and pursue independent inquiry through graduate study. A graduate education is of particular benefit to students interested in careers in research, management, development, design, or consulting; to those who aspire to formulate and administer policy; and to those who desire careers in higher education.

- Requirements for the Doctoral Degree
- Requirements for the Master's Degree
- Thesis and Dissertation Policy

Graduate Policies and Regulations

The Institute Graduate Curriculum Committee, with the approval of the Academic Faculty Senate, is responsible for establishing academic policy for the graduate programs; however, final authority rests with the Senate. This committee reserves the right to change requirements for degrees as may be appropriate. Students enrolled at the time such changes appear in the Catalog have the privilege of following either the requirements stated in the Catalog effective the semester in which they enrolled or the requirements in the Catalog that records the change.

This catalog records the institute-wide policies and regulations that govern the graduate programs. Schools may make additional rules concerning their programs and the pursuit of their degrees, but such rules may not contradict Institute policies and regulations.

Transfer Credit

A student may not apply for transfer credit until after matriculation at Georgia Tech. The courses to be transferred would typically be those appearing on the approved program of study form for the masters degree. A doctoral student normally does not request transfer credit. The rules relative to and the process for obtaining transfer of credit for graduate-level courses are as follows:

1. Student's in a master's degree program requiring fewer than 33 semester credit hours may receive up to six hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree. This ensures completion of at least one-third of the courses for a degree in residence at Georgia Tech (applies to programs that are face-to-face and online format). A student in a master's degree program requiring 33 semester credit hours or more may receive up to nine hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree. This ensures completion of at least one-third of the courses for a degree in residence at Georgia Tech (applies to programs that are face-to-face and online format).The student must supply a current transcript for this evaluation.
2. To obtain transfer of credit, the student must complete the following procedure:
   a. The student will confer with the graduate advisor to ascertain whether the courses to be transferred are a logical part of the student's graduate program;
   b. If the courses are appropriate, the student will deliver to the school that teaches such courses a copy of the current transcript, necessary descriptive materials including catalog descriptions, and textbooks used for evaluation. The faculty of the appropriate school will determine the equivalent Georgia Tech course and the number of credit hours accepted. The faculty member who prepares the transfer credit form (i.e., the Non-Resident Credit Report) should have the school chair cosign it. The school should then send the form directly to the registrar with a copy of the student's Approved Program of Study attached;
   c. If the student wishes to transfer more than the number of hours permitted in item one listed above, a petition must be submitted to the Institute Graduate Curriculum Committee that includes statements of possible justification for the granting of such a petition, transfer credit forms, and the recommendation of the student's school chair.
3. A joint enrollment student may receive graduate credit for up to one-third of the hours required for the degree for graduate courses taken at Emory University or Georgia State University provided that the following is true:
   a. Georgia Tech does not offer such courses;
   b. The student's advisor and school chair approve the courses in advance and in writing;
   c. The student passes the courses with a **C** or better. Advance approval is satisfied when the courses appear on the student's proposed Program of Study.
4. A student may not receive transfer credit from universities outside the United States and Canada unless the courses were taken at a foreign institution or university that is accredited by a Canadian or U.S. regional accrediting board or has a signed partner agreement with Georgia Tech. In any other case, an international student can obtain credit for courses previously taken but not applied toward another degree by filling out an Examination for Advanced Standing Authorization Request Form, paying the appropriate fee at the Bursar's Office, and passing the examination for advanced standing. The school or college that normally teaches the equivalent course will administer any necessary examinations.

Double Counting Credit between Master's Degrees

Students who are pursuing two Master's degrees at Georgia Tech may double count a maximum of 6 hours of credit for both degrees. This ensures that each degree involves a minimum of 24 hours of coursework completed at Tech that is not double counted.

The six-hour limit may be exceeded when specifically allowed as a component of an approved degree program.

Staff Members

No staff member beyond the rank of instructor in a school may work for a master's degree in that school. No new staff member with the rank of assistant professor in a school may work for a doctoral degree in that school.

General

A student who wishes to withdraw their name from the rolls of degree candidates must formally withdraw the Online Application for Graduation before the end of the seventh week of the semester (or fourth week of the summer term). This privilege will be extended to a degree candidate only once.

Graduate Student Work Loads

Full-time students must be enrolled for at least 12 credit hours on a letter grade or pass/fail basis. As an exception, the advisor and school chair may allow up to three hours out of the minimum 12 to be taken on an audit basis in fall and spring semesters; in summer semesters, the advisor and school chair may allow up to six hours out of the 12 minimum to be taken on an audit basis. (This exception is not applicable for students on immigrant visas or certain fellowships requiring them to enroll in at least 12 credit hours on a letter grade or Pass/Fail basis each academic term.) Hours in excess of the required 12 may be taken on any basis. Full-time students working exclusively on thesis research should be registered for 18 or more hours of 7000 or 9000 level courses (master's or doctoral thesis courses) in fall and spring semesters, and for up to 16 hours during summer semesters.

The maximum load for graduate students in good standing is 21 hours in fall/spring and 16 hours in summer. The minimum load is three hours, except for the semester of graduation. During the semester of graduation, a student is permitted to register for only one hour of master's or doctoral thesis courses (7000 or 9000). This exception may be used only once for each degree.

Students with fellowships, graduate research or teaching assistantships, traineeships, tuition waivers, or student visas, and those assigned to the Institute by the armed forces for the purpose of pursuing a degree are required to enroll full time. Part-time doctoral students engaged in research for their Ph.D.s should meet the minimum enrollment requirement and register for the number of 9000 level hours consistent with the time they and their faculty advisors spend on the dissertation research.

Requirements for the Doctoral Degree

The Doctoral Degree
Admission to Candidacy
Comprehensive Exams
Thesis Topic
Time Limit for Degree Completion
Dissertation
Doctoral Examination
Minor Field of Study
Other Requirements
Enrollment Requirements
Additional Graduation Requirements
Responsible Conduct for Research (RCR)

The Doctoral Degree

The degree of Doctor of Philosophy recognizes demonstrated proficiency and high achievement in research. After adequate preparation, the candidate must successfully complete both comprehensive examinations in their academic field and a searching and authoritative investigation of a special area in the chosen field, culminating in a written dissertation. The program of study for each doctoral degree program must include, at a minimum, 30 approved credit hours.

Admission to Candidacy

Doctoral students customarily apply for degree candidacy after completing at least three semesters of coursework beyond the bachelor's degree.

To qualify for candidacy, students must do the following:

1. Complete the requirements for training in Responsible Conduct for Research (RCR).
2. Complete all course requirements (except the minor).
3. Achieve a satisfactory scholastic record.
4. Pass the comprehensive examination.
5. Submit a formal statement naming the dissertation reading committee and delineating the research topic for approval to the school chair and Graduate Education (on behalf of the Vice Provost for Graduate and Postdoctoral Education).

Upon satisfactory completion of these requirements, the Office of Graduate Education will formally admit the applicant to candidacy for the degree on behalf of the Vice Provost for Graduate Education and Faculty Development.

Comprehensive Exams

The comprehensive examination assesses both general knowledge of the degree area and specialized knowledge of the student's chosen research field. Each program is responsible for scheduling comprehensive examinations at least once a year and for providing students information regarding exam formats, rules, and scope. Exam retakes are to occur no later than the end of the student's second full term (Fall, Spring, or Summer) in residence following the failed attempt.

Thesis Topic

Before a student becomes a candidate, they should present a formal statement for the approval of the school chair or college dean and Graduate Education that outlines the student's dissertation advisor, the topic selected for investigation, the objectives, and the steps by which the student proposes to achieve them. (Note that individual programs may have additional requirements for approving the dissertation prospectus or proposal before approval by the chair/dean and Graduate Education.) The dissertation topic must give promise of being either a genuine addition to the fundamental knowledge of the field or a new and better interpretation of facts already known.

Time Limit for Degree Completion

Students must complete all degree requirements within seven years from the end of the term in which they pass the comprehensive examination.

Dissertation

The dissertation must demonstrate that the candidate possesses powers of original thought, talent for research, and ability to organize and present findings. Resources such as the Thesis and Dissertation Manual, deadlines, checklist, and templates are found in the Thesis & Dissertation website. Dissertations must be submitted electronically via the Electronic Thesis and Dissertation link available on that resource site.

The format of the dissertation (in general appearance) must meet the criteria published in the Thesis and Dissertation Manual. For other format

or style questions, students should refer to style manuals appropriate to their disciplines.

Doctoral Examination

If the dissertation advisory committee finds the dissertation satisfactory, it schedules the candidate for an oral examination on the subject matter of the dissertation and the field in which it lies. An examining committee approved by Graduate Studies on behalf of the Vice Provost for Graduate and Postdoctoral Education will conduct the examination. The candidate's academic unit should forward the announcement of the oral examination, including the names of the examining committee members, to Graduate Education at least 10 working days prior to the exam.

If a candidate should fail to pass the final oral examination, the examining committee may recommend permission for one additional examination. In the case of failure, the Registrar does not receive a report of the examination results.

Minor Field of Study

In addition to an adequate knowledge of the major field of intended research, the student must demonstrate mastery of another smaller body of knowledge—the minor field—preferably outside the student's school. The purpose of the minor is to encourage a wider interest on the part of the student and can include topics that will help them in their research or those that will allow them to explore and prepare for their future careers.

The minor will normally consist of at least six semester hours of work in related courses, selected by the student in consultation with a guidance committee and approved by the Graduate Education (on behalf of the Vice Provost for Graduate and Postdoctoral Education). These courses should be at the 6000 level or above, but the use of certain 4000 level courses may also be approved. The student must receive a letter grade of C or higher for a course to count towards the doctoral minor. (Courses that are taken as pass/fail are not eligible to count toward the doctoral minor). Courses taken at other institutions may be included in the minor. Once the student has satisfactorily completed the minor, the school chair will send a confirmation, accompanied by course grades, to Graduate Studies for final approval and recording.

Although the student need not complete the minor as a prerequisite to become a candidate, the minor must be completed and approved in order to be cleared for graduation.

Other Requirements

Enrollment Requirements

The matriculation requirements for doctoral students are similar to those outlined for the master's degree with the addition of the residency requirement: doctoral students should spend at least one full-time semester in residence at Georgia Tech and should conduct research for their dissertation while in residence. Under special circumstances, candidates may receive permission to pursue their research in absentia, provided the chair of the appropriate school approves and a Georgia Tech faculty member directs the project. Although doctoral students working full-time on thesis research should normally be registered for a full course load of 9000-level dissertation hours each semester, this requirement is at the discretion of the advisor and the department. No minimum number of 9000-level dissertation hours is required for the doctoral degree. Doctoral students must be registered in the semester of graduation.

If a student has completed all degree requirements and will no longer require any of the Institute's facilities or faculty time, the student may request an enrollment waiver available on the Thesis & Dissertation Forms website.

Additional Graduation Requirements

In addition to the requirements listed elsewhere, the candidate is required to complete the following:

1. Complete an Online Application for Graduation to petition for the degree to the Registrar's Office during the term preceding the anticipated final term of work.
2. Have an overall GPA of at least 3.0.
3. Register for a minimum of one hour of dissertation in the term of graduation. This reduction from the normal minimum course load of three hours may be used only once. If all requirements for graduation, including submission of the final approved dissertation, have been completed prior to the last day of registration and the student was registered for the preceding term, the student may apply for a waiver of the enrollment requirement, where the application is available on the Thesis & Dissertation Forms website.
4. Submit the dissertation to the Electronic Thesis and Dissertation website, linked from the Thesis & Dissertation website, prior to the final submission of the completed dissertation to Graduate Education.

If both the dissertation and the examination are satisfactory, and the candidate has completed the requirements of residence, minor field, and any additional school requirements, Graduate Education will certify the candidate as qualified to receive the degree of Doctor of Philosophy.

Responsible Conduct for Research (RCR)

All Georgia Tech doctoral students must complete Responsible Conduct of Research (RCR) education, which includes an online training component and a doctoral-level RCR course. All master's thesis students must also complete RCR education. For more information, see https://rcr.gatech.edu/academic-policies.

Requirements for the Master's Degree

Graduate Course Option
Enrollment Requirements
Program of Study
Master's Thesis
Requirements for the Award of the Master's Degree

Graduate Course Option

Students completing both a bachelor's and master's in the same discipline at Georgia Tech may use up to six credit hours of graduate-level coursework in the major discipline for both degrees. Recognizing that some master's degree programs do not have a unique undergraduate counterpart program and that some master's programs are offered by several schools, the term "discipline" in the prior sentence will be broadly interpreted in such cases. To qualify for this option, students must complete the undergraduate degree with a cumulative GPA of 3.5 or higher and complete the master's degree within a two-year period from the award date of the bachelor's degree.

Enrollment Requirements

While students may enroll in a master's degree program upon admission with either full or conditional standing, all conditions must be met and the student's status changed to "full" in order to graduate with a master's degree. Students enrolled in a master's degree program must register for at least one semester per year in order for the original requirements for their degree to remain unchanged. In other cases, the school may reevaluate the student's credentials and impose additional degree requirements.

Students who have completed all coursework and are planning to submit a thesis in partial fulfillment of the requirements for a master's degree should register for research hours (MAJR 7000) consistent with a realistic appraisal of the amount of remaining thesis work and required faculty involvement. Students are not eligible to receive thesis guidance during any term for which they are not registered.

Students must normally enroll for a minimum of three hours each semester. Thesis students may enroll for one hour of thesis only in the semester of graduation; this option may be used only once. The Institute has no residency requirements for the master's degree.

If a student has completed all degree requirements and will no longer require any of the Institute's facilities or faculty time, the student may request an enrollment waiver, available on the Forms website.

Program of Study

The student, in consultation with the faculty advisor, should prepare a program of study for the master's degree as a guide for planning an academic schedule. In some cases, the student's school may require that the proposed program be submitted to the chair of that school for approval.

The program of study must be completed satisfactorily within six consecutive calendar years and must include, at a minimum, 30 approved credit hours distributed as follows:

With thesis:

1. Minimum course credit hours in major field (a basic field of knowledge, not a department of specialization): 12
2. Minimum course credit hours at 6000 to 9000 level: 12
3. Minimum course credit hours for degree: 18
4. Minimum Thesis hours (7000): 6
5. Total credit hours: 30

Without thesis: (must have approval of school chair)

1. Minimum course credit hours in major field (a basic field of knowledge, not a department of specialization): 18
2. Minimum course credit hours at 6000 to 9000 level: 21
3. Total credit hours: 30

Some schools require more than the minimum credit hours. Refer to specific academic program descriptions for more detailed information.

Other than thesis hours, the student may use only three hours under the pass/fail designation in the approved program of study.

Students who are pursuing two Master's degrees at Georgia Tech may double count a maximum of 6 hours of credit for both degrees. This ensures that each degree involves a minimum of 24 hours of coursework completed at Tech that is not double counted. Students should consult with their advisors on sharing coursework among Master's degrees.

Students may be eligible to utilize the Graduate Course Option or participate in an approved BS/MS program. Students should refer to the Catalog for requirements for the Graduate Course Option and for BS/MS program requirements.

Master's Thesis

To complete the requirements for the master's degree, the student must submit a master's thesis unless the school chair determines that additional coursework is of more importance in meeting approved objectives.

Students who meet the requirements for the master's degree by completing a combination of coursework and thesis must register for a minimum of six hours of thesis credit.

A candidate whose program includes a thesis must present a treatise in which the results of an investigation directed by a member of the faculty of the Institute are set forth in a clear, articulate form. The purpose of the thesis is to further educational development by requiring the student to plan, conduct, and report an organized and systematic study of importance.

Resources for theses such as the Thesis and Dissertation Manual, deadlines, templates, checklists are found on the Thesis & Dissertation website. The Manual for Graduate Theses specifies the formatting requirements for the thesis. Information regarding electronic thesis/dissertation submission can also be found on that resources website.

Requirements for the Award of the Master's Degree

For a student to receive a master's degree from Georgia Tech, the following requirements should be met:

1. During the semester prior to the anticipated final semester of work, students should petition to graduate. This can be done by completing the Online Application for Graduation.
2. The Approved Program of Study (which is listed on the petition for degree application) should show that course requirements for the master's degree will be satisfied before or during the final semester. The Approved Program of Study should be completed within a period of no more than six consecutive calendar years.
3. Students should have an overall GPA of at least 2.70 and satisfy all school academic requirements. (Some schools may require a higher overall GPA, and some programs may have different GPA requirements for certain segments of the program requirements, such as for core classes. If so, this must be reported to the Institute Graduate Curriculum Committee through the initial proposal or as a curriculum change and will be considered an informational item on the agenda. These requirements will be enforced at graduation.)
4. Students should earn a grade of at least D on coursework for it to be considered completed. (Some individual programs may require a grade of C or higher. These requirements must be reported to the Institute Graduate Curriculum Committee either as part of the initial proposal or as part of a curriculum change and will be considered an informational item on the agenda. These requirements will be enforced at graduation.)
5. Students may take three hours on a pass/fail basis, per Institute policy. (However, individual programs may not allow pass/fail grades

at all or may restrict them to only specific portions of the degree such as electives. These restrictions must be reported to the Institute Graduate Curriculum Committee as part of the initial proposal or as part of a curriculum change and will be enforced at graduation.)

6. Students should be registered for a minimum of three credit hours at all times. However, thesis students are permitted to enroll for one hour of MAJR 7000 in the semester of graduation. This reduction may be used only once. Students who have met all requirements for graduation before the last day of registration for the graduation term and who were registered the preceding semester may be eligible for a waiver of enrollment.
7. Coursework at the 1000 or 2000 level may not be used for a master's degree. In most cases, coursework at the 3000 level may not be used for a master's degree. But individual programs may allow a reasonable number of 3000-level courses in special circumstances, such as in a program that requires language proficiency. Individual programs may include 4000-level coursework, but this must be reported to the Institute Graduate Curriculum Committee as either part of the initial proposal or clearly stated when revising a program. These rules will be enforced at graduation.
8. Students should have completed satisfactorily any language requirement imposed by the major school.
9. Thesis students must complete the requirements for training in Responsible Conduct for Research (RCR).
10. Students should have passed any qualifying or comprehensive examinations required by their school.
11. Students should have completed any required coursework outlined at the time of matriculation.
12. Students should ensure that all requirements for the degree are completed and certified by the Office of the Registrar no later than 48 hours after final grades for the term are due. If a candidate for a degree is not certified by the appropriate deadline, the degree will not be awarded. It is the responsibility of the student to reactivate the degree petition for the following semester.
13. The diploma of a candidate for a degree shall bear the date of the latest commencement ceremony for the term in which the degree is awarded with the exception of summer graduation diplomas, which will bear the date of the official end of term.

Additional Requirements for Master's Thesis Students

1. Students should submit the thesis topic and committee form to Graduate Studies for approval and make satisfactory progress on the thesis.
2. Students should complete the requirements for training in Responsible Conduct for Research (RCR).
3. Students should submit the thesis electronically to the Electronic Thesis and Dissertation link available on the Thesis & Dissertation Forms website and receive final acceptance from the Office of Graduate Education.

Language Requirement

The student's school may require a reading knowledge of one appropriate language other than English.

Professional Education

Georgia Tech Professional Education (GTPE) is the global campus and lifetime education arm of Georgia Institute of Technology.

GTPE offers professional development courses, certificate programs, and master's degrees to career-focused adults in tech, business, and industry specific subject matter to meet the needs of working professionals and industry partners. Programs are available worldwide both online and on-site.

In addition to professional academic offerings, the division administers K-12 outreach, professional certificates for active-duty service members and veterans, and an English as a Second Language program. We also offer comprehensive virtual, hybrid, and in-person professional meeting and event experiences.

On an annual basis, GTPE serves and supports more than 193,000 learners – the "hidden students" who don't live on campus but out-number those who are physically here.

While GTPE is located at the Georgia Tech Global Learning Center (GLC) and the O'Keefe building in Atlanta, and at Georgia Tech-Savannah, our programs are available worldwide through online and hybrid formats, as well as in-person at corporate, government, and third-party locations.

Learn more about Georgia Tech Professional Education at pe.gatech.edu.

Community Outreach

Workforce readiness is a top priority for Georgia Tech Professional Education (GTPE). As such, we advocate for STEM exploration to improve appreciation, diversity, and performance in STEM fields, with many of our outreach programs offered in partnership with the Center for Education Integrating Science, Mathematics, and Computing (CEISMC).

From summer camp programs to professional development for STEM educators and distance math classes, we offer programs specifically engineered to give students the tools to solve real-world problems while also taking advantage of the resources and expertise of the Georgia Tech community. By providing these opportunities to students in STEM, we are ensuring tomorrow's innovators and educators have the skills to succeed in the workplace.

To learn more about our K-12 programs, visit pe.gatech.edu/programs/k12-programs.

English as a Second Language

The mission of the Georgia Tech Language Institute (GTLI) is to empower learners to reach their full potential through improved communication skills in English. The Language Institute has delivered high-quality, practical English language instruction for more than sixty years to a wide range of learners: matriculated international students; international scholars and postdocs; students preparing for academic work in the U.S.; professionals looking for career improvement through better language skills; learners seeking an exchange experience in the U.S.; and people wanting to increase their English proficiency for social reasons.

With its full- and part-time programs offered remotely and face-to-face, the Language Institute is a center for lifelong learning in communication and cross-cultural understanding.

Course options include:

- Intensive English Program (IEP)
- Certificate Program in Cross-Cultural Communication for Professionals
- Credit and non-credit communication courses for international graduate students
- Short Courses

- Online On-Demand courses
- Customized Programs

Learn more at www.esl.gatech.edu.

Professional Education Degree Programs

For over 45 years, Georgia Tech Professional Education has delivered online learning programs to career-focused adults across the globe.

Built on Georgia Tech's rigorous on-campus programs, our 10 online Master of Science degrees and three hybrid Professional Master's degrees are designed to provide you with the STEM and leadership capabilities to be competitive in your field.

In addition to a sought-after credential from a world-renowned university, you can also expect:

- World-class faculty
- Media-rich, digital learning tools
- High quality, rigorous courses

In annual rankings from *U.S. News & World Report*, Georgia Tech graduate programs consistently rank in the top 10. The proven excellence of Georgia Tech graduate degrees and the convenience of online delivery make them a compelling choice for working professionals.

The following Master of Science degrees are available online:

- Aerospace Engineering
- Analytics
- Computational Science and Engineering
- Computer Science
- Cybersecurity
- Electrical and Computer Engineering
- Industrial Engineering
- Mechanical Engineering
- Medical Physics
- Operations Research

Learn more about the online Master of Science degrees.

The following Professional Master's degrees are available in a hybrid format:

- Applied Systems Engineering
- Manufacturing Leadership
- Occupational Safety and Health

These programs combine online learning with three week-long visits to Georgia Tech's main campus in Atlanta over the course of the two-year program. Learn more about the Professional Master's Degrees.

Professional Education Short Programs

Georgia Tech Professional Education (GTPE) offers professional development courses, certificates, and bootcamp programs to career-focused adults in STEM and business fields worldwide.

Whether you are upgrading your skill set, sharpening your expertise, or future-proofing your career, our short programs are designed to position you to deliver immediate workplace impact using knowledge and skills learned from Georgia Tech's faculty experts and each other.

We offer industry-specific courses, boot camps, and certificate programs that combine academic rigor with hands-on, practice training in demand by industry. Programs are available worldwide both online and on-site.

Programs are available in more than 15 subject areas such as data analytics, cybersecurity, defense technology, engineering, leadership, manufacturing, occupational safety and health, project management, and supply chain and logistics.

Learn more at pe.gatech.edu/programs.

Advanced Technology Development Center (ATDC)

The Advanced Technology Development Center (ATDC)

The Advanced Technology Development Center (ATDC) is the state of Georgia's technology startup incubator. Founded in 1980 by the Georgia General Assembly which funds it each year, ATDC's mission is to work with entrepreneurs in Georgia to help them learn, launch, scale, and succeed in the creation of viable, disruptive technology companies. Since its founding, ATDC has grown to become the longest running and one of the most successful university-affiliated incubators in the United States, with its graduate startup companies raising in excess of $3 billion in investment financing and generating more than $12 billion in revenue in the state of Georgia.

ATDC is headquartered in Technology Square and has space wet lab space in the Ford Environmental Science and Technology (Ford ES&T) Building. The incubator also has staff across the state via its ATDC@ program in Albany, Athens, Augusta, Columbus, Macon, Peachtree Corners, and Savannah. ATDC staff also support programming in Alpharetta, Braselton, and Sandy Springs. At these locations, early-stage companies benefit from a strong entrepreneurial working environment, access to professional business consulting, contact with Institute research faculty, and modern office and laboratory facilities. Through its ATDC Connect offering, the incubator also provides companies with access to facilities, personnel, and University System of Georgia students, fosters relationships with investors, and large corporate enterprises.

- The Advanced Technology Development Center (ATDC)

Georgia Tech Research Corporation

Founded in 1937, the Georgia Tech Research Corporation (GTRC) is a state-chartered, not-for-profit corporation serving Georgia Tech as a University System of Georgia-approved cooperative organization. By charter, GTRC "...shall be operated exclusively for scientific, literary, and educational purposes...conduct laboratories, engage in scientific research, and distribute and disseminate information resulting from research..." GTRC is an IRS section 501(c)(3) not-for-profit organization and serves as the contracting agency for all of the sponsored research activities at Georgia Tech. It also licenses all intellectual property (patents, software, trade secrets, etc.) created at Georgia Tech. Additionally, GTRC assists Georgia Tech in obtaining quality research space, enters into long-term leases for specialized research equipment, and conducts other research support programs as requested by the Institute. All funds collected by GTRC are used to support various Georgia Tech research programs requested by the Institute and as approved by the twelve-member board of trustees.

- GTRC Website
- Office of Sponsored Programs

Georgia Tech Research Institute

The Georgia Tech Research Institute (GTRI) is a globally recognized applied research and development organization. Each day, GTRI's science and engineering expertise is used to solve some of the toughest problems facing government and industry across the nation and around the globe. GTRI's world-class engineers and scientists solve some of the toughest problems facing government and industry across the nation and around the globe. For more than eighty-six years GTRI has been uniquely positioned within the Georgia Institute of Technology, one of America's top research universities.

GTRI is over 2,800 people strong, including some of the world's top scientists and engineers who conduct more than $780 million in sponsored research each year. Many of GTRI's experts are recognized worldwide as leaders in a vast array of research domains. GTRI's core research areas include complex and agile systems engineering, sensor design and integration, information management and cybersecurity, and defense technology development.

GTRI operates 15 operations units and eight research laboratories located on Georgia Tech's main campus in midtown Atlanta, and at the Cobb County Research Facility (CCRF) north of Atlanta. In addition, GTRI serves its sponsors through 21 field offices located at:

- Aberdeen, Maryland;
- Albuquerque, New Mexico;
- Colorado Springs, Colorado;
- Dayton, Ohio;
- Fort Belvoir, Virginia;
- Hampton Roads, Virginia;
- Huntsville, Alabama;
- Jacksonville, Florida;
- Lincoln, Massachusetts;
- Orlando, Florida;
- Panama City, Florida;
- Patuxent River, Maryland;
- Pearl City, Hawaii;
- Phoenix, Arizona;
- Quantico, Virginia;
- San Antonio, Texas;
- San Diego, California;
- Shalimar, Florida;
- Tucson, Arizona
- Warner Robins, Georgia; and
- Washington, District of Columbia.

One of GTRI's goals is to support economic and technological development in Georgia. GTRI promotes economic growth in the state and the southeast through mutual programs with the Georgia Tech Enterprise Innovation Institute. GTRI operates strong technology transfer programs and GTRI researchers teach more than half of all courses offered through Georgia Tech's Distance Learning and Professional Education program. The newest offering is a Professional Master's Degree in Applied Systems Engineering, which was developed jointly by GTRI and the Georgia Tech College of Engineering. GTRI is also home to the state's Agricultural Research Technology Program, which conducts research and technology transfer for the poultry industry, one of Georgia's leading industries and employers.

Joint CNRS Research Laboratory

As the result of a strategic alliance between the Georgia Institute of Technology and the French Centre National de la Recherche Scientifique (CNRS), a joint research laboratory, GT-CNRS UMI 2958 was established at Georgia Tech-Lorraine in March of 2006. The laboratory conducts a unique transatlantic collaborative program of research in secure networks and smart materials. Research faculty and graduate students from Georgia Tech, French universities, and other CNRS laboratories work on joint research projects sponsored by industry and by local and national governments.

More information is available by visiting the CNRS web site or by contacting Dr. Abdallah Ougazzaden, Director UMI 2958, at +33 387.20.3939.

- Georgia Tech-Europe

Logistics Innovation Centers

Due to an increasing need for the comprehensive examination of trade-chains and in light of the success of the Supply Chain and Logistics Institute in partnering with the National University of Singapore and various agencies of the government of Singapore, a global network of Trade-chain Innovation & Production (TIP) Centers has developed. This network of centers enables a comprehensive program focused on (1) developing insights, strategies, and methodologies to improve the productivity of existing trade-chains, (2) promoting innovation for identifying and enabling new trade-chain opportunities, and (3)

providing education related to trade-chain infrastructure, innovation, and productivity.

Oak Ridge Associated Universities

Since 1946, students and faculty of the Georgia Institute of Technology have benefited from its membership in Oak Ridge Associated Universities (ORAU). ORAU is a consortium of ninety-one colleges and universities and a contractor for the United States Department of Energy (DOE) located in Oak Ridge, Tennessee. ORAU works with its member institutions to help their students and faculty gain access to federal research facilities throughout the country; to keep its members informed about opportunities for fellowship, scholarship, and research appointments; and to organize research alliances among its members.

Through the Oak Ridge Institute for Science and Education (ORISE), the DOE facility that ORAU operates, undergraduates, graduates, postgraduates, and faculty enjoy access to a multitude of opportunities for study and research. Students can participate in programs covering a wide variety of disciplines, including business, earth sciences, epidemiology, engineering, physics, geological sciences, pharmacology, ocean sciences, biomedical sciences, nuclear chemistry, and mathematics. Appointment and program length range from one month to four years. Many of these programs are especially designed to increase the numbers of underrepresented minority students pursuing degrees in science- and engineering-related disciplines. A comprehensive listing of these programs and other opportunities, their disciplines, and details on locations and benefits can be found in the ORISE Catalog of Education and Training Programs, which is available at www.orau.gov/orise/educ.htm, or by calling either of the contacts below.

ORAU's Office of Partnership Development seeks opportunities for partnerships and alliances among ORAU's members, private industry, and major federal facilities. Activities include faculty development programs, such as the Ralph E. Powe Junior Faculty Enhancement Awards, the Visiting Industrial Scholars Program, consortium research funding initiatives, faculty research and support programs, as well as services to chief research officers. For more information about ORAU and its programs, contact:

Charles L. Liotta
Vice Provost for Research and Dean of Graduate Studies
ORAU Councilor for Georgia Institute of Technology

Monnie E. Champion
ORAU Corporate Secretary

- Oak Ridge Associated Universities

Skidaway Institute of Oceanography

Located on Skidaway Island near Savannah, Georgia, the Skidaway Institute of Oceanography (SkIO) provides a complex of coastal- and ocean-related educational and research opportunities. School of Biology faculty have laboratory facilities at the Institute. Many SkIO faculty hold adjunct appointments with Georgia Tech schools, including Civil and Environmental Engineering, Earth and Atmospheric Sciences, and Biology, and actively participate in graduate research and education. SkIO maintains small boats for local studies and the 92-foot R/V Savannah for conducting ocean research. Other unique coastal research facilities include the Bioremediation and Environmental Research Mesocosms (BERM) facility, the Saltmarsh Ecosystem Research Facility (SERF), a large recirculating flume, and the SkIO library, which is the largest in the state devoted almost exclusively to marine sciences. Areas of faculty expertise at SkIO include chemical, physical, and biological oceanography, marine ecology, and marine geology. Visitor and graduate student housing is available on site, providing convenient access to these facilities.

- Skidaway Institute of Oceanography (SkIO)
- School of Biology

VentureLab

The Georgia Tech VentureLab program helps faculty members and students to commercialize technology developed as part of the Institute's research programs. VentureLab evaluates the commercial potential of innovations and matches faculty with experienced entrepreneurs who can help form new ventures.

More details are available on the VentureLab web site.

Academic Common Market

Undergraduate Programs

At the undergraduate level, Georgia Tech has withdrawn its programs from the Academic Common Market (ACM). This policy went into effect in the Summer 2011 semester.

Graduate Programs

At the graduate level only, Georgia Tech participates in the Academic Common Market (ACM), which is a program managed by the Southern Regional Education Board. ACM is an interstate agreement for sharing educational programs and facilities. It allows students to participate in selected programs not offered in their home states without having to pay out-of-state tuition charges..

The main purpose of the Academic Common Market is to assist states in offering together what they cannot offer alone. Residents of the participating states who qualify for admission and gain the approval of their state coordinators may enroll on an in-state tuition basis. Programs are added to and removed from the Market on an annual basis in order to reflect the changing needs of participating states. The State of Georgia currently makes program changes once annually during the spring.

These states currently participate: Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virgina.

- Southern Regional Education Board

Bachelor of Science and Master of Science Options (BS/MS Option)

The BSMS Options are formalized Graduate Course Option agreements between an undergraduate program and graduate program. These options allow a maximum of 6 hours that can be applied toward the bachelor's degree program and the master's program. These options include their own admission criteria into the master's program and their own GPA requirements. They also typically include research and mentoring components for eligible students. Students still must complete all requirements for the bachelor's and master's program. The master's degree must be completed within a two-year period following the award date of the bachelor's degree.

See below for specific BS/MS Option information regarding specific admission requirements, GPA requirements and which courses may be eligible to share between a bachelor's degree and master's degree.

See here for more information about the Graduate Course Option.

Center for Teaching and Learning (CTL)

The Center for Teaching and Learning (CTL) was founded in 1986 with a mission to lead Georgia Tech to a teaching and learning standard of excellence.

CTL's undergraduate course offerings include:

- Undergraduate Teaching Assistant Preparation,
- Fundamentals of Peer Tutoring, and
- Residence Life Seminar.

CTL offers a graduate-level course in Graduate Teaching Assistant preparation and courses to prepare graduate students for faculty positions.

- Graduate Teaching Assistant Preparation,

- Fundamentals of Teaching and Learning in Higher Education,
- Course Design for Higher Education,
- Teaching Practicum in Higher Education, and
- Teaching Immersion in Higher Education.

For international graduate students and teaching assistants who want to improve their English communication skills, CTL offers courses in conjunction with the Georgia Tech Language Institute.

- Communication Skills for International TAs,
- Academic Writing for International Graduate Students,
- Oral Communication for International Graduate Students, and
- Presentation Skills for International Students.

Courses offered by the Center for Teaching and Learning (CTL) can be viewed in the Course Catalog.

Experiential Education

- Georgia Tech Career Center
- Paid and Unpaid Internships
- Graduate Internship Program

Georgia Tech Career Center

Georgia Tech believes that obtaining relevant, academically related experience outside of the classroom is an integral part of the educational process. The Career Center offers opportunities to obtain such experience through cooperative education and internships.

The Undergraduate Cooperative Plan (Co-op) has been offered at Georgia Tech since 1912. It offers students the opportunity to integrate practical experience with theory learned in the classroom. Many students participate each semester, working full time during alternating semesters, for a total of three semesters, for employers throughout the United States and the world. Accredited by the Accreditation Council for Cooperative Education, it is the largest optional co-op program in the country and one of the highest-ranked programs among public universities.

The Undergraduate Co-op Plan is available for students in all majors. Co-op students remain enrolled in school while on work terms by registering for the appropriate co-op courses.

The work experience received is a valuable asset to graduates starting out in their chosen professions. Neither college laboratory experience nor employment during vacations can take the place of organized co-op experience. The plan provides, to a substantial degree, the experience most companies require of their employees before promoting them to positions of higher responsibility. Work experience may also assist students who are undecided about their future career goals by determining early in their college careers whether they wish to continue in a particular field.

The daily contact with diverse groups among their fellow employees offers students practical insight into sociology, psychology, economics, and ethics that no textbook can supply. Finally, students receive compensation for their services from the employer. Typically, co-op students can save enough from their earnings to pay for a substantial part of their school expenses.

Internships provide practical experience for students who choose not to follow the Undergraduate Co-op Plan. Internships, the majority of which are paid positions, are an extremely viable way to obtain out-of-classroom experience. Similar to cooperative education, the jobs and the students' performance are monitored by the Career Center to ensure maximum benefit by all parties.

Students in all majors may participate in the internship program and may work any term during the academic year. There are also part-time internships available for those who wish to work while attending classes.

Program Eligibility for Co-ops and Internships:
• GPA of 2.0 or above
• Good academic standing
• Co-op students must have three or more academic semesters remaining at the start of the first work term
• Experiential Learning Application must be completed in CareerBuzz

Students are required to register their co-op terms with the Career Center and are enrolled in the CO-OP (tuition-free) 12 audit hour course. Students securing internships are also strongly encouraged to register these opportunities with the Career Center. Students will be registered in the INTN audit hours course based on the number of total work hours per week, as follows:

10-19 hours per week = 3-hour audit course
20-29 hours per week = 6-hour audit course
30-35 hours per week = 9-hour audit course
36+ hours per week = 12-hour audit course

Benefits of CO-OP and INTN Course Enrollment:

- Audit hours are recorded on the official transcript
- Earnings do not affect FAFSA status
- Maintain active student status during work terms
- Cancelation of housing without penalty if working 25 miles or more from campus
- Support from the Career Center during your work terms
- Eligibility for co-op scholarships
- Eligibility for membership in the Briaerean Honors Society
- Co-op designation on the graduation diploma at the completion of the 3 work terms with the same employer

For more information on co-ops and internships, visit our website, email us at careercenter@gatech.edu or call the Career Center at 404-894-3320.

Graduate Cooperative Plan

The Graduate Internship Program provides graduate students with the opportunity to work with industry and government leaders in their respective areas of study. Eligibility for the program is based on academic achievement at Georgia Tech. For students who are working on research, their master's and doctoral thesis-related work may be related to the internship work assignments, and can be jointly supervised by Georgia Tech faculty and company staff. Eligibility for the Graduate Internship Program is based on academic achievement at Georgia Tech. There is no tuition associated with the Graduate Internship Program, nor are there any required fees. Students are provided full-time enrollment status through registration in an audit credit Graduate Internship course. This permits students to retain all privileges of full-time enrolled students while on work assignments.

For more information, visit the Georgia Tech Graduate Internship Program site.

Paid and Unpaid Internships

In addition to the internship and cooperative programs administered through the Career Center, students may participate in internships through the academic units. These internships are either paid or unpaid.

Students who receive pay for the internship may not also receive academic credit for it. Students who receive academic credit for an internship may not also receive pay for it. There may be rare exceptions to this policy, such as the legislative internship that is part of the program in Public Policy. Exceptions have to be approved by the curriculum committee.

When students request enrollment in a departmental internship, they must (for credit or pay) complete a departmental approval form. Departmental internship sections are set up by permit only, and the student is permitted for the appropriate section to register for it.

Academic units are strongly encouraged to use the following standard numbering system for internships that they offer for pay or credit. Schools that wish to add an internship course will need to submit a new course proposal form to the curriculum committee and request course numbers under their subject codes.

Course Numbering

Freshmen and Sophomores

XXXX 2694: Undergraduate Internship for Pay (Audit only)

XXXX 2695: Undergraduate Internship for Credit

Juniors and Seniors

XXXX 4694: Undergraduate Internship for Pay (Audit only)

Dual Enrollment Program for High School Students

Georgia Tech partners with high school and home study programs to enroll students in advanced courses. Our program intends to enrich the high school experience, not replace it. Students who take classes at Georgia Tech usually continue taking classes and participating in activities and organizations in their high school communities.

Distance Math and On-Campus Dual Enrollment programs admit students for fall semester only. If you are admitted for fall semester, you may enroll in spring semester courses pending satisfactory academic performance in the fall. **Distance Computer Science admits students for Summer, Fall, or Spring semesters.** That program includes one-semester courses and students may take one or more.

The admission process is selective. Most admitted applicants have completed the highest level math and science courses available in their high school curriculum. Visit the Office of Undergraduate Admission website for more details.

Learning Support Policies

The Office of the Vice Provost for Undergraduate Education (OUE) administers the Learning Support Program. Co-requisite support courses (for non-academic credit) are offered for College Algebra, MATH 1111, and English Composition I, ENGL 1101, for students who need additional preparation to be successful in these and related courses.

Georgia Tech uses benchmark scores earned via the SAT (Evidenced-Based Reading and Writing and Math) or ACT (English and Math) to determine placement in Learning Support. Students who score below 480 on the SAT Evidence-Based Reading and Writing Section (or 17 on the ACT English) will be required to complete the learning support program for English. Students who score below 530 on the SAT Math Section (or 21 on the ACT Math) will be required to complete the learning support program for math. Students may be required to complete the learning support program for both English and math. Georgia Tech will consider the higher of the SAT and ACT scores when determining learning support placement.

Students who are required by the Institute to take courses in the Learning Support Program will be notified in writing.

Students placing into learning support for English will be required to take ENGL 0999, a three-hour (non-academic credit) course designed to reinforce critical reading and communications concepts, concurrently with ENGL 1101, a three-hour course.

Students placing into learning support for math will be required to take MATH 0999, a two-hour (non-academic credit) course designed to reinforce basic mathematical concepts, concurrently with MATH 1111, College Algebra, a four-hour course.

MATH 0999 and ENGL 0999 are not college level classes and cannot be applied to degree requirements, including free electives.

Students complete their learning support requirements when they pass the required college level course, ENGL 1101 or MATH 1111, with a grade of D or better.

Students who do not pass ENGL 1101 or MATH 1111 with a grade of D or better will be required to take both the co-requisite course and the college level course (ENGL 0999 and ENGL 1101 or MATH 0999 and MATH 1111) regardless of the grade they received in co-requisite course. Students will continue to take the combination of courses until they have passed the college level course, ENGL 1101 or MATH 1111, with grade of D or better. There is no limit to the number of times these classes and their corresponding co-requisites may be attempted.

The Learning Support Program requirements should be completed as soon as possible after matriculation to Georgia Tech. Students should work with advisors to determine the best timing for these requirements.

Contact your advisor for further information and assistance.

Preprofessional Programs

Georgia Tech offers Pre-professional programs and advising in the following areas:

- Pre-Health (includes all health professions, including pre-med, pre-dentistry, pre-pharmacy, and more)
- Pre-law
- Pre-teaching (K-12)

Students can look these advisors up on the Advising Web page.

Professional schools typically admit students with strong academic credentials, a well-balanced education, good communication skills, and a broad range of experiences. With the appropriate selection of elective courses, most majors at Georgia Tech provide suitable preparation for professional schools in any area.

The best choice of a major is usually the one in which the student has the greatest inherent interest. No specific major offers an obvious competitive advantage in assuring admission to professional schools.

Georgia Tech has elected not to have majors designated as pre-medicine, pre-dentistry, or pre-law. This approach to pre-professional education has two major advantages. First, students who elect not to enter professional school upon graduation are prepared for alternative careers immediately. Second, students who do continue on to professional school have backgrounds that often provide them with unique opportunities within their selected professions. Examples include medical research,

development of medical devices and apparatus, patent law, or the legal aspects of design and construction.

President's Scholarship Program

The Stamps President's Scholars Program is Georgia Tech's premier and most prestigious merit-based scholarship. Recipients are selected from the top applicants for admission to Georgia Tech based on demonstrated excellence in scholarship, leadership, progress, and service as described on the Stamps President's Scholars Program web page. From the applicant pool, students selected as semifinalists interview online. The top semifinalists are named finalists and invited, with their parents, to campus for additional interviews and an information weekend in March or April.

Transfer students are not eligible for the four-year award. Recipients must be US/UK/Ireland Citizens or US/UK Permanent Residents.

Each year, 40 incoming first-year students receive the Stamps President's Scholarship, which is renewable for up to four academic years or eight semesters, contingent upon honors-level performance and continued leadership development as evidenced by involvement in program, campus, and community activities. Scholarships are "full ride," including tuition and mandatory fees, room and board, books, and personal expenses. See the website below for more information on stipends.

To ensure consideration, a student must apply as an incoming first-year student, and submit the Georgia Tech Application for First-Year Admission, along with the application fee by the relevant early action deadline.

More information:

- Stamps President's Scholars Program

ROTC

Georgia Tech offers three voluntary ROTC programs: Army, Navy, and Air Force.

Depending on the student's major, Basic and Advanced ROTC classes count as a portion of elective credit. (Students may apply a maximum of 4 credit hours in Basic ROTC courses and six credit hours in Advanced ROTC courses toward meeting the elective requirements for any degree at the discretion of the school.) Consult specific colleges to determine the amount of hours that will count toward a degree. After earning a baccalaureate degree and completing the Advanced ROTC courses for any of the three services, a student may receive a commission as an officer in either the reserve or active forces.

Students accepted into the program earn more than just money for a college degree. Cadets and midshipmen receive training and experience in the one quality which is always in great demand: Leadership.

Students may apply a maximum of 4 credit hours in basic (1000-2000 level courses) ROTC courses and six hours in advanced (3000-4000 level) ROTC courses toward meeting the free elective requirements for any degree. Students should begin taking basic ROTC courses during the first term they are enrolled. For further information, see individual curricula for the schools. Please note some departments may have stricter guidelines regarding ROTC courses.

Summer Language Programs

Languages for Business and Technology (LBAT)

The School of Modern Languages offers special summer immersion programs in the countries/regions related to our areas of language study: Arabic, Chinese, French, German, Japanese, Korean, Russian, and Spanish. These intensive programs in Languages for Business and Technology (LBAT) consist of study abroad in which classroom lessons in business, culture, and technology are combined with fieldwork, cultural events, excursions, and visits to area businesses, government agencies, and social concerns, all conducted in the target language. The professional visits provide students with firsthand experience of business life, the protocols and strategies of business and technology interactions, and a heightened awareness of the current economic and social issues facing the host country. The LBAT experience offers a unique opportunity for rapid growth in proficiency, for building a deeper appreciation for the cultures and lifestyle patterns of other peoples, and for making lifelong social and professional contacts.

Depending on the particular program, students will spend 6-8 weeks abroad and earn 9-15 semester hours at the 3000 level (with some programs including offerings at the 1000 or 2000 level); these credits often can count toward a certificate, a minor, or the joint majors offered by the School of Modern Languages. Program costs vary according to the country visited and the length of the program. The HOPE scholarship applies. See the School of Modern Languages' "LBAT Programs" web page for more information.

The International Plan

In today's economy, employers are expecting to hire college graduates with international experience, global perspectives, intercultural communication skills, and the ability to work in diverse teams. In response to this need, Georgia Tech developed the International Plan, a globally-focused degree designation.

The International Plan is a challenging undergraduate academic program aimed at developing a student's global competence within the context of their major. It is an optional degree-long program that integrates overseas experiences, language proficiency, and globally-focused coursework into any participating major. It builds on existing undergraduate degree requirements and international opportunities, and it is intended to be completed within the normal time frame of a four-year undergraduate degree. Completion of the International Plan is recognized by a designation on the student's diploma, e.g., "B.S. in Electrical Engineering: International Plan."

A defining feature of the International Plan is coherence. Coherence refers to the connection between the destination(s) chosen to complete

the international experiences, the language chosen to satisfy the language requirement, and the appropriateness to the student's discipline. While some students' Plans are inherently coherent through language, other students may link the elements of their Plan through academic and/or professional topics, creating "intellectual" coherence. The program is designed to give students a deep understanding of another culture so that they develop strong intercultural skills that will help them function effectively in a global environment. Students are encouraged to think strategically about their academic and international experience choices and seek guidance from their advisors.

In order to earn the International Plan designation in a participating major, students will complete the following components:

1. Globally-Focused Coursework: Complete three courses, one from each of the following categories. Only one 1000-level course may be used to satisfy globally-focused coursework requirements.
   a. International relations
   b. A course about the country or region of the overseas experience
   c. Global economics
2. International Experience: Complete two terms abroad (at least 26 weeks) engaged in any combination of study, research, and/or internship. International experiences for the International Plan must be approved by the International Plan staff and the major IP faculty representative.
3. Second Language Proficiency: Demonstrate proficiency equivalent to four semesters of college-level language study. An optional Language Proficiency Distinction is available to students who demonstrate more advanced oral proficiency skills.
4. Culminating Course: Complete a major-specific capstone course designed to tie the international studies and experiences together with the student's discipline.
5. Have a cumulative GPA of at least 2.7 upon entrance to and graduation from the International Plan

For additional information about the International Plan visit https://oie.gatech.edu/content/international-plan.

Culminating Course - International Plan Capstone

The IP Capstone is integrated into the major's senior design/seminar course. Students should enroll in the appropriate course and section for their major as listed below. Major IP faculty representatives can provide additional information and instructions

Major	Course Number
Aerospace Engineering	AE 4350/AE 4351 - IP or AE 4356/ AE 4357 - IP or AE 4358/AE 4357 - IP
Applied Languages and Intercultural Studies	CHIN 4500/FREN 4500/ GRMN 4500/JAPN 4500/ RUSS 4500/SPAN 4500
Architecture	ARCH 4012, ARCH 4011
Biochemistry	CHEM 4699 - IP, CHEM 4582, CHEM 4765, CHEM 4695, VIP (must be approved)
Biology	BIOS 4699 - IP or BIOS 4590 or BIOS 4690 or BIOS 4910
Biomedical Engineering	BMED 4600/BMED 4601 - IP
	BMED 4602 and BMED 4873
Business Administration	MGT 3659
Civil and Environmental Engineering	CEE 4090 - IP
Chemical and Biomolecular Engineering	CHBE 4520-IP or CHBE 4530-IP

Chemistry	CHEM 4699 - IP,CHEM 4582, CHEM 4765, CHEM 4695, VIP (must be approved)
Computer Science	Option 1: CS 4901 - IP plus 4XXX (crs taken abroad) - IP section
	Option 2: CS 4001 - IP or CS 4002 - IP
	Option 3: CS 4911 - IP
	Option 4: INTA 4500 (Global Citizenship section only; taught by Dr. Birchfield)
Computational Media	See IP Faculty Representative
Earth & Atmospheric Sciences	See IP Faculty Representative
Electrical and Computer Engineering	ECE 4012 - IP
Economics	See IP Faculty Representative
Economics and International Affairs	See IP Faculty Representatives
Global Economics and Modern Languages	CHIN 4500/FREN 4500/ GRMN 4500/JAPN 4500/ RUSS 4500/SPAN 4500
History, Technology, and Society	HTS 4091
International Affairs	INTA 4500 - IP
International Affairs and Modern Languages	CHIN 4500/FREN 4500/ GRMN 4500/JAPN 4500/ RUSS 4500/SPAN 4500
Industrial Design	ID 4012 - IP
Industrial and Systems	ISYE 4106 - IP
Literature, Media, and Communication	LMC 4100/LMC 4200/LMC 4300/ LMC 4400/ or LMC 4500 - IP or LMC 4102 - IP
Mechanical Engineering	ME 4182 - IP or ME 4723
Psychology	See IP Faculty Representative

Transfer Programs

Dual Degree Program

Under the Dual Degree Program, students attend the participating Dual Degree school for three years and then come to Georgia Tech for approximately two years. Students participating in the Dual Degree Program may seek a degree from any undergraduate degree-granting program in the College of Engineering. Upon completion of the program, the student receives a bachelor's degree from the first school and a bachelor's degree in one of the engineering disciplines at Georgia Tech.

Participating in the Dual Degree Program are many of the schools in the University System of Georgia, including Morehouse College, Spelman College, Clark Atlanta University, and other historically black colleges and universities (HBCU) and predominantly women's colleges in the southeast. For additional information on either of these programs, contact the College of Engineering at Georgia Tech or the Regents' Engineering Transfer Program (RETP) or Dual Degree coordinator at a participating RETP or Dual Degree institution.

Regents' Engineering Transfer Program

The Regents' Engineering Transfer Program (RETP) is a cooperative program between Georgia Tech and colleges in the University System of Georgia.

For the first two years, students in this program attend one of the participating institutions, where they take all of the mathematics and science and many of the engineering courses required in the first two years of the Georgia Tech engineering curricula. Upon successful completion of the RETP requirements at the RETP institution, students are admitted to Georgia Tech to work toward completion of a Bachelor of Science in Engineering degree.

By enrolling in RETP, students may attend a college close to home, thereby decreasing the cost of their education and easing the adjustment to college life. At the same time, RETP students enjoy many of the advantages of Tech students: they have equal access to engineering majors at Tech, they can participate in the co-op program, and they are invited to the Tech campus once a year for campus tours, information sessions, and meetings with advisors in their engineering majors.

- Core Curriculum and Other Georgia Tech Requirements
- Credit, Tests, and Scores
- Undergraduate-Level Courses
- Undergraduate Students Taking Graduate Courses, Graduate Course Option, and BSMS Options

BS/MS Options

The BSMS Options are formalized Graduate Course Option agreements between an undergraduate program and graduate program. These options allow a maximum of 6 hours that can be applied toward the bachelor's degree program and the master's program. These options include their own admission criteria into the master's program and their own GPA requirements. They also typically include research and mentoring components for eligible students. Students still must complete all requirements for the bachelor's and master's program. The master's degree must be completed within a two-year period following the award date of the bachelor's degree.

See below for specific BS/MS Option information regarding specific admission requirements, GPA requirements and which courses may be eligible to share between a bachelor's degree and master's degree.

See here for more information about the Graduate Course Option.

Core Curriculum and other Georgia Tech Requirements

Important Note:

On March 9, 2016, the Board of Regents of the University System of Georgia approved a revision to system-wide policies related to the Core Curriculum.

1. Institutions in the University System of Georgia will not be required to identify or track overlay requirements related to US Perspectives, Global Perspectives, and Critical Thinking.
2. Students will not be required to complete the overlay requirements from this point forward.
3. Students who are scheduled to graduate in the Spring 2016 Semester and who have not completed the overlays may graduate without fulfilling this requirement.

University System of Georgia Core Curriculum Requirements

The following describe the core requirements, effective in Fall 2011 and reflecting an important change in March 2016.

The courses that can be used to satisfy the various area requirements are subject to change, and will be updated as soon as possible. Students and advisors are encouraged to check this section of the Catalog regularly to obtain the most current information.

Any courses completed that were listed in prior catalogs as satisfying the Humanities/Social Science Requirement and were completed while that edition of the Catalog was in effect may also be used to satisfy that requirement.

More information about the University System of Georgia's Core Curriculum polices is available on in the Academics & Student Affairs Handbook on the USG web site.

Core Curriculum Requirements:

- Constitution and History
- Core Area A1
- Core Area A2
- Core Area B
- Core Area C
- Core Area D
- Core Area E
- Core Area F
- Global Perspectives*
- U.S. Perspectives*

Other Georgia Tech Requirements and Attributes:

- Wellness Requirement
- Ethics Attribute

Constitution and History: US and Georgia

Georgia Code 32-171 states that "…no undergraduate student in any college or university shall receive a certificate of graduation or a degree without successfully completing course work or previously passing a satisfactory examination on the history of the United States and the history of Georgia, and upon the provisions and principles of the United States Constitution and the Constitution of Georgia."

Pursuant to the above, all undergraduate students must satisfy four legislative requirements to graduate:

1. United States History.
2. Georgia History.
3. United States Constitution.
4. Constitution of Georgia.

These implementation requirements take effect with the 2023-2024 Catalog that is effective May 1, 2023. All incoming undergraduate students who first matriculate at Georgia Tech on or after May 1, 2023 will be required to follow these implementation requirements.

Completion of the legislative requirements is required for students to be eligible to graduate with Georgia Tech undergraduate degrees.

Below are options for satisfying these legislative requirements:

United States History

Course Credit. Receive credit for either of these courses taken at Georgia Tech or receive transferred credit for either course, or receive credit for either course awarded for a score on an Advanced Placement (AP) or International Baccalaureate (IB) examination:

- HIST 2111 The United States to 1877
- HIST 2112 The United States since 1877

Examination. Earn a satisfactory score (60% or higher) on the United States History Non-Credit Canvas Course Examination. Students who elect to satisfy this legislative requirement by examination should do so before completing 90 or more credit hours. Information about this examination may be found at: https://oue.gatech.edu/glr-requirement.

Note: An examination taken to satisfy this legislative requirement does not carry any academic credit and does not satisfy any other requirement for graduation. Examination scores are used only to determine whether this legislative requirement is satisfied and are not noted or recorded on any transcript or other academic record.

Transfer Transcript. Submit a transcript for transfer from another accredited institution to Georgia Tech. If the transfer institution is within the University System of Georgia or Technical College System of Georgia, submit a transcript that includes an indication of satisfaction of this legislative requirement, as determined by the Georgia Tech Registrar's Office; Georgia Tech will honor indications of satisfaction of this legislative requirement by these institutions.

Georgia History

Course Credit. Receive credit for either of these courses taken at Georgia Tech:

- HIST 2111 The United States to 1877
- HIST 2112 The United States since 1877

Note: These Georgia Tech courses include study of Georgia History in addition to United States History; when completed at Georgia Tech, these courses satisfy both the United States History and the Georgia History legislative requirements.

Examination. Earn a satisfactory score (60% or higher) on the Georgia History Non-Credit Canvas Course Examination. Students who elect to satisfy this legislative requirement by examination should do so before completing 90 or more credit hours. Information about this examination may be found at: https://oue.gatech.edu/glr-requirement.

Note: An examination taken to satisfy this legislative requirement does not carry any academic credit and does not satisfy any other requirement for graduation. Examination scores are used only to determine whether this legislative requirement is satisfied and are not noted or recorded on any transcript or other academic record.

Transfer Transcript.

Submit a transcript for transfer from another University System of Georgia or a Technical College System of Georgia institution to Georgia Tech that includes an indication of satisfaction of this legislative

requirement, as determined by the Georgia Tech Registrar's Office; Georgia Tech will honor indications of satisfaction of this legislative requirement by these institutions.

Submit a transcript for transfer from any other accredited institution. If the transcripted course is transferable, the normal procedure for faculty review of transfer credit content will be followed to determine whether the course satisfies this legislative requirement.

United States Constitution

Course Credit. Receive credit for any of these courses taken at Georgia Tech or receive transferred credit for any of these courses:

- INTA 1200 American Government in Comparative Perspective
- POL 1101 Government of the United States
- PUBP 3000 American Constitutional Issues

Or receive credit for either of these courses awarded for a score on an Advanced Placement (AP) examination:

- INTA 1200 American Government in Comparative Perspective
- POL 1101 Government of the United States

Examination. Earn a satisfactory score (60% or higher) on the United States Constitution Non-Credit Canvas Course Examination. Students who elect to satisfy this legislative requirement by examination should do so before completing 90 or more credit hours. Information about this examination may be found at: https://oue.gatech.edu/glr-requirement.

Note: An examination taken to satisfy this legislative requirement does not carry any academic credit and does not satisfy any other requirement for graduation. Examination scores are used only to determine whether this legislative requirement is satisfied and are not noted or recorded on any transcript or other academic record.

Transfer Transcript.

Submit a transcript for transfer from another accredited institution to Georgia Tech. If the transfer institution is within the University System of Georgia or Technical College System of Georgia, submit a transcript that includes an indication of satisfaction of this legislative requirement, as determined by the Georgia Tech Registrar's Office; Georgia Tech will honor indications of satisfaction of this legislative requirement by these institutions.

Constitution of Georgia

Course Credit. Receive credit for any of these courses taken at Georgia Tech:

- INTA 1200 American Government in Comparative Perspective
- POL 1101 Government of the United States
- PUBP 3000 American Constitutional Issues

Note: These Georgia Tech courses include study of the Constitution of Georgia in addition to the United States Constitution; receiving credit for either of these courses when taken at Georgia Tech satisfies both the United States Constitution and the Constitution of Georgia legislative requirements.

Examination. Earn a satisfactory score (60% or higher) on the Constitution of Georgia Non-Credit Canvas Course Examination. Students who elect to satisfy this legislative requirement by examination should do so before completing 90 or more credit hours. Information about this examination may be found at: https://oue.gatech.edu/glr-requirement.

Note: An examination taken to satisfy this legislative requirement does not carry any academic credit and does not satisfy any other requirement for graduation. Examination scores are used only to determine whether this legislative requirement is satisfied and are not noted or recorded on any transcript or other academic record.

Transfer Transcript.

Submit a transcript for transfer from another University System of Georgia or a Technical College System of Georgia institution to Georgia Tech that includes an indication of satisfaction of this legislative requirement, as determined by the Georgia Tech Registrar's Office; Georgia Tech will honor indications of satisfaction of this legislative requirement by these institutions.

Submit a transcript for transfer from any other accredited institution. If the transcripted course is transferable, the normal procedure for faculty review of transfer credit content will be followed to determine whether the course satisfies this legislative requirement.

Social Science Attribute

Courses taken to satisfy Core Area E requirements (Social Sciences) can also be used to satisfy the legislative requirements, as specified above. The courses(s) can serve both purposes.

Note that, to satisfy Core Area E requirements, credit must be received for one of the following courses: HIST 2111, HIST 2112, POL 1101, INTA 1200, or PUBP 3000. When these courses are completed at Georgia Tech or at another University System of Georgia institution or at a Technical College System of Georgia Institution:

- HIST 2111 and HIST 2112 also satisfy both the United States History and the Georgia History legislative requirements, and
- POL 1101, INTA 1200, and PUBP 3000 also satisfy both the United States Constitution and the Constitution of Georgia legislative requirements.

Core Area A1

Core Area A1: Communication Outcomes

Area A1 is satisfied by completion of 6 credit hours as follows.

Required for all majors:

Effective Fall 2010, for freshmen entering the USG system Fall 2010, students who have earned 60 hours but have not completed Area A1 must enroll in the next course necessary to make progress toward completing this Area in every semester in which they take classes.

Effective Fall 2011, this hour limit is lowered to 45 hours for freshmen entering the USG system Fall 2011, Spring 2012, and Summer 2012.

Effective Fall 2012, the hour limit is lowered to 30 hours for freshmen entering the USG system Fall 2012 and thereafter.

Code	Title	Credit Hours
ENGL 1101	English Composition I	3
ENGL 1102	English Composition II	3

Core Area A2

Core Area A2: Quantitative Outcomes

Required of all students majoring in the College of Architecture, College of Computing, College of Engineering, College of Sciences:

Area A2 is satisfied by completion of 4 semester hours as follows:

Code	Title	Credit Hours
MATH 1552	Integral Calculus	4

Required of all other majors[1]. Select one of the following:

Code	Title	Credit Hours
MATH 1712	Survey of Calculus	4
or MATH 1552	Integral Calculus	

[1] In the case of a degree (major) that is jointly offered and the Colleges' requirements in this area are different, the student must complete the course that is specified in the curriculum for the degree, regardless of which college is the declared "home" of the student. This area of the Core Curriculum is driven by the requirements of the specific degree program, not by the general requirements of the College, if a degree is jointly offered.

Effective Fall 2010, for freshmen entering the USG system Fall 2010, students who have earned 60 hours but have not completed Area A2 must enroll in the next course necessary to make progress toward completing this Area in every semester in which they take classes.

Effective Fall 2011, this hour limit is lowered to 45 hours for freshmen entering the USG system Fall 2011, Spring 2012, and Summer 2012.

Effective Fall 2012, freshmen entering the USG system Fall 2012 and thereafter, the hour limit is lowered to 30 hours.

Core Area B

Core Area B: Institutional Options

Area B is satisfied by students completing the following:

Code	Title	Credit Hours
CS 1301	Introduction to Computing [1]	3

[1] Or another CS class designated by the School

Core Area C

Core Area C: Humanities, Fine Arts, and Ethics

Core Area C is satisfied by completion of 6 semester hours in courses that carry the HUM (Humanities) attribute. Fine Arts and some ethics related courses are included under Humanities at Georgia Tech. Courses that carry both the HUM and ETHS attribute can serve both purposes.

Notice:

On March 9, 2016 the Board of Regents approved a revision to Board of Regents policies related to the Core Curriculum.

Effective immediately:

1. Institutions will not be required to identify or track overlay requirements related to US Perspectives, Global Perspectives, and Critical Thinking.
2. Students will not be required to complete the overlay requirements from this point forward.
3. Students who are scheduled to graduate this semester and who have not completed the overlays may graduate without fulfilling this requirement.

Note:

1. Any courses completed that were listed in prior catalogs as satisfying the humanities or ethics requirement and were completed while that catalog was in effect may also be used to satisfy this requirement.
2. Academic units must formally request approval for courses they deem eligible to carry the Humanities attribute from the Institute Curriculum Committee and the University System of Georgia General Education Council.
3. Humanities credit is awarded for Modern Languages 1001 classes upon successful completion of the corresponding 1002 classes. Humanities credit is awarded for SPAN 1001 only upon the successful completion of SPAN 1002. In some instances, students may complete a Modern Languages course at 1001 and then be placed at the second-semester level and complete the 2001 level course. Therefore, the sequence that will warrant HUM credit for Modern Languages courses may be either the 1001-1002 or the 1001-2001 sequence. **Note:** Any new Modern Languages course must be approved by the Institute Undergraduate Curriculum Committee and the University System of Georgia General Education Council to carry the Humanities attribute. The attribute is not automatically applied to new Modern Languages courses as new languages are introduced.
4. Undergraduate Research courses numbered 2698, 2699, 4698, and 4699 cannot be used to fulfill requirements for humanities.
5. Additional information on Music courses: Students can earn humanities credit for participation in ensembles.
6. **Humanities Credit for Ensemble Participation**
   Students can earn Humanities credit for participation in one or more specified School of Music ensembles. Each ensemble course is repeatable for credit and the following ensembles carry the humanities attribute:

Code	Title	Credit Hours
MUSI 3121	Concert Band	1
MUSI 3131	Symphonic Band	1
MUSI 3231	Chamber Choir	1
MUSI 3241	Chorale	1
MUSI 3251	Glee Club	1
MUSI 3261	Treble Choir	1
MUSI 3311	Jazz Ensemble	1
MUSI 3511	Percussion Ensemble	1
MUSI 3531	New Music Ensemble	1
MUSI 3551	Rock and Pop Ensemble	1
MUSI 3611	Symphony Orchestra	1

7. **Transfer Students:**
   Please be aware that when you see courses on your GT record that are listed with an "X" in the number (ECON 3XXX or JAPN 10X2, for example) it means that these are transfer courses and although they were not equated exactly with a GT course, they may have been accepted to meet a Core area such as Humanities and Social Science.

   If you review your records in DegreeWorks, you will be able to see how your transfer credit applies to your GT degree program. Refer to your academic advisor for more information.

Courses that fulfill both Humanities and Ethics Requirements

Code	Title	Credit Hours
LMC 3219	Literature and Medicine	3
LMC 3304	Science, Technology, and Gender	3
LMC 3318	Biomedicine and Culture	3
PHIL 3105	Ethical Theories	3
PHIL 3109	Engineering Ethics	3
PHIL 3127	Science, Technology, and Human Values	3
PHIL 3140	Philosophy of Food	3
PHIL 4176	Environmental Ethics	3

Core Area D

Core Area D: Natural Sciences, Math, and Technology

Core Area D is satisfied by students completing 8 semester hours from the science list and 4 semester hours from the Mathematics list.

Science

8 semester hours

Notice: The School of Biological Sciences has updated the course pre-fix for BIOL and APPH courses (excluding APPH 1040 and APPH 1050) effective in the 2019-20 Catalog year. Students who have taken BIOL 1220, BIOL 1510, BIOL 1520 may still use those courses toward Core D requirements.

Code	Title	Credit Hours
CHEM 1211K	Chemical Principles I	4
CHEM 1212K	Chemical Principles II	4
CHEM 1310	Principles of General Chemistry for Engineers	4
BIOS 1220	Biology of Sex & Death	4
BIOS 1107 & 1107L	Biological Principles and Biological Principles Laboratory [1]	4
BIOS 1108 & 1108L	Organismal Biology and Organismal Biology Laboratory [2]	4
EAS 1600	Introduction to Environmental Science	4
EAS 1601	Habitable Planet	4
EAS 2600	Earth Processes	4
PHYS 2211	Introductory Physics I	4
PHYS 2212	Introductory Physics II	4

[1] Biology majors should take BIOS 1207 and BIOS 1207L.
[2] Biology majors should take BIOS 1208 and BIOS 1208L.

Mathematics

4-6 semester hours

All students with majors in the Colleges of Architecture, Engineering, and Science

Code	Title	Credit Hours
MATH 1551	Differential Calculus	2
MATH 1553	Introduction to Linear Algebra	2

All students with majors in the College of Computing

Code	Title	Credit Hours
MATH 1551	Differential Calculus	2
MATH 1554	Linear Algebra	4

All other majors [1]

Select one of the following:

Code	Title	Credit Hours
MATH 1711	Finite Mathematics	4
or MATH 1551	Differential Calculus	5
& MATH 1552	and Introduction to Linear Algebra	3

Honors versions of the above courses are also accepted.

[1] In the case of a degree (major) that is jointly offered and the Colleges' requirements in this area are different, the student must complete the course that is specified in the curriculum for the degree, regardless of which college is the declared "home" of the student. This area of the Core Curriculum is driven by the requirements of the specific degree program, not by the general requirements of the College, if a degree is jointly offered.

Core Area E

Core Area E: Social Sciences

Area E is satisfied by completion of 12 credit hours as follows:

Code	Title	Credit Hours
Select one of the following:		3
HIST 2111	The United States to 1877	
HIST 2112	The United States since 1877	
POL 1101	Government of the United States	
INTA 1200	American Government in Comparative Perspective	
PUBP 3000	American Constitutional Issues	
Select 9 credit hours from the following list.		9
Total Credit Hours		**12**

Some social science courses also carry the ethics attribute. Those courses may be used to satisfy both the SOC SCI and the Ethics requirements. **Credit not awarded for both** POL 1101 **and** INTA 1200.

Any courses completed that were listed in prior catalogs as satisfying the humanities/social science requirement and were completed while that catalog was in effect may also be used to satisfy this requirement.

Academic units must formally request approval for courses they deem eligible to carry the Social Science attribute from the Institute Curriculum Committee and the University System of Georgia General Education Council.

Students can receive three credit hours for any one of:

Code	Title	Credit Hours
Select one of the following:		3
ECON 2100	Economic Analysis and Policy Problems	
ECON 2101	The Global Economy	
ECON 2105	Principles of Macroeconomics	
ECON 2106	Principles of Microeconomics	
Total Credit Hours		**3**

The only combination for which students can receive six credit hours is ECON 2105 together with ECON 2106.

Undergraduate Research courses numbered 2698, 2699, 4698, and 4699 cannot be used to fulfill requirements for Social Sciences.

Transfer Students: Please be aware that when you see courses on your GT record that are listed with an "X" in the number (ECON 3XXX or JAPN 10X2, for example) it means that these are transfer courses and although there were not equated exactly with a GT course, they may have been accepted to meet a Core area such as Humanities and Social Science.

If you review your records in DegreeWorks, you will be able to see how your transfer credit applies to your GT degree program. Refer to your academic advisor for more information.

Social Sciences Courses

Code	Title	Credit Hours
ARCH 3135	City Literacy	3

Core Area F

Core Area F - Lower-Division Major Requirements

Core Area F requirements vary with degree and major. It is expected that there will be 18 credit hours of lower division requirements in each major.

Ethics

The courses listed below carry the Georgia Tech-specific Ethics attribute. While some courses (as designated) meet Humanities or Social Science requirements, not all of the courses listed below will meet Core Curriculum (general education) requirements. Additionally, some programs may require specific courses that address their ethics degree requirements. These specific courses may or may not appear on the list below. Check with the major school accordingly.

Any course that is to be assigned the Ethics attribute must receive approval from the Institute Undergraduate Curriculum Committee GenEd and Policy Subcommittee, the Institute Undergraduate Curriculum Committee, and the Academic Senate. Courses that are considered for approval to carry the Ethics attribute must address the Ethics Attribute Learning Outcomes in the course syllabus.

The learning outcomes for the ethics attribute are broadly crafted to accommodate ethical principles and applications across disciplines.

Course proposals should include learning outcomes that reflect these broad institution-level statements but are contextualized to reflect disciplinary principles and course level content.

To carry the Georgia Tech-specific ethics attribute, a course must demonstrate alignment of course level objectives, content, and assessments with each of the following:

1. An ability to recognize ethical and professional responsibilities in real-world contexts.
2. An ability to assess actions or decisions based on established ethical principles and theories, or through deliberative processes.
3. An ability to consider the implications of actions, both broadly (e.g. global, economic, environmental, or societal) and for individuals.

Global Perspectives

Important Note:

On March 9, 2016, the Board of Regents of the University System of Georgia approved a revision to system-wide policies related to the Core Curriculum.

1. Institutions in the University System of Georgia will not be required to identify or track overlay requirements related to US Perspectives, Global Perspectives, and Critical Thinking.
2. Students will not be required to complete the overlay requirements from this point forward.
3. Students who are scheduled to graduate in the Spring 2016 Semester and who have not completed the overlays may graduate without fulfilling this requirement.

U.S. Perspectives

Important Note:

On March 9, 2016, the Board of Regents of the University System of Georgia approved a revision to system-wide policies related to the Core Curriculum.

1. Institutions in the University System of Georgia will not be required to identify or track overlay requirements related to US Perspectives, Global Perspectives, and Critical Thinking.
2. Students will not be required to complete the overlay requirements from this point forward.
3. Students who are scheduled to graduate in the Spring 2016 Semester and who have not completed the overlays may graduate without fulfilling this requirement.

Wellness

Wellness Requirement

All undergraduate students attending Georgia Tech must satisfactorily complete a wellness requirement.

Code	Title	Credit Hours
APPH 1040	Scientific Foundations of Health [1]	2
APPH 1050	The Science of Physical Activity and Health	2
APPH 1060	Flourishing: Strategies for Well-being and Resilience	2

[1] Previously offered as HPS 1040 (Health).

Credit, Tests, and Scores

- Advanced Levels (A-Levels)
- Advanced Placement Exams
- Advanced Standing
- Caribbean Advanced Proficiency Examinations (CAPE)
- Departmental Exams
- French Baccalaureat
- German Language Exams (DSD)
- International Baccalaureate Exams
- Regents' Testing Program
- ROTC Credit
- SAT II Subject Tests
- Seal of Biliteracy
- Transfer Courses with 'X' Numbers
- Transfer Credit

Advanced Levels (A-Levels)

Students entering Georgia Tech may receive college credit based upon their scores on the College Board Advanced Placement (AP) Exams taken in conjunction with designated high school advanced placement classes,

SAT II Subject Tests, The International Baccalaureate, Advanced Levels (A-Levels), and/or Georgia Tech Departmental Exams.

Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate, or A-Level Examinations for credit. All examinations must be completed prior to the student's enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an Examination for Advanced Standing.

Subject	Course	Hours
Biology	Grade: A = BIOS 1107/BIOS 1107L	4
Chemistry	Grade: A or B = CHEM 1310	4
Economics	Grade: A = ECON 2100	3
Math	Grade: A or B = MATH 1551	2
Physics	Grade: A = PHYS 2XXX	4

Georgia Tech does not grant credit for AS-Level or O-Level examination results.

Official transcript is required, provisional results will not be accepted.

Advanced Placement Exams

Students entering Georgia Tech may receive college credit based upon their scores on the College Board Advanced Placement (AP) Exams taken in conjunction with designated high school advanced placement classes, SAT II Subject Tests, The International Baccalaureate, and/or Georgia Tech Departmental Exams.

Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate, or A-Level Examinations for credit. All examinations must be completed prior to the student's enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an Examination for Advanced Standing.

****Please be aware that** BIOL 1510 **credit will be awarded as** BIOS 1107 **and** BIOS 1107L **effective Spring 2020.**

****Please be aware foreign language credit is only awarded with a score of 3 for First Year students starting 2020-2021.**

****Please be aware Spanish Literature & Culture with a score of 5 will only award SPAN 3050 for first year students starting 2022-2023.**

****Georgia Tech will accept the new African American Studies exam and award HTS 1XXX with a score of 4 or 5 in 2023.**

****Georgia Tech will accept the new Pre-Calculus exam and award** MATH 1113 **with a score of 4 or 5 in 2024.**

College Board Advanced Placement Exams

Studio Art: Drawing	No Credit Awarded	0
United States (American) History	AP Score: 4 or 5 = HIST 2111	3
World History	AP Score: 4 or 5 = HTS 1XXX[2]	3

[1] With a score of 4 or 5 in both macroeconomics and microeconomics, a student could instead elect to receive 3 semester hours of credit for ECON 2100.

[2] HTS 1XXX represents a 1000 level elective course that may be used toward a social science requirement.

[3] Students cannot receive credit for both INTA 1200 and POL 1101.

[4] Students who receive a score of 4 will be contacted by the School of Physics after the AP scores are received (early in August each year) with information about taking a placement test to validate the credit. If students pass the test, they will be awarded credit.

[5] Subscores not accepted

[6] Language credit is only awarded with a score of 3 for First Year students starting 2020-2021

SAT II Subject Tests

International Baccalaureate

Advanced Standing

Examinations for Advanced Standing

1. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination. Such an examination is called an "Examination for Advanced Standing."
2. Examinations for advanced standing require the recommendation of the department of instruction in which the course is offered, payment of the appropriate fee to the Office of the Bursar, and authorization by the Office of the Registrar.
3. Examinations for Advanced Standing will usually be offered during the Final Examination Period.
4. A student will not be allowed to take an Examination for Advanced Standing in a given course more than twice.
5. Students will not be allowed to take an Examination for Advanced Standing in a course for which any prerequisite has not been met, except with the consent of the school offering the course.
6. An Examination for Advanced Standing will be reported with an "S" or "U" grade. Neither grade will be included in the calculation of grade-point average (GPA).
7. Advanced standing is not allowed for laboratory or studio classes, except with the consent of the school offering the course.
8. Students may not use more than nine credits of advanced standing to meet degree requirements.
9. The School of Modern Languages does not offer Advanced Standing examinations, although students may receive advanced standing credit for up two modern languages courses in the same language of study for a total of 6 to 8 credits upon successful completion (with a C or higher) of coursework as outlined in numbers 4 and 5 below. The only courses for which Advanced Standing credit may be given are 1001, 1002, 2001, and/or 2002 in the languages currently offered in

the School of Modern Languages at Georgia Tech. No 3000- or 4000-level Advanced Standing credit will be granted.

For students seeking Advanced Standing Credit for 1 course (3-4 credits), there are four options:

Advanced Standing Credit	Required course(s) to successfully complete (with a grade of C or higher) before applying	
1001	1002	2001
1002	2001	N/A
2001	2002	N/A
2002	3XXX or 4XXX	N/A

For students seeking Advanced Standing Credit for 2 courses (6-8 credits), there are three options:

Advanced Standing Credit		Required course(s) to successfully complete (with a grade of C or higher) before applying	
1001	1002	2001	2002
1002	2001	2002	3XXX or 4XXX
2001	2002	3XXX or 4XXX	3XXX or 4XXX

Advanced Standing Form

Departmental Exams

Advanced Placement in Mathematics

The School of Mathematics will offer optional GT advanced placement mathematics examinations to incoming freshmen who wish to test out of MATH 1113, MATH 1551 (Differential Calculus), MATH 1552 (Integral Calculus) and/or MATH 1553 (Intro to Lineal Algebra).

If a student already has GT credit for MATH 1551 the student does not have to take the optional GT Advanced Placement exam for MATH 1551. Such a student may elect to take the optional GT Advanced Placement exam for MATH 1552.

French Baccalaureat

Students entering Georgia Tech may receive college credit based upon their scores on the College Board Advanced Placement (AP) Exams taken in conjunction with designated high school advanced placement classes, SAT II Subject Tests, The International Baccalaureate, Advanced Levels (A-Levels), and/or Georgia Tech Departmental Exams.

Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate, or A-Level Examinations for credit. All examinations must be completed prior to the student's enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an Examination for Advanced Standing.

Subject	Score	Course
Scientifique Math[1,2]	10 or higher with coefficient of 4 or higher	MATH 1551 & MATH 1552
English Language & Literature[1,2]	16 or higher	ENGL 1101
History - Geography	14 or higher	HTS 1XXX (3 semester hours)
Earth Life Science	16 or higher	BIOS 1107 and BIOS 1107L

[1] Effective for the 2019-20 Catalog Year.

[2] Students must bring French Baccalauréat transcript to the Registrar's Office for evaluation.

German Language Exams (DSD)

Students entering Georgia Tech may receive college credit based upon their scores on the College Board Advanced Placement (AP) Exams taken in conjunction with designated high school advanced placement classes, SAT II Subject Tests, The International Baccalaureate, Advanced Levels (A-Levels), and/or Georgia Tech Departmental Exams.

Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate, or A-Level Examinations for credit. All examinations must be completed prior to the student's enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an Examination for Advanced Standing.

Subject	Course	Credits
DSD I[1,2]	GRMN 3XXX	3
DSD II[1,2]	GRMN 3XXX	6

[1] Effective for the 2019-20 Catalog Year.

[2] Students must bring Deutsches Sprachdiplom transcript to the Registrar's Office for evaluation.

International Baccalaureate Exams

Students entering Georgia Tech may receive college credit based upon their scores on the College Board Advanced Placement (AP) Exams taken in conjunction with designated high school advanced placement classes, SAT II Subject Tests, The International Baccalaureate, and/or Georgia Tech Departmental Exams.

Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate, or A-Level Examinations for credit. All examinations must be completed prior to the student's enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an Examination for Advanced Standing.

**Please note: The awarded credit for BIOL 1510 and BIOL 1520 will be updated to BIOS 1107 and BIOS 1107L and BIOS 1108 and BIOS 1108L effective Spring 2020.
**Effective 2020-21, credit for High Level Physics will be PHYS 2XXX (4 credits). Georgia Tech will no longer award credit for PHYS 2211 and PHYS 2212.
**Note: Changes to Modern Languages credits are for first year students entering 2020-21.
**Note: Credit not awarded for Cantonese exams.
**Note: Addition of Film credits is for first-year students entering 2022-23.
*Exam credit awarded if completed prior to August 2019 (applies to Mathematics Standard and High Level)

International Baccalaureate - High Level A (Foreign Language courses)

Subject	Higher Level Exam Scores	Credit
Arabic	5	9 hours (ARBC 2001, ARBC 2002, and ARBC 3XXX)

SAT II Subject Tests

Advanced Placement

Regents' Testing Program

Effective Spring 2010

The Regents' exam is no longer required at Georgia Tech as a result of a recent decision by The Board of Regents'.

ROTC Credit

Georgia Tech offers three voluntary ROTC programs: Army, Navy, and Air Force.

Depending on the student's major, Basic and Advanced ROTC classes count as a portion of elective credit. (Students may apply a maximum of 4 credit hours in Basic ROTC courses and six credit hours in Advanced ROTC courses toward meeting the elective requirements for any degree at the discretion of the school.) Consult specific colleges to determine the amount of hours that will count toward a degree. After earning a baccalaureate degree and completing the Advanced ROTC courses for any of the three services, a student may receive a commission as an officer in either the reserve or active forces.

Students accepted into the program earn more than just money for a college degree. Cadets and midshipmen receive training and experience in the one quality which is always in great demand: Leadership.

Students may apply a maximum of 4 credit hours in basic (1000-2000 level courses) ROTC courses and six hours in advanced (3000-4000 level) ROTC courses toward meeting the free elective requirements for any degree. Students should begin taking basic ROTC courses during the first term they are enrolled. For further information, see individual curricula for the schools. Please note some departments may have stricter guidelines regarding ROTC courses.

SAT II Subject Tests

Students entering Georgia Tech may receive college credit based upon their scores on the College Board Advanced Placement (AP) Exams taken in conjunction with designated high school advanced placement classes, SAT II Subject Tests, The International Baccalaureate, and/or Georgia Tech Departmental Exams.

Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate,

or A-Level Examinations for credit. All examinations must be completed prior to the student's enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an Examination for Advanced Standing.

****Note: On January 19th, 2021, College Board announced they would no longer be offering SAT Subject Test in the United States and internationally after June 2021. Georgia Tech will accept existing SAT II scores and those completed in 2021 until 2026.**

The table below describes the course credit a student may earn if they achieve a specific score on a specific SAT II Subject Test.

Subject	Score	Semester Course	Hours
Chemistry	680	CHEM 1211K	4
Chemistry	730	CHEM 1310	4
Literature	750	HUM 1XXX	3
U.S. History	710	HIST 2111	3
World History	710	HTS 1XXX	3

Advanced Placement

International Baccalaureate

Transfer Courses with 'X' Numbers

Transfer courses for which there is no exact Georgia Tech equivalent will be listed with the numbers 1XXX, 2XXX, etc. Courses so numbered can be used as free electives or may be substituted for Georgia Tech courses at the discretion of the academic unit. Transfer courses with an "X" as the secord or third number of the course (e.g., MATH 15X2) are lacking a component of the Georgia Tech course. These courses, in combination with another Georgia Tech course, may be considered as equivalent for prerequisite checking and degree requirements. Students should seek advisement from their academic unit regarding the use of these courses toward fulfilling degree requirements.

Transfer Credit

The basic policy regarding the acceptance of courses by transfer is to allow credit for courses completed with satisfactory grades ("C" or better) at other accredited colleges and universities in the United States and Canada, provided the courses correspond in time and content to courses offered at Georgia Tech. The Institute will not accept credit for courses successfully completed at another institution but previously taken at Georgia Tech unless the final grade received at Georgia Tech is a "W." The student must request and file an official transcript of transfer courses before the Institute can award credit. Coursework completed at colleges and universities outside the United States and Canada will be evaluated on a case-by-case basis. Transfer credit is not calculated in the Georgia Tech grade-point average.

Students may attend another institution as a transient student during terms when not enrolled at Georgia Tech. Students should discuss their course selection with their academic advisor to ensure transferability and applicability toward their degree programs. With the exception of officially sanctioned cross-enrolled programs, students are not to be enrolled at Georgia Tech and another institution during the same term without the specific approval the Institute Undergraduate Curriculum Committee or Institute Graduate Curriculum Committee, as appropriate.

Transfer Credit Policy

Policy on Transfer Credit

1. Only official transcripts from other schools may be used to evaluate and/or award credit.
   - **New students** must request that an official transcript from all previously attended colleges and universities be mailed to the Admissions Office.
   - Georgia Institute of Technology
     Undergraduate Admissions Office
     Atlanta, GA 30332-0320
   - **Current or previously enrolled Georgia Tech students** must have an official transcript from all other colleges and universities mailed to:
   - Georgia Institute of Technology
     Office of the Registrar
     Transfer Credit
     Atlanta, GA 30332-0320
2. The basic policy regarding the acceptance of the courses by transfer is to allow credit for courses completed with satisfactory grades (C or better) in other accredited colleges provided the courses correspond in time and content to courses offered at the Georgia Institute of Technology. Georgia Tech assumes responsibility for the academic quality of any work or credit recorded on the institution's transcript. Transfer credits will be accepted from newly-formed institutions of the University System of Georgia prior to accreditation.
3. Georgia Tech will not award credit for courses successfully completed at another institution which were previously taken at Georgia Tech.
4. A petition to the faculty must be approved to use course work more than ten years old.
5. Georgia Tech reserves the right to test the proficiency of any student in course work transferred from other institutions and to disallow credit in courses in which the student cannot demonstrate acceptable proficiency.

Transfer Credit for Online Courses

Georgia Tech accepts credit for coursework as listed on the transfer equivalency table online at oscar.gatech.edu.

Requesting Transfer Credit for Courses Not Previously Evaluated

1. Check the online equivalency database for updates. New evaluations are posted daily.
2. Notify the Office of the Registrar's Transfer Credit Department of any not-awarded credit. Send an email to comments@registrar.gatech.edu
3. Using the Transfer Credit web site, submit courses for evaluation.

About Transfer Credit

1. Georgia Tech does not offer correspondence courses and does not grant credit for correspondence courses taken at other institutions. Academic units reserve the right to take such things as delivery method into consideration. For example, on-line courses and computer-instructed courses may not be accepted by some academic units for credit.
2. Georgia Tech does not grant credit for the College Level General Educational Development Tests, CLEP, USAFI courses, or courses

completed at any United States armed services, with the exception of the military academies and schools with full accreditation.

3. Georgia Tech does not grant credit for professional certificate programs.
4. The following items are among other circumstances in which non-resident credit is not granted:
   - Courses previously completed at Georgia Tech.
   - College courses taken to meet freshman admissions requirements.
   - Remedial courses.
   - Courses basically secondary school or pre-college level.
   - Courses with essentially non-academic content.
   - Vocational courses.
   - Learning support courses.
5. Non-resident credit is not computed as a part of the student's grade point average at Georgia Tech.

Advanced Placement (AP) and International Baccalaureate (IB)

For Advanced Placement (AP), visit the Advanced Placement page for more information.

For International Baccalaureate (IB), visit the International Baccalaureate page for more information.

Note: Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate or A-Level Examinations for credit. All examinations must be completed prior the student's enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an "Examination for Advanced Standing."

Transfer Equivalency Catalog

Undergraduate Students Taking Graduate Courses

A senior with a grade-point average (GPA) of at least 2.7 may enroll in a graduate course if the student obtains permission from the school or department offering the course.

Up to twelve credit hours earned as an undergraduate student may count toward earning a master's degree if the following conditions are satisfied:

1. The student was in residence at Georgia Tech for at least two semesters before registering for the course(s).
2. The student did not use the course(s) toward a bachelor's degree. Special exceptions may apply, as described below. Students may use either option but cannot combine options listed below.
   a. Graduate Course Option
      i. If a student pursues both a bachelor's and master's at Georgia Tech, and if both degrees are in the same discipline, they may apply up to six credit hours of graduate-level credit to satisfying the requirements for both degrees while still completing all other requirements for the bachelor's and master's degrees. Because some master's degree programs do not have a unique undergraduate counterpart program, and because some master's programs are offered by several schools, the definition of "discipline" will be broadly interpreted in such cases. To qualify for this option, a student must complete the bachelor's degree with a cumulative grade-point average (GPA) of 3.5 or higher and must complete the master's degree within a two-year period following the award date of the bachelor's degree.
   b. BSMS Option
      i. The BSMS Options are formalized Graduate Course Option agreements between an undergraduate program and graduate program. These options allow a maximum of 6 hours that can be applied toward the bachelor's degree program and the master's program. These options include their own admission criteria into the master's program and their own GPA requirements. They also typically include research and mentoring components for eligible students. Students still must complete all requirements for the bachelor's and master's program. The master's degree must be completed within a two-year period following the award date of the bachelor's degree.

         See BS/MS Options for specific BS/MS Option information regarding specific admission requirements, GPA requirements and which courses may be eligible to share between a bachelor's degree and master's degree.

Undergraduate-Level Courses

Undergraduate Minors

Undergraduate Minor Guidelines

An undergraduate minor is a defined program of study outside the student's major field. Minors are intended to broaden the student's education by encouraging and officially recognizing knowledge obtained by the student in fields other than their major.

Minors are typically offered by Schools which also offer a major. A program of study for the minor is outlined and it may include more than one option or "track". Tracks allow students to focus on an aspect of the academic field that is of particular interest to them. It is expected that there will be depth of the program of study and that specific educational objectives will be met upon completion of the minor.

Other minors are offered where there is no undergraduate degree granting program at Georgia Tech. These minors cover fields which are inherently multidisciplinary; i.e., ones that are covered in part by multiple degree granting academic programs. Multidisciplinary minors require particularly broad Programs of Study which include courses from multiple Schools and/or Colleges.

Undergraduate Minors Offered

Click here for a list of minors offered at Georgia Tech. All undergraduate minor requirements are also available in DegreeWorks.

Program of Study

The program of study for each minor must satisfy the curricular requirements listed below. However, some minors, at the discretion of the offering academic unit(s) and approval from the Institute Curriculum Committee, may be exempt from some of these requirements, may exceed some requirements, and/or add additional requirements. Consult

the advisor for the minor program for the specific requirements of that minor.

Requirements for the Program of Study

1. A minor program of study must have at least 15 credit hours of coursework.
2. A minor program of study must include at least 9 credit hours of courses numbered 3000 or above.
3. Courses used to satisfy Core Areas A through E in a student's major degree program cannot also be used to satisfy the course requirements for a minor.
4. Any free elective course used to satisfy the course requirements of the student's major degree program may also be used to satisfy the course requirements for a minor.
5. All academic units may designate a block/blocks of courses outside of the student's major field of study in which the same course can be used to satisfy the course requirements in the student's major degree program and also be used to satisfy the course requirements for a minor.
6. A multidisciplinary or other minor may contain courses in a student's major field of study. A maximum of 6 credit hours of such courses may be used to satisfy the course requirements for the minor, provided these courses are not also used to satisfy any course requirement in the student's major degree program.
7. A maximum of 6 credit hours of Special Topics courses may be included in a minor program or the student may complete 3 credit hours of Special Topics and 3 credit hours of either Special Problems or Undergraduate Research. Students may not use 6 credit hours of either Special Problems or Undergraduate Research for a minor.
8. A maximum of 3 credit hours of transfer credit may be used to satisfy the course requirements for a minor. This includes courses taken at another institution or credit earned through the AP or IB program, assuming the scores meet Georgia Tech minimum standards.
9. A course may not be used to satisfy the requirements of more than one minor or certificate.
10. All courses counting toward the minor must be taken on a letter-grade basis.
11. All courses used to satisfy the course requirements for a minor must be completed with a grade of C (2.00) or better.

Other Guidelines

1. A student should select a minor in consultation with an advisor in their major field of study. The minor selected must be:
   a. outside of the student's major, or
   b. a multidisciplinary minor that may include some courses in the student's major field of study. (See requirement #6 above.)
2. The student should also consult with an advisor in the minor field of study who can inform and advise the student about the specific requirements of the minor. Some of these may be different than the requirements listed above.
3. Students can declare a minor at any time. However, it is recommended that students declare the minor as soon as they have made the decision so that they can monitor their progress using the online degree audit and with their advisor. Declaration of the minor also provides information to the relevant academic units that is helpful in planning courses. The minor declaration form is on the Registrar's Office website at: http://www.registrar.gatech.edu/students/formlanding/changeminor.php.
4. The student must complete a minor program of study form at the same time the online application for graduation is completed, generally during the semester before the terminal one. Program of study forms for all minors can be found here.
5. The minor is conferred at the same time the major degree is conferred. The major degree and minor will be recorded on the student's transcript. The minor will not appear on the student's diploma.
6. Minors will not be conferred retroactively upon students who have graduated.

Administrative Guidelines

1. All proposals for a minor must originate from the faculty of the academic unit(s) offering the minor. Minors may originate in several ways, such as:
   a. a minor in a field in which Georgia Tech offers a degree program through a single academic unit (College/School),
   b. a multidisciplinary minor, in which the subject matter is covered by multiple degree granting academic programs in multiple academic units (Colleges/Schools),
   c. a minor in a field in which there is no undergraduate degree-granting program at Georgia Tech. In this case, the proposed minor must be in a recognized academic field or discipline and the offering academic unit(s) must have in place sufficient courses, faculty, and facilities.
2. All proposals for a minor must include a statement of the educational objectives of the minor and how the program of study is used to satisfy these objectives.
3. The academic unit(s) offering the minor may choose to require an admission process, set admission standards, and/or set enrollment limits.
4. The academic units(s) offering the minor may request to be exempted from some of the curricular requirements applied to the program of study or add additional requirements if this is justified as essential to meeting the stated educational objectives of the minor.
5. For a multidisciplinary or other minor, a maximum of 6 semester hours of courses in the student's major field of study may be used to satisfy the course requirements for a minor when their inclusion is justified as essential to meeting the stated educational objectives of the minor. However, these courses cannot also be used to satisfy any course requirement in the student's major degree program unless they belong to the special block of courses described in requirement #5 of the Requirements for the Program of Study of the minor.
6. All proposals for a minor must include a plan for advising students pursuing the minor and for approving a student's completion of the required program of study.
7. All proposals for a minor must be endorsed by the appropriate College Dean(s) and by the Provost.
8. All undergraduate minors must be approved by the Institute Undergraduate Curriculum Committee and by the Academic Senate.
9. Information and relevant documents for proposing a new minor can be found at http://www.icc.gatech.edu/submit/requirements.php?type=101

Graduate Admissions

Prospective students may obtain information and apply for admission via the Graduate Education website. The site provides information regarding minimum admission standards and relevant deadlines for individual programs.

Applicants for Georgia Tech's graduate programs should hold a bachelor's degree from an accredited institution and be able to demonstrate academic excellence. Students should also be able to demonstrate experience with their selected field of graduate studies such as an undergraduate degree in the field or work experience in a related job.

Admissions Information

Anyone who is qualified is welcome to seek admission to Georgia Tech, and anyone who applies for and accepts admission can be confident that the policy and regular practice of the Institute will not discriminate against him or her on the basis of race, religion, sex, or national origin.

Verification of credentials and certification of compliance with Institute admissions policies shall be the responsibility of the Office of Graduate Education. Policies and procedures that are approved by the Office of the President, Board of Regents of the University System of Georgia, and the Academic Faculty Senate of the Institute shall be applied in determining eligibility. From those eligible candidates, final admission decisions shall be the responsibility of the admitting department. Satisfying minimal standard does not guarantee admission, since the number of eligible applicants generally far exceeds the number of places available. As a result, many well-qualified applicants cannot be accommodated.

The criteria used in determining each applicant's eligibility for consideration shall include:

1. Evidence of award of a bachelor's degree, its equivalent, or higher degree (prior to matriculation) from a regionally accredited institution; demonstrated academic excellence; and evidence of experience in the selected field of graduate study.
2. For international applicants, a satisfactory score on one of the following: Test of English as a Foreign Language (TOEFL), International English Language Testing System Academic (IELTS Academic) test, the Georgia Tech Language Institute (GTLI) English Proficiency Assessment, or GTLI Upper Advanced 700 Level.

Departments make final admission decisions from the pool of eligible candidates based on a combination of factors, including academic degrees and records, the statement of purpose, letters of recommendation, test scores, and relevant work experience. Departments may also consider the appropriateness of the applicant's goals to the degree program in which they are interested and to the research interests of the program's faculty. In addition, consideration may be given to how the applicant's background and life experience would contribute significantly to an educationally beneficial mix of students.

Graduate Record Examinations (GRE)

Official GRE general test scores are required by most graduate programs and GRE subject test scores are required for some programs. Check the Graduate Education Degree Program page for test requirements in specific programs.

Orientation - New Students

All new graduate students should plan to attend one of the Institute's orientation sessions and should be familiar with the broader set of onboarding programs and resources available to them. In some cases, individual programs will also hold program orientations. New students should plan to attend both the Institute and the program orientations, as the same information is not covered in these separate sessions.

An extended orientation program, GT6000, is also recommended for new graduate students. This program is led by experienced graduate students and introduces new students to campus resources, builds community, and provides peer mentoring for new graduate students.

Deferring an Application

An applicant wishing to defer an application to a subsequent semester must first consult with the admitting graduate program to determine if the program admits students for that semester. An applicant may submit a one-time request to their admitting program, as long as the request meets the program's deadline and occurs prior to the start of the original semester of matriculation. If the admitting program agrees to the applicant's request for a deferral, the applicant may select a term no more than 3 semesters from the original semester of matriculation. Deferred applications are referred to the graduate program for reconsideration and a new admissions decision. Graduate programs may refuse admission to applicants 1) whose application is incomplete (e.g. missing documents) after the start of the semester of original matriculation and 2) when the applicants have not requested deferrals to future semesters. If an applicant has not requested a deferral prior to the start of the original semester of matriculation, the applicant must submit a new application and application fee for the future semester.

Readmission

Students who interrupt the continuity of their graduate programs by not registering for three or more consecutive terms must seek readmission by filing a completed Request for Readmission form with the Registrar. Individuals who have received a graduate degree from Georgia Tech and who wish to reenter to receive an additional graduate degree (at the same level or higher) must confirm with the new major department whether or not a new application is necessary or if the student may apply through Readmission. Readmission forms are available from the Office of the Registrar. For more information, see the policy for withdrawal and readmission.

Students who have been out three or more terms will be required to meet health, lawful presence, and other certification requirements in effect at the time of readmission.

Transfer of Credit

A student may not apply for transfer credit until after matriculation at Georgia Tech. The courses to be transferred would typically be those appearing on the approved program of study form for the masters degree. A doctoral student normally does not request transfer credit. The rules relative to and the process for obtaining transfer of credit for graduate-level courses are as follows:

1. Student's in a master's degree program requiring fewer than 33 semester credit hours may receive up to six hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree.
   A student in a master's degree program requiring 33 semester credit hours or more may receive up to nine hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree. The student must supply a current transcript for this evaluation.
2. To obtain transfer of credit, the student must complete the following procedure:
   a. The student will confer with the graduate advisor to ascertain whether the courses to be transferred are a logical part of the student's graduate program;
   b. If the courses are appropriate, the student will deliver to the school that teaches such courses a copy of the current transcript, necessary descriptive materials including catalog descriptions, and textbooks used for evaluation. The faculty of the appropriate school will determine the equivalent Georgia Tech course and the number of credit hours accepted. The faculty member who prepares the transfer credit form should have the school chair cosign it. The school should then send the form directly to the registrar with a copy of the student's Approved Program of Study attached;
   c. If the student wishes to transfer more than the number of hours permitted in item one listed above, a petition must be submitted to the Institute Graduate Curriculum Committee that includes statements of possible justification for the granting of such a petition, transfer credit forms, and the recommendation of the student's school chair.
3. A joint enrollment student may receive graduate credit for up to one-third of the hours required for the degree for graduate courses taken at Emory University or Georgia State University provided that the following is true:
   a. Georgia Tech does not offer such courses;
   b. The student's advisor and school chair approve the courses in advance and in writing;
   c. The student passes the courses with a C or better. Advance approval is satisfied when the courses appear on the student's proposed Program of Study.
4. A student may not receive transfer credit from universities outside the United States and Canada unless the courses were taken at a foreign institution or university that is accredited by a Canadian or U.S. regional accrediting board or has a signed partner agreement with Georgia Tech. In any other case, an international student can obtain credit for courses previously taken but not applied toward another degree by filling out an Examination for Advanced Standing Authorization Request Form, paying the appropriate fee at the Bursar's Office, and passing the examination for advanced standing. The school or college that normally teaches the equivalent course will administer any necessary examinations.

Types of Standing

Applicants holding a bachelor's degree in an appropriate field from a regionally accredited institution will be given full graduate standing upon acceptance and matriculation, provided their previous work is of sufficient quality to indicate immediate success in advanced study.

If the work of an applicant holding an approved bachelor's degree is deficient in content or quality so that supplemental study or demonstrated ability is necessary, the applicant may be given conditional graduate standing upon acceptance.

Applicants who do not wish to qualify for an advanced degree at Georgia Tech, but demonstrate the potential benefits of their participation in advanced study, may gain admission as special non-degree graduate students. Students who are admitted with special non-degree standing for failure to submit official transcripts or for other administrative reasons may apply not more than 16 semester credit hours taken on special non-degree standing toward a degree.

Graduate students in good standing at other U.S. universities may enroll at Georgia Tech as transient graduate students by filing an application for admission and by providing a letter of verification of good standing status from the registrar of the institution at which they are currently enrolled. Work undertaken in transient standing will not apply toward a Georgia Tech degree.

Undergraduate Admissions, not Graduate Studies, will admit students working toward a second bachelor's degree.

In addition to full, conditional, and special non-degree graduate standing, graduate students will be classified by academic standing according to their GPAs: good standing, warning, probation, or drop. (The graduate GPA includes the grades on all courses scheduled by the student after admission to graduate study.) For specific information, see the scholastic regulations.

First-Year Admission

General Information for First-Year Admission

First-year students may only apply for the summer or fall terms. A completed application for first-year admission includes a non-refundable application fee and high school transcript (or equivalent). International applicants and applicants who have been homeschooled may be required to submit additional information. We accept the Common Application for first-year admission.

It is the applicant's responsibility to ensure that all required elements, including the application, non-refundable application fee, and high school transcript, are submitted by stipulated deadlines. All elements must be received prior to the first-year application deadlines. More information regarding first-year application deadlines can be found at https://admission.gatech.edu/first-year/deadlines.

Students may self-report standardized test scores on their application for us to use in file review. We will consider self-reported scores listed on your Common Application testing section. We provide a form in your Admission Portal to self-report scores after you submit your application. We will not use scores received via email, fax, or postal service. Students who are admitted and choose to enroll at Tech are required to submit official test scores from the testing agency.

The Office of Undergraduate Admission will consider all completed applications on file by the stated deadlines. For more information regarding first-year admission to the Georgia Institute of Technology, visit www.admission.gatech.edu, call 404.894.4154, or email admission@gatech.edu.

Transfer Admissions

Information regarding how to apply for transfer admission can be found on the Undergraduate Admission website. To be eligible for admission, students must complete the application, submit the non-refundable application fee, and submit official transcripts from all United States colleges or universities ever attended. Students who have completed any coursework outside the United States will be required to submit additional information. All documents must be original and certified as appropriate.

The Office of Undergraduate Admission will consider all completed applications on file by the stated deadlines, provided spaces are available for the particular term or academic year for which the student applies. For more information including admission requirements and deadlines regarding transfer admission to the Georgia Tech, visit https://admission.gatech.edu/transfer/ or call 404.894.4154.

Policy on the Competitive Admission of Transfer Applicants

The Georgia Institute of Technology is a top-ranked public university determined to define the technological research university of the 21st century. Publicly funded and governed by the University System of Georgia, the Institute is committed to preparing students for global leadership, effectiveness and innovation.

Consistent with its mission to improve the human condition in Georgia, the United States, and around the globe, Georgia Tech counts the diversity of its students among its greatest strengths and an integral component of its educational process and academic excellence.

The undergraduate admissions process, which reflects the Institute's strategic plan, seeks to identify those applicants, who as individuals and as a group, will benefit from the campus learning environment, and thus enrich the entire student body.

The process is structured to build entering classes of students who will:

- Meet the Institute's requirements for academic success.
- Embrace the diverse campus community.
- Benefit substantially from the Institute's curriculum and scholarly pursuits.
- Develop as leaders, innovators, global citizens and engaged learners.
- Contribute to the intellectual, cultural, social and civic life of the Institute, state, and nation.

How Does Georgia Tech Review Applications?

Each year, Georgia Tech must make fine distinctions among large numbers of highly qualified applicants. The ability to assess consistently all information presented in the application becomes increasingly important.

Therefore, the Office of Undergraduate Admission employs a rigorous review process in order to provide an individualized and holistic evaluation of every application. Each applicant is assessed on the basis of achievements and potential in a broad range of categories, viewed in the context of the opportunities and challenges the applicant faced.

These categories include:

- Strength of educational performance and potential for academic success, as measured by the nature and rigor of curriculum and academic achievements.
- Potential to contribute to the overall intellectual climate and make a positive contribution to campus and community life.
- Demonstrated commitment to intellectual engagement.
- Competitiveness within academic major.

Appeals concerning individual admission decisions shall be addressed to the Executive Director of the Office of Undergraduate Admission or the Vice Provost for Enrollment Management.

Academic Advising

The appointed academic advisor is the key source of information about the college. All entering students are assigned an academic advisor depending on their declared majors at Georgia Tech. To find the assigned advisor, visit the advising Web page. Students will meet their assigned advisors at orientation and at regular intervals during their college careers. Advisors welcome questions about different programs and areas.

Academic advisors are the guides through the college experience. They will help to identify the correct major, curriculum, minor, certificates, study abroad, internships, campus resources, and much more.

While the degree requirements are posted on the Registrar's Office web page, it is essential to check in with the assigned advisor at least once a year (if not more) to ensure that requirements are being met and communication lines are open. Also, regular contact with the advisor will

enhance each student's college experience and help them reach their future goals.

Academic Advising

Degree Requirements

Required Computer Ownership

In an effort to foster equal access to computers and to make the most of the teaching and learning technology available at Georgia Tech, all undergraduate students entering Georgia Tech under this or subsequent catalogs are required to own or lease a computer. The minimum hardware and software requirements (as well as purchasing and financing options) are sent each spring to students accepted for the summer and fall semesters, and in the fall to students accepted for spring semester.

Because computer ownership is mandatory, an average cost for the minimum hardware and software required can be included in computing a new student's cost of education for the purpose of determining their eligibility for all forms of student financial aid. Students should contact the Office of Scholarships and Financial Aid for more information.

Student Computer Ownership Website

International Students

International students should access further information regarding application policies and procedures and other basic information helpful to applicants from other countries by visiting https://admission.gatech.edu/international/first-year. International students will not receive financial aid or institutional scholarships.

For more information, email the Office of Undergraduate Admission at admission@gatech.edu.

Office of International Education

Office of Undergraduate Admission

FASET (New Student Orientation)

Familiarization and Adaptation to the Surroundings and Environs of Tech (FASET) is coordinated by The Office of New Student and Transition Programs.

FASET is Georgia Tech's orientation program for incoming undergraduate students and their families.

- First-year students
- New transfer students
- New exchange students
- Parents, family members, and guests of these students

FASET has been a Georgia Tech tradition since 1972. Orientation sessions are offered at the start of each semester for transfer and exchange students and during the summer for incoming first-year students.

During FASET, new students receive academic advisement, register for their first semester of courses, and complete other business items. In addition, Georgia Tech faculty, staff, and administrators discuss important campus services, student organizations, the undergraduate curriculum, and academic programs. Most importantly, students, parents, and guests have the opportunity to meet and interact with current Georgia Tech students and to get to know other new students, parents, and guests.

For more information, call 404.894.6897 or visit www.transitionprograms.gatech.edu.

Regents' Testing Program

Effective Spring 2010

The Regents' exam is no longer required at Georgia Tech as a result of a recent decision by The Board of Regents'.

Sophomore Programs

In collaboration with campus departments and academic units, the Office of New Student and Sophomore Programs provides programs and services to support sophomore success and meet the unique needs of students during this critical academic transition. The overall goals of these programs are to help sophomores in managing and succeeding with sophomore year courses, moving from exploration to decision-making about majors and careers, developing meaningful relationships on-campus and beyond, pursuing involvement and leadership opportunities, and creating a sophomore class identity. These goals are achieved through multiple programs, including:

- Sophomore Leadership Council
- Sophomore Leadership Forum
- Year 2 at Tech E-Newsletter
- Sophomore Career Experience

More information is available from the Office of New Student and Sophomore Programs.

Transfer Credit

The basic policy regarding the acceptance of courses by transfer is to allow credit for courses completed with satisfactory grades ("C" or better) at other accredited colleges and universities in the United States and Canada, provided the courses correspond in time and content to courses offered at Georgia Tech. The Institute will not accept credit for courses successfully completed at another institution but previously taken at Georgia Tech unless the final grade received at Georgia Tech is a "W." The student must request and file an official transcript of transfer courses before the Institute can award credit. Coursework completed at colleges and universities outside the United States and Canada will be evaluated on a case-by-case basis. Transfer credit is not calculated in the Georgia Tech grade-point average.

Students may attend another institution as a transient student during terms when not enrolled at Georgia Tech. Students should discuss their course selection with their academic advisor to ensure transferability and applicability toward their degree programs. With the exception of officially sanctioned cross-enrolled programs, students are not to be enrolled at Georgia Tech and another institution during the same term without the specific approval the Institute Undergraduate Curriculum Committee or Institute Graduate Curriculum Committee, as appropriate.

Transfer Credit Policy

Policy on Transfer Credit

1. Only official transcripts from other schools may be used to evaluate and/or award credit.
   - **New students** must request that an official transcript from all previously attended colleges and universities be mailed to the Admissions Office.
   - Georgia Institute of Technology
     Undergraduate Admissions Office
     Atlanta, GA 30332-0320
   - **Current or previously enrolled Georgia Tech students** must have an official transcript from all other colleges and universities mailed to:
   - Georgia Institute of Technology
     Office of the Registrar
     Transfer Credit
     Atlanta, GA 30332-0320
2. The basic policy regarding the acceptance of the courses by transfer is to allow credit for courses completed with satisfactory grades (C or better) in other accredited colleges provided the courses correspond in time and content to courses offered at the Georgia Institute of Technology. Georgia Tech assumes responsibility for the academic quality of any work or credit recorded on the institution's transcript. Transfer credits will be accepted from newly-formed institutions of the University System of Georgia prior to accreditation.
3. Georgia Tech will not award credit for courses successfully completed at another institution which were previously taken at Georgia Tech.
4. A petition to the faculty must be approved to use course work more than ten years old.
5. Georgia Tech reserves the right to test the proficiency of any student in course work transferred from other institutions and to disallow credit in courses in which the student cannot demonstrate acceptable proficiency.

Transfer Credit for Online Courses

Georgia Tech accepts credit for coursework as listed on the transfer equivalency table online at oscar.gatech.edu.

Requesting Transfer Credit for Courses Not Previously Evaluated

1. Check the online equivalency database for updates. New evaluations are posted daily.
2. Notify the Office of the Registrar's Transfer Credit Department of any not-awarded credit. Send an email to comments@registrar.gatech.edu
3. Using the Transfer Credit web site, submit courses for evaluation.

About Transfer Credit

1. Georgia Tech does not offer correspondence courses and does not grant credit for correspondence courses taken at other institutions. Academic units reserve the right to take such things as delivery method into consideration. For example, on-line courses and computer-instructed courses may not be accepted by some academic units for credit.
2. Georgia Tech does not grant credit for the College Level General Educational Development Tests, CLEP, USAFI courses, or courses completed at any United States armed services, with the exception of the military academies and schools with full accreditation.
3. Georgia Tech does not grant credit for professional certificate programs.
4. The following items are among other circumstances in which non-resident credit is not granted:
   - Courses previously completed at Georgia Tech.
   - College courses taken to meet freshman admissions requirements.
   - Remedial courses.
   - Courses basically secondary school or pre-college level.
   - Courses with essentially non-academic content.
   - Vocational courses.
   - Learning support courses.
5. Non-resident credit is not computed as a part of the student's grade point average at Georgia Tech.

Advanced Placement (AP) and International Baccalaureate (IB)

For Advanced Placement (AP), visit the Advanced Placement page for more information.

For International Baccalaureate (IB), visit the International Baccalaureate page for more information.

Note: Once enrolled at Georgia Tech, students are not allowed to take College Board (Advanced Placement and SAT II), International Baccalaureate or A-Level Examinations for credit. All examinations must be completed prior the student's enrollment date. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination at Georgia Tech. Such an examination is called an "Examination for Advanced Standing."

More information:

Transfer Equivalency Catalog

Readmission

Any student who is not enrolled for three or more consecutive terms (counting Summer Session) must apply for readmission. The Application for Readmission, with all pertinent supporting information, must be submitted to the Office of the Registrar before the deadline for the term for which readmission is requested as listed below:

Term Deadline [1]

Term	Date
Fall	July 1st
Spring	December 1st
Summer	April 1st

[1] Former students on drop or review status should apply at least two months prior to these deadlines in order to ensure sufficient time for the review process.

The "Rules and Regulations" section in this Catalog contains additional information on readmission.

Students who withdraw from the Institute (receiving all grades of "W") will not ordinarily be permitted to enroll the next succeeding term. If an exception is requested due to unusual circumstances, a Petition to the Faculty must be filed.

Students who have been out three or more terms will be required to meet health, lawful presence, and other certification requirements in effect at the time of readmission.

More information:

- Withdrawal / Readmission Policies
- Medical Regulations
- Lawful Presence Requirement
- Office of the Registrar | Readmission Policy

Academic Advising

The appointed academic advisor is the key source of information about the college. All entering students are assigned an academic advisor depending on their declared majors at Georgia Tech. To find the assigned advisor, visit the advising Web page. Students will meet their assigned advisors at orientation and at regular intervals during their college careers. Advisors welcome questions about different programs and areas.

Academic advisors are the guides through the college experience. They will help to identify the correct major, curriculum, minor, certificates, study abroad, internships, campus resources, and much more.

While the degree requirements are posted on the Registrar's Office web page, it is essential to check in with the assigned advisor at least once a year (if not more) to ensure that requirements are being met and communication lines are open. Also, regular contact with the advisor will enhance each student's college experience and help them reach their future goals.

Graduate Financial Assistance

The Institute offers financial aid from a variety of sources to assist students with the pursuit and completion of their degrees as rapidly as circumstances permit.

Students should address inquiries for financial assistance to the graduate coordinator of the school in which they plan to study. Graduate school applicants should also investigate national fellowships offered by various foundations, professional organizations, and government agencies; many are listed with the Fellowships Office. Educational loans are available for qualified applicants through the Office of Scholarships and Financial Aid. More information about Federal Loan programs and various alternative loan programs may be found at www.finaid.gatech.edu.

Assistantships

Graduate Research Assistantships

Students receiving Graduate Research Assistantships must be registered for at least twelve total graduate credits with at least nine hours attempted for a letter grade or on a Pass/Fail basis and be employed at least one-third of the time by the Institute. Students receiving Graduate Research Assistantships are also eligible for a tuition waiver.

Graduate Teaching Assistantships

Students receiving Graduate Teaching Assistantships must be registered for at least twelve total graduate credits with at least nine hours attempted for a letter grade or on a Pass/Fail basis and be employed at least one-third of the time by the Institute. Students receiving Graduate Teaching Assistantships are also eligible for a tuition waiver.

Graduate Assistantship Schedule and Flexibility Policy

Source: Georgia Tech Policy Library

Policy Statement: The work duties of Graduate Research Assistants (GRAs) and Graduate Teaching Assistants (GTAs, encompass 4.5 calendar months for fall and spring terms and three calendar months for summer term. The fall term work period consists of half of August and all of September through December. The spring term work period consists of January through April and half of May. Summer term consists of half of May, all of June and July, and half of August. Supervisors are generally expected to employ a GRA or GTA for the full work period, providing continuous employment and pay throughout the year.

GRAs and GTAs are not required to work on official Institute holidays, which appear on the Human Resources web site. In addition, at the discretion of the student's supervisor, a GRA or GTA may be permitted to average effort over several weeks or cluster research or teaching activities in order to spend one or more weeks away from campus during the semester or, more frequently, during periods when classes are not in session. Any time away requires the approval of the supervisor. This flexibility may be used to allow later start dates for students new to campus. Some work assignments may not permit this flexibility.

GRAs or GTAs appointed to sponsored research projects should monitor their appointments monthly in the Electronic Workload Assignment Form (EWAF), because they will be required to sign an Annual Statement of Reasonableness indicating that the effort they put into projects was correctly recorded. For more information, read the policy on Personal Services Reporting Using the Plan Confirmation System in the Georgia Tech Policy Library.

Fee Payment through Payroll Deduction

The Office of the Bursar maintains information regarding the GRA/GTA-Fee Payment Program which facilitates the payment of tuition and fees through payroll deductions for students who are employed at Georgia Tech as Graduate Research Assistants (GRAs) or Graduate Teaching Assistants (GTAs) and who are paid on a monthly basis. For more information, read the policy on Payroll Deduction for Tuition and Fees on the Office of the Bursar's web site.

Fellowships

A large number of individual fellowships are awarded to Georgia Tech students. They vary in value from a few hundred dollars to $30,000 or more per year. Most of them are awarded internally by schools, not by the Office of Graduate Education or the Office of Scholarships and Financial Aid. Even for campus awards for which students from several disciplines are eligible, nominations usually come from within the programs, rather than directly from students.

The only Institute-level fellowship programs are President's Fellowships ($5,500 per year) and Georgia Tech Institute Fellowships ($7,500 per year). These supplement assistantships or other fellowships. Schools nominate incoming students for these programs, and the Office of Graduate Education works with the Office of Scholarships and Financial Aid to administer the awards. Click here for more details about other available fellowships.

Graduate Financial Aid

Out-of-State Tuition Waivers

Georgia Tech has permission from the Board of Regents to award out-of-state tuition differential waivers and assess in-state tuition for certain nonresidents of Georgia for the following reasons and under the following conditions. The waivers processed in the Office of the Registrar are listed below. Any student requesting to pay at the in-state tuition rate will be required to provide verification of their lawful presence in the United States in order to be classified as an in-state student or awarded an out-of-state tuition waiver. See Lawful Presence.

- **Military**
  a. Active duty military personnel, their spouses, and their dependent children who meet one of the following:
     i. The military sponsor is currently stationed in or assigned to Georgia; or,
     ii. The military sponsor previously stationed in or assigned to Georgia is reassigned outside of Georgia, and the student(s) remain (s) continuously enrolled in a Georgia school, Technical College System of Georgia institution, and/or a University System of Georgia institution; or,
     iii. The military sponsor is reassigned outside of Georgia and the spouse and/or dependent children remain in Georgia; or,
     iv. The military sponsor is stationed in a state contiguous to the Georgia border and resides in Georgia; or,
     v. Dependent children of a military sponsor, previously stationed in or assigned to Georgia within the previous five years, or the child completed at least one year of high school in Georgia; or,
     vi. Any student utilizing VA educational benefits transferred from a currently serving military member is also eligible, even if the student is no longer a dependent of the transferor.
        - Download Application for Active Duty Military Personnel

  b. Active members of the Georgia National Guard stationed or assigned to Georgia or active members of a unit of the U.S. Military Reserves based in Georgia, and their spouses and their dependent children (BoR Minutes, October 2008).
     - Download Application for GA National Guard and Reservists

  c. Separated military members from a uniformed military service of the United States who meet one of the following (BoR Minutes, June 2004; October 2008; October 2013: March 2016; May 2017):
     i. Individuals who within thirty-six (36) months of separation from such service, enroll in an academic program and demonstrate intent to become domiciled in Georgia. This waiver may also be granted to their spouses and dependent children.
     ii. Any separated service member or any student utilizing transferred VA educational benefits, and physically residing in the state.
     iii. Any individual as described in 38 U.S.C. 3679(c).
     iv. Anyone using benefits under the Marine Gunnery Sergeant John David Fry Scholarship who lives in the state in which the institution is located (regardless of formal state residence).< >Except...Surviving spouses can use the Fry Scholarship for 15 years from the anniversary of the service member's death or until they remarry.{C}Eligible children can use the Fry Scholarship between the ages of 18 and 33.{C}Download Application for Those Separated from the Military

- **Economic Advantage**
  As of the first day of classes for the term, an economic advantage waiver may be granted to a U.S. citizen or U.S. legal permanent resident who is a dependent or independent student and can provide clear evidence that the student or the student's parent, spouse, or U.S. court-appointed legal guardian has relocated to the State of Georgia to accept full-time, self-sustaining employment and has established domicile in the State of Georgia. Relocation to the state must be for reasons other than enrolling in an institution of higher education. For U.S. citizens or U.S. legal permanent residents, this waiver will expire 12 months from the date the waiver was granted.
  As of the first day of classes for the term, an economic advantage waiver may be granted to an independent non-citizen possessing a valid employment-related visa status who can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Independent non-citizen students may continue to receive this waiver as long as they maintain a valid employment-related visa status and can demonstrate continued efforts to establish U.S. legal permanent residence and legal domicile in the State of Georgia.
  A dependent non-citizen student who can provide clear evidence that the student's parent, spouse, or U.S. court-appointed legal guardian possesses a valid employment-related visa status and can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment is also eligible to receive this waiver. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Non-citizen students currently receiving a waiver who are dependents of a parent, spouse, or U.S. court-appointed legal guardian possessing a valid employment-related visa status may continue to receive this waiver as long as they can demonstrate that their parent, spouse, or U.S. court-appointed legal guardian is maintaining full-time, self-sustaining employment in Georgia and is continuing efforts to pursue an adjustment of status to U.S. legal permanent resident and the establishment of legal domicile in the State of Georgia. (BR Minutes, October 2008.)

Download Application for Economic Advantage

- **Non-Resident Students**
  As of the first day of classes for the term, a non-resident student can be considered for this waiver under the following conditions:
  - Students under 24.
    - If the parent, or United States court-appointed legal guardian has maintained domicile in Georgia for at least twelve (12) consecutive months and the student can provide clear and legal evidence showing the relationship to the parent or United States court-appointed legal guardian has existed for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. Under Georgia code, legal guardianship must be established prior to the student's 18th birthday (BoR Minutes, October 2008, title amended February 2010); or
    - If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term (BoR Minutes, February 2010).
  - Students 24 and Older.
    - If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008, title amended February 2010).

This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008).

Download Application for Non-Resident Students

- **Senior Citizen Waiver**
  A s of the first day of classes for the term, a waiver of in-state tuition and fees may be granted to a legal resident of Georgia aged 62 and over. This waiver can remain in effect as long as the student is continuously enrolled.
  Download Application for Senior Citizens

Students who come to Georgia Tech from another state and work for companies in Georgia remain ineligible for in-state tuition in the absence of compelling evidence of intent to remain in Georgia permanently. Having Georgia voter registration, having employment in any position normally filled by a student (such as co-op, graduate research assistant, or graduate teaching assistant), having a lease of living quarters, having a Georgia automobile registration, and having Georgia driver's license do not constitute sufficient evidence of domicile to affect classification as an in-state student under the Board of Regents' policy.

For further information concerning residency, students should contact the Residency Office in Room 112 of TechTower, write to the Office of the Registrar, Residency, Georgia Tech, Atlanta, GA 30332-0315, or email comments@registrar.gatech.edu. The Residency Office must receive an application for classification as a legal resident for fee payment purposes no later than one month prior to the academic registration date for the term in which the student seeks to pay fees as a resident of Georgia. Requests for tuition waivers must be received by the Office of the Registrar no later than the first day of classes for the term for which the out-of-state tuition is to be waived. See the official Academic Calendar for dates.

Outside Sponsorships

A student whose tuition and fees are to be paid by a corporate or government sponsor must notify the Bursar's Office by submitting an authorization or voucher from the sponsor on original letterhead and signed by an official authorized to obligate payment by the organization per the specifics outlined here. Authorizations must be received before the payment deadline each semester. Payment deadlines for upcoming terms are published on the Bursar's Calendar. As a courtesy to students, the Bursar's Office sends a billing statement to the sponsor after the Registration Period ends. A student whose sponsor fails to pay the authorized charges will have their conditional credit reversed and will be responsible for the unpaid charges. A financial hold will be placed on the student's account until the balance is paid in full. Students are encouraged to remain in contact with their sponsor until all terms of a billing authorization are met.

Veterans Services

Veterans Services at Georgia Tech is not a division of the US Department of Veterans Affairs (DVA) but part of the Office of the Registrar. It serves as a liaison between veteran students and the DVA. Its primary purposes are to assist veteran students with the processing of forms for educational benefits, to advise veteran students about certain procedural requirements, and to certify enrollment of Georgia Tech veteran students to the Department of Veterans Affairs.

Because the US Department of Veterans Affairs (DVA) must receive certification of enrollment before issuing benefit payments, any student planning to enroll under any of the DVA's programs should initiate the certification procedure through the Office of the Registrar as early as possible.

Veterans must apply to Georgia Tech through the regular admissions procedure. Eligibility for DVA benefits does not guarantee acceptance into the Institute, nor does acceptance signify eligibility for DVA benefits. The Institute serves only as a source of certification and information to the DVA; the student must carry out all financial transactions with the US Department of Veterans Affairs directly.

Starting Benefits

Before a student can use GI Bill® education benefits, she/he must be formally admitted to Georgia Tech. Prospective students who need information about applying should see the Undergraduate Admissions web site. Individuals who intend to utilize GI Bill® education benefits are admitted by the same standards as any other students.

Those who intend to utilize GI Bill® education benefits for the first time should apply for these benefits least two months before the start of the first academic term in which they will be enrolled as students at Georgia Tech.

First-Time GI Bill® Applicants

If the student has already applied for GI Bill® Education Benefits

- After a student applies for education benefits, the US Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Ansley Sharp, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.

If the student need to apply for GI Bill® Education Benefits

- If the student is the veteran
  - Veterans enrolling at Georgia Tech must apply for benefits through the GI Bill® web site.
  - After a student applies for education benefits, the US Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Ansley Sharp, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.
- If the student is the dependent or spouse of the veteran
  - A veteran may transfer Ch 33 Post 9/11 GI Bill® benefits to a family member with the approval of the US Department of Defence (DoD). Information regarding transfer of benefits is available on the GI Bill® web site. Once the DoD approves transfer of benefits, the family member must submit Form 22-1990e, "Application for Family Member to Use Transferred Benefits," online or by mailing the printable form to the address below:
    Department of Veterans Affairs
    VA Regional Office
    P.O. Box 8888
    Muskogee, OK 74402-8888
  - After family member applies for education benefits, the Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Ansley Sharp, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.

Transferring GI Bill® Education Benefits to Georgia Tech

- A student who has used GI Bill® Education Benefits at another college or university must complete Form 22-1995, "Request for Change of Program or Place of Training." This form may be submitted online or by mailing the printable form to the address below:
  Department of Veterans Affairs
  VA Regional Office
  P.O. Box 8888
  Muskogee, OK 74402-8888

Signing Up for Yellow Ribbon

- A formally admitted student who is eligible and who has already sent a copy of her/his Certificate of Eligibility (COE) letter to the School Certifying Official (SCO) may be added to either the Yellow Ribbon participant list or the waiting list. Yellow Ribbon is given on a first-come, first-served basis. If all 40 participant slots are taken when a student completes the Yellow Ribbon Participation Request Form, the student will be placed on a waiting list until a slot becomes available.
- The Yellow Ribbon Participation Request Form is submitted only once. After student is given a participant slot for the Yellow Ribbon program, she/he is eligible to receive this benefit until she/he exhausts her/his Ch 33 benefits, graduates, or stops attending Georgia Tech (e.g., loses registration eligibility by absence or failure to participate in scheduled classes).

Types of Benefits

The Department of Veterans Affairs (DVA) administers a variety of education benefit programs. Many veterans and active duty personnel can qualify for education benefits. Currently, Georgia Tech participates in the following programs:

- Chapter 33, The Post-9/11 GI Bill® (Yellow Ribbon)
- Chapter 30, Montgomery GI Bill® - Active Duty (MGIB-AD)
- Chapter 35, Survivors' and Dependents' Educational Assistance Program (DEA)
- 1606 - Montgomery GI Bill® - Selected Reserve (MGIB-SR)
- Chapter 31, Veteran Readiness and Employment (VR&E)

Certification Process

The School Certifying Official (SCO) releases an email to notify veteran students that initial enrollment certifications will be submitted 45 days before the start of the academic term. At this time, students may ask any questions or request to not be certified. Submitting the initial enrollment certification 45 days prior to the start of the semester ensures that students' first monthly stipend will be issued on time.

For students under Chapter 33 Post-9/11 GI Bill® (Yellow Ribbon), this is the first of two certifications. The first certification reports a student's enrollment for her/his monthly stipend. The second certification reports

tuition and mandatory student fees (and Yellow Ribbon funding if applicable) after the Phase 2 Registration Period ends.

The Office of the Bursar places a deferral on each Chapter 33 student's account for the amount expected from the DVA. This deferral prevents the assessment of late fees or schedule cancellation due to the student's account balance. Students should make plans to pay whatever balance is not covered by Chapter 33 (e.g., housing, parking, meal plan) before the regular payment deadlines.

Students' Responsibilities

Veteran students at Georgia Tech have ongoing responsibilities to the Department of Veterans Affairs. The DVA and the Veterans Services office at Georgia Tech closely monitor each veteran student's enrollment status and academic program. The student's entitlement is based upon the number of credit hours for which a student is enrolled and any changes in academic program. To ensure that a student's enrollment is certified to the DVA accurately, the student must abide by the following requirements:

- Check the Georgia Tech Veterans Services web page for current news
- Read all notification emails from the School Certifying Official (SCO)
- Email the SCO if adjustments are made to class schedule during the Phase 2 Registration Period
- Email the SCO if adjustments need to be made to schedule after the Phase 2 Registration Period ends
- Email the SCO if changing address or academic major

Frequently Used Forms

Below are the most frequently used printable forms. All other printable forms may be found in the Forms Library the DVA web site.

- Printable forms should be mailed to the DVA regional office in Atlanta.

Additional Information

More information is available on the Office of the Registrar's web site on the Veterans Services' Frequently Asked Questions (FAQ) page.

GI Bill® is a registered trademark of the U.S. Department of Veterans Affairs (VA). More information about education benefits offered by VA is available at the official U.S. government Web site at https://www.benefits.va.gov/gibill.

DoD Tuition Assistance (TA)

The Tuition Assistance (TA) program pays the cost of tuition and some additional fees. Nearly all active duty military service members are eligible for TA. However, each service branch determines eligibility criteria that often reduce access. Tuition Assistance covers up to 100% Tuition and Fees, not to exceed $250.00 per semester credit hour or $4500.00 per fiscal year.

All service members should speak with their Educational Services Officer (ESO) or counselor within their military service prior to enrolling at Georgia Tech or any institution. Since military funding is limited, it is important for all service members to use all their resources in making any educational decision.

62 and Older Student Waiver

Georgia residents who are aged 62 and older may be eligible to take courses on a space available basis at little or no cost.As of the first day of classes for the term, a waiver of in-state tuition and fees may be granted to a legal resident of Georgia aged 62 and over. This waiver can remain in effect as long as the student is continuously enrolled.

For more information, please visit: https://registrar.gatech.edu/prospective-students/62-or-older

Undergraduate Financial Assistance

The Office of Scholarships and Financial Aid (OSFA) is dedicated to helping current and prospective students and parents apply for financial aid and understand the options for meeting the cost of a college education at Georgia Tech. The OSFA awards federal, state, and Institute funds to students and directs students to other sources of aid. Additionally, the OSFA serves as the disbursement and delivery agent for all sources of assistance for students, including awards for Georgia Tech students from outside agencies.

All US Citizen and Permanent Resident undergraduate students, including transfer students, who are interested in scholarships, grants, loans, and/or work opportunities must submit the "Georgia Tech Application for Scholarships and Financial Aid" and the "Free Application for Federal Student Aid" (FAFSA). The priority application deadline for entering freshman students, returning undergraduate students, and transfer students is January 31st.

Additional information is available for the Office of Scholarships and Financial Aid.

Out-of-State Tuition Waivers

Georgia Tech has permission from the Board of Regents to award out-of-state tuition differential waivers and assess in-state tuition for certain nonresidents of Georgia for the following reasons and under the following conditions. The waivers processed in the Office of the Registrar are listed below. Any student requesting to pay at the in-state tuition rate will be required to provide verification of their lawful presence in the United States in order to be classified as an in-state student or awarded an out-of-state tuition waiver. See Lawful Presence.

  c. Separated military members from a uniformed military service of the United States who meet one of the following (BoR Minutes, June 2004; October 2008; October 2013: March 2016; May 2017):
     i. Individuals who within thirty-six (36) months of separation from such service, enroll in an academic program and demonstrate intent to become domiciled in Georgia. This waiver may also be granted to their spouses and dependent children.
     ii. Any separated service member or any student utilizing transferred VA educational benefits, and physically residing in the state.
     iii. Any individual as described in 38 U.S.C. 3679(c).
     iv. Anyone using benefits under the Marine Gunnery Sergeant John David Fry Scholarship who lives in the state in which the institution is located (regardless of formal state residence).< >Except...Surviving spouses can use the Fry Scholarship for 15 years from the anniversary of the service member's death or until they remarry.{C}Eligible children can use the Fry Scholarship between the ages of 18 and 33.{C}Download Application for Those Separated from the Military

- **Economic Advantage**
  As of the first day of classes for the term, an economic advantage waiver may be granted to a U.S. citizen or U.S. legal permanent resident who is a dependent or independent student and can provide clear evidence that the student or the student's parent, spouse, or U.S. court-appointed legal guardian has relocated to the State of Georgia to accept full-time, self-sustaining employment and has established domicile in the State of Georgia. Relocation to the state must be for reasons other than enrolling in an institution of higher education. For U.S. citizens or U.S. legal permanent residents, this waiver will expire 12 months from the date the waiver was granted.
  As of the first day of classes for the term, an economic advantage waiver may be granted to an independent non-citizen possessing a valid employment-related visa status who can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Independent non-citizen students may continue to receive this waiver as long as they maintain a valid employment-related visa status and can demonstrate continued efforts to establish U.S. legal permanent residence and legal domicile in the State of Georgia.
  A dependent non-citizen student who can provide clear evidence that the student's parent, spouse, or U.S. court-appointed legal guardian possesses a valid employment-related visa status and can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment is also eligible to receive this waiver. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Non-citizen students currently receiving a waiver who are dependents of a parent, spouse, or U.S. court-appointed legal guardian possessing a valid employment-related visa status may continue to receive this waiver as long as they can demonstrate that their parent, spouse, or U.S. court-appointed legal guardian is maintaining full-time, self-sustaining employment in Georgia and is continuing efforts to pursue an adjustment of status to U.S. legal permanent resident and the establishment of legal domicile in the State of Georgia. (BR Minutes, October 2008.)

Download Application for Economic Advantage

- **Non-Resident Students**
  As of the first day of classes for the term, a non-resident student can be considered for this waiver under the following conditions:
  - Students under 24.
    - If the parent, or United States court-appointed legal guardian has maintained domicile in Georgia for at least twelve (12) consecutive months and the student can provide clear and legal evidence showing the relationship to the parent or United States court-appointed legal guardian has existed for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. Under Georgia code, legal guardianship must be established prior to the student's 18th birthday (BoR Minutes, October 2008, title amended February 2010); or
    - If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term (BoR Minutes, February 2010).
  - Students 24 and Older.
    - If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008, title amended February 2010).

This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008).

President's Scholarship Program

The Stamps President's Scholars Program is Georgia Tech's premier and most prestigious merit-based scholarship. Recipients are selected from the top applicants for admission to Georgia Tech based on demonstrated excellence in scholarship, leadership, progress, and service as described on the Stamps President's Scholars Program web page. From the applicant pool, students selected as semifinalists interview online. The top semifinalists are named finalists and invited, with their parents, to campus for additional interviews and an information weekend in March or April.

Transfer students are not eligible for the four-year award. Recipients must be US/UK/Ireland Citizens or US/UK Permanent Residents.

Each year, 40 incoming first-year students receive the Stamps President's Scholarship, which is renewable for up to four academic years or eight semesters, contingent upon honors-level performance and continued leadership development as evidenced by involvement in program, campus, and community activities. Scholarships are "full ride," including tuition and mandatory fees, room and board, books, and personal expenses. See the website below for more information on stipends.

To ensure consideration, a student must apply as an incoming first-year student, and submit the Georgia Tech Application for First-Year Admission, along with the application fee by the relevant early action deadline.

Prospective students who need information about applying should see the Undergraduate Admissions web site. Individuals who intend to utilize GI Bill® education benefits are admitted by the same standards as any other students.

Those who intend to utilize GI Bill® education benefits for the first time should apply for these benefits least two months before the start of the first academic term in which they will be enrolled as students at Georgia Tech.

First-Time GI Bill® Applicants

If the student has already applied for GI Bill® Education Benefits

- After a student applies for education benefits, the US Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Ansley Sharp, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.

If the student need to apply for GI Bill® Education Benefits

- If the student is the veteran
  - Veterans enrolling at Georgia Tech must apply for benefits through the GI Bill® web site.
  - After a student applies for education benefits, the US Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Ansley Sharp, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.
- If the student is the dependent or spouse of the veteran
  - A veteran may transfer Ch 33 Post 9/11 GI Bill® benefits to a family member with the approval of the US Department of Defence (DoD). Information regarding transfer of benefits is available on the GI Bill® web site. Once the DoD approves transfer of benefits, the family member must submit Form 22-1990e, "Application for Family Member to Use Transferred Benefits," online or by mailing the printable form to the address below:
    Department of Veterans Affairs
    VA Regional Office
    P.O. Box 8888
    Muskogee, OK 74402-8888
  - After family member applies for education benefits, the Department of Veterans Affairs (DVA) sends a Certificate of Eligibility (COE) letter indicating the type of benefit awarded and the terms of eligibility under that benefit. A copy of this letter must be submitted to Ansley Sharp, the School Certifying Official (SCO) at Georgia Tech, via fax at 404.894.0167 or e-mail at veterans@registrar.gatech.edu.

Transferring GI Bill® Education Benefits to Georgia Tech

- A student who has used GI Bill® Education Benefits at another college or university must complete Form 22-1995, "Request for Change of Program or Place of Training." This form may be submitted online or by mailing the printable form to the address below:
  Department of Veterans Affairs
  VA Regional Office
  P.O. Box 8888
  Muskogee, OK 74402-8888

Signing Up for Yellow Ribbon

- A formally admitted student who is eligible and who has already sent a copy of her/his Certificate of Eligibility (COE) letter to the School Certifying Official (SCO) may be added to either the Yellow Ribbon participant list or the waiting list. Yellow Ribbon is given on a first-come, first-served basis. If all 40 participant slots are taken when a student completes the Yellow Ribbon Participation Request Form, the student will be placed on a waiting list until a slot becomes available.
- The Yellow Ribbon Participation Request Form is submitted only once. After student is given a participant slot for the Yellow Ribbon program, she/he is eligible to receive this benefit until she/he exhausts her/his Ch 33 benefits, graduates, or stops attending Georgia Tech (e.g., loses registration eligibility by absence or failure to participate in scheduled classes).

Types of Benefits

The Department of Veterans Affairs (DVA) administers a variety of education benefit programs. Many veterans and active duty personnel can qualify for education benefits. Currently, Georgia Tech participates in the following programs:

- Chapter 33, The Post-9/11 GI Bill® (Yellow Ribbon)
- Chapter 30, Montgomery GI Bill® - Active Duty (MGIB-AD)
- Chapter 35, Survivors' and Dependents' Educational Assistance Program (DEA)

- 1606 - Montgomery GI Bill® - Selected Reserve (MGIB-SR)
- Chapter 31, Veteran Readiness and Employment (VR&E)

Certification Process

The School Certifying Official (SCO) releases an email to notify veteran students that initial enrollment certifications will be submitted 45 days before the start of the academic term. At this time, students may ask any questions or request to not be certified. Submitting the initial enrollment certification 45 days prior to the start of the semester ensures that students' first monthly stipend will be issued on time.

For students under Chapter 33 Post-9/11 GI Bill® (Yellow Ribbon), this is the first of two certifications. The first certification reports a student's enrollment for her/his monthly stipend. The second certification reports tuition and mandatory student fees (and Yellow Ribbon funding if applicable) after the Phase 2 Registration Period ends.

The Office of the Bursar places a deferral on each Chapter 33 student's account for the amount expected from the DVA. This deferral prevents the assessment of late fees or schedule cancellation due to the student's account balance. Students should make plans to pay whatever balance is not covered by Chapter 33 (e.g., housing, parking, meal plan) before the regular payment deadlines.

Students' Responsibilities

Veteran students at Georgia Tech have ongoing responsibilities to the Department of Veterans Affairs. The DVA and the Veterans Services office at Georgia Tech closely monitor each veteran student's enrollment status and academic program. The student's entitlement is based upon the number of credit hours for which a student is enrolled and any changes in academic program. To ensure that a student's enrollment is certified to the DVA accurately, the student must abide by the following requirements:

- Check the Georgia Tech Veterans Services web page for current news
- Read all notification emails from the School Certifying Official (SCO)
- Email the SCO if adjustments are made to class schedule during the Phase 2 Registration Period
- Email the SCO if adjustments need to be made to schedule after the Phase 2 Registration Period ends
- Email the SCO if changing address or academic major

Frequently Used Forms

Below are the most frequently used printable forms. All other printable forms may be found in the Forms Library the DVA web site.

- Printable forms should be mailed to the DVA regional office in Atlanta.
  Department of Veterans Affairs
  VA Regional Office
  P.O. Box 8888
  Muskogee, OK 74402-8888

- Form 22-1990, Application for VA Education Benefits
- Form 22-1990e, Application for Family Member to Use Transferred Benefits
- Form 22-1995, Request for Change of Program or Place of Training
- Form 22-5495, Dependents' Request for Change of Program or Place of Training
- VA Course Withdrawal Form
- Tuition Assistance Withdrawal Form
- Yellow Ribbon Participation Request Form
- Mandatory Student Fee Waiver Form for Active Duty Military and Veterans

Additional Information

More information is available on the Office of the Registrar's web site on the Veterans Services' Frequently Asked Questions (FAQ) page.

GI Bill® is a registered trademark of the U.S. Department of Veterans Affairs (VA). More information about education benefits offered by VA is available at the official U.S. government Web site at https://www.benefits.va.gov/gibill.

Billing

A complete itemized statement of the student account is available online to students and authorized users. Georgia Tech does not mail invoices to students.

To access a student's account, go to Buzzport and click the PayNow–Bursar icon on the Home or Student tab, or go to the Pay Now links on the Bursar's website, Payment Instructions, at bursar.gatech.edu. A student or authorized user logs into the Bill+Payment portal with their credentials. Registration changes impacting tuition and fee charges, as well as online payments, are updated in real time to show the most current information on the account. Parking, Meal Plan, and other auxiliary charges are uploaded daily to the student account. Tuition and other charges are subject to change without notice.

Notices from the Bursar's Office concerning a student account are sent to the student's Georgia Tech e-mail account, which is the Institute's official means of communication with students. It is the student's responsibility to ensure all requirements of their account are satisfied by the payment deadline for a term. Questions concerning charges, payments, or credit balances on the student account should be directed to the Bursar's Office. Verbal misinformation is not grounds for waiver of a regulation.

Additional details are available on the Bursar's web site.

- Student Payment Instructions
- Parent Payment Instructions
- Cost of Attendance

Official policies are available in the Georgia Tech Policy Library.

- Code of Conduct Regarding Private Lending and Student Choice
- Grade Substitution Policy
- Institute Policy for Scholarship/Fellowship Payments and the Payment of Prizes/Awards to Students
- Mandatory Student Insurance
- Refunds
- Satisfactory Academic Progress
- Student Appeals
- Voluntary Student Fees

Cancellation of Registration

Students who register for classes and do not attend must cancel their classes online. Failure to do so will result in awarded financial aid being applied to the student's account, and the student receiving a grade of "F" in each course.

All students must be aware of Georgia Tech's policies and processes regarding Verification of Participation.

Fees

Paying Tuition and Fees

Tuition and fees are payable by the deadline published on the official Academic Calendar and the Bursar's Office web page for each academic term. Registration is not complete until all charges are paid. The Institute reserves the right at any time during the semester to drop any student from classes for failure to pay their balance in full. In no case is a regulation waived or an exception granted because a student pleads ignorance of the regulation or asserts they were not informed of it by an adviser or other authority. Students who owe the Institute money and have been placed on "hold" because of failure to pay may have their account forwarded to a professional collection agency.

Payment may be made by check payable in U.S. currency and drawn on a financial institution located in the U.S. (with checking account encoded on the check and made payable to Georgia Institute of Technology), or cashier's check. Credit card payments and electronic checks (WebChecks) are accepted online through the Bill+Payment portal. Credit card payments are processed by a third party vendor which charges a 2.85 percent fee for this service. A fee is not charged for WebCheck transactions. Credit card payments cannot be made by mail, phone, fax, or in person.

Tuition and Fee Rates

The tuition and fees listed are estimates and are subject to change. These amounts should be used only as a planning guide for future payments. Tuition charges can vary based on state residency status and degree program of study. Residency status is determined by the Office of Admission at the time of acceptance. Students are either classified as a resident or nonresident of Georgia for tuition purposes in accordance with the regulations of the Board of Regents of the University System of Georgia. The most current information on tuition and fees is available at http://www.bursar.gatech.edu/content/tuition-fees.

Mandatory Student Fees

Published student fees are subject to change and should be considered estimates for use in planning future payments. Students registered for four or more credit hours in one academic term are charged all mandatory student fees which are due at the same time as tuition charges. Mandatory student fees are considered part of the registration process and must be paid in full for the student to be considered enrolled. The Activity Fee, Athletic Fee, CRC Operations Fee, Campus Center Facility Fee, Health Fee, Recreation Facility Fee, Student Campus Center Operations Fee, Special Institutional Fee, Technology Fee, and Transportation Fee are mandatory student fees used to provide cultural, social, and athletic programs for the entire student body. In addition, these fees provide financial support for student facilities at the Institute, guest speakers and lecturers, student publications, and many special events that are available exclusively for Georgia Tech students. The Transportation Fee assists in defraying shuttle costs for transporting students. The Technology Fee supports the infrastructure necessary to provide students with the latest online computing services technology. Students registering for fewer than four credit hours in one academic term are required to pay the Special Institutional Fee, Technology Fee, and Transportation Fee. See https://www.bursar.gatech.edu/tuition-fees for current information.

Late Registration Fees

Students who do not meet payment deadlines may incur penalty fees. If a student does not pay all required fees by the published payment deadlines (https://www.bursar.gatech.edu/calendar) registration may be canceled. The late payment fee is currently $100. If registration is canceled, the reinstatement fee is $200. Reinstatement is not guaranteed.

Payment

Fee Payment

All fees are payable by the deadline published on the official Academic Calendar and the Bursar's Office web page for each academic term. Registration is not complete until all fees are paid. The Institute reserves the right at any time during the semester to drop any student from classes for failure to pay fees. In no case is a regulation waived or an exception granted because a student pleads ignorance of the regulation or asserts that they were not informed of it by an advisor or other authority. Students who owe the Institute money and have been placed on "hold" for failure to pay may have their account forwarded to a professional collection agency.

Payment may be made by check payable in U.S. currency and drawn on a financial institution located in the U.S. (checking account number encoded on the check and made payable to Georgia Institute of Technology) or cashier's check. Payments may also be made online by electronic check (WebCheck) or credit card. Credit card payments may only be made via the Student Information System and are processed by a third party vendor which charges a 2.85 percent fee for this service. A fee is not charged for WebCheck transactions. Credit card payments cannot be made by mail, phone, fax, or in person.

Choosing a Payment Option

Online By Credit Card or WebCheck

The Bursar's Office accepts WebChecks and credit card payments online. To make a payment for an account, go to Buzzport and select the PayNow—Bursar icon on the Home or Student tab.

By Mail

Checks or money orders should be made payable to Georgia Institute of Technology. The student's identification number must be clearly notated on checks or money orders. Payments must be received (not postmarked) by 4:00 p.m., Eastern Time, on the payment deadline date. Mail payments to the following address:

Georgia Institute of Technology
Office of the Bursar
Suite 111 Lyman Hall
225 North Avenue
Atlanta, Georgia 30332-0255

In Person

Payment by check or money order may be deposited in the drop box, located in the entry vestibule to Lyman Hall, at any hour of the day before the payment deadline. Checks should be payable to Georgia Institute of Technology. Notate the student's identification number on the memo line.

Fee Payment Using Financial Aid

Financial aid, including scholarships and fellowships, and tuition waivers are disbursed to the student's account and applied to any outstanding

balances. Financial aid is initially estimated before it is disbursed. The Balance Due for a student is reduced by this estimated amount. Disbursements begin approximately one week prior to the payment deadline. It is the student's responsibility to ensure all funds are properly credited by the payment deadline date by reviewing their online invoice. If funds are not disbursed or credited by the payment deadline, a student may be eligible to request a payment deferment from the Office of Scholarships and Financial Aid. Deferments must be requested and may be granted for the lesser of the financial aid award or the amount due to the Institute.

Disbursement of Financial Aid Refunds

Financial aid processed by the Office of Scholarships and Financial Aid is applied directly to the student's account in the Bursar's Office. If a credit balance exists after all charges are posted and paid, the Bursar's Office will refund the credit amount to the student's bank account. Many financial aid programs - including Zell and HOPE scholarships, Federal Pell Grant, and Stafford Loan - do not require full time enrollment for disbursement to occur. However, because some scholarships and grants require full-time study, and some aid programs require course registration of at least six hours for disbursement, students who are planning to enroll for fewer than twelve hours and are unsure of the requirements, are advised to seek clarification from the Office of Scholarships and Financial Aid.

Important links:

- The Office of Scholarships and Financial Aid

Returned Check Payments

If a check is returned from the bank (for insufficient funds or stop payment), the student is required to redeem the returned check with a cashier's check in the Bursar's Office. A returned check fee will be added to the amount due. Returned checks remaining unredeemed after a reasonable period of time may be forwarded to a collection agency. Students who have two checks returned against their Georgia Tech account will be denied future check writing privileges.

If a student intends to withdraw from Georgia Tech, it is the student's responsibility to formally withdraw by following the Procedures for Withdrawal and Dropping Courses on the Registrar's Office website.

Important links:

- Registrar's Office | Procedures for Withdrawal and Dropping Courses
- Bursar's Office | Policy on Returned Checks

Refunds

Refunds for Students with Financial Aid

For students withdrawing from school, a calculation is made on any financial aid received to determine whether a student who completely withdraws during a term has "earned" the monies disbursed. Students "earn" their aid based on the period of time they were enrolled. During the first 60 percent of the term, a student earns financial aid funds in direct proportion to the length of time the student was enrolled. Beyond the 60 percentage point, all aid is considered earned. The responsibility to repay "unearned" aid is shared by the Institute and the student in proportion to the aid each is assumed to possess. The most current refund schedule can be found at http://www.bursar.gatech.edu/content/refund-calendars.

If a student intends to withdraw from Georgia Tech, it is the student's responsibility to formally withdraw by following the Withdrawal From School Procedures on the Registrar's website.

Refund Policy

The refund amount for students withdrawing from the Institute shall be based on a pro rata percentage determined by dividing the number of calendar days in the semester that the student completed by the total number of calendar days in the semester. The total number of calendar days in a semester is calculated by using the first day of class through the last day of final exams for the Institute and excludes scheduled breaks of five or more consecutive days. Institutional charges are refunded up to the point in time that the percentage equals 60 percent. Students who withdraw from the Institute when the calculated percentage of completion is greater than 60 percent are not entitled to a refund of any portion of institutional charges. A full refund (100 percent) is available to students who fully withdraw from the Institute or to students who drop individual courses by the end of late registration, if the reduction in hours changes their tuition tier under the flat rate tuition model. No further refunds are given for individual classes dropped after the end of late registration.

Students suspended or expelled from the Institute for any reason forfeit their right to a refund of any credit balance on their student account.

Refund Information

Withdrawal Information

Student Financial Agreement

By registering for classes at the Georgia Institute of Technology (Georgia Tech), I agree to the following terms and conditions:

1. I accept full responsibility for payment of all tuition, fees and other associated costs assessed as a result of my class registration and/or receipt of services at Georgia Tech. I understand Georgia Tech uses electronic billing as the official billing method and does not mail invoices. I am responsible for reviewing and paying my student account balance by the scheduled due date. I further understand failure to review my account does not constitute a valid reason for non-payment by the scheduled due date.
2. If I drop or withdraw from some or all classes for which I register, I accept responsibility for paying all tuition and mandatory fees in accordance with the published tuition refund schedule at http://www.bursar.gatech.edu/content/refund-calendars. I further understand non-attendance does not absolve me of this responsibility.
3. I agree my financial aid is to be used to pay charges assessed to my account at Georgia Tech such as tuition, fees, campus housing and meal plans, student health insurance, parking permits, service fees, fines, bookstore charges, or any other charge, in accordance with the terms of the aid. If any portion of my financial aid is revoked, I agree to repay all revoked aid that was disbursed to my account and either applied to charges or refunded to me.
4. I understand if I fail to pay my student account bill or any monies owed to Georgia Tech by the scheduled due date, Georgia Tech will place a financial hold on my student account, preventing me from registering for future classes, requesting transcripts, or receiving my diploma. Georgia Tech may also assess late payment fees and/or cancel my class registration.

5. I understand if I fail to pay my student account bill or any monies owed to Georgia Tech by the scheduled due date, and also fail to make acceptable payment arrangements to bring my account current, Georgia Tech may refer my delinquent account to a collection agency. I further understand that if Georgia Tech refers my student account balance to a third party for collection, a collection fee will be assessed and due in full at the time of the referral to the third party. The collection fee will be calculated as a percentage at a maximum of fifteen (15) percent of my delinquent account. Further, I understand that my delinquent account may be reported to one or more of the national credit bureaus.
6. I understand Georgia Tech and its agents and contractors may contact me at my current and any future cellular phone number(s), email address(es) or wireless device(s) regarding my delinquent student account(s)/loan(s), any other debt I owe to Georgia Tech, or to receive general information. I authorize Georgia Tech and its agents and contractors to use automated telephone dialing equipment, artificial or pre-recorded voice or text messages, and personal calls and emails, in their efforts to contact me. I may withdraw my consent to call my cellular phone using automated telephone dialing equipment by submitting my request in writing to the Georgia Tech Bursar's Office or in writing to the applicable contractor or agent contacting me on behalf of Georgia Tech.
7. I understand I am responsible for complying with all applicable Georgia Tech policies and procedures.
8. I understand Georgia Tech uses the e-mail account provided by the institution as the official method of communication with me and I am responsible for reading Georgia Tech e-mails on a timely basis.
9. I understand I am responsible for keeping Georgia Tech records up to date with my current physical addresses, email addresses, and phone numbers by following the procedure at http://www.registrar.gatech.edu/students/formlanding/address.php. The linked procedure is incorporated herein by reference. Upon leaving Georgia Tech for any reason, it is my responsibility to provide Georgia Tech with updated contact information for purposes of continued communication regarding any amounts owed to Georgia Tech.
10. I understand that this Agreement shall be governed by the laws of the state of Georgia without regard to choice of law provisions and that all actions arising under this agreement will be filed and litigated exclusively in the state or federal courts in Atlanta, Georgia and I expressly agree to the jurisdiction of such courts.

Tuition

Tuition and Fee Rates

Published tuition and fees listed are subject to change. These amounts should be used only as a planning guide for future payments. Tuition charges can vary based on state residency status and degree program of study. Residency status is determined by the Office of Admission at the time of acceptance. Students are either classified as a "resident" or "nonresident" of Georgia for tuition purposes in accordance with the regulations of the Board of Regents of the University System of Georgia. The most current information on tuition and fees is available from the Bursar's Office.

More information:

- Out-of-State Tuition Waivers
- Tuition Classification

Out-of-State Tuition Waivers

Georgia Tech has permission from the Board of Regents to award out-of-state tuition differential waivers and assess in-state tuition for certain nonresidents of Georgia for the following reasons and under the following conditions. The waivers processed in the Office of the Registrar are listed below. Any student requesting to pay at the in-state tuition rate will be required to provide verification of their lawful presence in the United States in order to be classified as an in-state student or awarded an out-of-state tuition waiver. See Lawful Presence.

- **University System Employees and Dependents**
  Full-time employees of the University System, their spouses, and their dependent children.
  Download Application for USG Employess and Dependents

- **Full-time School Employees**
  Full-time employees in the public schools of Georgia or the Technical College System of Georgia, their spouses, and their dependent children. Teachers employed full-time on military bases in Georgia shall also qualify for this waiver (BR Minutes, 1988-89, p.43).
  Download Application for Full-Time School Employees

- **Career Consular Officials**
  Career consular officers, their spouses, and their dependent children who are citizens of the foreign nation that their Consulate office represents and who are stationed and living in Georgia under orders of their respective governments.
  Download Application for Career Consular Officials

- **Military**
  1. Active duty military personnel, their spouses, and their dependent children who meet one of the following:
     a. The military sponsor is currently stationed in or assigned to Georgia; or,
     b. The military sponsor previously stationed in or assigned to Georgia is reassigned outside of Georgia, and the student(s) remain (s) continuously enrolled in a Georgia school, Technical College System of Georgia institution, and/or a University System of Georgia institution; or,
     c. The military sponsor is reassigned outside of Georgia and the spouse and/or dependent children remain in Georgia; or,
     d. The military sponsor is stationed in a state contiguous to the Georgia border and resides in Georgia; or,
     e. Dependent children of a military sponsor, previously stationed in or assigned to Georgia within the previous five years, or the child completed at least one year of high school in Georgia; or,
     f. Any student utilizing VA educational benefits transferred from a currently serving military member is also eligible, even if the student is no longer a dependent of the transferor.
        - Download Application for Active Duty Military Personnel
  2. Active members of the Georgia National Guard stationed or assigned to Georgia or active members of a unit of the U.S. Military Reserves based in Georgia, and their spouses and their dependent children (BoR Minutes, October 2008).
     - Download Application for GA National Guard and Reservists
  3. Separated military members from a uniformed military service of the United States who meet one of the following (BoR Minutes, June 2004; October 2008; October 2013: March 2016; May 2017):
     a. Individuals who within thirty-six (36) months of separation from such service, enroll in an academic program and

demonstrate intent to become domiciled in Georgia. This waiver may also be granted to their spouses and dependent children.

b. Any separated service member or any student utilizing transferred VA educational benefits, and physically residing in the state.
c. Any individual as described in 38 U.S.C. 3679(c).
d. Anyone using benefits under the Marine Gunnery Sergeant John David Fry Scholarship who lives in the state in which the institution is located (regardless of formal state residence).
   - Except...
     - Surviving spouses can use the Fry Scholarship for 15 years from the anniversary of the service member's death or until they remarry.
     - Eligible children can use the Fry Scholarship between the ages of 18 and 33.
   - Download Application for Those Separated from the Military

- **Economic Advantage**
  As of the first day of classes for the term, an economic advantage waiver may be granted to a U.S. citizen or U.S. legal permanent resident who is a dependent or independent student and can provide clear evidence that the student or the student's parent, spouse, or U.S. court-appointed legal guardian has relocated to the State of Georgia to accept full-time, self-sustaining employment and has established domicile in the State of Georgia. Relocation to the state must be for reasons other than enrolling in an institution of higher education. For U.S. citizens or U.S. legal permanent residents, this waiver will expire 12 months from the date the waiver was granted.
  As of the first day of classes for the term, an economic advantage waiver may be granted to an independent non-citizen possessing a valid employment-related visa status who can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Independent non-citizen students may continue to receive this waiver as long as they maintain a valid employment-related visa status and can demonstrate continued efforts to establish U.S. legal permanent residence and legal domicile in the State of Georgia.
  A dependent non-citizen student who can provide clear evidence that the student's parent, spouse, or U.S. court-appointed legal guardian possesses a valid employment-related visa status and can provide clear evidence of having relocated to the State of Georgia to accept full-time, self-sustaining employment is also eligible to receive this waiver. Relocation to the state must be for employment reasons and not for the purpose of enrolling in an institution of higher education. These individuals must be able to show clear evidence of having taken legally permissible steps toward establishing legal permanent residence in the United States and the establishment of legal domicile in the State of Georgia. Non-citizen students currently receiving a waiver who are dependents of a parent, spouse, or U.S. court-appointed legal guardian possessing a valid employment-related visa status may continue to receive this waiver as long as they can demonstrate that their parent, spouse, or U.S. court-appointed legal guardian is maintaining full-time, self-sustaining employment in Georgia and is continuing efforts to pursue an adjustment of status to U.S. legal permanent resident and the establishment of legal domicile in the State of Georgia. (BR Minutes, October 2008.)
  Download Application for Economic Advantage

- **Non-Resident Students**
  As of the first day of classes for the term, a non-resident student can be considered for this waiver under the following conditions:
  - Students under 24.
    - If the parent, or United States court-appointed legal guardian has maintained domicile in Georgia for at least twelve (12) consecutive months and the student can provide clear and legal evidence showing the relationship to the parent or United States court-appointed legal guardian has existed for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. Under Georgia code, legal guardianship must be established prior to the student's 18th birthday (BoR Minutes, October 2008, title amended February 2010); or
    - If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term (BoR Minutes, February 2010).
  - Students 24 and Older.
    - If the student can provide clear and legal evidence showing a familial relationship to the spouse and the spouse has maintained domicile in Georgia for at least twelve (12) consecutive months immediately preceding the first day of classes for the term. This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008, title amended February 2010).

This waiver can remain in effect as long as the student remains continuously enrolled (BoR Minutes, October 2008).

Download Application for Non-Resident Students

- **Senior Citizen Waiver**
  A s of the first day of classes for the term, a waiver of in-state tuition and fees may be granted to a legal resident of Georgia aged 62 and over. This waiver can remain in effect as long as the student is continuously enrolled.
  Download Application for Senior Citizens

Students who come to Georgia Tech from another state and work for companies in Georgia remain ineligible for in-state tuition in the absence of compelling evidence of intent to remain in Georgia permanently. Having Georgia voter registration, having employment in any position normally filled by a student (such as co-op, graduate research assistant, or graduate teaching assistant), having a lease of living quarters, having a Georgia automobile registration, and having Georgia driver's license do not constitute sufficient evidence of domicile to affect classification as an in-state student under the Board of Regents' policy.

For further information concerning residency, students should contact the Residency Office in Room 112 of TechTower, write to the Office of the Registrar, Residency, Georgia Tech, Atlanta, GA 30332-0315, or email comments@registrar.gatech.edu. The Residency Office must receive an application for classification as a legal resident for fee payment purposes no later than one month prior to the academic registration date for the term in which the student seeks to pay fees as a resident

of Georgia. Requests for tuition waivers must be received by the Office of the Registrar no later than the first day of classes for the term for which the out-of-state tuition is to be waived. See the official Academic Calendar for dates.

Tuition Classification

Classification of Students for Tuition Purposes

Under the Constitution and laws of Georgia, the Board of Regents of the University System of Georgia was created to govern, control, and manage a system of public institutions providing quality higher education for the benefit of Georgia citizens. The state, in turn, receives substantial benefit from individuals who attend or have attended these institutions through their significant contributions to the civic, political, economic, and social advancement of the citizens of Georgia.

Because the overwhelming proportion of financial support for the operation of the public institutions of higher education in Georgia comes from the citizens through the payment of taxes, the determination of whether a student is classified as a resident or a nonresident of the state for tuition purposes becomes a significant matter. The tuition paid by in-state students covers only about one-fourth of the total cost of their education in the University System. Therefore, Georgia taxpayers are contributing three-fourths of the necessary funds to provide quality education for the citizens of the state.

The practice followed by state colleges and universities of assessing out-of-state students a higher tuition rate is a rational attempt by states to achieve a partial cost equalization between those who have and those who have not recently contributed to the state's economy, even though no precise way exists to determine the degree to which higher tuition charges equalize the cost of educating in-state and out-of-state students.

Courts that have been faced with challenges to residency classification procedures have consistently recognized the right of public institutions of higher education to charge higher rates to out-of-state students and to adopt reasonable criteria for determining the establishment of in-state status.

For the purpose of these regulations, the question to be answered is not primarily whether a student is a resident or nonresident of Georgia, but whether the student should pay University System fees on an in-state basis. The term "resident" is confusing because it may have several definitions as it relates to voter registration, driver's licenses, automobile registration, deeds, contracts, wills, income taxes, and other matters. A student may be a resident of Georgia for some purposes, but not entitled to in-state status for tuition purposes.

The Board of Regents has adopted certain policies governing the classification of students as residents and nonresidents for tuition purposes in keeping with its responsibilities to the citizens of Georgia for an appropriate assessment of fees and reasonable share of the cost of their education. The taxpayers of Georgia are thereby assured that they are not assuming the financial burden of educating persons whose presence in the state is not intended to be permanent.

With these considerations in mind, the Board of Regents has adopted the following policies governing the classification of students for fee payment purposes:

http://www.usg.edu/policymanual/section4/policy/4.3_student_residency/

1. United States Citizens
   a. An independent student who has established and maintained a domicile in the State of Georgia for a period of at least twelve consecutive months immediately preceding the first day of classes for the term shall be classified as "in-state" for tuition purposes.

      It is presumed that no student shall have gained or acquired in-state classification while attending any postsecondary educational institution in this state without clear evidence of having established domicile in Georgia for purposes other than attending a postsecondary educational institution in this state.

   b. A dependent student shall be classified as "in-state" for tuition purposes if either:

      i. the dependent student's parent has established and maintained domicile in the State of Georgia for at least twelve consecutive months immediately preceding the first day of classes for the term and the student has graduated from a Georgia high school or

      ii. the dependent student's parent has established and maintained domicile in the State of Georgia for at least twelve consecutive months immediately preceding the first day of classes for the term and the parent claimed the student as a dependent on the parent's most recent federal income tax return.

   c. A dependent student shall be classified as "in-state" for tuition purposes if a U.S. court-appointed legal guardian has established and maintained domicile in the State of Georgia for at least twelve consecutive months immediately preceding the first day of classes for the term, provided that appointment was not made to avoid payment of out-of-state tuition and the U.S. court-appointed legal guardian can provide clear evidence of having established and maintained domicile in the State of Georgia for a period of at least twelve consecutive months immediately preceding the first day of classes for the term.

   d. If an independent student classified as "in-state" relocates temporarily but returns to the State of Georgia within 12 months, the student shall be entitled to retain in-state tuition classification.

   e. If the parent or U.S. court-appointed legal guardian of a dependent student currently classified as "in-state" for tuition purposes establishes domicile outside of Georgia after having established and maintained domicile in the State of Georgia, the student may retain in-state tuition classification as long as the student remains continuously enrolled in a public postsecondary educational institution in the state, regardless of the domicile of the parent or U.S. court-appointed legal guardian.

2. Noncitizens
   Noncitizens initially shall not be classified as "in-state" for tuition purposes unless there is evidence to warrant consideration of in-state classification. Lawful permanent residents, refugees, asylees, or other eligible noncitizens as defined by federal Title IV regulations may be extended the same consideration as citizens of the United States in determining whether they qualify for in-state classification.

International students who reside in the United States under nonimmigrant status conditioned at least in part upon intent not to abandon a foreign domicile are not eligible for in-state classification.

3. Any student requesting to pay at the in-state tuition rate will be required to provide verification of their lawful presence in the United States in order to be classified as an in-state student or awarded an out-of-state tuition waiver. See Lawful Presence.

VA Compliance Statement

All covered individuals who are accepted and registered for courses in which a certificate of eligibility for entitlement to educational assistance under chapter 31, 33, or 35 has been received or an existing certificate is on file with the Office of the Registrar before the first day of classes for the payment term shall not be cancelled for non-payment, assessed late fees, or denied access to institutional facilities that are provided through mandatory fee payment or specific course registration. This coverage ends on the earlier of the following: date on which payment from VA is made to Georgia Tech, or 90 days after Georgia Tech submits certified tuition and fees following the receipt of the certificate of eligibility.

If the covered individual's eligibility does not cover the entire assessed amount of tuition and fees, the student is responsible for the difference in total tuition and fees and the covered eligibility amount by the posted fee payment deadline.

The first day of classes and fee payment deadline for each term can be found on the academic calendar (https://registrar.gatech.edu/calendar). For information on how to submit a certification of eligibility and other needed documents for processing can be found at https://registrar.gatech.edu/veterans-services.

Verification of Participation

Verification of participation is a process whereby instructional faculty report to the Office of the Registrar and the Office of Scholarships and Financial Aid whether they have students enrolled in their classes who are not engaged with the course.

Verification of participation is a Federal Title IV requirement.The rule requires students who are receiving Federal Title IV financial aid to participate in all courses (credit hours) for which they have been funded. For example if a student is enrolled in twelve credit hours and their financial aid award has been based on a twelve-credit-hour course load, participation must be verified for all twelve credit hours.

Any student who is reported as "not participating" in the courses for which financial aid was awarded will see their amount of aid recalculated and revoked as appropriate. The student will be required to pay back the remaining amount. Lack of participation results in a financial impact for the student. Students cannot accept Federal Title IV aid and then neglect to engage in the study that it is funding.

Participation must be verified for all undergraduate and graduate classes that earn credit, are billable, and are gradable. For example, 7000- and 9000-level thesis courses for graduate students must be reported. Courses that are graded on a Pass/Fail basis must also be reported. Classes that are delivered online or at a distance must be reported.

Participation in a course can be indicated in a variety of ways. As instructional faculty are reporting their findings at the beginning of each term, the following examples might be helpful.

- Attending the class
- Handing in homework
- Taking a quiz or exam
- Posting information or accessing information on a website
- Posting blog entries or comments in a chat room
- Participation in group projects
- Meeting with or communicating with the thesis advisor on research progress
- Any other activity that demonstrates engagement in the course

The tool for reporting the verification of participation is available at https://registrar.gatech.edu/faculty-and-staff/verification-of-participation.

POLICIES

The Rules and Regulations section of this catalog contains detailed information regarding the academic regulations of the Institute. Students who have questions concerning these regulations should consult either their major school or the Registrar's Office.

- Academic Honor Code
- Alcohol and Drug Policy
- Certificate Guidelines
- Disabled Persons Assistance
- Discrimination
- Family Educational Rights and Privacy Act (FERPA) and Applicant Records
- Grading GPA
- Health Policies
- Institute Commitment to Diversity, Equity, and Inclusion
- Intellectual Property Policy
- Required Computer Ownership
- Sexual Misconduct Policy
- Student Absence from Class Due to Illness or Personal Emergencies

Academic Honor Code

The Academic Honor Code is a student initiative that became an official Institute policy in 1996. The objective of the Academic Honor Code is to increase academic integrity and strengthen trust in the Georgia Tech community. All students are required to sign an agreement acknowledging their awareness of the Academic Honor Code. They are strongly encouraged to seek a full understanding of their instructors' expectations regarding academic honor.

The Academic Honor Code is available in the Georgia Tech Policy Library.

Alcohol and Drug Policy

The Student/Student Organization Alcohol Policy is maintained by the Office of Student Integrity and published in the Georgia Tech Policy Library. In the event of any conflict, the most current policy shown on the OSI web site and/or the Policy Library shall govern.

Student/Student Organization Alcohol Policy

Last Revised: August 2015

Review Date: April 2020

Policy Owner: Student Life, Division of Student Engagement & Well-Being

Contact Name: John M. Stein

Contact Title: Associate Vice President for Student Life and Dean of Students

Contact Email: john.stein@studentlife.gatech.edu

The purpose of this policy is to promote and educate about the lawful and responsible use of alcohol by students, and to educate about illegal drugs in order to maintain an environment that is consistent with the educational focus of Georgia Tech.
Georgia Tech will comply with all federal, state, and local laws and policies, including the policies of the Board of Regents of the University System of Georgia, on the abuse of alcohol and other drugs by its students. The legal drinking age in the State of Georgia is 21.

Each member of the Georgia Tech community should be involved in the implementation of, and compliance with this policy. Unless otherwise stated by law, each individual retains responsibility for their actions at all times regardless of their mental state, even if altered by alcohol or other drugs.
Campus organizations may develop and enforce additional group/individual standards which are more restrictive than those established in this policy.

Standards of Conduct and Sanctions

In accordance with federal and state laws and because of the potential detriment to the health and well-being of its students, all students are prohibited from engaging in the unlawful use, possession, manufacture, distribution, dispensation, and sale of alcoholic beverages, controlled substances (including marijuana), and other drugs. The term "dangerous drug" is defined in the Official Code of Georgia Section 16-13-71.

A. **Alcohol**

The sale, distribution, and consumption of alcoholic beverages in or on all Georgia Tech owned or leased (by) property, or on sidewalks/streets are specifically prohibited, with the exception of those approved by the Office of the President or designee. This policy does not prohibit the lawful use of alcohol in Institute-owned residences.

Individual possession and/or consumption of alcohol is acceptable, provided individuals DO NOT:

a. Possess or consume alcohol if under 21 years of age.
b. Furnish, or cause to be furnished, any alcohol to persons under 21 years of age.
c. Conspicuously display open containers of alcohol in any public location, including, but not limited to, grounds, sidewalks, and streets within campus boundaries (but not the public sidewalks and streets, or privately owned or leased property).
d. Sell alcoholic beverages.
e. Misrepresent one's age or identity in any manner for the purpose of obtaining or possessing alcohol.
f. Serve or make available alcohol to intoxicated persons.

Alcoholic beverages may be served and/or consumed by individuals 21 and older at advertised events and activities that are promoted, sponsored, or supervised by a chartered Georgia Tech organization, providing the organization shall:

a. Be responsible for enforcing the entire Student Policy on Alcohol and Illegal Drugs.
b. Completed and confirmed review of the "Acknowledgement of Alcohol and Illegal Drugs Policy." This form will remain on file in the Office of Leadership and Civic Engagement, 2211 Student Center Commons. Acknowledgment of Alcohol and Illegal Drugs Policy Forms are available in the Office of Leadership and Civic Engagement. This must be signed with every officer transition.
c. Ensure that alcohol is not the focal point, the reason for, or the drawing card for an event.

d. Submit, and have approved, a completed Alcohol Event Planning Form. Alcohol Event Planning Forms are available in the Office of Leadership and Civic Engagement.
e. Not advertise the service or availability of alcoholic beverages at functions.
f. Ensure that alcoholic beverages are not consumed by any individual under the legal drinking age of 21.
g. Provide non-alcoholic beverages and food in reasonable quantity, in the same general area, and for the same time period, as the alcoholic beverages are accessible.
h. Control access to the alcoholic beverages through a central point of distribution by a designated server within a designated area at the event (e.g. beer garden) and through the use of sober monitors. Only students who have shown proper proof of age may enter the designated area where alcohol is being served. All alcohol must be distributed and consumed within the designated area. Control is for the purpose of restricting use by those under 21 and/or who are obviously intoxicated.
i. Not use organizational funds to purchase alcohol. Any funds used to pay for alcohol must be taken from personal/private sources and paid to a properly licensed third party vendor. Alcohol may not be paid for by the student organization via a sale at the activity or by charging an admission fee either in advance or at the door (as stated in the Georgia Code of Law, 1981 Section 3-3-21).
j. Not use kegs, champagne/punch fountains, or other common usage containers (such as punch bowls or frozen drink machines) for alcoholic beverages.
k. In the absence of a third-party vendor, designate or hire a TIPS (Training Intervention Procedures for Servers) trained server to monitor the service and consumption of alcohol. It is unlawful to serve or make available alcohol to intoxicated persons (as stated in the Georgia Code of Law, Section 3-3-22).
l. Require a full-time Institute employee, who must not be a minor, to be present for the duration of functions hosted by student organizations where alcohol is served or made available. Advisers are encouraged to attend such functions.

Promotional activities regarding alcohol are as follows:

a. The posted advertisement of alcoholic beverages on campus is not permitted. This includes, but is not limited to: chalking, electronic communications, bulletins, flyers, and social media sites.
b. Campus publications are encouraged to minimize/eliminate all advertisement of alcoholic beverages.
c. No promotion or advertising on campus of incentive drinking ("happy hours", "2-for-1 specials", unlimited quantities of alcohol available at reduced prices or free, events focusing on the consumption of alcohol, etc.) is permitted.
d. Chartered student organizations and student groups may not seek or accept sponsorship or support from companies/vendors whose main focus of business is the manufacture, distribution, or sale of alcohol, other drugs or related paraphernalia.

Participants in Study Abroad programs are bound by the legal drinking age of the respective countries in which they are traveling and in all other respects this policy applies.

Sanctions for Violation of Standards:
Students who violate this policy will be subject to disciplinary action and penalties in accordance with the Georgia Tech Student Code of Conduct.

Attempts to circumvent the provisions in this policy in any way are an infraction of this policy.

B. Possession and/or Use of Illegal Drugs

Georgia Tech does not permit or condone the illegal possession and/or use of controlled substances. Controlled substances means any drug, substance, or immediate precursor included in the definition of controlled substance in the Official Code of Georgia Section 16-13-21 (4) or Schedule I through V of Section 202 of the Federal Controlled Substance Act [21 United States Code 812]. The term "dangerous drug" is defined in the Official Code of Georgia Section 16-13-71.

Sanctions for Violation of Standards:
Any student who violates this policy or any federal or state law or policy regarding the manufacture, distribution, sale, possession, or use of controlled substances or other dangerous drugs shall be subject to disciplinary actions and penalties in accordance with the Georgia Tech Student Code of Conduct.

Additionally, in accordance with Georgia law, any student convicted of a felony that involves the manufacture, distribution, sale, possession, or use of controlled substances or other illegal drug, or chartered student organizations and student groups involved in these activities may be subject to specific penalties required by state law.

Further information regarding the effects of drug abuse and penalties for manufacture, distribution, sale, possession, or use of controlled substances or other illegal drugs is available in the Counseling Center, Stamps Health Services and the Office of the Vice President for Student Life and Dean of Students.

Participants in Study Abroad programs are bound by the policies of the Georgia Institute of Technology regarding the possession and/or use of controlled substances or other illegal drugs.

Drug and Alcohol Counseling, Treatment, and Rehabilitation Programs

Students with alcohol- or drug-related concerns may be referred to, or seek assistance from the Division of Student Affairs. The Division of Student Affairs provides trained professional and paraprofessional counselors in the Counseling Center for drug and alcohol abuse prevention, education, and counseling.

Policy Review

This policy shall be reviewed by a Task Force which includes student representation and is appointed by the Vice President for Student Life and Dean of Students or their designee, to determine its effectiveness, to ensure that policies are enforced and the disciplinary sanctions are consistently applied, to evaluate the effectiveness of the implementation of the educational component of the policy, and to recommend and implement changes as appropriate.

Policy Distribution

The Vice President for Student Life and Dean of Students, or their designee, shall oversee the annual distribution of this Policy to every Georgia Tech student. Additional copies of the Policy on Student Alcohol

and Illegal Drugs may be obtained from the Office of the Vice President for Student Life and Dean of Students.

Parental Notification Policy

Parents or legal guardians of students under the age of 21 may be notified when a student is found responsible for violating the Student/ Student Organization Alcohol Policy when any of the following occur:

- A student endangers himself/herself or others while under the influence of alcohol or other substances. Specific instances include driving under the influence, fighting, alcohol poisoning, and hospitalization.
- When the Vice President for Student Life and Dean of Students determines that any future violation of Institute Policy will most likely result in suspension from Georgia Tech.
- When a student conduct administrator determines that any future violation of Institute policy will likely result in removal from housing.

Certificate Guidelines

- Graduate Certificate Guidelines
- Undergraduate Certificate Guidelines

Graduate Certificate Guidelines

Georgia Institute of Technology offers two types of graduate certificates: **embedded certificates and stand-alone certificates.**

Embedded Graduate Certificates Guidelines

Embedded certificates are intended to encourage students to use the elective requirements in their degree program to form a coherent concentration of coursework in a specified area.

1. Embedded certificates will be granted only to students who, in addition to the certificate program requirements, have satisfied requirements for a graduate degree. The offering unit is responsible for verifying satisfaction of all certificate requirements, as well as completion of a graduate degree. Embedded certificates are not recorded on the student's transcript or diploma. Arrangements must be made for awarding embedded certificates within colleges or offering units. Embedded certificates will not be awarded at the Institute level.
2. All graduate embedded certificate programs must be approved by the Graduate Curriculum Committee and by the Academic Senate.
3. Departments, schools, and colleges are eligible to offer graduate certificate programs in well-defined and coherent subject areas. Certificate programs sponsored jointly by more than one academic unit may be designated as multi-disciplinary certificates, subject to the special requirements listed below.
4. A certificate program generally will be available to all graduate students, subject to the restrictions below. Exceptions must be clearly justified in the certificate proposal.
5. All proposals for a certificate must originate from the faculty of the academic unit offering the certificate or, in the case of a multi-disciplinary certificate, from the faculty of each participating academic unit. Proposals must be endorsed by the appropriate College Dean(s) and by the Provost.
6. In addition to the academic requirements for the certificate, the proposal must define the procedures for management of the program and for awarding certificates. The offering unit must record and maintain enrollment and completion for certificates. The design and working of certificates must be approved by the Provost and a draft must be submitted with the proposal.
7. The embedded certificate program must comprise at least 12 semester hours in a coherent program of which at least three semester hours are foundational to provide a broad overview of that discipline. A multi-disciplinary certificate program will additionally require that courses be taken from more than one academic unit and that at least three semester hours be taken outside the student's major field. Cross-listed courses may be counted as being outside the student's major field.
8. No more than a total of 4 semester hours of Special Problems courses may be included in an embedded certificate program.
9. Courses used in a certificate also may be used to fulfill elective requirements in the student's major degree program.
10. A course may not be counted toward more than one certificate.
11. All courses counting toward the embedded certificate must be taken on a letter-grade basis, and be completed with a grade of B or higher.
12. The availability of a certificate should be noted in the catalog, at least by title, under the appropriate academic unit(s). The academic unit(s) offering the certificate shall publish and make available to students the requirements for the certificate – the courses and total number of hours required, along with the enumeration of any particular courses that are mandated or excluded, and any grade requirements that differ from the general grade requirements of this policy.
13. All certificate programs are to be reviewed during the scheduled academic program review in the sponsoring unit(s).

Georgia Institute of Technology offers two types of graduate certificates: **embedded certificates and stand-alone certificates.**

Stand-Alone Graduate Certificates Guidelines

Stand-alone certificates may be completed independent of students being enrolled as Master's or Doctoral student. These certificates represent a cohesive program of study of a smaller size than a Master's program and provide more flexibility to professionals for pursing graduate education, including a means for professionals to renew and retrain due to a fast-changing work force. When completed, these certificates appear on the student's academic record (transcript), and the student receives a certificate of completion.

Curricular Requirements and Approvals

1. Departments, schools, and colleges are eligible to offer graduate certificate programs in well-defined and coherent subject areas. Certificate programs sponsored jointly by more than one academic unit may be designated as multi-disciplinary certificates, subject to the special requirements listed below.
2. All proposals for a certificate must originate from the faculty of the academic unit offering the certificate or, in the case of a multi-disciplinary certificate, from the faculty of each participating academic unit. Proposals must be endorsed by the appropriate College Dean(s) and by the Provost.
3. All Graduate Certificate programs must be approved by the Institute Graduate Curriculum Committee and by the Academic Faculty Senate.

4. In addition to the academic requirements for the certificate, the proposal must define the procedures for management of the program.
5. The certificate program must comprise at least 12 semester hours in a coherent program of which at least six semester hours are required and the remaining hours may be selected from a set of elective courses. A multi-disciplinary certificate program will additionally require that courses be taken from more than one academic unit. No Special Problems courses may be included in a certificate program.
6. A course may not be counted towards more than one certificate.
7. For students enrolled as a Master's or a Doctoral student, courses used in a certificate also may be used to satisfy requirements in the student's major degree program, unless otherwise designated by the academic unit(s) offering the certificates.
8. All courses counting toward the certificate must be taken on a letter-grade basis, and be completed with a grade of C or higher with a minimum GPA of 2.7 for the certificate.

Admissions

1. Students must be admitted to the Institute as either Graduate Certificate-seeking students or degree-seeking graduate students.
2. Admission requirements for Graduate Certificate-seeking students are listed in the description of the Certificate in the Catalog. A minimum requirement is a Bachelor's Degree.

Completion

1. Certificates will be granted only to students who have satisfied the requirements as listed in the Catalog. Students must complete the certificate requirements within a four-year time-frame.
2. The offering unit is responsible for verifying satisfaction of all Certificate requirements with the final audit being conducted by the Registrar's Office.
3. Upon completion of the required courses, the student must apply for the stand-alone certificate online through the on-line application for graduation. Stand-alone certificates will be awarded three times per year, in May, December, and August. The award of the Certificates coincides with the award of degrees.
4. Award of the Certificate will be posted by the Registrar to the academic record (transcript), and the Registrar's Office will issue a certificate of completion. The design of the certificate of completion will be uniform across the Institute and will be managed in a fashion similar to diplomas.

Management of the Program

1. The availability of a stand-alone certificate should be noted in the Catalog, at least by title, under the appropriate academic unit(s). The academic unit(s) offering the certificate shall publish and make available to students the requirements for the certificate – the courses and total number of hours required, along with the enumeration of any particular courses that are mandated or excluded, any grade requirements that differ from the general grade requirements of this policy, and whether the courses taken for the certificate can be counted towards an MS Degree in that unit.
2. The offering unit must record and maintain data related to student learning and professional opportunities enhanced related to Gainful Employment requirements. Data related to Gainful Employment is required if the Certificate is approved as eligible under Federal Title IV financial aid rules.
3. All certificate programs are to be reviewed during the scheduled academic program review in the sponsoring unit(s).
4. Costs may vary by program

Undergraduate Certificate Guidelines

Certificates are intended to encourage students to use the elective course requirements in their degree program to form a coherent package of coursework in a specified area.

1. Certificates will be granted only to students who, in addition to the certificate program requirements, have satisfied requirements for an undergraduate degree. The offering unit is responsible for verifying satisfaction of all certificate requirements, as well as completion of an undergraduate degree. Certificates are not recorded on the student's transcript or diploma. Arrangements must be made for awarding certificates within colleges or offering units. Certificates will not be awarded at the Institute level.
2. All undergraduate certificate programs must be approved by the Undergraduate Curriculum Committee and by the Academic Senate.
3. Departments, schools, and colleges are eligible to offer undergraduate certificate programs in well-defined and coherent subject areas. Certificate programs sponsored jointly by more than one academic unit may be designated as multi-disciplinary certificates, subject to the special requirements listed below.
4. A certificate program generally will be available to all undergraduate students, subject to the restrictions below. Exceptions must be clearly justified in the certificate proposal.
5. All proposals for a certificate must originate from the faculty of the academic unit offering the certificate or, in the case of a multi-disciplinary certificate, from the faculty of each participating academic unit. Proposals must be endorsed by the appropriate College dean(s) and by the Provost.
6. In addition to the academic requirements for the certificate, the proposal must define the procedures for management of the program and for awarding certificates. The design and wording of certificates must be approved by the Provost and a draft must be submitted with the proposal.
7. A certificate program must comprise at least twelve semester hours in a coherent program, of which at least nine semester hours are upper-division coursework (numbered 3000 or above). A multi-disciplinary certificate program will additionally require that courses be taken from more than one academic unit and that at least three semester hours be taken outside the student's major field. Cross-listed courses may be counted as being outside the student's major field.
8. No more than 6 semester hours of Special Topics courses may be included in a certificate program. No more than a total of 4 semester hours of Special Problems or Undergraduate Research courses may be included in a certificate program.
9. Courses required by name and number in a student's major degree program can not be used in satisfying the course requirements for a certificate.
10. Courses used to satisfy Core Areas A through E in a student's major degree program cannot also be used to satisfy the course requirements for a certificate.
11. Any free elective course used to satisfy the course requirements of the student's major degree program may also be used to satisfy the course requirements for a certificate.

12. All academic units may designate a block/blocks of courses outside of the student's major field of study in which the same course can be used to satisfy the course requirements in the student's major degree program and also be used to satisfy the course requirements for a certificate.
13. A course may not be counted toward more than one certificate and/or minor.
14. All courses counting toward the certificate must be taken on a letter-grade basis, and be completed with a grade of C or better.
15. The availability of a certificate should be noted in the catalog, at least by title, under the appropriate academic unit(s). The academic unit(s) offering the certificate shall publish and make available to students the requirements for the certificate – the courses and total number of hours required, along with the enumeration of any particular courses that are mandated or excluded, and any grade requirements that differ from the general grade requirements of this policy.
16. All certificate programs will be reviewed by the offering academic unit(s) on a regular basis (6 years is recommended) so that decisions can be made about the need for the certificate or the need for it to be revised to meet current academic content.

Disabled Persons Assistance

Assistance for Individuals with Disabilities

The Office of Disability Services provides accessible programs, services, activities, and reasonable accommodations for students with a disability as defined by section 504 of the Rehabilitation Act of 1973, as amended, and by the Americans with Disabilities Act of 1990 and 2008. Services are available to ensure that individuals with disabilities have an equal opportunity to pursue education, employment, or other campus programs, activities, or services.

The Office of Disability Services offers self-identified students with permanent or temporary disabilities assistance with registration, accessibility, transportation, parking, housing, counseling, note taking, recorded textbooks, advocacy, test proctoring, referral services, and other needs. Disability Services promotes disability awareness programs for departmental faculty and staff, as well as the Georgia Tech community.

Students and prospective students who wish to learn more about accommodations for students with disabilities should contact:

Office of Disability Services
Suite 221 Smithgall
Student Services Building
Georgia Institute of Technology
Atlanta, Georgia 30332-0285

call 404.894.2563 (voice) or 404.894.1664 (TTY)
visit http://disabilityservices.gatech.edu
email dsinfo@gatech.edu

Faculty, staff, and visitors should contact:

Disability Services in the Office of Human Resources

404.894.3344 (voice) or 404.894.9411 (TDD)

Office of Disability Services Website

Academic Accommodations for Students with Disabilities

Reasonable accommodations are provided to self-identified students with disabilities who meet the academic and technical standards requisite to admission or participation in the program of study.

Consideration may be given to the substitution or modification of certain course requirements as long as such changes do not detract from the quality of the educational experience and the changes remain within the accreditation criteria for the degree program. Such substitutions or modifications must be approved by the school chair, department head, or college dean, and the Undergraduate Curriculum Committee and/or the Graduate Committee.

Office of Disability Services Website

Discrimination

Equal Opportunity and Non-Discrimination

The Institute does not discriminate against individuals on the basis of race, color, religion, sex, national origin, age, disability, sexual orientation, gender identity, or veteran status in the administration of admissions policies, educational policies, employment policies, or any other Institute governed programs and activities. The Institute's equal opportunity and non-discrimination policy applies to every member of the Institute community.

Family Educational Rights and Privacy Act (FERPA) and Applicant Records

Notification of Student Rights Under FERPA

The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. They are:

- The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. They are:
  - The right to inspect and review the student's education records within forty-five days of the day that the Institute receives the request for access.

    Students should submit written requests to the Registrar's office in order to identify the record(s) they wish to inspect. The Registrar will make arrangements for access and notify the student of the time and place where the records may be inspected.

    Students should specify the specific records being requested as stated below when making such written request:

    - Transcripts (Office of the Registrar)
    - Student Disciplinary Records (Office of Student Integrity)
    - Title IX records (Title IX Coordinator)
    - Student Housing (Department of Housing)

- Financial Aid Records (Office of Scholarships and Financial Aid)

For education records that are not specified above, please include a sufficient description and, if possible, the location for the requested records as these records are transient in nature and are not routinely maintained as part of a student's FERPA records.

Please note that fees may be assessed solely to remove other student information that is protected by FERPA and that may be contained within these transient records. You will not be charged to review your student records except as stated herein and we will notify you first if fees may be assessed.

- The right to request the amendment of the student's education records that the student believes are inaccurate or misleading.

  Students may ask the Institute to amend a record that they believe is inaccurate or misleading. They should write the registrar, clearly identifying the part of the record they want changed, and specify why it is inaccurate or misleading.

  If the Institute decides not to amend the record as requested by the student, the Institute will notify the student of the decision and advise the student of their right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

- The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent.

  One exception which permits disclosure without consent is disclosure to school officials with legitimate educational interests. A school official is

  - a person whether volunteering for or employed by the Institute in an administrative, supervisory, academic or research, or support staff position (including law enforcement unit personnel and health staff);
  - a person or company with whom the Institute has contracted (such as an attorney, auditor, or collection agent);
  - a person serving on the Board of Regents;
  - a staff member in the office of the Board of Regents;
  - staff in the Office of the Attorney General; or
  - a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing their tasks.

  A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill their professional responsibility.

- The right to file a complaint with the United States Department of Education concerning alleged failures by the Georgia Institute of Technology to comply with the requirements of FERPA.

  The name and address of the Office that administers FERPA is:

  Family Policy Compliance Office
  U.S. Department of Education
  400 Maryland Avenue, SW
  Washington, DC 20202-4605

Applicant Records

Access to applicant records is strictly controlled and governed by Institute policy. To the extent permitted by law, these records are treated as confidential.

Annual Notice of Directory Information Contents

"Directory Information" is information not generally considered harmful or an invasion of privacy if disclosed. Effective May 11, 2020, the Georgia Institute of Technology considers the following information to be directory information:

- Name
- Campus mailing address
- Georgia Tech email address
- Level (graduate or undergraduate)
- Field of study (degree, major, minor)
- Enrollment status (full-time, part-time, less than part-time)
- Dates of attendance
- Degrees with associated honors and designations, and date(s) awarded
- Anticipated date of graduation
- Participation in NCAA Division I sports, including terms of team membership

Directory information cannot include social security numbers.

Students who wish to prohibit the release of Directory Information can view information on the registrar's confidentiality Web page.

Georgia Tech's use of information concerning an individual's financial assistance, including information from the Free Application for Financial Aid (FAFSA), is limited and restricted. For more information, see the Office of Scholarships & Financial Aid policy on information sharing.

Possible Federal and State Data Collection and Use

As of January 3, 2012, the U.S. Department of Education's FERPA regulations expand the circumstances under which your education records and personally identifiable information (PII) contained in such records — including your Social Security Number, grades, or other private information — may be accessed without your consent. First, the U.S. Comptroller General, the U.S. Attorney General, the U.S. Secretary of Education, or state and local education authorities ("Federal and State Authorities") may allow access to your records and PII without your consent to any third party designated by a Federal or State Authority to evaluate a federal- or state-supported education program. The evaluation may relate to any program that is "principally engaged in the provision of education," such as early childhood education and job training, as well as any program that is administered by an education agency or institution. Second, Federal and State Authorities may allow access to your education records and PII without your consent to researchers performing certain types of studies, in certain cases even when we object to or do not request such research. Federal and State Authorities must obtain certain use-restriction and data security promises from the entities that they authorize to receive your PII, but the Authorities need not maintain direct control over such entities. In addition, in connection with Statewide Longitudinal Data Systems, State Authorities may collect, compile, permanently retain, and share without your consent PII from your education records, and they may track your participation

in education and other programs by linking such PII to other personal information about you that they obtain from other Federal or State data sources, including workforce development, unemployment insurance, child welfare, juvenile justice, military service, and migrant student records systems.

Additional Information

Additional information on Georgia Tech's FERPA policies is available from the Registrar's Office.

Grading & GPA

- Academic Average
- Auditing
- Final Examinations
- Grade Substitution
- Grading System
- Pass/Fail Grading
- Progress Reports

Academic Average

The "academic average," or grade-point average (GPA), is the ratio of total quality points earned to total credit hours attempted.

When a student passes a course, she/he receives the designated number of credit hours; at the same time, she/he receives a certain number of quality points, based on the letter grade earned. Multiply the number of credit hours designated to the specific course by the numerical value of the letter grade earned to determine the number of quality points earned. Letter grades carry the following numerical values:

- "A" = 4
- "B" = 3
- "C" = 2
- "D" = 1

For example, when a student earns a letter grade of "C" in a 3-credit-hour course, she/he receives 6 quality points.

Grade-point averages are truncated after two decimal places.

A student who repeats a course for which the student has previously received credit (either by class work at the Institute, through AP/IB credit, or credit transferred from another school) forfeits the original credit in the event the student should fail the course on a subsequent attempt. Where a course has been repeated, both the original and subsequent grades are included in the average, but the credit is counted only once. The academic average includes all subsequent attempts, unless a grade substitution request has been approved and processed.

If a student takes the same course more than once, any later grade does not replace any earlier one. The academic average includes both attempts, unless a grade substitution has been approved and processed.

If a student takes a course on a Pass/Fail basis, the course is not included in their academic average.

For undergraduate students, the academic average is calculated by summing the number of quality points earned by the student for all courses in which they have enrolled as an undergraduate and dividing this sum by the number of credit hours designated to all courses in which they have enrolled as an undergraduate.

For graduate students, the academic average includes only the courses in which the student has enrolled after her/his entrance into the graduate division.

Auditing

1. The auditing of a course will be permitted to regularly a enrolled student who has obtained the approval of their advisor and the departments concerned. Such a course counts at full value in computing the student's course load for an academic term.
2. The grade of "V" (i.e., "Visitor") is earned when a student audits a course. The "V" grade has no effect on a student's grade-point average (GPA).
3. No academic credit is granted for auditing a course.
4. Students are not permitted to change to or from an auditing status except through the regular procedures for schedule change or withdrawal. Any student who does not meet the instructor's requirements for a successful audit will be withdrawn with a grade of "W" assigned at the end of the academic term.

Final Examinations

Final Instructional Class Days and Reading Periods

The following applies to the standard academic terms, including the Fall Semester, Spring Semester, and Full Summer Session. It does not apply to the Early Short Summer Session and Late Short Summer Session. Given the variability in the exact timing of the Full Summer Session, the Office of the Registrar will adjust the final instructional class days and reading periods for this semester only in order to meet required instructional time. This policy replaces the former Dead Week (Week Preceding Final Examinations) policy.

1. **Final Instructional Class Days**
    a. Final Instructional Class Days are scheduled during each regular term including the Full Summer Session and are the last two instructional days of the term immediately preceding the first reading period.
    b. No tests or quizzes are to be administered on these days. Lab quizzes and/or practicums may be given in courses comprised of both a lecture and a scheduled lab, wherein the lecture carries at least two credits.
    c. For all courses, graded homework or assignments, lab reports, course projects, demonstrations, studio reviews, and presentations may be due during these two days, provided that they are listed on the syllabus at the start of the semester.
    d. All quizzes and tests should be graded and reported to students on or before the last Final Instructional Class Day.
2. **Reading Periods**
    a. Reading Periods will be designated to provide time for students to prepare for final examinations.
    b. No classes meet. This includes labs, recitations, projects, design/capstone courses, and studios.
    c. No assignments, projects, presentations, or other graded activities are allowed.

   d. Instructors may schedule optional study review sessions for students during reading periods, but no credit or extra credit may be attached to these optional sessions. New content may not be covered, and any materials (e.g., handouts, slides, practice problems, etc.) that are provided at these optional review sessions must be made available to all students. This provision does not require that such optional sessions be audio or video recorded.
3. Requests for exceptions to the Final Instructional Class Day and Reading Period policies may be made in writing by the Dean of the College (or their designee) to the Student Rules and Regulations Committee (SRR). The SRR will then make a recommendation to the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate, for approval or denial. Requests must be made no later than the academic term prior to the desired term of implementation and will be regularly reviewed.
4. Student concerns may be discussed with the faculty member and/or reported to the Chief Academic Officer of the department of instruction, or with the Assistant Provost for Academic Advocacy and Conflict Resolution. For more information, see the Student Academic Grievance Policy.

Final Examinations

1. In all courses of the Institute offered for a letter grade, a final assessment, either a final examination or some alternative form, shall be administered. The decision on the type of final assessment shall be made by the instructor of record, and an announcement of the course's final assessment policy shall be made to the class by the end of the first week of the term (close of Phase II registration) and included in the course syllabus.
2. A change to a class's type of final assessment after the close of Phase II registration must be announced to all students in the class before the last day to withdraw from a single class.
3. In regularly scheduled, full-semester courses of the Institute, final examinations shall be scheduled during the Final Examination Period at the time specified in the official Final Examination Schedule as distributed by the Office of the Registrar, and meeting times for alternative final assessments shall not be scheduled during the Final Examination Period at any time other than the time specified in the official Final Examination Schedule.
4. No assessment other than a final examination or an alternative final assessment may be due during the Final Examination Period.
5. Requests to change a class's final examination time within the Final Examination Period must be submitted to the Chief Academic Officer of the department of instruction for approval no later than one week before the beginning of the Final Examination Period. Any such request must have the unanimous approval of the class as shown by secret ballot, as well as approval by the instructor of the class.
6. A change in the scheduling of a final assessment during the Final Examination Period for an individual student ordinarily will not be permitted; however, such a change may be allowed for hardship cases at the discretion of the instructor. The request for a change must be justified in writing by the student and shall be submitted to the instructor prior to Final Examination Period and may be rescheduled to an appropriate time.
7. In the event a student has two final assessments scheduled for the same time, the course having the lower number shall be considered in conflict and the student shall notify the instructor no later than two weeks before the first day of the Final Examination Period. In such case, the final assessment in that course shall be given during the Conflict Examination Period or, by agreement of the instructor and the student, at a mutually satisfactory time.
   a. If the student notifies the instructor after the above deadline but before the first day of the Final Examination Period, the student shall, at the discretion of the instructor:
      i. receive a course grade of "I" (Incomplete), with an opportunity to take a makeup final examination the following academic term (and have the course grade changed as warranted by the results of the test), or
      ii. be given the final assessment during the Conflict Examination Period or at an alternative time during the Final Examination Period.
   b. A student who fails to notify the instructor of the conflict before the first day of the Final Examination Period shall, at the discretion of the instructor:
      i. receive a score of zero on the final assessment, or
      ii. be given the final assessment during the Conflict Examination Period or at an alternative time during the Final Examination Period.
8. In the event a student is scheduled for three final assessments in one day, the assessment scheduled for the middle period shall be considered in conflict and the student shall notify the instructor no later than two weeks before the first day of the Final Examination Period. In such case, the final assessment in that course shall be given during the Conflict Examination Period or, by agreement of the instructor and the student, at a mutually satisfactory time.
   a. If the student notifies the instructor after the above deadline but before the first day of the Final Examination Period, the student shall, at the discretion of the instructor:
      i. receive a course grade of "I" (Incomplete), with an opportunity to take a makeup final assessment the following academic term (and have the course grade changed as warranted by the results of the test), or
      ii. be given the final assessment during the Conflict Examination Period or at an alternative time during the Final Examination Period, or
      iii. be given the final assessment at the time scheduled for the course.
   b. A student who fails to notify the instructor of the conflict before the first day of the Final Examination Period shall, at the discretion of the instructor:
      i. receive a score of zero on the final assessment, or
      ii. be given the final assessment during the Conflict Examination Period or at an alternative time during the Final Examination Period, or
      iii. be given the final assessment at the time scheduled for the course.
9. At the discretion of the instructor, students who arrive late, who exit the room without permission, or who are absent for an excessive period of time may forfeit their opportunity to complete the final assessment.
10. Students will have the full two hours and fifty minutes to complete the final, unless otherwise stated on the syllabus. Students must be notified in writing of any changes to the duration of the final exam before the withdrawal deadline.

Grade Substitution

A. Grade Substitution for Undergraduate Students

Undergraduate students may repeat courses for grade substitution according to the following set of criteria. If these conditions are not met, the general policy governing repeated courses applies.

1. Undergraduate students may repeat for grade substitution up to two GT courses with posted letter grades of D or F. These courses will be excluded from calculation of their cumulative grade point average.
2. A course can be taken for grade substitution only once and must be repeated within one calendar year. Students who completed the Georgia Tech course prior to matriculating as first-year, degree-seeking undergraduates (e.g., joint/dual enrollment or in a non-degree seeking status) have one calendar year from their matriculation date to repeat the course.
3. A course is not eligible for grade substitution if the student was found responsible for any academic misconduct in that course regardless of how many times it is repeated.
4. Grades excluded under previous Institute rules (such as the Grade Substitution policy that was in effect up until 2019) count toward the maximum two courses allowed for substitution.
5. Once a grade substitution is posted, the student cannot remove the exclusion or change it to another course at a later date. A student cannot request a grade substitution after they have graduated.
6. The application for grade substitution must be filed with the Registrar's Office no later than the deadline for withdrawing from a course during the student's next term of enrollment after the course is repeated.
7. Students should not submit the form during the term they are repeating the course.

The original grade and the repeated grades will all appear on the official transcript. Once a grade substitution is applied to a course, the credit hours attempted and earned on the course will be removed from the calculation of the cumulative grade point. Excluded courses and hours will continue to be counted in calculations of satisfactory progress, for financial aid eligibility, and for tuition.

Students should be aware that many graduate and professional schools recalculate grade point averages in the process of considering an applicant for admission to such programs. This recalculation may include restoring the grades of the repeated classes and their effects on the cumulative grade point average.

The grade substitution policy (including, but not limited to, course eligibility, number of courses, time limits, and deadlines) is not subject to exceptions and *may not* be petitioned to the Undergraduate Institute Curriculum Committee.

Download Form

Frequently Asked Questions about the Undergraduate Grade Substitution Policy

B. Grade Substitution for Graduate Students

Graduate students may repeat a course for grade substitution according to the following set of criteria. If these conditions are not met, the general policy governing repeated courses applies.

1. Graduate students may repeat for grade substitution one GT course with posted letter grades of C, D or F. The course will be excluded from calculation of their cumulative grade point average.
2. The one-substitution limit holds during the entirety of their time as a graduate student regardless of the number of degree programs that they might enroll in.
3. A course can be taken for grade substitution only once. Since not all graduate-level courses are offered each term, the student should consult with their academic advisor about planning to retake the course. Due to course scheduling constraints, some courses may not be repeatable in a timely fashion. This assumes the course is offered again in a future term.
4. A course is not eligible for grade substitution if the student was found responsible for any academic misconduct in that course regardless of how many times it is repeated.
5. Once a grade substitution is posted, the student cannot remove the exclusion or change it to another course at a later date. A student cannot request a grade substitution after they have graduated.
6. The application for grade substitution must be filed with the Registrar's Office no later than the deadline for withdrawing from a course during the student's next term of enrollment after the course is repeated.
7. Students cannot submit the form until after the course is repeated.
8. The original grade and the repeated grade will all appear on the official transcript. Once a grade substitution is applied to a course, the credit hours attempted and earned on the course will be removed from the calculation of the cumulative grade point. The excluded course and hours will continue to be counted in calculations of satisfactory progress, for financial aid eligibility, and for tuition.
9. This policy cannot be used to extend the applicable dates of an I-20 or other type of visa.

The grade substitution policy (including, but not limited to, course eligibility, time limit, and deadline) is not subject to exceptions and *may not* be petitioned to the Institute Graduate Curriculum Committee.

Applying for Graduate Grade Substitution

Grading System

Grades

The letter grades used in the calculation of grade-point average (GPA) are as follows:

A	Excellent. Four quality points.
B	Good. Three quality points.
C	Satisfactory. Two quality points.
D	Passing. One quality point.

F	Failure. No quality points. If the course is required, the student must repeat it.

Guiding principles for the determination of grades:

- The grading system an instructor uses, including relative weighting of different types of grading instruments (e.g., _% for homework, _ % for quizzes) must be communicated to students in the course syllabus and aligned with the course objectives, teaching activities, assignments, and assessments. For guidance on specific approaches to grading, see the Center for Teaching and Learning website (https://ctl.gatech.edu/grading-and-assessment-resources).
- Students should be able to easily translate their scores on assignments to their course letter grade. The criteria for final grades should be clearly indicated on the syllabus. For example, A grade of “A” corresponds to a percentage grade of __% or above on graded assignments, a grade of “B” corresponds to a percentage grade of __ %-__% , etc.
- Students must be graded against a set of standards, not solely on their performance relative to their classmates.
- The grading process and scoring methods should be clear and provide students with meaningful feedback throughout the term, allowing students to reasonably predict progress towards their final grade as the semester advances.
- It is the responsibility of the instructor to design assignments and scoring criteria that are consistent with the published grading scheme. Grade adjustments may be made to increase, not lower, students' grades.

The following grades are used under special conditions and are not included in the calculation of grade-point average (GPA):

S	Satisfactory
U	Unsatisfactory
V	No credit earned. The "V" grade is used when a student audits a course.

The following grades are used in the cases indicated and are not be included in the calculation of grade-point average (GPA):

I	Incomplete. The "I" grade is used when, for reasons beyond her/his control and deemed acceptable by the instructor, a student whose academic performance had been satisfactory becomes unable to fulfill a course's requirements. If the student's academic performance had been so poor as to preclude her/his passing, the instructor shall assign the grade of "F." Regulation VII., "Deficiencies," outlines the removal of the "I" grade. See the Registrar's Office website for more guidance on the use of the Incomplete grade under Incomplete grade page under the Faculty section.
W	Withdrawal without Penalty. Withdrawals from individual courses without penalty are not permitted after 60 percent of the academic term has passed, as specified by the official Academic Calendar, except in cases of hardship, as determined by the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate. Withdrawal from the Institute is not permitted after 60 percent of the academic term has passed, except in cases of hardship, as determined by the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate. With the exception of part-time graduate students, those who withdraw from the Institute and receive all grades of "W" customarily will not be permitted to enroll in courses in the next succeeding academic term. Regulation VII., "Withdrawal and Readmission," outlines the Institue's policies on readmission. Faculty are expected to return to students a graded assignment or other meaningful performance feedback prior to the deadline for withdrawing from classes so that students can make informed decisions about withdrawing.
NR	Not Reported. The "NR" grade is used when, by no fault of the student, the instructors fails to submit grades before the deadline.
IJ	Incomplete Judicial. The “IJ” is used when academic misconduct has been reported in a class and the investigation is being conducted. It is a placeholder grade that is changed to a permanent grade as determined by the outcome of the investigation. It remains in place until the charges are adjudicated and a proper final grade is determined and assigned.

- Final grades are reported to the Office of the Registrar at the end of each academic term.
- Progress report grades are submitted to the Office of the Registrar for all classes numbered 1000 and 2000 in the Fall Semester and Spring Semester. These grades are used for advising students, not for calculating any grade-point average (GPA) at Georgia Tech. Progress report grades are "S" or "U." A grade of "U" indicates that, based on the work completed to that point in the academic term, the student's standing is in the "D" or lower range. Progress report grades must

be submitted once 40 percent of the academic term has passed, as specified by the official Academic Calendar. The due date for reporting will be noon on Monday and the grades will be available to students that afternoon.

- If a final course grade is believed to be erroneous, the student should contact the professor as soon as possible. In general, no change of grade will be made after the end of the student's next academic term in residence.

Academic Average

The "academic average," or grade-point average (GPA), is the ratio of total quality points earned to total credit hours attempted.

When a student passes a course, she/he receives the designated number of credit hours; at the same time, she/he receives a certain number of quality points, based on the letter grade earned. Multiply the number of credit hours designated to the specific course by the numerical value of the letter grade earned to determine the number of quality points earned. Letter grades carry the following numerical values:

- "A" = 4
- "B" = 3
- "C" = 2
- "D" = 1

For example, when a student earns a letter grade of "C" in a 3-credit-hour course, she/he receives 6 quality points.

Grade-point averages are truncated after two decimal places.

A student who repeats a course for which the student has previously received credit (either by class work at the Institute, through AP/IB credit, or credit transferred from another school) forfeits the original credit in the event the student should fail the course on a subsequent attempt. Where a course has been repeated, both the original and subsequent grades are included in the average, but the credit is counted only once. The academic average includes all subsequent attempts, unless a grade substitution request has been approved and processed.

If a student takes the same course more than once, any later grade does not replace any earlier one. The academic average includes both attempts, unless a grade substitution has been approved and processed.

If a student takes a course on a Pass/Fail basis, the course is not included in their academic average.

For undergraduate students, the academic average is calculated by summing the number of quality points earned by the student for all courses in which they have enrolled as an undergraduate and dividing this sum by the number of credit hours designated to all courses in which they have enrolled as an undergraduate.

For graduate students, the academic average includes only the courses in which the student has enrolled after her/his entrance into the graduate division.

Pass/Fail Grading

A. General

1. At the option of the student's major school, credit toward a bachelor's degree may be allowed for courses taken under the pass/fail system and completed with a grade of "Pass."
2. The major school must approve all pass/fail courses included in the final program of study, and students should be aware of school requirements.
3. In graduate programs, thesis research hours will be evaluated on a pass/fail basis.
4. Pass/fail enrollment in any course may be restricted by the school or department offering the course.
5. Students who are permitted to register under the pass/fail system will be so designated on the official class rolls. The grades recorded will be "S" for "Satisfactory" or "U" for "Unsatisfactory." These grades will not be included in the calculation of the grade-point average and cannot be changed to a grade that will count in the average.
6. Withdrawals from courses taken on a pass/fail basis will follow the same rules that govern withdrawals from courses included in the grade-point average.
7. The deadline to change the grade mode from letter grade to pass/fail (and vice versa) is the same day as the Last Day to Withdraw from Individual Courses without a Penalty.

Grade mode changes are allowed online during the Registration Period. After the Registration Period ends, the following form must be completed and submitted to the Office of the Registrar.

Download Form

B. Credit Hours Permitted

1. The maximum number of credit hours that a student may earn on a pass/fail basis is related to the number of credit hours required for the program of study in which the student is enrolled.

Hours included in program of study	Hours allowed on pass/fail basis
45 to 70 credit hours	3 credit hours
71 to 90 credit hours	6 credit hours
91 or more credit hours	9 credit hours

2. For a second undergraduate degree, these limits apply to the credit hours included in the program of study for that second degree.
3. A master's degree program of study may include up to three semester credit hours on a pass/fail basis.

Progress Reports

Progress Report grades of "S" or "U" are issued for all students enrolled in 1000 and 2000 level courses in the Fall Semester and Spring Semester prior to midterm, a Progress Report grade of "U" indicates a performance level of "D" or lower. These are not permanent grades and never appear on a transcript, but are issued to help students assess where they stand in the class and obtain academic help from the faculty and the many academic resource services available on campus.

For more information, see Regulation V., "Grades/Average," Section A, "Grades."

Health Policies

A Medical Entrance Form and proof of required immunizations and tuberculosis screening must be on file with Stamps Health Services. Failure to provide this information may result in a health hold and delay of registration. All international students (F1 and J1 visas) are required to have health insurance coverage. Students may elect to purchase the health insurance made available by the health insurance provider contracted by Georgia Tech or may have their own comparable medical insurance.

Student Health Insurance

Source: Stamps Health Services

The Georgia Board of Regents (BOR) offers student health insurance for eligible students and their dependent(s). Two groups of students may purchase student health insurance: Mandatory and Voluntary. Mandatory students are required by the BOR to have student health insurance and the charge is applied automatically to the student's account along with tuition. Mandatory Graduates: Teaching Assistant, F1 or J1 visa holder, Research Assistant, Fellowship or Full tuition waiver. Mandatory Undergraduates: F1 or J1 visa holders. Mandatory students who already have health insurance may apply to waive the Board of Regents (BOR) student health insurance coverage.

There is a 30 day open enrollment period at the start of each semester to enroll for student insurance coverage, to enroll for the voluntary plan, or for mandatory students to add spouse/dependents coverage. For students and spouses with Board of Regents (BOR) student health insurance, Stamps Health Services (SHS) is the primary care provider. SHS renders care to students, spouses, and domestic partners. Dependent children are not eligible to be treated at SHS.

More information is available at www.health.gatech.edu

Immunizations

Source: Stamps Health Services

All incoming students must comply with the Board of Regents of the University System of Georgia's immunization requirements. It is strongly recommended that immunization requirements are met as soon as possible to avoid a registration hold. A registration hold keeps students from registering for classes

Incoming students must use Stamps Health Services Immunizations Form.

More information is available at www.health.gatech.edu

Special Health Considerations

Source: Georgia Tech Policy Library

It is the responsibility of all students to notify the Health Center, the School of Applied Physiology, and the Office of Disabled Student Services of any disability that would make participation in swimming, competitive sports, and aerobic training hazardous to their well-being. Any student requesting special consideration because of mental or physical disability should have their physician write an explanatory letter, giving full details of the disability and consequent limitations on physical activity, to the medical director of Health Services. This letter must accompany the Medical Entrance Form.

Institute Commitment to Diversity, Equity, and Inclusion

Diversity is one of Georgia Tech's greatest strengths and one of the major priorities identified in our twenty-five-year strategic plan.

> *"We will recruit, develop, retain, and engage a diverse cadre of students, faculty, and staff with a wide variety of background, perspectives, interests, and talents, creating a campus community that exemplifies the best in all of us—in our intellectual pursuits, our diversity of thought, our personal integrity, and our inclusive excellence."* — Georgia Tech Strategic Plan

At Tech, we embrace and leverage diversity in all its manifestations. We are proud that we are one of the most diverse universities in the world with students who represent every state in the nation and more than 100 countries. In the years ahead, our goal is to continue to build a campus culture of collegiality, close collaboration, global perspective, intercultural sensitivity, respect, and thoughtful interaction among a diverse community of students, employees, and alumni.

We realize that, in order to achieve our vision for Georgia Tech as a leader in influencing the major technological, social, and policy decisions in the twenty-first century, we must recruit and retain faculty, staff, and students from a wide array of backgrounds, perspectives, interests, and talents. In doing so, we will create a community that exemplifies the best in all of us – our intellectual pursuits, our diversity of thought, and our personal integrity. Our mission to achieve inclusive excellence means unleashing the full potential of Tech's human capacity to create a better, sustainable future for us all.

You are invited to join us on the journey of creating and sustaining a future that builds upon the talents of all members of our community in addressing the major challenges of this and future generations.

The Office of the President
Georgia Institute of Technology

Intellectual Property Policy

The Georgia Institute of Technology is dedicated to teaching, research, and the extension of knowledge to the public. Its personnel recognize as two of their major objectives, the production of new knowledge and the dissemination of both old and new knowledge. Inherent in these objectives is the need to encourage the development of new and useful devices and processes, the publication of scholarly works and educational materials, the development of computer software, and other forms of Intellectual Property.

The Institute's Intellectual Property Policy, concerning inventions, copyright, and computer software, **applies to students** as well as to faculty and staff. Adherence thereto is a condition of continued enrollment at the Institute.

All full or part-time faculty and staff shall, as a condition of employment with the Institute, execute an agreement, assigning all rights, title, and interest, to the extent prescribed in this policy, in any Intellectual Property to the Georgia Tech Research Corporation.

Students shall be required to execute an agreement:

1. When working on a research project funded by an entity other than Georgia Institute of Technology, the Georgia Tech Foundation, or the Board of Regents;

2. When employed by Georgia Institute of Technology; or
3. When required by the Office of the Provost. Such requirement may be recommended by a faculty member who has students working in faculty-directed research.

For more information and the full text from the Institute's Intellectual Property policies, visit Georgia Tech's online Policy Library and the Faculty Handbook.

Georgia Tech Research Corporation

Required Computer Ownership

In an effort to foster equal access to computers and to make the most of the teaching and learning technology available at Georgia Tech, all undergraduate students entering Georgia Tech under this or subsequent catalogs are required to own or lease a computer. The minimum hardware and software requirements (as well as purchasing and financing options) are sent each spring to students accepted for the summer and fall semesters, and in the fall to students accepted for spring semester.

Because computer ownership is mandatory, an average cost for the minimum hardware and software required can be included in computing a new student's cost of education for the purpose of determining their eligibility for all forms of student financial aid. Students should contact the Office of Scholarships and Financial Aid for more information.

Student Computer Ownership Website

Sexual Misconduct Policy

The official and most current version of the Sexual Misconduct Policy is available in the Georgia Tech Policy Library.

Sexual Misconduct Policy

Student Absence from Class Due to Illness or Personal Emergencies

Expectations, Rights, and Responsibilities

A. A student may miss class on occasion due to medical issues. The following statement intends to describe the expectations, rights, and responsibilities of all involved including students, Office of Student Life, instructors, and health care providers. The information is intended to give students better direction as to how they should proceed to notify instructors when they are ill and need to miss class and what kind of documentation they should provide and to whom. The information is intended to provide faculty, instructors, information that will be more useful to them in determining the student's options for making up the work, or understanding the implications on their grade in the class. The information is intended to provide some guidance to the on-campus health services staff and off-campus health care providers in terms of what kinds of documentation is needed and how it will be handled once provided.

1. **Students: Expectations, Rights, and Responsibilities**

Students who need to miss class due to illness should be aware of the following:

a. If ill, and possibly contagious, students are expected to take appropriate action including not coming to class and seeking medical treatment.
b. Students have the right to expect that their privacy will be protected under HIPAA but they must follow proper procedures in order to ensure that health care information is kept private.
c. Students are responsible for seeking medical attention and for obtaining some type of documentation that would include the following minimal information:
    i. Date of the visit
    ii. Name of medical facility where treatment occurred
    iii. Diagnosis or indication of whether class absence is recommended or required
    iv. Expected duration of the recovery
d. Students are responsible for providing the documentation to the Office of Student Life where it will be treated and handled confidentially with necessary information being submitted to the student's instructors for that term.

2. **Office of Student Life: Expectations, Rights, and Responsibilities**

In regard to supporting students who need to miss class due to illness the Office of Student Life is expected to remain aware of the following:

a. It will serve as the collection point for medical documentation and treat it in a confidential manner.
b. It will share the medical documentation with appropriate instructional faculty. Sufficient information from the medical documentation to ensure that the dates of illness or of treatment for the illness occurred will be shared with the instructional faculty.
c. It will share sufficient information as to help determine whether the illness was of sufficient concern that missing class was recommended or required.
d. It will answer questions that instructional faculty may have if they are unclear about what to do with the information.

3. **Instructors of Classes: Expectations, Rights, and Responsibilities**

In regard to supporting students who need to miss class due to illness, instructors are expected to remain aware of the following:

a. It is the responsibility of the instructors to respect the student's right to confidentiality and understand that medical documentation will be handled by the Office of Student Life in an appropriate manner.
b. It is expected that instructors will not ask the student directly for medical documentation. If it is

provided without being requested, the instructors should return it to the student or destroy it.

c. Instructors are expected to:
   i. Work with the student to make up the missed assignments, when possible.
   ii. Work with the student to find alternatives, if possible, if the assignments missed cannot be made up.
   iii. Do so within a reasonable timeframe.

4. **Medical Professionals: Expectations, Rights, and Responsibilities**

In regard to supporting students who need to miss class due to illness, medical professionals are expected to remain aware of the following:

a. At the request of the student (patient), it is expected that some type of document be provided that indicates at minimum the date of the visit or treatment. If the student is to miss class, it is expected that the student would have sufficient information from the medical facility to support that need.
b. It is expected that the medical professional will provide sufficient information to the student so that the student can then provide it to the Office of Student Life.
c. The medical professional can expect the information to be handled in a confidential manner.
d. The medical documentation must be on official letterhead of the facility and contain a date.

B. A student may miss class on occasion due to personal emergencies. Whatever the type of personal that exists, there are expectations on part of the students, the Office of Student Life, and the instructional faculty.

1. **Students: Expectations, Rights, and Responsibilities**

Students who need to miss class due to personal emergencies should remain aware of the following:

a. Some type of documentation is required by the Office of Student Life. This could take the form of an obituary, travel itinerary, or other type of document that would include a date and possibly some type of explanation for the absence.
b. The length of the absence needs to be clear as part of the documentation.
c. Student have the right to expect that their privacy will be protected under FERPA.

2. **Office of Student Life: Expectations, Rights, and Responsibilities**

In regard to supporting students who need to miss class due to personal emergencies the Office of Student Life will remain aware of the following:

a. It will serve as the collection point for documentation and treat it in a confidential manner.
b. It will share with appropriate instructors sufficient information from the documentation to ensure that the dates of the incident or event are clear and that it was a severe enough life interruption to cause absence from class.
c. It will answer questions that instructional faculty may have if they are unclear about what to do with the information.

3. **Faculty/Instructors of Classes: Expectations, Rights, and Responsibilities**

In regard to supporting students who need to miss class due to personal emergencies, instructors are expected to remain aware of the following:

a. It is the responsibility of the instructors to respect the student's right to confidentiality and understand that the documentation will be handled by the Office of Student Life in an appropriate manner.
b. It is expected that instructors will not ask the student directly for documentation. If it is provided without being requested, the instructors should return it to the student or destroy it. Depending upon the kind of documentation it is, there could be other information in it that could compromise the privacy of others, including other family members.
c. Instructors are expected to:
   i. Work with the student to make up the missed assignments, when possible.
   ii. Work with the student to find alternatives, if possible, if the assignments missed cannot be made up.
   iii. Do so within a reasonable timeframe.

- Application to Request a Leave of Absence
- Application to Request to Return from a Leave of Absence

RULES AND REGULATIONS

- I. Purpose
- II. Academic Calendar
- III. Notices
- IV. Attendance
- V. Grades / Average
- VI. Scholastic Regulations
- VII. Deficiencies
- VIII. Withdrawal/Readmission
- IX. Scheduling
- X. Pass/Fail Grading
- XI. Cross Enrollment and Concurrent Registration
- XII. Examinations
- XIII. Undergraduate Degrees
- XIV. Graduate Degrees
- XV. Medical Regulations
- XVI. Extracurricular Activities
- XVII. Academic Honor Code
- XVIII. Code of Conduct
- XIX. Grievance Procedures
- XX. Exceptions
- XXI. Student-Faculty Expectations

I. Purpose

These regulations are intended to set forth the requirements of the faculty to the end that a large student body may live and work together harmoniously with a minimum of friction and misunderstanding. Each student is expected to be a law-abiding citizen and to obey the laws of the city of Atlanta, Fulton County, the state of Georgia, and the United States.

II. Academic Calendar

A. Standard Calendar

Georgia Tech's standard Academic Calendar consists of a Fall Semester, a Spring Semester, and an accelerated Summer Session. Each Fall Semester and each Spring Semester normally includes approximately fifteen weeks of instruction plus one week of final examinations. A normal Summer Session includes approximately eleven weeks of instruction plus one week of final examinations. Each Academic Year consists of one sequence of a Fall Semester followed by a Spring Semester. The word "term" may refer to a Fall Semester, a Spring Semester, or a Summer Session. The Office of the Registrar publishes the official Academic Calendar for each term. Due to variations in the yearly calendar and the need to balance the dates of campus events, particularly in the Fall Semester, the Registrar uses discretion, as appropriate, to set dates on the Academic Calendar, such as Fall Recess, the Last Day to Withdraw from Individual Courses without a Penalty, and the Progress Report Grade Due Date. See Catalog Regulation V. Grades and Scholastic Average for more information.

B. Other Academic Terms

In addition to the standard Academic Calendar, some programs may be offered on other schedules. All such offerings are subject to the approval of the Institute Undergraduate Curriculum Committee, Institute Graduate Committee, and/or the Registrar, as appropriate. With approval, such programs may operate under different academic rules, such as credit hour limits or withdrawal dates, than those specified for standard academic terms.

C. Curriculum Year

1. Requirements for degrees and minors shall be specified for each Curriculum Year, which is comprised of a Summer Session plus the immediately following Fall Semester and Spring Semester. This designation shall be independent of any schedule for publication of such requirements in printed or electronic form.
2. All changes in degree and minor requirements shall become effective at the beginning of the next Curriculum Year following final approval by the Institute Undergraduate Curriculum Committee, Institute Graduate Committee, Academic Senate, and/or University System, as appropriate.
3. The Office of the Registrar shall maintain an archival record of all degree and minor requirements associated with each curriculum year.

D. Unit of Credit Defined

The current Academic Calendar is semester#based, consisting of 15 weeks of instruction in a standard Fall/Spring semester where one contact hour is equal to 50 minutes of instruction. The amount of class attendance is 750 minutes for each scheduled credit hour in a standard semester.

One unit of credit represents how much time a typical student is expected to devote to learning in a typical week of study. Each unit of credit is representative of in#seat effort and out#of#seat effort. One credit awarded yields a total of 3 contact hours of effort on the student's behalf. The breakdown of effort from in#seat effort (scheduled time) vs. out#of#seat effort (non#scheduled time) differs by course structure and schedule type.

For scheduled time, one 15#minute instructional break per 75 minutes of continuous instruction will be included for courses meeting in durations of greater than 75 continuous minutes.

This policy is consistent with specifications in the University System of Georgia Academic and Student Affairs Handbook, Section 2.1 Semester System, Uniform Academic Calendar, Cancellation of Classes and Religious Holidays. The policy is also consistent with the Southern Association of Colleges and Schools policy statement on credit hours.

The amount of time that students should expect to spend in#seat (scheduled time) and out#of#seat (nonscheduled time) should be commensurate with catalog structure of the course as approved by the Institute Undergraduate Curriculum Committee and/or the Institute Graduate Curriculum Committee. The appropriate committee must approve exceptions to this policy.

At Georgia Tech, courses have historically been classified as 'lecture' with a 1:1 ratio and/or 'laboratory' with a 3:1 ratio. These labels have become increasingly inconsistent with the creation of new scheduling types as faculty introduce new pedagogies in the classroom. The list below offers flexibility in how the Institution refers to the in#seat/out#of#seat efforts for existing and new scheduling types.

Effort 1 (Lecture)

"Lecture" based courses yield a 1:1 ratio of in#seat effort to credit hours. This means that for every 1 credit hour of lecture, there is 1 scheduled contact hour and an expectation for 2 contact hours of nonscheduled effort.

Effort 2 (Studio)

"Studio" based courses yield a 2:1 ratio of in#seat effort to credit hours. This means that for every 1 credit hour of studio, there are 2 scheduled contact hours and an expectation for 1 contact hour of nonscheduled effort.

Effort 3 (Laboratory)

"Laboratory" based courses yield a 3:1 ratio of effort to credit hours. There are three types in Banner; Supervised, Unsupervised, and Mixed.

- "Supervised Laboratory" means that for every 1 credit hour of supervised laboratory, there are 3 scheduled contact hours and an expectation for no non#scheduled effort besides the completion of a post#laboratory report.
- "Unsupervised Laboratory" means that for every 1 credit hour of unsupervised laboratory, there are 3 non#scheduled contact hours and an expectation for no scheduled effort.
- "Mixed Laboratory" means that for laboratories worth 2 credits or more in even increments (ie: 2, 4, 6, credit hours, etc.), that half of the total credit hours are treated as supervised laboratories and half are treated as unsupervised laboratories. Breakdown in whole credits only.

III. Notices

A. Notices

All enrolled students have an e-mail account provided by Georgia Tech. This account is a student's official point of contact with the Institute, and she/he is expected to check it each school day. Students are also expected to be aware of notices that appear on the Student Access System and of general notices that are in the *Technique*. It is the student's responsibility to check the Student Access System, both during the Drop/Add Period and during the academic term, in order to verify the accuracy of their course schedule and to become aware of important notices. A student should verify their course schedule at least once during the first five weeks of the academic term and once after Mid-term.

B. Change of Address

When a student's address changes, the student is responsible for updating their record in the Student Access System within one week of the change.

C. Unclaimed Mail

Students are responsible for returning to the front window of the Post Office all mail in their Post Office boxes that is unclaimed after three days.

D. Physical Location of Students

To comply with federal regulations, the Higher Education Act, the Georgia Institute of Technology must confirm where our students are physically located while enrolled. In an effort to capture this information, a hold will be placed in the registration system during registration periods. Students are responsible for updating this information when it changes.

More information is on the Office of the Registrar website at: https://registrar.gatech.edu/info/common-registration-error-messages.

IV. Attendance

A. General

1. Each term, a course listing is published showing the time period for each class.
2. If an instructor should be late in meeting the class, the students shall wait twenty minutes after the published starting time. If the instructor has not arrived by that time, the students may leave unless specifically notified to await the instructor's arrival.

B. Class Attendance

1. There are no formal institutional requirements regarding class attendance at Georgia Tech. The resources of the Institute are provided for the intellectual growth and development of the students who attend. A schedule of courses is provided for the students and faculty to facilitate an orderly arrangement of the program of instruction. The fact that classes are scheduled is evidence that attendance is important; students should, therefore, maintain regular attendance if they are to attain maximum success in the pursuit of their studies.
2. All students are responsible for obtaining an understanding of each instructor's policy regarding absences; all students are expected to attend announced quizzes, laboratory periods, and final examinations. Although it is recognized that occasionally it may be necessary for students to be absent from scheduled classes or laboratories for personal reasons, students are responsible for all material covered in their absences, and they are responsible for the academic consequences of their absences. Students should discuss planned absences with their instructors as soon as possible after the beginning of an academic term. Work missed may be made up at the discretion of the instructors.
3. In the event of a medical emergency or an illness that is severe enough to require medical attention, students are responsible for contacting the Office of the Dean of Students as soon as possible to report the medical issue or emergency, providing dated documentation from a medical professional and requesting assistance in notifying their instructors. The medical documentation will be handled confidentially within the Office of the Dean of Students and will inform a decision as to whether communication with instructional faculty is appropriate. It is the expectation of the Institute that instructional faculty will honor a request from the Office of the Dean of Students to excuse a medical emergency or illness and allow make-up of the work missed, including homeworks, quizzes, presentations, examinations, or other class assignments.
4. Students who are absent because of participation in approved Institute activities (such as field trips, professional conferences, and athletic events) will be permitted to make up the work missed during their absences. Approval of such activities will be granted by the Student Academic and Financial Affairs Committee of the Academic Senate, and statements of the approved absence may be obtained from the Office of the Registrar. Course instructors are responsible for establishing reasonable deadlines and/or make-up materials for the missed work, and for clearly communicating this information to the relevant student(s), when absences for Institute activities are approved.

a. Student Responsibilities
    i. Individual students requesting approval from the Student Academic and Financial Affairs Committee are expected to do so at least two weeks before their requested absences;
    ii. Students are expected to inform their instructors about their approved absence by the end of the class meeting immediately following receipt of their approval notice.
b. Course Instructor Responsibilities
    i. Course instructors receiving timely notification of student absence (as outlined above) are expected to establish reasonable deadlines and/or make-up materials for missed work, and for clearly communicating this information to the relevant student(s).
c. Faculty/Staff Sponsor Responsibilities
    i. Faculty/staff sponsors of student organizations are expected to submit requests for absence approval, to the Office of the Registrar, at least one week before the date of the expected absence(s);
    ii. Faculty/staff sponsors are expected to provide the Office of the Registrar with roster changes in as timely a fashion as possible, to reduce negative impact on the ability of students and instructors to coordinate their plans;
    iii. Faculty/staff sponsors are expected to notify students of approved absences, along with instructions for notifying their instructors, within two business days of receipt of approval from the Office of the Registrar.

5. Students who are absent because of participation in a particular religious observance will be permitted to make up the work missed during their absence with no late penalty, provided the student informs the course instructor of the upcoming absence, in writing, within the first two weeks of class, and provided the student makes up the missed material within the time frame established by the course instructor. Exercising one's rights under this policy is subject to the Georgia Tech Honor Code. The course instructor is responsible for establishing reasonable deadlines and/or make-up material for the missed work, and for clearly communicating this information to the student. Students may choose to appeal to the Student Academic and Financial Affairs Committee of the Academic Senate for formal approval of this type of absence.
6. In alignment with **section 4.1.3** of the **University System of Georgia (USG)'s general Student Affairs policy**, students are encouraged to vote in all federal, state, and local elections. Students are encouraged to plan their voting to avoid missing classes. Students are also encouraged to participate in early voting whenever possible or to vote before, in between, or after classes on election day. For students who are registered elsewhere, they are encouraged to request absentee ballots by the appropriate deadlines. However, faculty should not penalize students for missing a class to vote on election day. In this case, a student should inform the course instructor at least 5 business days before election day about the absence for voting in writing. The course instructor is expected treat the absence as an officially excused absence if a student chooses to vote in person on election day.
7. Faculty members must provide students with reasonable accommodations for making up graded work missed while on jury duty.

V. Grades / Average

A. Grades

The letter grades used in the calculation of grade-point average (GPA) are as follows:

A	Excellent. Four quality points.
B	Good. Three quality points.
C	Satisfactory. Two quality points.
D	Passing. One quality point.
F	Failure. No quality points. If the course is required, the student must repeat it.

Guiding principles for the determination of grades:

- The grading system an instructor uses, including relative weighting of different types of grading instruments (e.g., _% for homework, _ % for quizzes) must be communicated to students in the course syllabus and aligned with the course objectives, teaching activities, assignments, and assessments. For guidance on specific approaches to grading, see the Center for Teaching and Learning website (https://ctl.gatech.edu/grading-and-assessment-resources).
- Students should be able to easily translate their scores on assignments to their course letter grade. The criteria for final grades should be clearly indicated on the syllabus. For example, A grade of "A" corresponds to a percentage grade of __% or above on graded assignments, a grade of "B" corresponds to a percentage grade of __ %-__% , etc.
- Students must be graded against a set of standards, not solely on their performance relative to their classmates.
- The grading process and scoring methods should be clear and provide students with meaningful feedback throughout the term, allowing students to reasonably predict progress towards their final grade as the semester advances.
- It is the responsibility of the instructor to design assignments and scoring criteria that are consistent with the published grading scheme. Grade adjustments may be made to increase, not lower, students' grades.

The following grades are used under special conditions and are not included in the calculation of grade-point average (GPA):

S	Satisfactory
U	Unsatisfactory
V	No credit earned. The "V" grade is used when a student audits a course.

The following grades are used in the cases indicated and are not be included in the calculation of grade-point average (GPA):

I	Incomplete. The "I" grade is used when, for reasons beyond her/his control and deemed acceptable by the instructor, a student whose academic performance had been satisfactory becomes unable to fulfill a course's requirements. If the student's academic performance had been so poor as to preclude her/his passing, the instructor shall assign the grade of "F." Regulation VII., "Deficiencies," outlines the removal of the "I" grade. See the Registrar's Office website for more guidance on the use of the Incomplete grade under Incomplete grade page under the Faculty section.
W	Withdrawal without Penalty. Withdrawals from individual courses without penalty are not permitted after 60 percent of the academic term has passed, as specified by the official Academic Calendar, except in cases of hardship, as determined by the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate. Withdrawal from the Institute is not permitted after 60 percent of the academic term has passed, except in cases of hardship, as determined by the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate. With the exception of part-time graduate students, those who withdraw from the Institute and receive all grades of "W" customarily will not be permitted to enroll in courses in the next succeeding academic term. Regulation VII., "Withdrawal and Readmission," outlines the Institue's policies on readmission. Faculty are expected to return to students a graded assignment or other meaningful performance feedback prior to the deadline for withdrawing from classes so that students can make informed decisions about withdrawing.
NR	Not Reported. The "NR" grade is used when, by no fault of the student, the instructors fails to submit grades before the deadline.
IJ	Incomplete Judicial. The "IJ" is used when academic misconduct has been reported in a class and the investigation is being conducted. It is a placeholder grade that is changed to a permanent grade as determined by the outcome of the investigation. It remains in place until the charges are adjudicated and a proper final grade is determined and assigned.

- Final grades are reported to the Office of the Registrar at the end of each academic term.
- Progress report grades are submitted to the Office of the Registrar for all classes numbered 1000 and 2000 in the Fall Semester and Spring Semester. These grades are used for advising students, not for calculating any grade-point average (GPA) at Georgia Tech. Progress report grades are "S" or "U." A grade of "U" indicates that, based on the work completed to that point in the academic term, the student's standing is in the "D" or lower range. Progress report grades must be submitted once 40 percent of the academic term has passed, as specified by the official Academic Calendar. The due date for reporting will be noon on Monday and the grades will be available to students that afternoon.
- If a final course grade is believed to be erroneous, the student should contact the professor as soon as possible. In general, no change of grade will be made after the end of the student's next academic term in residence.

B. Academic Average

The "academic average," or grade-point average (GPA), is the ratio of total quality points earned to total credit hours attempted.

When a student passes a course, she/he receives the designated number of credit hours; at the same time, she/he receives a certain number of quality points, based on the letter grade earned. Multiply the number of credit hours designated to the specific course by the numerical value of the letter grade earned to determine the number of quality points earned. Letter grades carry the following numerical values:

- "A" = 4
- "B" = 3
- "C" = 2
- "D" = 1

For example, when a student earns a letter grade of "C" in a 3-credit-hour course, she/he receives 6 quality points.

Grade-point averages are truncated after two decimal places.

A student who repeats a course for which the student has previously received credit (either by class work at the Institute, through AP/IB credit, or credit transferred from another school) forfeits the original credit in the event the student should fail the course on a subsequent attempt. Where a course has been repeated, both the original and subsequent grades are included in the average, but the credit is counted only once. The academic average includes all subsequent attempts, unless a grade substitution request has been approved and processed.

If a student takes the same course more than once, any later grade does not replace any earlier one. The academic average includes both attempts, unless a grade substitution has been approved and processed.

If a student takes a course on a Pass/Fail basis, the course is not included in their academic average.

For undergraduate students, the academic average is calculated by summing the number of quality points earned by the student for all courses in which they have enrolled as an undergraduate and dividing this sum by the number of credit hours designated to all courses in which they have enrolled as an undergraduate.

For graduate students, the academic average includes only the courses in which the student has enrolled after her/his entrance into the graduate division.

C. Grade Substitution for Undergraduate Students

Undergraduate students may repeat courses for grade substitution according to the following set of criteria. If these conditions are not met, the general policy governing repeated courses applies.

1. Undergraduate students may repeat for grade substitution up to two GT courses with posted letter grades of D or F. These courses will be excluded from calculation of their cumulative grade point average.
2. A course can be taken for grade substitution only once and must be repeated within one calendar year. Students who completed the Georgia Tech course prior to matriculating as first-year, degree-seeking undergraduates (e.g., joint/dual enrollment or in a non-degree seeking status) have one calendar year from their matriculation date to repeat the course.
3. A course is not eligible for grade substitution if the student was found responsible for any academic misconduct in that course regardless of how many times it is repeated.
4. Grades excluded under previous Institute rules (such as the Grade Substitution policy that was in effect up until 2019) count toward the maximum two courses allowed for substitution.
5. Once a grade substitution is posted, the student cannot remove the exclusion or change it to another course at a later date. A student cannot request a grade substitution after they have graduated.
6. The application for grade substitution must be filed with the Registrar's Office no later than the deadline for withdrawing from a course during the student's next term of enrollment after the course is repeated.
7. Students should not submit the form during the term they are repeating the course.

The original grade and the repeated grades will all appear on the official transcript. Once a grade substitution is applied to a course, the credit hours attempted and earned on the course will be removed from the calculation of the cumulative grade point. Excluded courses and hours will continue to be counted in calculations of satisfactory progress, for financial aid eligibility, and for tuition.

Students should be aware that many graduate and professional schools recalculate grade point averages in the process of considering an applicant for admission to such programs. This recalculation may include restoring the grades of the repeated classes and their effects on the cumulative grade point average.

The grade substitution policy (including, but not limited to, course eligibility, number of courses, time limits, and deadlines) is not subject to exceptions and *may not* be petitioned to the Undergraduate Institute Curriculum Committee.

Download Form

Frequently Asked Questions about the Undergraduate Grade Substitution Policy

D. Grade Substitution for Graduate Students

Graduate students may repeat a course for grade substitution according to the following set of criteria. If these conditions are not met, the general policy governing repeated courses applies.

1. Graduate students may repeat for grade substitution one GT course with posted letter grades of C, D or F. The course will be excluded from calculation of their cumulative grade point average.
2. The one-substitution limit holds during the entirety of their time as a graduate student regardless of the number of degree programs that they might enroll in.
3. A course can be taken for grade substitution only once. Since not all graduate-level courses are offered each term, the student should consult with their academic advisor about planning to retake the course. Due to course scheduling constraints, some courses may not be repeatable in a timely fashion. This assumes the course is offered again in a future term.
4. A course is not eligible for grade substitution if the student was found responsible for any academic misconduct in that course regardless of how many times it is repeated.
5. Once a grade substitution is posted, the student cannot remove the exclusion or change it to another course at a later date. A student cannot request a grade substitution after they have graduated.
6. The application for grade substitution must be filed with the Registrar's Office no later than the deadline for withdrawing from a course during the student's next term of enrollment after the course is repeated.
7. Students cannot submit the form until after the course is repeated.
8. The original grade and the repeated grade will all appear on the official transcript. Once a grade substitution is applied to a course, the credit hours attempted and earned on the course will be removed from the calculation of the cumulative grade point. The excluded course and hours will continue to be counted in calculations of satisfactory progress, for financial aid eligibility, and for tuition.
9. This policy cannot be used to extend the applicable dates of an I-20 or other type of visa.

The grade substitution policy (including, but not limited to, course eligibility, time limit, and deadline) is not subject to exceptions and *may not* be petitioned to the Institute Graduate Curriculum Committee.

Applying for Graduate Grade Substitution

VI. Scholastic Regulations

A. Classification of Students

1. Undergraduate students, with the exception of non-degree-seeking students, shall be classified at the end of each academic term by the Office of the Registrar on the basis of the total number of attempted credit hours for which they have successfully earned credit in accordance with the following:

Freshman	0-29 credit hours
Sophomore	30-59 credit hours
Junior	60-89 credit hours
Senior	90+ credit hours

2. Graduate and special students who have completed all requirements for a particular classification, as defined by their major department, may request reclassification through their major department.
3. Students scheduled for at least twelve (12) credit hours in a semester are classified as full-time students; those scheduled for six to eleven (6-11) hours are classified as part-time students; and those scheduled for one to five (1-5) hours are classified as less-than-part-time students.

B. Eligibility for Class Rings

A student may purchase a class ring any time after successfully earning credit for 70 attempted credit hours.

C. Academic Standing

1. The assignment of academic standing is based on both the student's most recent academic term and their cumulative grade-point average.
2. The minimum satisfactory grade-point average (GPA) is 1.70 for freshmen and joint-enrolled high school students; 1.80 for sophomores; 1.95 for juniors; 2.00 for seniors and special undergraduates; 2.70 for master's and special graduate students; and, 3.00 for doctoral students.
3. Students not on academic probation are in good academic standing.
4. Academic warning
   a. Academic warning is a subcategory of good academic standing, differing only in the maximum allowable schedule load.
   b. A student who has a cumulative grade-point average below the minimum satisfactory scholarship requirement, or whose cumulative grade-point average for work taken during any term is below this requirement, shall be placed on academic warning.
   c. A student on academic warning whose grade-point average for the academic term is above the minimum satisfactory scholarship requirement and cumulative grade-point average is below the minimum satisfactory scholarship requirement shall remain on academic warning.
   d. A student on academic warning will be deemed in good academic standing and removed from academic warning if both the grade-point average for the academic term and the cumulative grade-point average are above the minimum satisfactory scholarship requirement.
5. Academic probation
   a. A student on academic warning whose grade-point average is below the minimum satisfactory scholarship requirement for any academic term shall be placed on academic probation.
   b. An undergraduate student in good academic standing whose grade-point average for any academic term is below 1.00, based on at least six graded hours, shall be placed on academic probation.
   c. A student also may be placed on academic probation through other actions, as described in the following section.
   d. A student on academic probation will be deemed in good academic standing and removed from academic probation if both the grade-point average for the academic term and the cumulative grade-point average are above the minimum satisfactory scholarship requirement.
6. Dismissal for unsatisfactory scholarship
   a. The Institute may drop from the rolls at any time a student whose record in scholarship is unsatisfactory.
   b. A graduate student whose grade-point average for any term is 2.00 or below may be placed on academic probation or dropped, regardless of the student's previous record.
   c. A student on academic probation whose grade-point average for the academic term of probation is below the minimum satisfactory scholarship requirement and whose cumulative grade-point average is below the minimum satisfactory scholarship requirement shall be dropped from the rolls for unsatisfactory scholarship.
   d. An undergraduate student on academic warning whose grade-point average for any term is below 1.00, based on at least six graded hours, and cumulative grade-point average is below the minimum satisfactory scholarship requirement shall be dropped from the rolls for unsatisfactory scholarship.
   e. The record of a student on academic probation whose grade-point average for the academic term in unsatisfactory, but whose overall academic record is satisfactory, may be reviewed by the Institute Undergraduate Curriculum Committee or the Institute Graduate Curriculum Committee, as appropriate. The student may be dropped or may be continued on academic probation.
7. Academic review
   A student who normally would be dropped from the rolls for academic deficiencies, but appears from the record not to have completed the academic term, may be placed on academic review. This is a temporary standing that makes the student ineligible for registration. If no acceptable explanation is given within a reasonable time, the standing is changed to drop.
8. The academic standing regulations given previously for graduate students do not preclude a school from having more rigorous requirements.

D. Satisfactory Academic Progress Toward Degree Completion

1. Undergraduate Students.
   a. Satisfactory academic progress toward degree completion means that for each term of enrollment, the student completes a course or courses with the minimum necessary grades that are either prerequisites for courses required in the major or that are degree applicable to stay on track towards graduation. It is noted that some majors may require a minimum grade that is higher than "D" in specified courses.
      i. If a student does not make any progress toward degree completion during an academic term (by either not passing or earning minimum required grades or completing any courses that apply toward unfulfilled degree requirements in the major), they will be reviewed by their academic unit/major and a success plan for the next academic semester must be

completed and submitted to the Registrar's Office in the form of a departmental contract.

ii. If a student fails to make any progress toward degree completion in the following term of enrollment, they may be placed on academic warning (regardless of grade point average).

b. If a student withdraws from all courses in a term, there will be no change in status. However, if a student withdraws from all courses in a second term of enrollment, they will be placed on warning for lack of satisfactory academic progress towards degree completion. If withdrawal occurs in a third term of enrollment, the status will be revised to probation. If withdrawal occurs in a fourth term of enrollment, the student will be placed on academic dismissal for lack of satisfactory progress towards degree completion. The number of withdrawal terms is cumulative and irrespective of whether they occur consecutively. Withdrawals either during the term or when approved retroactively through a petition to the faculty count for this purpose.

c. Students applying for readmission may be denied based on prior terms of withdrawals.

d. Eligibility for financial aid, NCAA Division I sports, etc. may be predicated on different satisfactory progress requirements. Information on those requirements should be directed to the appropriate office on campus and should not be confused with this academic policy.

2. Graduate Students in Master's Programs.

a. Students should plan to graduate well within six years from the time that they first enrolled in their master's degree program. Satisfactory academic progress toward degree completion means that within each academic year (summer-fall-spring), the student completes at least two courses with the minimum necessary grades required in the major or that are degree applicable to stay on track towards graduation.

i. If enrolled in a thesis program and taking thesis hours, the student must earn a satisfactory grade in thesis hours.

ii. If the student exceeds the 6-year rule for degree completion, the program may place the student on academic Warning, Probation or Dismissal.

iii. If a student does not make satisfactory degree progress toward degree completion during an academic year (by either not passing or earning minimum required grades, or by not completing two courses that apply toward unfulfilled degree requirements in the major), they will be reviewed by their academic unit/major and a success plan for the next academic semester must be completed and submitted to the Registrar's Office in the form of a departmental contract.

iv. If a student fails to make any progress toward degree completion in the following term of enrollment, they may be placed on academic warning (regardless of grade point average).

b. If a student withdraws courses in a consistent manner or withdraws from all courses in a term in a consistent manner, the program will review the student's record each term and adjust academic standing as needed with the Registrar's Office. A student could be placed on academic Warning, Probation, or Dismissal depending on the pattern(s) of course and term withdrawals. Students applying for readmission may be denied based on prior terms of withdrawals.

c. Eligibility for financial aid, NCAA Division I sports, etc. may be predicated on different satisfactory progress requirements. Information on those requirements should be directed to the appropriate office on campus and should not be confused with this academic policy.

E. Maximum Schedule Load

1. The maximum number of credit hours for which an undergraduate student may register in a Fall Semester or Spring Semester, based on their academic standing, is as follows:

Good	21 credit hours
Warning	16 credit hours
Probation	14 credit hours

2. The maximum number of credit hours for which an undergraduate student may register in a regular Summer Session, based on their academic standing, is as follows:

Good	16 credit hours
Warning	14credit hours
Probation	12 credit hours

3. Students who are on probation or probation from dismissal are required to enroll in and successfully complete GT 2100 by earning a grade of 'S'. This course does not count toward graduation requirements nor would it count against the maximum course loads listed above.
4. A graduate student may register for a maximum of 21 credit hours in a Fall Semester or Spring Semester and a maximum of 16 credit hours during a regular Summer Session.
5. Requests for schedule overloads must be recommended by the student's major school and approved by the Institute Undergraduate Curriculum Committee or Institute Graduate Curriculum Committee, as appropriate.
6. During Phase 1 Registration, the Institute reserves the right to limit undergraduate students to 18 credits maximum for the Fall Semester and Spring Semester and to limit graduate students to less than 21 credit hours depending upon the needs of the program or school.

F. Academic Honors

The Institute encourages excellence in scholarship and gives official recognition to undergraduate students whose work is superior in any given academic term.

1. Dean's List

a. Full-time Students. The Dean's List includes all degree-seeking undergraduates who, during the preceding academic term, earned a grade-point average (GPA) of 3.00 or higher, completed a schedule of at least twelve credit hours of coursework on a letter-grade basis, and are not on academic warning or probation or subject to any disciplinary action. All grades must be reported.

b. Part-time Students. The Part-time Dean's List for students enrolled in less than 12 hours includes all degree-seeking undergraduates who, during the preceding academic term, earned a grade-point average (GPA) of 3.00 or higher, completed a schedule of at least three credit hours of coursework on a letter-grade basis, and are not on academic warning or probation or subject to any disciplinary action. All grades must be reported.

2. Faculty Honors

a. Faculty Honors includes all degree-seeking undergraduates who, during the preceding academic term, earned a grade-point

average (GPA) of 4.00, completed a schedule of at least twelve credit hours of coursework on a letter-grade basis with no "W" grades, and are not on academic warning or probation or subject to any disciplinary action. All grades must be reported.

G. Change of Major

1. Undergraduate students, by filing the required form, will be permitted one unrestricted transfer between majors until they have accumulated credit for sixty hours (this includes AP, IB, and other types of transfer credit including courses taken at Georgia Tech). After sixty hours or upon subsequent request for transfer, the transfer will be permitted at the discretion of the school that the student is seeking to enter. Students who transfer from another institution to pursue a degree at Georgia Tech will be permitted to change their major only at the discretion of the school that the student is seeking to enter. Transfer students are not eligible for the one unrestricted change of major.

   The Institute reserves the right to limit access to programs due to capacity or other issues that affect how many students can be accommodated in that program. Should a School wish to limit access to a program, permission must be sought from the Provost's Office and, if granted, the program website must place a notice on its website with an effective date. The Office of the Registrar will be notified when the approval is granted and will place a notice in a visible location on its website as well. Before deciding about a change of major, the student should consult with the academic advisor in the new major to determine if any restrictions are in place at that time.

   Some programs have existing change-of-major conditions due to grade, GPA, or other requirements such as presentation of a portfolio that may limit change of major.

   - Industrial and Systems Engineering
   - Mechanical Engineering
   - Music Technology
   - Computer Science (Due to high demand, the conditions are placed on incoming first-year students beginning Summer 2024.)

   Other programs that wish to implement similar conditions must first propose the change to the Institute Undergraduate Curriculum Committee.

2. Graduate students, by filing the required form, may transfer with the concurrence of the schools involved and the graduate dean.
3. Students who change their majors must complete the degree requirements in the Catalog that was effective for the term in which the change of major became official, or any subsequent Catalog.
4. Admitted first-year students must confirm their major in their Admission Portal after paying their enrollment deposit and prior to FASET Orientation. Visit the admission website for details.

H. Exceptions

Exceptions to these scholastic regulations may be made by the Institute Undergraduate Curriculum Committee or the Institute Graduate Curriculum Committee, as appropriate, whenever a consideration of the student's complete record indicates that the application of a specific regulation will result in injustice.

I. Course Requirements

1. Each course shall have a syllabus and course policies provided to students before the first class meeting. Each syllabus shall include an outline of the course objectives (learning outcomes), required materials, criteria used in determining the course grade, any other requirements for successful completion of the course, and a statement about services available through the Office of Disability Services. Each syllabus shall refer to acceptable student conduct as it relates to the Georgia Tech Honor Code and Student-Faculty Expectations Agreement in the Rules and Regulations section of the Catalog. Students shall be informed of any changes made to the syllabus and course policies with reasonable time to adjust to these changes. Any changes to the syllabus after the first week of the term should be done prior to the last day to withdraw from the course with a W grade. Instructors should refer to the resources on the CTL website for developing their syllabi.
2. In all courses, faculty are expected to return to students a graded assignment or other meaningful performance feedback prior to the deadline for withdrawing from classes so that students can make an informed decision about withdrawing or changing the grade mode.
3. Progress Report grades of "S" or "U" will be submitted to the Office of the Registrar for all classes numbered in 1000 and 2000 ranges each semester prior to Mid-term, which is typically on the sixth week of Fall Semester and Spring Semester and on the fifth week of the Summer Session. A Progress Report grade of "U" generally indicates a performance level of "D" or lower. These grades are not permanent and never appear on a transcript, but they are issued to help students understand their academic performance in each of their courses and obtain academic help from the faculty and the many academic support services available on campus.
4. Students shall not be penalized if they cannot attend instructional, lab, or examination sessions that are not institutionally scheduled in accordance with the standard protocols.
5. Students shall have the opportunity to review graded material in a timely fashion and with reasonable access to grading instruments and/or grading criteria for individual assignments, projects, or exams.

VII. Deficiencies

A. About Deficiencies

1. A student who has received a grade of "I," "F," or "U" in a course has a deficiency in the course.
2. A student whose final grade is "F" or "U" has failed the course. The student must repeat and pass the course before credit will be allowed.

B. Removal of Deficiencies

1. When a grade of "I" ("Incomplete") is assigned in a course, the "I" grade must be removed and the grade change reported by the end of the student's next academic term in residence or, if the student has not been enrolled, by the end of the academic term one calendar year from the date the incomplete was assigned. Failing to remove the "I" in the allotted time will result in the grade of "I" being changed to the grade of "F." To remove the "I" grade, the student should consult with the instructor as soon as possible after the academic term is over and complete whatever remaining coursework is outlined by the instructor. Repeating the course for credit does not remove the grade of "I."

2. When a course in which a "D" grade was earned is repeated and a grade of "F" is earned, the student must file a Petition to the Faculty to be allowed to use the "D" grade to meet graduation requirements.
3. A degree candidate who has otherwise completed all requirements for graduation and who has an "Incomplete" in laboratory work taken during their final academic term in residence may remove the "Incomplete" at the convenience of the department of instruction concerned.

VIII. Withdrawal/Readmission

A. Withdrawal

1. Withdrawal from the Institute will not be permitted after 60 percent of the academic term has passed, except in cases of hardship as determined by the Institute Undergraduate Curriculum Committee or Graduate Curriculum Committee, as appropriate. With the exception of part-time graduate students, students who withdraw from the Institute and receive all grades of "W" will not ordinarily be permitted to re-enroll the following term. A student may withdraw from the Institute via the Student Information System by the posted deadline in the official Academic Calendar. All holds on the student's record must be cleared prior to withdrawal.
2. Students who cease attendance without withdrawing via the Student Information System receive grades of "F," "U," or "I" for their ongoing courses.
3. Permission and/or formal resignation are not required when a student has completed an academic term and does not register for the following term.
4. See Regulation V.A.3 for further information on grading as it relates to withdrawal.

B. Readmission

1. Any student who is not enrolled for three or more consecutive terms (counting Summer Session) must apply for readmission. This application, with all the pertinent supporting information, must be submitted to the Office of the Registrar before the deadline for the academic term for which readmission is requested. Deadlines are listed below.

Term	Date
Fall	July 1
Spring	December 1
Summer	April 1

2. Applications received after these deadlines will not be accepted.
3. Readmission is not guaranteed. Schools/Colleges must recommend readmission for any student wishing to return in majors under their jurisdiction.
4. The readmission policy supersedes the change of major policy. No School/College is obligated to readmit a student even if that student is within their limit for requesting a non-restricted change of major. Once readmission applies, the change of major process is not applicable including the non-restricted change of major.
5. Any student who has attended any other college or university should plan their readmission process in a way that allows ample time for their official transcript(s) from any other institution to arrive at Georgia Tech. If official transcripts have not been received prior to the last day of the Registration Period, the student seeking readmission will not be allowed to register.
6. Any student in good standing who is not enrolled for one single term will be allowed to re-enroll without applying for readmission to the Institute. This regulation makes no distinction among Fall Semester, Spring Semester, and Summer Session.
7. A student who is on academic warning or academic probation and who does not enroll for two terms may have a registration hold placed on their account. If a hold is placed, the student will be notified and the hold must be cleared by their major school. For example, if a student is placed on academic probation at the end of the Fall Semester and fails to enroll by the close of the Registration Period for the Spring Semester, a registration hold may be set, and it must be cleared by the student's major school before they can register for any future academic term.
8. A student who has been dropped once for unsatisfactory scholarship usually will not be readmitted. A student who seeks an exception to this rule must have been out of the Institute for at least one term and have had a conference with the major school concerning the readmission. The Readmission Application Deadline for a student who has been dropped is two months prior to the published Readmission Application Deadline for the academic term.
9. A student who is dropped a second time for unsatisfactory scholarship will not be readmitted to the Institute.
10. A student who is on expulsion, defined as permanent separation from the Institute, is not eligible for readmission.
11. Students are readmitted under the current catalog that is in effect at the time of readmission. If a student wishes to follow the degree requirements from a catalog in effect prior to the term of readmission, she/he must make a request to the major school. There is no guarantee that such a request will be granted, and readmitted students should be prepared to follow the degree requirements as outlined in the current catalog. Programs of study that have been deactivated or terminated are not available for readmission. Students who were enrolled in a program of study that has since been deactivated are eligible for readmission to the Institute; however, they must select an active program at the time of readmission. Once a decision is made to no longer admit students to a program of study due to an impending deactivation or termination, readmission is also not allowed.
12. Any student, except a part-time graduate student, who withdraws during an academic term and wishes to return the following academic term must complete a Petition to the Faculty for consideration. This petition must be submitted to the Office of the Registrar before the deadline for the academic term for which readmission is requested.
13. Students may be eligible for academic renewal. See below for more information.
    a. University System of Georgia undergraduate students who have been readmitted or reinstated after a period of absence of three (3) calendar years or longer are eligible for academic renewal. Academic renewal for the student signals the initiation of a new grade-point average to be used for determining academic standing. This provision allows University System of Georgia degree-seeking students who earlier experienced academic difficulty to make a fresh start and have one final opportunity to earn an associate or bachelor's degree (BR Minutes, June, 1995, p. 7). The complete policy is available online at: www.usg.edu/academic_affairs_handbook/section2/handbook/2.5_grading_system/
    b. The application for academic renewal shall be considered as a petition to the Undergraduate Curriculum Committee.

C. Leaves of Absence

1. Students may be eligible for an approved leave of absence. Interruption in enrollment due to circumstances outside the student's control may qualify for an approved Leave of Absence. This may include, for example, required military service.
2. It should be noted that an approved Leave of Absence would be effective in a future term (see item 12 for more details). Students on an approved Leave of Absence would not have to apply for re-admission and would be able to retain their email accounts during the approved absence. Prior to returning, the student would have to notify the Registrar's Office so that the record could be reactivated for re-entry.
3. The Leave of Absence would cover eligible students for at least three and no more than seven semesters (including Summer). If the seventh semester is a Spring term, students may opt to return in either the Summer or Fall term.
4. Students who are on an Approved Leave of Absence may not attend class, live in campus housing, or access other campus services.
5. The form to request an Approved Leave of Absence is on the Registrar's Office website under the student tab, forms and student records.
6. The Leave of absence may be used more than once, but for no more than seven total semesters during the student's enrollment at Tech.
7. Students who have been placed on academic drop or suspended or expelled for disciplinary reasons may not participate.
8. Students must clear up any other issues such as registration holds or providing any requested documentation prior to re-entry. The Approved Leave of Absence does not override other considerations or restrictions on enrollment.
9. Students should apply for the Leave of Absence as soon as possible. Applications for Leave of Absence will require review and signatures by the Office of the Dean of Students and the student's major academic advisor. Other signature approvals, such as the Office of International Education and Financial Aid may also need to be obtained.
    - Students should bear in mind the time limits as outlined in section 11 below in determining the anticipated date of return.
    - Readmission is required when three or more consecutive terms have been missed (which includes Summer). Once the student has made the decision that they will have to or need to be out for three or more consecutive term and the student wishes to return to Tech without being readmitted, the application for a Leave of Absence should be filed with the Registrar's Office.
    - The clock begins when the student does not enroll for a third consecutive term. The Leave of Absence Request would have to be for the third consecutive missed term to avoid readmission.
10. The Leave of Absence cannot be approved retroactively.
11. Students must file a Return from Leave of Absence form to return. If the leave exceeds the 7 semester time frame, the student must apply for readmission. The form is on the Registrar's Office website under the student tab, forms and student records.
12. The Leave of Absence, if approved, would be effective in a future term. It will not be approved to be effective in the term in which application is made. It in no way supplants or replaces any other policy. If a student needs to withdraw from classes within a given term, they should follow the withdrawal process and if a Leave of Absence is needed or desired, it would be effective for a future term or terms only as approved.
13. Normally, students would not enroll in courses at another school while on Leave of Absence. However, students who wish to or need to take classes at another institution must obtain prior approval from the academic unit and from the Registrar to do so. Students who fail to obtain prior permission may forfeit their opportunity to transfer the credit back to Georgia Tech. In all cases, students on Leave of Absence should consult with their academic advisor for information pertaining to transfer-credit, the 36-hour rule, and other applicable rules and regulations.

D. Other Evidence for Readmission

Coursework pursued at another institution after withdrawal or dismissal for unsatisfactory scholarship from Georgia Tech may be considered as evidence for readmission. Please refer to the Registrar's website for guidelines regarding transfer credits: https://registrar.gatech.edu/records/transfer-credit.

E. Study Abroad

Any student in good standing who chooses to participate in an approved study abroad program for two or more terms must complete a Student Information Update Form with the study abroad coordinator prior to departure. This form enables the student to re-enroll for the term of "planned re-entry" without submitting a formal readmission application. It will be the student's responsibility to inform the study abroad coordinator of any change to her/his planned re-entry date.

IX. Scheduling

A. General

1. All previously scheduled coursework takes precedence over newly scheduled material. Therefore, all work that is incomplete from a previous term should be completed, or arrangements to complete it should be made prior to placing emphasis on new coursework.
2. Students must follow the approved curriculum of the academic school in which they are registered. Students who do not follow the approved curriculum may be denied registration privileges.
3. Each student is strongly advised each term to schedule all prerequisite courses. A student who has not completed the stated prerequisites for a course but believes she/he has the necessary knowledge to fulfill prerequisite requirements should contact the department of instruction.
4. The completion of incomplete work from a previous term and the scheduling of out-of-sequence courses are the responsibility of the student, and, consequently, she/he will be held accountable. The number of scheduled credit hours allowed for an academic term may be adjusted to take into consideration the amount of incomplete work remaining regardless of the student's academic standing.
5. Students may not repeat courses on a letter-grade basis in which the grade of "B" or higher has been earned previously.
6. Subject to approval by a faculty advisor, a course may be taken more than once for academic credit. All grades and hours will count in determining the student's grade-point average (GPA), but the course will be counted only once for credit toward a degree.
7. See Regulation X, "Pass/Fail Grading," for the Institute's rules regarding courses taken on a Pass/Fail basis.

B. Academic Load

1. Maximum credit hour loads are explained in Regulation VI, "Scholastic Regulations," Section D, "Maximum Schedule Load."

Any hours above these limits must obtain prior approval from the Undergraduate Institute Curriculum Committee or the Graduate Institute Curriculum Committee, as appropriate.

2. Graduate students must maintain a minimum of three credit hours each academic term. Exceptions to this regulation may be made during the term in which the student graduates.

C. Auditing of Courses

1. The auditing of a course will be permitted for a regularly enrolled student who has obtained the approval of her/his advisor and the departments concerned. Such a course counts at full value in computing the student's course load for an academic term.
2. The grade of "V" (i.e., "Visitor") is earned when a student audits a course. The "V" grade has no effect on a student's grade-point average (GPA).
3. No academic credit is granted for auditing a course.
4. Students are not permitted to change to or from an auditing status except through the regular procedures for schedule change or withdrawal. Any student who does not meet the instructor's requirements for a successful audit will be withdrawn with a grade of "W" assigned at the end of the academic term.
5. Members of the faculty or staff of the Georgia Institute of Technology may sit in on, rather than audit, a course with the permission of the instructor. The permission is granted on a space-available basis in the class.

D. Attending Classes

1. Students may attend only those particular classes for which they are registered and paid.

E. Undergraduate Students Taking Graduate Courses

A senior with a grade-point average (GPA) of at least 2.7 may enroll in a graduate course if she/he obtains permission from the school or department offering the course.

1. Up to twelve credit hours earned as an undergraduate student may count toward earning a master's degree if the following conditions are satisfied.
   a. The student was in residence at Georgia Tech for at least two semesters before registering for the course(s).
   b. The student did not apply credit for the course toward a bachelor's degree. Special exceptions may apply in certain schools, as described below.
      i. If student pursues both a bachelor's and master's at Georgia Tech, and if both degrees are in the same discipline, she/he may apply up to six credit hours of graduate-level credit in the major discipline to satisfying the requirements for both degrees. Because some master's degree programs do not have any unique undergraduate counterpart program, and because some master's programs are offered by several schools, the definition of "discipline" will be broadly interpreted in such cases. To qualify for this option, a student must complete the bachelor's degree with a cumulative grade-point average (GPA) of 3.5 or higher, and she/he must complete the master's degree within a two-year period following the award date of the bachelor's degree.

F. Graduate Students Taking Undergraduate Courses

Graduate students who wish to take a 1000- or 2000-level course must obtain a permit from the department teaching the course. The student must have the department of instruction enter a permit on her/his account, and then come in-person to the Office of the Registrar to have the course added to her/his schedule. Institute policy allows a graduate student to take a 1000- or 2000- level course on a Pass/Fail or audit basis only.

X. Pass/Fail Grading

A. General

1. At the option of the student's major school, credit toward a bachelor's degree may be allowed for courses taken under the pass/fail system and completed with a grade of "Pass."
2. The major school must approve all pass/fail courses included in the final program of study, and students should be aware of school requirements.
3. In graduate programs, thesis research hours will be evaluated on a pass/fail basis.
4. Pass/fail enrollment in any course may be restricted by the school or department offering the course.
5. Students who are permitted to register under the pass/fail system will be so designated on the official class rolls. The grades recorded will be "S" for "Satisfactory" or "U" for "Unsatisfactory." These grades will not be included in the calculation of the grade-point average and cannot be changed to a grade that will count in the average.
6. Withdrawals from courses taken on a pass/fail basis will follow the same rules that govern withdrawals from courses included in the grade-point average.
7. The deadline to change the grade mode from letter grade to pass/fail (and vice versa) is the same day as the Last Day to Withdraw from Individual Courses without a Penalty.

Grade mode changes are allowed online during the Registration Period. After the Registration Period ends, the following form must be completed and submitted to the Office of the Registrar.

Download Form

B. Credit Hours Permitted

1. The maximum number of credit hours that a student may earn on a pass/fail basis is related to the number of credit hours required for the program of study in which the student is enrolled.

Hours included in program of study	Hours allowed on pass/fail basis
45 to 70 credit hours	3 credit hours
71 to 90 credit hours	6 credit hours
91 or more credit hours	9 credit hours

1. For a second undergraduate degree, these limits apply to the credit hours included in the program of study for that second degree.
2. A master's degree program of study may include up to three semester credit hours on a pass/fail basis.

XI. Cross Enrollment and Concurrent Registration

A. General

1. Students who are enrolled at Georgia Tech may not receive credit for courses completed at another institution during the same academic term, unless prior permission has been obtained for cross enrollment or concurrent registration, as described in this section.
2. With the approval of the student's major school, a student may schedule courses at any one of the colleges or universities comprising the Atlanta Regional Consortium for Higher Education (ARCHE), if such courses are not available in a particular term at Georgia Tech. A list of participating institutions is available from the Office of the Registrar.
3. All cross enrollment registration activities are performed at the student's home institution.
4. For institutions not participating in cross enrollment, a student must apply in advance for permission to be concurrently registered at both Georgia Tech and the other institution, except during the Summer.

B. Eligibility and Other Rules

1. Cross Enrollment:

    a. Is available is available only to degree-seeking juniors, seniors, and graduate students.

    b. Students will not be allowed to cross enroll for more than two courses per academic term.

    c. International Plan students may cross enroll for a language course(s) not offered at Georgia Tech as early as the second semester of their first year of enrollment. Special permission to do this will be granted to accepted International Plan students only. Forms and procedures are available from the Office of the Registrar. Any student seeking an exception to these eligibility requirements should contact the Office of the Registrar.

    d. Courses completed through cross enrollment is allowed during the final 36-hours of degree completion (the 36-hour rule is not applicable).

2. Concurrent Registration:

    a. Is available during the Fall and Spring terms only to degree-seeking juniors, seniors, and graduate students.

    b. Is available during the Summer term to anyone. Students do not need special permission (a petition to the faculty) for concurrent registration during the Summer and they do not have to be in junior, senior, or graduate student status.

    c. International Plan students may cross enroll or register concurrently for a language course(s) not offered at Georgia Tech as early as the second semester of their first year of enrollment. Special permission to do this will be granted to accepted International Plan students only. Forms and procedures are available from the Office of the Registrar. Any student seeking an exception to these eligibility requirements should contact the Office of the Registrar.

    d. Courses completed through concurrent registration will not be degree applicable if enrolled in the student's last 36-hours of degree completion. In order to have these courses apply to degree requirements, the student must submit a petition to the faculty for a waiver of the 36-hour rule and explain why the concurrent registration is necessary.

3. To participate in cross enrollment *or* concurrent registration, a student must be in good standing during the term when the application is processed.

4. During the term of cross enrollment *or* concurrent registration, the student must enroll in three or more credit hours at Georgia Tech and be in good standing. The total academic load carried at all institutions combined may not exceed the number of credit hours for which the student would be allowed to register at Georgia Tech.

5. Any cross enrollment or concurrent registration course must be completed with a grade of "C" or better in order to receive credit for the course.

    a. Credits earned under cross enrollment will be treated as transfer credit but will count as in-residence credit toward a degree.

    b. Credits earned under concurrent registration will be treated as transfer credit and will not count as in-residence credit toward a degree.

    c. Grades received in cross enrollment *or* concurrent registration courses will not be included in the calculation of the grade-point average.

    d. No credit will be awarded for courses completed under cross enrollment *or* concurrent registration until an official transcript from the participating institution is received by the Office of the Registrar.

XII. Examinations

A. General

1. Some units offer Departmental Exams to undergraduates. For details, please see https://catalog.gatech.edu/academics/undergraduate/credit-tests-scores/departmental-exams/.
2. If the instructor considers it necessary during an examination, students may be required to present their student identification card to the instructor or an authorized representative.

B. Examinations for Advanced Standing

1. Students who offer satisfactory evidence that they are qualified to do so may receive credit for a course by examination. Such an examination is called an "Examination for Advanced Standing."
2. Examinations for advanced standing require the recommendation of the department of instruction in which the course is offered, payment of the appropriate fee to the Office of the Bursar, and authorization by the Office of the Registrar.
3. Examinations for Advanced Standing will usually be offered during the Final Examination Period.
4. A student will not be allowed to take an Examination for Advanced Standing in a given course more than twice.

5. Students will not be allowed to take an Examination for Advanced Standing in a course for which any prerequisite has not been met, except with the consent of the school offering the course.
6. An Examination for Advanced Standing will be reported with an "S" or "U" grade. Neither grade will be included in the calculation of grade-point average (GPA).
7. Advanced standing is not allowed for laboratory or studio classes, except with the consent of the school offering the course.
8. Students may not use more than nine credits of advanced standing to meet degree requirements.
9. The School of Modern Languages does not offer Advanced Standing examinations, although students may receive advanced standing credit for up two modern languages courses in the same language of study for a total of 6 to 8 credits upon successful completion (with a C or higher) of coursework as outlined in numbers 4 and 5 below. The only courses for which Advanced Standing credit may be given are 1001, 1002, 2001, and/or 2002 in the languages currently offered in the School of Modern Languages at Georgia Tech. No 3000- or 4000-level Advanced Standing credit will be granted.

   For students seeking Advanced Standing Credit for 1 course (3-4 credits), there are four options:

Advanced Standing Credit	Required course(s) to successfully complete (with a grade of C or higher) before applying	
1001	1002	2001
1002	2001	N/A
2001	2002	N/A
2002	3XXX or 4XXX	N/A

For students seeking Advanced Standing Credit for 2 courses (6-8 credits), there are three options:

Advanced Standing Credit		Required course(s) to successfully complete (with a grade of C or higher) before applying	
1001	1002	2001	2002
1002	2001	2002	3XXX or 4XXX
2001	2002	3XXX or 4XXX	3XXX or 4XXX

C. Final Instructional Class Days and Reading Periods

The following applies to the standard academic terms, including the Fall Semester, Spring Semester, and Full Summer Session. It does not apply to the Early Short Summer Session and Late Short Summer Session. Given the variability in the exact timing of the Full Summer Session, the Office of the Registrar will adjust the final instructional class days and reading periods for this semester only in order to meet required instructional time. This policy replaces the former Dead Week (Week Preceding Final Examinations) policy.

1. **Final Instructional Class Days**

   a. Final Instructional Class Days are scheduled during each regular term including the Full Summer Session and are the last two instructional days of the term immediately preceding the first reading period.

   b. No tests or quizzes are to be administered on these days. Lab quizzes and/or practicums may be given in courses comprised of both a lecture and a scheduled lab, wherein the lecture carries at least two credits.

   c. For all courses, graded homework or assignments, lab reports, course projects, demonstrations, studio reviews, and presentations may be due during these two days, provided that they are listed on the syllabus at the start of the semester.

   d. All quizzes and tests should be graded and reported to students on or before the last Final Instructional Class Day.

2. **Reading Periods**

   a. Reading Periods will be designated to provide time for students to prepare for final examinations.

   b. No classes meet. This includes labs, recitations, projects, design/capstone courses, and studios.

   c. No assignments, projects, presentations, or other graded activities are allowed.

   d. Instructors may schedule optional study review sessions for students during reading periods, but no credit or extra credit may be attached to these optional sessions. New content may not be covered, and any materials (e.g., handouts, slides, practice problems, etc.) that are provided at these optional review sessions must be made available to all students. This provision does not require that such optional sessions be audio or video recorded.

3. Requests for exceptions to the Final Instructional Class Day and Reading Period policies may be made in writing by the Dean of the College (or their designee) to the Student Rules and Regulations Committee (SRR). The SRR will then make a recommendation to the Undergraduate Institute Curriculum Committee or Graduate Institute Curriculum Committee, as appropriate, for approval or denial. Requests must be made no later than the academic term prior to the desired term of implementation and will be regularly reviewed.
4. Student concerns may be discussed with the faculty member and/or reported to the Chief Academic Officer of the department of instruction, or with the Assistant Provost for Academic Advocacy and Conflict Resolution. For more information, see the Student Academic Grievance Policy.

D. Final Examinations

1. In all courses of the Institute offered for a letter grade, a final assessment, either a final examination or some alternative form, shall be administered. The decision on the type of final assessment shall be made by the instructor of record, and an announcement of the course's final assessment policy shall be made to the class by the end of the first week of the term (close of Phase II registration) and included in the course syllabus.
2. A change to a class's type of final assessment after the close of Phase II registration must be announced to all students in the class before the last day to withdraw from a single class.
3. In regularly scheduled, full-semester courses of the Institute, final examinations shall be scheduled during the Final Examination Period at the time specified in the official Final Examination Schedule as distributed by the Office of the Registrar, and meeting times for alternative final assessments shall not be scheduled during the Final Examination Period at any time other than the time specified in the official Final Examination Schedule.
4. No assessment other than a final examination or an alternative final assessment may be due during the Final Examination Period.

5. Requests to change a class's final examination time within the Final Examination Period must be submitted to the Chief Academic Officer of the department of instruction for approval no later than one week before the beginning of the Final Examination Period. Any such request must have the unanimous approval of the class as shown by secret ballot, as well as approval by the instructor of the class.
6. A change in the scheduling of a final assessment during the Final Examination Period for an individual student ordinarily will not be permitted; however, such a change may be allowed for hardship cases at the discretion of the instructor. The request for a change must be justified in writing by the student and shall be submitted to the instructor prior to Final Examination Period and may be rescheduled to an appropriate time.
7. In the event a student has two final assessments scheduled for the same time, the course having the lower number shall be considered in conflict and the student shall notify the instructor no later than two weeks before the first day of the Final Examination Period. In such case, the final assessment in that course shall be given during the Conflict Examination Period or, by agreement of the instructor and the student, at a mutually satisfactory time.
    a. If the student notifies the instructor after the above deadline but before the first day of the Final Examination Period, the student shall, at the discretion of the instructor:
        i. receive a course grade of "I" (Incomplete), with an opportunity to take a makeup final examination the following academic term (and have the course grade changed as warranted by the results of the test), or
        ii. be given the final assessment during the Conflict Examination Period or at an alternative time during the Final Examination Period.
    b. A student who fails to notify the instructor of the conflict before the first day of the Final Examination Period shall, at the discretion of the instructor:
        i. receive a score of zero on the final assessment, or
        ii. be given the final assessment during the Conflict Examination Period or at an alternative time during the Final Examination Period.
8. In the event a student is scheduled for three final assessments in one day, the assessment scheduled for the middle period shall be considered in conflict and the student shall notify the instructor no later than two weeks before the first day of the Final Examination Period. In such case, the final assessment in that course shall be given during the Conflict Examination Period or, by agreement of the instructor and the student, at a mutually satisfactory time.
    a. If the student notifies the instructor after the above deadline but before the first day of the Final Examination Period, the student shall, at the discretion of the instructor:
        i. receive a course grade of "I" (Incomplete), with an opportunity to take a makeup final assessment the following academic term (and have the course grade changed as warranted by the results of the test), or
        ii. be given the final assessment during the Conflict Examination Period or at an alternative time during the Final Examination Period, or
        iii. be given the final assessment at the time scheduled for the course.
    b. A student who fails to notify the instructor of the conflict before the first day of the Final Examination Period shall, at the discretion of the instructor:
        i. receive a score of zero on the final assessment, or
        ii. be given the final assessment during the Conflict Examination Period or at an alternative time during the Final Examination Period, or
        iii. be given the final assessment at the time scheduled for the course.
9. At the discretion of the instructor, students who arrive late, who exit the room without permission, or who are absent for an excessive period of time may forfeit their opportunity to complete the final assessment.
10. Students will have the full two hours and fifty minutes to complete the final, unless otherwise stated on the syllabus. Students must be notified in writing of any changes to the duration of the final exam before the withdrawal deadline.

XIII. Undergraduate Degrees

A. General

1. To be considered for admission to candidacy for a degree, a student must complete the Online Application for Graduation during the academic term preceding the term in which they will complete the degree requirements for their program.
2. A student who wishes to withdraw their name from the rolls of degree candidates must either notify the Office of the Registrar or their major academic advisor in writing to formally withdraw the Online Application for Graduation before the end of the seventh week of the semester (or fourth week of the summer term).
3. The diploma of a candidate for a degree shall bear the date of the commencement for which the degree is awarded.
4. All requirements for the degree must be completed and certified by the Registrar no later than 48 hours after Final Grade Submission Deadline of the academic term in which the candidate intends to graduate. If a candidate is not certified by the appropriate deadline, the candidate will be graduated at the next scheduled commencement. It is the responsibility of the student to reactivate the Online Application for Graduation for the appropriate term.
5. A degree program may include a maximum of four hours of basic ROTC and a maximum of six hours of advanced ROTC.

B. Residency Rule

No student may be considered a candidate for a degree unless the final 36 credit hours required for the degree are earned in residence at Georgia Tech and approved by the major school.

C. Ten-Year Rule

Work that was completed more than ten years prior to commencement must be validated by special examinations or evaluation by the appropriate academic unit before it can be counted toward a degree.

D. Requirements For a Bachelor's Degree

1. To be a candidate for a degree, undergraduate students must have passed or be enrolled in all courses required for the degree, must have a grade-point average for their entire academic program of at least 2.00, and must have done creditable work in their departmental courses so as to merit the recommendation for the degree by the chair and faculty of their school.

2. A bachelor's degree program must require at least 21 credit hours of upper division courses in the major field and at least 39 credit hours of upper division work overall.
3. A bachelor's degree program must require at least 120 credit hours, plus the Wellness Requirement, for a total of 122 credit hours.
4. A student, with the approval of their school or specialization, may satisfy the requirements for a bachelor's degree by meeting all of the requirements associated with any one curriculum year that has been in effect during their period of enrollment in the Institute (or that has been in effect during their last two years in the program at one of the Regents' Engineering Pathway Program (REPP) institutions, if their enrollment there occurred prior to their enrollment at Georgia Tech). A curriculum year is in effect for a student only if the student's date of matriculation is prior to the ending date of the Spring Semester concluding that curriculum year.
5. Constitution and History Requirements
   a. The Georgia law, as amended March 4, 1953, requires that before graduation all students pass examinations or pass comparable courses in United States and Georgia history and in the United States and Georgia Constitutions.
   b. See the Core Curriculum section of the Catalog for the methods by which the Constitution and History Requirements may be satisfied.
6. Regents' Exam
   - Since Spring 2010, the Regents' Exam has no longer required at Georgia Tech. To be considered a degree candidate, a student must complete an Online Application for Graduation during the term preceding the final term in residence.
7. Wellness Requirement
   a. Unless medically exempted, all students are required to satisfy the wellness requirement prior to graduation, as specified in the Core Curriculum section of the Catalog.
   b. The Health Information Record on file with the Director of Health Services will be used to determine any medical exemptions from the Wellness Requirement. All certificates of disability from personal physicians must be endorsed by the Director of Health Services.

E. Graduation with Academic Distinction

1. For graduation with highest honor, the minimum grade-point average (GPA) shall be 3.55.
   For graduation with high honor, the minimum grade-point average (GPA) shall be 3.35.
   For graduation with honor, the minimum grade-point average (GPA) shall be 3.15.
2. A student must have earned at least 60 semester credit hours (excluding remedial coursework) at Georgia Tech to graduate with highest honor, with high honor, or with honor.
3. In order to qualify for graduation with honors, all grades or grade corrections affecting the honors designation must be received and certified by the Office of the Registrar no later than noon on Wednesday following Commencement.
4. Tentative honors at graduation (recognized at Commencement) are determined by the grade-point average (GPA) entering the graduating term and the sum total of graded hours accumulated prior to the graduation term plus graded hours registered for and pending during the graduation term.

F. Earning More than One Undergraduate Degree

1. Students pursuing more than one undergraduate degree will remain classified as undergraduate students. Graduate students wishing to pursue additional undergraduate degrees will remain classified as graduate students. A graduate student, with approval of the major school, may work toward additional undergraduate degrees while pursuing a graduate degree.
2. To declare and be a candidate for more than one undergraduate degree, a student must submit an approved Change of Major form to the Registrar's Office.
3. To obtain more than one undergraduate degree, a student must complete all major required courses for the specific degree programs and earn credit for a total of at least 36 credit hours in excess of the requirement for any previous degrees earned. Students should work with their advisors to ensure the additional 36 hours for each additional undergraduate degree are not being counted multiple times across those degrees.
4. All items in Regulation XIII, "Undergraduate Degrees," apply to students completing more than one undergraduate degree.

G. Minors

1. A student may complete a minor in another academic field while completing the requirements of their major degree program.
2. With the approval of the major school, the student should consult an advisor in the minor field, who can inform the student of the requirements for the minor.
3. A Change of Undergraduate Minor Form must be completed, signed by the Minor Advisor/Coordinator and the Major Advisor, and submitted to Office of the Registrar. Students are encouraged to submit the completed form when they decide to pursue the minor but no later than the Deadline for the Online Application for Graduation in the academic term preceding anticipated graduation.
4. Students who change or add a minor must complete the requirements in the Catalog that was effective for the term in which the change or addition of a minor became official, or any subsequent edition of the Catalog.
5. A readmitted student who wishes to pursue a minor must indicate their choice on the Application for Readmission. Requirements for the minor are those in effect at the time the student is readmitted as stated in the current edition of the Catalog. The readmitted student may select only minors offered at the time of readmission.
6. Some courses in a minor may have prerequisites that are not included in the minor description. Some minors may have additional requirements that students must meet before being admitted to that minor.
7. The student must declare any minor(s) prior to applying for graduation. A Minor Program of Study Form signed by the major and minor advisor may be required depending on the minor. Minor requirements and information for a Minor Program of Study Form are located in DegreeWorks.
8. The minor will be conferred at the same time the degree is conferred.
9. Minors may not be conferred retroactively upon students who have graduated.
10. The minor will not be printed on the diploma, but both the degree and minor will be recorded on the student's transcript.
11. A student who has applied for a minor but does not wish to complete the minor must have their advisor contact the Office of the Registrar

for the minor to be removed prior to completing an Online Application for Graduation. Minors will be audited with the major and the status will be noted in DegreeWorks.

H. Undergraduate Students Taking Graduate Courses

See information about Undergraduate Students Taking Graduate Courses.

XIV. Graduate Degrees

The faculty of Georgia Tech grants stand-alone graduate certificates, master's degrees, and doctoral degrees. The goals for graduate education are to establish an educational environment that will strengthen students' personal and professional development, to encourage students and faculty to pursue the discovery and generation of new knowledge through research, to investigate ways of applying such knowledge for the benefit of society and humanity, and to foster the development of new tools, objects, and ideas.

Students whose interests and aptitudes lead them beyond the limits of the traditional undergraduate curriculum may broaden their knowledge of a given field and pursue independent inquiry through graduate study. A graduate education is of particular benefit to students interested in careers in research, management, development, design, or consulting; to those who aspire to formulate and administer policy; and to those who desire careers in higher education

A. Graduate Student Work Loads

Full-time students must be enrolled for at least 12 credit hours on a letter grade or pass/fail basis. As an exception, the advisor and school chair may allow up to three hours out of the minimum 12 to be taken on an audit basis in fall and spring semesters; in summer semesters, the advisor and school chair may allow up to six hours out of the 12 minimum to be taken on an audit basis. Hours in excess of the required 12 may be taken on any basis. Full-time students working exclusively on thesis research should be registered for 18 or more hours of 7000 or 9000 level courses (master's or doctoral thesis courses) in fall and spring semesters, and for up to 16 hours during summer semesters.

The maximum load for graduate students in good standing is 21 hours in fall/spring and 16 hours in summer. The minimum load is three hours, except for the semester of graduation. During the semester of graduation, a student is permitted to register for only one hour of master's or doctoral thesis courses (7000 or 9000). This exception may be used only once for each degree.

Students with fellowships, graduate research or teaching assistantships, traineeships, tuition waivers, or student visas, and those assigned to the Institute by the armed forces for the purpose of pursuing a degree are required to enroll full time. Part-time doctoral students engaged in research for their Ph.D.s should meet the minimum enrollment requirement and register for the number of 9000 level hours consistent with the time they and their faculty advisors spend on the dissertation research.

B. Graduate Policies and Regulations

The Institute Graduate Curriculum Committee, with the approval of the Academic Faculty Senate, is responsible for establishing academic policy for the graduate programs; however, final authority rests with the Senate. This committee reserves the right to change requirements for degrees as may be appropriate. Students enrolled at the time such changes appear in the catalog have the privilege of following either the regulations stated in the catalog effective the semester in which they enrolled or the regulations in the catalog that records the change.

This catalog records the Institute-wide policies and regulations that govern the graduate programs. Schools may make additional rules concerning their programs and the pursuit of their degrees, but such rules may not contradict Institute policies and regulations.

C. Transfer Credit

A student may not apply for transfer credit until after matriculation at Georgia Tech. The courses to be transferred would typically be those appearing on the approved program of study form for the master's degree. A doctoral student normally does not request transfer credit. The rules relative to and the process for obtaining transfer of credit for graduate-level courses are as follows:

1. Student's in a master's degree program requiring fewer than 33 semester credit hours may receive up to six hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree. This ensures completion of at least one-third of the courses for a degree in residence at Georgia Tech (applies to programs that are face-to-face and online format). A student in a master's degree program requiring 33 semester credit hours or more may receive up to nine hours of transfer credit for graduate-level courses taken at an institution accredited by a Canadian or U.S. regional accrediting board, or at a foreign school or university that has a signed partner agreement with Georgia Tech, and not used for credit toward another degree. This ensures completion of at least one-third of the courses for a degree in residence at Georgia Tech (applies to programs that are face-to-face and online format).The student must supply a current transcript for this evaluation.
2. To obtain transfer of credit, the student must complete the following procedure:
   a. The student will confer with the graduate advisor to ascertain whether the courses to be transferred are a logical part of the student's graduate program;
   b. If the courses are appropriate, the student will deliver to the school that teaches such courses a copy of the current transcript, necessary descriptive materials including catalog descriptions, and textbooks used for evaluation. The faculty of the appropriate school will determine the equivalent Georgia Tech course and the number of credit hours accepted. The faculty member who prepares the transfer credit form should have the school chair cosign it. The school should then send the form directly to the registrar with a copy of the student's Approved Program of Study attached;
   c. If the student wishes to transfer more than the number of hours permitted in item one listed above, a petition must be submitted to the Institute Graduate Curriculum Committee that includes statements of possible justification for the granting of such a petition, transfer credit forms, and the recommendation of the student's school chair.
3. A joint enrollment student may receive graduate credit for up to one-third of the hours required for the degree for graduate courses taken at Emory University or Georgia State University provided that the following is true:

a. Georgia Tech does not offer such courses;
b. The student's advisor and school chair approve the courses in advance and in writing;
c. The student passes the courses with a **C** or better. Advance approval is satisfied when the courses appear on the student's proposed Program of Study.

4. A student may not receive transfer credit from universities outside the United States and Canada unless the courses were taken at a foreign institution or university that is accredited by a Canadian or U.S. regional accrediting board or has a signed partner agreement with Georgia Tech. In any other case, an international student can obtain credit for courses previously taken but not applied toward another degree by filling out an Examination for Advanced Standing Authorization Request Form, paying the appropriate fee at the Bursar's Office, and passing the examination for advanced standing. The school or college that normally teaches the equivalent course will administer any necessary examinations.

D. Double Counting Credit between Master's Degrees

Students who are pursuing two master's degrees at Georgia Tech may double count a maximum of 6 hours of credit for both degrees. This ensures that each degree involves a minimum of 24 hours of coursework completed at Tech that is not double counted.

The six-hour limit may be exceeded when specifically allowed as a component of an approved degree program.

XV. Medical Regulations

A Medical Entrance Form and proof of required immunizations and tuberculosis screening must be on file with Stamps Health Services. Failure to provide this information may result in a health hold and delay of registration. All international students (F1 and J1 visas) are required to have health insurance coverage. Students may elect to purchase the health insurance made available by the health insurance provider contracted by Georgia Tech or may have their own comparable medical insurance.

A. Student Health Insurance

Source: Stamps Health Services

The Georgia Board of Regents (BOR) offers student health insurance for eligible students and their dependent(s). Two groups of students may purchase student health insurance: Mandatory and Voluntary. Mandatory students are required by the BOR to have student health insurance and the charge is applied automatically to the student's account along with tuition. A list of students who fall under the health insurance mandate can be found here: https://health.gatech.edu/sites/default/files/images/usg_mandatory_groups.pdf. Mandatory students who already have health insurance may apply to waive the Board of Regents (BOR) student health insurance coverage as long as their insurance coverage meets or exceeds the BOR insurance requirements.

There is an open enrollment period at the start of each semester to enroll or waive mandatory student insurance coverage, to enroll for the voluntary plan, or for enrolled mandatory students to add spouse/dependents coverage. For students and spouses with Board of Regents (BOR) student health insurance, Stamps Health Services (SHS) is the primary care provider. SHS renders care to students, spouses, and domestic partners. Dependent children are not eligible to be treated at SHS.

Note: The student health insurance is not the same as the Mandatory Student Health Fee. The Mandatory Student Health Fee is assessed per semester to all students taking 4+ credit hours. It is not health insurance and cannot be used outside of Stamps Health Services. Students cannot waive this fee. The Health fee covers most services at Stamps Health Services.

More information is available at www.health.gatech.edu and/or https://health.gatech.edu/finance/insurance.

B. Immunizations

Source: Stamps Health Services

All incoming students must comply with the Board of Regents of the University System of Georgia's immunization requirements. It is strongly recommended that immunization requirements are met as soon as possible to avoid a registration hold. A registration hold keeps students from registering for classes

Incoming students must use Stamps Health Services Immunizations Form.

More information is available at www.health.gatech.edu

XVI. Extracurricular Activities

A. Participation

1. In order to be eligible to participate in extracurricular activities, a student must satisfy the following requirements:
   a. be enrolled in a degree program (including students in official exchange programs as determined by the Office of International Education and as reported to the Registrar) and be registered;
   b. for Fall and Spring semesters, maintain a schedule with at least six credit hours on a for-credit basis or be a student registered with the Career Center on a work term
   c. all student organization officers must be enrolled in Georgia Tech classes with at least six credit hours on a for-credit basis or be a student registered with the Career Center on a work term in Atlanta
2. Changes in academic standing that affect eligibility become effective at the end of each academic term, usually the Tuesday following Final Examination Period.
3. Any student placed on Academic Drop/Dismissal or Review, or subject to finalized sanction(s) which include suspension or expulsion, is immediately ineligible for participation.
4. Changes in disciplinary standing that affect eligibility become effective immediately.
5. Participation also requires satisfaction of any additional requirements established by the Student Activities Committee of the Academic Senate.

B. Scheduling of Events

In each term, no student-sponsored extracurricular events can occur between the last day of classes and the end of the final exam period.

C. Student Organizations

1. All student organizations must adhere to the Student Organization Code of Conduct, the Student/Student Organization Alcohol Policy, and other policies set forth by the Division of Student Life.
2. Every organization must renew its charter every year or when changing officers by submitting an Officer Update Form and by signing the Alcohol Policy Acknowledgement Form.
3. Requirements and standards for chartering a student organization are established by the Student Activities Committee of the Academic Senate and are available from the Division of Student Life.

D. Fraternity and Sorority Regulations

1. To be eligible for initiation, a student must be a full-time student not on academic or disciplinary probation.
2. The initiation of any individual must be registered with and approved by the Division of Student Life prior to the initiation.
3. The individual must meet all Georgia Tech Interfraternity Council (IFC) or Panhellenic requirements concerning initiation.
4. All fraternities and sororities are subject to the rules established by the Georgia Tech IFC/Panhellenic/National Pan-Hellenic and all Georgia Tech policies, rules, and regulations.

E. Intercollegiate Athletics Regulations

1. To be eligible for intercollegiate athletic competition, a student must satisfy the following requirements:
   a. be eligible to participate in extracurricular activities, as defined in Regulation XVII, "Extracurricular Activities," Section A, "Participation";
   b. be carrying a full-time workload as defined in Regulation VI, "Scholastic Regulations," Section A, "Classification of Students," Item 3;
   c. for Summer semesters, be carrying an appropriate workload (3-16 hours) with the provision that the definition of full-time in Regulation VI, "Scholastic Regulations," Section A, "Classification of Students," Item 3 remains applicable;
   d. be making satisfactory progress toward a degree; and
   e. meet any further requirements of the NCAA or other governing organization; see the Athletic Director for details.
2. No student may be excused from regularly scheduled classes for athletic practice.
3. Special accommodations may be made (or coordinated) for intercollegiate student-athletes whose competition schedules conflict with the first week of reading periods and final exams.
4. No student may participate in more than two sports in intercollegiate competition in any school year, except by permission of the Division of Student Life. Being a manager or assistant manager is counted as participation within the meaning of this rule.

XVII. Academic Honor Code

Academic Honor Code

The Academic Honor Code is a student initiative that became an official Institute policy in 1996. The objective of the Academic Honor Code is to increase academic integrity and strengthen trust in the Georgia Tech community. All students are required to sign an agreement acknowledging their awareness of the Academic Honor Code. They are strongly encouraged to seek a full understanding of their instructors' expectations regarding academic honor.

The Academic Honor Code is available in the Georgia Tech Policy Library.

The Honor Agreement

"Having read the Georgia Institute of Technology Academic Honor Code, I understand and accept my responsibility as a member of the Georgia Tech community to uphold the Honor Code at all times. In addition, I understand my options for reporting honor violations as detailed in the Code."

XVIII. Code of Conduct

The official and most current versions of this policy document can be found in the Georgia Tech Policy Library and/or the Office of Student Integrity web site. In the event of any conflict, the document in the Policy Library and/or on the OSI web site shall govern.

- Student Code of Conduct

Additional policy documents are available in the Georgia Tech Policy Library.

- Academic Honor Code
- Student Organizations Code of Conduct
- Student/Student Organization Alcohol Policy
- Student Sexual Misconduct Policy

XIX. Grievance Procedures

These procedures are intended to provide students at Georgia Tech a means for setting forth grievances relating to assessment activities that contribute toward satisfaction of graduation requirements. Disputes that can be contested under these Grievance Procedures include, but are not limited to: final course grades, PhD qualifying or comprehensive exams, and PhD defenses. It is not the intention of these procedures to provide a forum for questioning the judgment or grading policies of faculty. A student's concerns may be discussed with a faculty member and/or reported to the school or department head, the academic deans, or the Associate Vice Provost for Advocacy and Conflict Resolution.

These Grievance Procedures may not be used to challenge or appeal the outcome of an Academic Misconduct case adjudicated under the Academic Honor Code. The Academic Honor Code and the rules governing Academic Misconduct procedures can be found in the Policy Library at: http://www.policylibrary.gatech.edu/student-affairs/academichonor-code, http://www.policylibrary.gatech.edu/student-life/academic-misconduct.

A. Deadlines for Submitting a Grievance

1. Students must submit a formal grievance within their next enrolled academic term following the academic term of the course or examination in question, and best efforts should be applied to resolve the appeal within that academic term.

2. Students who have been placed on academic dismissal or who have graduated may also use these grievance procedures. The deadline to submit a formal grievance for these students is within the next term after the grade was earned or the examination result was provided to the student. For example, a student who earned the grade in the Fall term would have to initiate the formal grievance process in the following Spring term. A student who earned the grade in the

Spring term would have to initiate the formal grievance process in the following Summer term.

B. Steps in the Grievance Process*

**The steps of the grievance process must followed in the order presented below.*

1. The student should attempt to informally resolve the grievance with the individual faculty member or the academic unit involved, where a unit is defined as a school, department or college (if the college has no schools or departments).
2. If the grievance is not resolved in Step B.1 and the student elects to initiate a formal grievance process, the student may request a hearing by setting forth in writing the complaint and the remedy sought at the unit level. Upon receipt of this document, the unit head will acknowledge the formal grievance in writing within seven calendar days and will expeditiously proceed to constitute an ad hoc grievance committee. The unit head will serve as a nonvoting member of the committee. In addition, the following four committee members will be selected:
   a. One tenured faculty member from within the unit, selected by the unit head.
   b. One member of the academic faculty, selected by the student. The student may elect not to select a faculty member; in that case, the committee will consist of three members.
   c. One member from outside the unit, selected by the Student Grievance and Appeal Committee in consultation with the unit head.
   d. One member of the academic faculty selected by the faculty member or faculty committee whose action is in question.
   The Committee will proceed with due haste to examine the merits of the complaint and to render a decision within 30 days. During the proceedings, the student may present any and all evidence that the student deems necessary to support the complaint, except that the Committee must agree that the evidence is in some way relevant. Such evidence may consist of documentation and/or testimony. Both the student grievant and respondent(s) may be accompanied by advisors; the role of advisor must, however, be restricted to advice. Grievant(s) and respondent(s) must make their own cases before the committee.
   Following a hearing and a written decision at the school, college, or unit level, the grievance is presumed to be resolved unless the grievant appeals.
3. The grievant may appeal the decision that has been rendered by the unit to the Student Grievance and Appeal Committee.
   a. If the Committee, or subset thereof appointed by the chairperson of the Student Grievance and Appeal Committee, rules that the procedures are not applicable or that based on the facts stated by the grievant viewed in the light most favorable to the grievant, there is no basis for relief, then the appeal is denied,
   b. If the Committee rules that the grievance procedural rules are applicable and that a hearing of the appeal is warranted, the Committee shall initiate a hearing process.
   c. If a student wishes to have a grievance outcome reviewed by the Student Grievance and Appeal Committee with a view to a formal hearing, the student shall observe the following requirements:
      i. The appeal must be in writing. It must state the basis for the grievance and the facts that support it, including a summary of the steps that have already been taken to resolve the grievance, reasons why the student finds the resolutions unfair or unsatisfactory, and a statement of the desired remedy.
      ii. The written appeal must be presented to the chairperson of the Student Grievance and Appeal Committee within thirty days after the student has received notice of a decision from the unit.
      iii. The decision as to whether a formal hearing is warranted shall be made available, in writing, to the parties concerned within thirty days after the Committee has received notice of the appeal.
      iv. The Committee may alter a deadline specified in these procedures on written petition of either party showing a meritorious reason for delay; if the Committee itself needs to extend a deadline, it may do so on its own authority for periods up to fourteen calendar days; for longer delays, the Committee must request an extension from the Executive Board of the Institute.
      v. The determination of the Committee as to whether a hearing is warranted is final.
      vi. The Committee shall develop and, with the approval of the Academic Senate, establish and publish its own rules of procedures for the conduct of formal hearings.
      vii. After receiving testimony and the relevant documents, the Committee shall make a decision within thirty days on the basis of the received material.
      viii. The Committee's decision shall contain finding of fact, the decision arrived at, reasons for the decision, and the criteria or policy applied in reaching the decision.

C. Remedies

1. **General**
   If the Committee finds, after a formal hearing, that a faculty member, a unit committee, or an administrator of a unit has not acted fairly or properly, it will recommend a remedy. It will seek to find a remedy that can be implemented by those whose cooperation is needed. In the matter of a grade dispute, this must include the faculty member involved in the dispute.

2. **Enforcement**

   a. If any party does not comply with the decision of the Committee, the Committee shall, upon request of any party, seek full compliance through the administrative offices of the Institute through the Chief Academic Officer (CAO).
   b. The merits of the dispute shall not be subject to review in the process of enforcement. There shall be strong presumption in favor of the remedy selected by the Committee.

3. **Report of a Final Decision**
   After a final decision has been made in a case, the Committee shall prepare a report setting forth its findings and recommendations for action and present the report to the CAO. A copy of the report shall be presented to the parties concerned and to those persons involved in implementing the Committee's recommendations. All such communications shall be effected in person or by certified mail with a return receipt requested; such receipt will become part of the Institute records of the case.
   Care will be given that no incomplete or inaccurate information pertaining to the grievance is placed in any file and that all evidence obtained at any stage of the process and all deliberations and

proceedings be kept confidential. At the conclusion of each case, the Student Grievance and Appeal Committee shall transmit original or true copies of the documents related to the case to the appropriate Office of the Dean of Students, who shall keep such records securely as Institute records for a period of time specified by Institute statutes.

a. **Grade Changes:**
In decisions that would result in the changing of a posted grade, the CAO will instruct the unit director to ask the involved faculty member to effect the prescribed grade change or, if cooperation is not forthcoming, to effect the grade change directly by action of the unit director. Such action shall not be construed as restrictive of the resources of the faculty member through the usual appeal procedure of the Institute.

4. **Final Appeal**
Appeal of the decision of the Committee to the CAO shall be permitted only for the purposes of procedural review. Such appeals shall be submitted in writing, with copies to the Committee. The CAO will review the findings of the Committee and, upon judgment that the Committee has failed to follow these procedures or has failed to follow the procedures approved by the Academic Senate for the operation of the Student Grievance and Appeal Committee (XX1.C.3.c.c6), return the case to the Committee for reconsideration, along with description of the received error in procedure and a recommendation for its correction.

XX. Exceptions

Where appeals are not otherwise specified, exceptions to these regulations may be made by the appropriate faculty committee upon petition by the student and recommendation of the student's school or department. Blanket exceptions that have the effect of amending these regulations shall be referred to the Academic Senate for approval.

XXI. Student-Faculty Expectations

Additional information is available regarding Graduate Student-Advisor Expectations. Read more

A. Preamble

The Georgia Tech community believes that it is important to continually strive for an atmosphere of mutual respect, acknowledgement, and responsibility between faculty members and the student body. Therefore, we herein endeavors to enumerate the specific expectations of each side. However, this document is not intended to be either comprehensive or limiting in regards to the Institute's statutes. Ultimately, simple respect for knowledge, hard work, and cordial interactions will help build the environment we seek. We remain committed to the ideals of Georgia Tech, agree to abide by these principles in our time here, and will encourage each other to uphold these responsibilities.

B. Student Expectations

We hold that all students have the right to expect:

1. a positive, respectful, and engaged academic environment inside and outside the classroom;
2. to attend classes at regularly scheduled times without undue variations and without penalty if the student cannot attend instructional, lab, or examination hours not institutionally scheduled;
to have their instructor of record be present during most scheduled lecture periods.
3. to receive a syllabus which should include an outline of the course objectives, evaluation criteria, and any other requirements for successful completion of each course during the first week of class meetings and to be clearly informed of any changes made to the syllabus during the semester with reasonable time to adjust to these changes;
4. to consult with faculty outside of usual classroom times through regularly scheduled office hours or a mutually convenient appointment;
5. to have reasonable access to Institute facilities and equipment in order to complete course assignments and/or objectives;
6. to have reasonable time to learn course material prior to the administration of an examination;
7. to receive a clear explanation of the faculty's definition and interpretation of academic misconduct within the course that extends over and beyond those clearly defined in the Georgia Tech Honor Code;
8. to have reasonable access to graded materials for assignments, projects, or exams, to review graded material in a timely fashion, and to have a clear explanation of grading criteria and grade determination;
9. to have their letter grade in a class based on their performance based on course criteria and not solely on their performance relative to their classmates;
10. faculty to adhere to formal Institute policies, rules and regulations, such as the policy on Final Instructional Class Days and Reading Periods, and the confidentiality policies of FERPA.
11. faculty to be supportive of students' desires and needs to find rewarding careers after graduation from Georgia Tech. Faculty should be flexible in allowing students to attend the Georgia Tech All Majors Career Fair that occurs in the Fall and Spring Semesters and should refrain when possible from scheduling quizzes or tests on those days;
12. faculty to be flexible during the semester when students have off campus interviews for jobs or graduate/professional schools and should allow students to make up missed work when possible.
13. to be allowed to make up course assignments that were due prior to the student's addition of that course during Phase II registration.

C. Faculty Expectations

We hold that all faculty members have the right to expect:

1. a positive, respectful, and engaged academic environment inside and outside the classroom;
2. students to appear regularly for class meetings in a timely fashion;
3. to select qualified Teaching Assistants in accordance with departmental protocols as well as the right to delegate grading, studio and laboratory instruction, tutoring, and other academic activities to these individuals;
4. students to appear at office hours or a mutually convenient appointment for official matters of academic concern;
5. full attendance at examination, midterms, presentations, studios, and laboratories, with the exception of formal pre-approved excused absences or emergency situations;
6. students to be prepared for class, appearing with appropriate materials and having completed assigned readings and homework;

7. full engagement within the classroom, including meaningful focus during lectures, appropriate and relevant questions, and class participation;
8. to cancel class due to emergency situations and to cover missed material during subsequent class meeting times at the discretion of the instructor;
9. students to act with integrity and to adhere to the principles of the Georgia Tech Student Honor Code;
10. students to adhere to the formal Institute policies, such as the Student Code of Conduct.
11. students to make every effort to minimize their absences from scheduled lectures, laboratories, and studios during the Georgia Tech All Majors Career Fair that occurs in the Fall and Spring Semesters, and to notify them in advance if they intend to miss class to attend the Georgia Tech All Majors Career Fair;
12. students to notify them as soon as possible when they have off campus interviews for jobs or graduate/professional schools that conflict with class attendance.
13. students would be responsible for obtaining and completing any missed assignments or material in a timely manner when they add a course during Phase II registration after the first class meeting.

Georgia Institute of Technology offers three types of Certificates:
Undergraduate Embedded

Undergraduate embedded certificates are intended to encourage students to use the elective course requirements in their degree program to form a coherent package of coursework in a specified area.

Undergraduate embedded certificates will be granted only to students who, in addition to the undergraduate embedded certificate program requirements, have satisfied requirements for an undergraduate degree. The offering unit is responsible for verifying satisfaction of all undergraduate embedded certificate requirements, as well as completion of an undergraduate degree. Undergraduate embedded certificates are not recorded on the student's transcript or diploma. Arrangements must be made for awarding undergraduate embedded certificates within colleges or offering units. Undergraduate embedded certificates will not be awarded at the Institute level.

Undergraduate Certificate Guidelines

Graduate Embedded

Graduate embedded certificates are intended to encourage students to use the elective course requirements in their degree program to form a coherent package of coursework in a specified area.

Graduate embedded certificates will be granted only to students who, in addition to the graduate embedded certificate program requirements, have satisfied requirements for a graduate degree. The offering unit is responsible for verifying satisfaction of all graduate embedded certificate requirements, as well as completion of a graduate degree. Graduate embedded certificates are not recorded on the student's transcript or diploma. Arrangements must be made for awarding graduate embedded certificates within colleges or offering units. Graduate embedded certificates will not be awarded at the Institute level.

Graduate Embedded Certificate Guidelines

Graduate Stand-Alone

Stand-alone certificates may be completed independent of students being enrolled as Master's or Doctoral student. These certificates represent a cohesive program of study of a smaller size than a Master's program and provide more flexibility to professionals for pursing graduate education, including a means for professionals to renew and retrain due to a fast-changing work force. When completed, these certificates appear on the student's academic record (transcript), and the student receives a certificate of completion.

Graduate Stand-Alone Certificates

- Business Analytics. Graduate Certificate
- Data Science for the Chemical Industry. Graduate Certificate
- Emerging Technologies and Proliferation. Graduate Certificate
- Global Development. Graduate Certificate
- International Security and Aerospace Systems. Graduate Certificate
- Medical Physics. Graduate Certificate
- Sustainable Energy and Environmental Management. Graduate Certificate

Once graduate stand-alone certificate programs are approved by the Institute, they will be listed here.

BACHELOR OF SCIENCE IN AEROSPACE ENGINEERING

The first year focuses on coursework in the areas of chemistry, mathematics, physics, humanities, social sciences. The second year adds coursework in general engineering sciences and aerospace specific disciplines. The third and fourth years emphasize aerospace disciplines, vehicle systems integration and design, and Options courses that allow students to individualize their education.The undergraduate curriculum is designed to provide each student with a general background for employment in industry or government, or advanced study in graduate school at the end of four years. The program stresses the analytical, experimental, and design aspects of aerospace engineering. A certain degree of specialization is available to undergraduate students through the proper choice of Options and through a choice of air- or space-focused tracks. In addition, opportunities for undergraduate research and team competition courses are available, depending on the student's abilities and career objectives. Courses do not have to be taken during the specific semester indicated in the curriculum, but all prerequisites must be satisfied for each course. Advisement is encouraged before registration, with each student assigned a faculty advisor who remains the same for the full undergraduate program, unless the student requests a change. Students should consult with academic advisors for the availability of courses and recommended course sequences.

Program Educational Objectives

The undergraduate aerospace engineering degree program is designed to achieve the following objectives:

- Our graduates will be technically proficient and effective leaders and entrepreneurs. They will display high professional and ethical standards in aerospace engineering and related fields, and within industry, academia, and government.
- Our graduates will create new knowledge and engineering practices and develop products and services that have a global impact. They will collaborate with international partners and engage in culturally diverse teams.
- Our graduates will be life-long learners, continually developing their leadership, critical thinking, and problem-solving skills. They will be actively engaged in the acquisition and advancement of knowledge and technical expertise through research and development, and through active participation in professional societies, graduate studies, conferences, and symposia.
- Our graduates will transfer the knowledge gained from their aerospace engineering degrees to new fields that intersect with aerospace engineering such as robotics, medicine, and clean energy. They will use their degrees as a launching point for careers in other professional fields such as law, medicine, and public service.

Code	Title	Credit Hours
Wellness		
APPH 1040	Scientific Foundations of Health	2
or APPH 10	The Science of Physical Activity and Health	
or APPH 10	Flourishing: Strategies for Well-being and Resilience	
Core A - Essential Skills

or AE 4322	Space System Design II: Mission Design	
or AE 4332	Rotorcraft Design II: Preliminary Design	

AE 4531	Aircraft Flight Dynamics	3
or AE 4532	Spacecraft Flight Dynamics	
AE 4451	Jet and Rocket Propulsion	3
AE 4610	Dynamics and Control Laboratory	2
AE Options [4]		6
Non-AE Required Courses		
ME 1670	Introduction to Engineering Graphics and Design	3
ECE 3710	Circuits and Electronics	2
ECE 3741	Instrumentation and Electronics Lab	1
Math Option [5]		3
Free Electives		
Free Electives [6]		9
Total Credit Hours		**131**

Pass-fail only allowed for Free Electives.

1 Minimum grade of C required.
2 If PHYS 2231 (5 credit hours) is taken, excess hour applies to Free Electives.
3 If PHYS 2232 (5 credit hours) is taken, excess hour applies to Free Electives.
4 AE courses from list supplied by School
5 Math Options: MATH 3215, MATH 3670, MATH 4305, MATH 4317, MATH 4320, MATH 4347, MATH 4541, MATH 4581, MATH 4640
6 ME 2202, ME 3322, and PHYS 2XXX (AP credit) are not allowed.
7 MATH 1554 or MATH 1564 may be used in place of MATH 1553.

- A grade of **C** or better is required in each 1000 and 2000 level mathematics and physics course; a course with a **D** or **F** grade must be repeated the next semester the student is in residence.
- A 2.0 or higher overall grade-point average is required to schedule COE 2001
- At the 3000-level and above, no more than two D grades are permitted in required AE (core and AE options) and required COE courses. Additional D grades must be repeated.

Cooperative Plan

The School of Aerospace Engineering offers BSAE with COOP option. Students alternate between industrial assignments and classroom studies until they complete three semesters of work. Co-op students with mechanical engineering majors complete the same coursework on campus that is completed by regular four-year students. Most co-op students begin the program as sophomores or juniors and are classified as full-time students regardless of whether they are attending classes on campus or are full-time at an employer's location. For additional information about the Georgia Tech Co-Op program, visit www.coop.gatech.edu.

International Plan

The International Plan is a challenging and coherent academic program for undergraduates emphasizing global competence within the context of the aerospace engineering major. This program has specific language requirements. There are also coursework requirements related to history, global economy, international culture, and residential foreign experience. Refer to www.internationalplan.gatech.edu for the general requirements of the International Plan. These requirements may be satisfied by carefully selecting the humanities, social sciences, and free elective hours available in the program, in consultation with a faculty advisor.

Research Option

The school of Aerospace Engineering offers the "Research Option" under the BSAE degree program. In order to graduate with a BSAE (RO) degree, the students must

- Complete at least nine units of undergraduate research (over at least two, preferably three terms). Research may be for either pay (AE 2698 or AE 4698) or credit (AE 2699 or AE 4699). Research for credit may be used towards the BSAE free elective requirements.
- Write an undergraduate thesis/report of research on their findings. This is usually done during the graduating term.
- Take both LMC 4701 (typically taken during the first or second semester of research) and LMC 4702: (taken during the thesis-writing semester).

At least six of the nine required credit hours of research should be on the same topic. A research proposal must be approved by a faculty advisor and one other faculty member. This proposal will be written in LMC 4701 which serves as a prerequisite for LMC 4702. Completion of Research Option is noted on the student's transcript.

For additional details, please contact: permits@ae.gatech.edu

BS/MS Honors Program

A combined BS/MS honors program is also offered that prepares students for graduate studies and research. Please see http://ae.gatech.edu/bs-ms-honors-program for more information.

BACHELOR OF SCIENCE IN APPLIED LANGUAGES & INTERCULTURAL STUDIES

The School of Modern Languages offers a Bachelor of Science degree in Applied Languages and Intercultural Studies (ALIS) with separate language concentrations in Chinese, French, German, Japanese, Korean, Russian, and Spanish. The B.S. in Applied Languages and Intercultural Studies equips students with 21st-century foreign language study and expertise that acknowledges a rapidly globalizing world.

The B.S. in ALIS is more than language study. As an international institution located in the global hub that is Atlanta, Georgia Tech sits at the intersection of global culture and innovation. Our degree recognizes that it is no longer enough to learn a new language if it is not accompanied with applicable skills for emerging industries, real-world problem-solving, and sustainable development. The B.S. in ALIS takes an intercultural and interdisciplinary approach that trains students in their language concentration, as well as in linguistics, literature, media, cultural studies, comparative analysis, and critical awareness.

The B.S. in ALIS program is designed around the cultural perspectives, industry knowledge, humanities skills, and technological innovation required to participate and thrive in the current competitive global market. By coupling advanced language skills with intercultural competence, ALIS majors are positioned to work in a variety of fields that include: local and national government; non-profits and NGOs; healthcare and medicine; international business, law, and trade; global affairs and public policy; new media development and web design; journalism, marketing, and advertising.

Students in this program take 30 credit hours of advanced language study at the 3000-/4000-level, although students may count CHIN 2002/FREN 2002/GRMN 2002/KOR 2002/JAPN 2002/RUSS 2002/SPAN 2002 for CHIN 2501, FREN 2005, KOR 2692, RUSS 2692) for 3 of the 30 credits. In addition, students must complete an 18-credit-hour concentration in an approved cluster, which consists of coursework applied toward certificates, minors, additional degrees, or study-abroad programs. A total of 12 credit hours from the language electives for the ALIS Major Requirements or from the Approved Cluster must be completed abroad in the language of study.

The B.S. in ALIS degree program is intentionally flexible with a high number of free electives, which allows students to combine it with another major or minor(s).

- Bachelor of Science in Applied Languages and Intercultural Studies - Chinese
- Bachelor of Science in Applied Languages and Intercultural Studies - French
- Bachelor of Science in Applied Languages and Intercultural Studies - German
- Bachelor of Science in Applied Languages and Intercultural Studies - Japanese
- Bachelor of Science in Applied Languages and Intercultural Studies - Korean
- Bachelor of Science in Applied Languages and Intercultural Studies - Russian
- Bachelor of Science in Applied Languages and Intercultural Studies - Spanish

International Plan

The degree requirements for the Applied Languages and Intercultural Studies (Chinese, French, German, Japanese, Korean, Russian, and Spanish) - International Plan (ALIS - IP) are basically the same as for the ALIS degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese, and Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad must total a minimum of twenty-six weeks; typically these consist of one semester of study plus a significant amount of time spent with a research or work project abroad. Only one summer semester abroad will count in this total. ALIS-IP majors are strongly encouraged to enroll in the Language for Business and Technology (LBAT) intensive summer programs offered by the School of Modern Languages.

In addition to gaining advanced global competence, the International Plan designation will set ALIS majors apart from other applicants with recruiters from top companies and governmental agencies. Other required courses include the following, which can easily be obtained within the regular required curriculum offerings of Modern Languages (these requirements can also be met with courses taken abroad, upon consultation with ALIS degree advisors):

1. One course focused on international relations historically and theoretically, including topics such as:
   a. the role of state sovereignty and nationalism and non-state actors in the international system;
   b. international conflict, peace, security, intervention, and nation-building;
   c. international organizations, law, and ethics; and
   d. transnational problems of the environment, terrorism, health, and migration; among other issues.
2. One course that provides a historical and theoretical understanding of the global economy, including topics such as international trade, finance, investment, and production; regional economic integration (such as the EU); economic development and modernization; and questions of natural resource sustainability.
3. One course that provides familiarity with an area of the world or a country that allows them to make systematic comparisons with their own society and culture. A culminating course, occurring either at the end of or after the international experience that integrates knowledge of the discipline and the international experience in a global context. (satisfied by the CHIN 4500/FREN 4500/GRMN 4500/JAPN 4500/KOR 4500/RUSS 4500/SPA

Degree Information

BS/MS Applied Languages and Intercultural Studies

Eligibility requirements:

1. Recommendation of two Modern Languages faculty members

2. Grade of 3.0 or higher in all BS-ALIS coursework as demonstrated through official GT transcript (as of 2019-20 Spanish coursework)

3. Oral proficiency level of at least Intermediate High according to American Council of the Teaching of Foreign Languages (ACTFL) standards and OPI assessment procedures. This will be determined by in-person interview or ACTFL phone test.

4. Students must apply by March 15 of their junior year, so as to be accepted into the program and enroll in the graduate version of the required Intercultural Seminar (Capstone) course in the spring of their senior year.

5. Student acceptance will be recommended by a Graduate Committee comprised of members of the language programs to which students apply.

6. Students must maintain at least a 3.0 GPA throughout the MS ALIS program.

Program of Study and BS/MS ALIS Curriculum:

Following the model of other BS/MS degrees at Georgia Tech, ALIS majors meeting and maintaining eligibility requirements for continuing with the BS/MS ALIS may double count up to 6 credit hours of language study at the 4000 level or higher toward both degrees. BS/MSALIS students must complete at least 146 hours (total hours for BSALIS = 122 credit hours and total hours for MSALIS = 30 credit hours equal 152 credit hours with 6 credit hours being shared = 146 credit hours. Students may double count a 6000-level elective (3 hours) and 6000-level Intercultural Seminar (3 hours) toward undergraduate and graduate requirements.

BS/MS ALIS students also 21 take credit hours of graduate electives (3 credits of this requirement will be completed at undergraduate level), of which 18 or more must be in the target language, while one advisor-approved course not in the target language is allowed (3 credit hours of graduate level coursework taken at the undergraduate level will satisfy both BSALIS ML elective and a MSALIS elective requirement). BS/MS students must also complete Intercultural Seminar (6500) that will satisfy both the undergraduate and graduate seminar requirement.

Study Abroad Experience (12 credits from 30 credits of Chinese Electives for the ALIS Major Requirements and/or 18 credits of Approved Cluster) [4]		
Free Electives		
Free Electives [5]		29
Total Credit Hours		**122**

Note: The 12-credit study abroad requirement for the B.S. ALIS degree is temporarily suspended for academic year 2022-2023. ALIS majors will still complete 30-credits of language coursework at the 2002 and above level, including the 4500 Intercultural Seminar, as well as the 18-credit cluster, but will not have to complete 12 of those credits abroad. ALIS majors are encouraged to participate in virtual faculty-led study abroad programs or LBATs or in "Global at Home" immersive programs in the event that study abroad is not possible in their language of study.

1. Designed for coursework toward certificates, minors, additional degrees, or study-abroad programs. Please consult with advisor on course selection.
2. CHIN 4500 "Intercultural Seminar" is the only required language course. CHIN 4500 functions as the capstone course for the B.S. ALIS degree. Students should plan to take this course in their last spring semester before graduation and upon completion of the required international experience. Please consult with advisor on scheduling for the required CHIN 4500 course.
   Note that a student with a valid scheduling conflict may substitute CHIN 4699 (Undergraduate Research) for CHIN 4500 (Intercultural Seminar) with approval from the Director of Undergraduate Studies and/or Assistant Director of Undergraduate Studies. Valid scheduling conflicts include co-oping, interning, or studying abroad in the spring semester of one's senior year or needing to take another required major course in the same time slot in one's senior year.
3. May count CHIN 2002 (or CHIN 2501). All other courses must be 3000- or 4000- level courses. A student who counts CHIN 2002 (or

CHIN 2501) toward the major requirements, may only count one 34XX course toward the major requirements. A student who does not count CHIN 2002 (or CHIN 2501) toward the major requirements, may count up to two 34XX courses toward the major requirements. Additional 34XX courses may be taken as free electives or to fulfil Humanities requirements.

4 A minimum of 12 credits from the Chinese Electives for the ALIS Major Requirements and/or from the Approved Cluster must be completed abroad in Chinese. A student may petition to have the 12-credit study abroad requirement reduced or waived under circumstances of extreme hardship or in the event of program cancellation. If approved, the student would substitute the overseas experience with a comparable cross-cultural experience as approved by the Program Director, Director of Undergraduate Studies, and/or Assistant Director of Undergraduate Studies.

5 Students are strongly encouraged to take additional language courses, linguistics courses, and relevant area studies courses to fulfill free elective credits so as to broaden and/or deepen language and culture learning.

ALIS Major Requirements		
RUSS 4500	Russian Intercultural Capstone Seminar [2]	3
Russian Electives		27
Study Abroad Experience (12 credits from 30 credits of Russian Electives for the ALIS Major Requirements and/or 18 credits of Approved Cluster) [4]		
Free Electives		
Free Electives [5]		29
Total Credit Hours		**122**

Note: The 12-credit study abroad requirement for the B.S. ALIS degree is temporarily suspended for academic year 2022-2023. ALIS majors will still complete 30-credits of language coursework at the 2002 and above level, including the 4500 Intercultural Seminar, as well as the 18-credit cluster, but will not have to complete 12 of those credits abroad. ALIS

majors are encouraged to participate in virtual faculty-led study abroad programs or LBATs or in "Global at Home" immersive programs in the event that study abroad is not possible in their language of study.

1 Designed for coursework toward certificates, minors, additional degrees, or study-abroad programs. Please consult with advisor on course selection.

2 RUSS 4500, "Intercultural Seminar" is the only required language course. RUSS 4500 functions as the capstone course for the B.S. ALIS degree. Students should plan to take this course in their last spring semester before graduation and upon completion of the required study abroad credits. Please consult with advisor on scheduling for the required RUSS 4500 course. Note that a student with a valid scheduling conflict may substitute RUSS 4699 (Undergraduate Research) for RUSS 4500 (Intercultural Seminar) with approval from the Director of Undergraduate Studies and/or Assistant Director of Undergraduate Studies. Valid scheduling conflicts include co-oping, interning, or studying abroad in the spring semester of one's senior year or needing to take another required major course in the same time slot in one's senior year.

3 Russian electives are limited to RUSS 2002 or RUSS 2692 and 3000- and 4000-level Russian courses. A student who counts RUSS 2002 or RUSS 2692 toward the major requirements, may only count one RUSS 34XX course toward the major requirements. A student who does not count RUSS 2002 or RUSS 2692 toward the major requirements, may count up to two RUSS 34XX courses toward the major requirements. Additional RUSS 34XX courses may be taken as free electives or to fulfil Humanities requirements.

4 A minimum of 12 credits from the Russian Electives for the ALIS Major Requirements and/or from the Approved Cluster must be completed abroad in Russian. A student may petition to have the 12-credit study abroad requirement reduced or waived under circumstances of extreme hardship or in the event of program cancellation. If approved, the student would substitute the overseas experience with a comparable cross-cultural experience as approved by the Program Director, Director of Undergraduate Studies, and/or Assistant Director of Undergraduate Studies.

5 Students are strongly encouraged to take additional language courses, linguistics courses, and relevant area studies courses as part of their free elective credits.

[3] Spanish electives are limited to SPAN 2002 and 3000- and 4000-level Spanish courses. A student who counts SPAN 2002 toward the major requirements, may only count one SPAN 34XX course toward the major requirements. A student who does not count SPAN 2002 toward the major requirements, may count up to two SPAN 34XX courses toward the major requirements. Additional SPAN 34XX courses may be taken as free electives or to fulfil Humanities requirements.

[4] A minimum of 12 credits from the Spanish Electives for the ALIS Major Requirements and/or from the Approved Cluster must be completed abroad in Spanish. A student may petition to have the 12-credit study abroad requirement reduced or waived under circumstances of extreme hardship or in the event of program cancellation. If approved, the student would substitute the overseas experience with a comparable cross-cultural experience as approved by the Program Director, Director of Undergraduate Studies, and/or Assistant Director of Undergraduate Studies.

[5] Students are strongly encouraged to take additional language courses, linguistics courses, and relevant area studies courses as part of their free elective credits.

BACHELOR OF SCIENCE IN APPLIED PHYSICS

The School of Physics offers two undergraduate degrees, the Bachelor of Science in Physics and the Bachelor of Science in Applied Physics.

The degree program in applied physics may be better suited for entry into industry or government upon graduation, preparation for further professional training (medicine, law, dentistry, or business), or preparation for graduate study in some other discipline. The applied physics program differs from the traditional one in that a few courses intended primarily as preparation for graduate study in physics are replaced by courses oriented toward the applications of physics.

Each of the baccalaureate programs contains the following: a) courses needed to meet general institutional degree requirements; b) a core of technical courses intended to give a strong background in mathematics and the physical principles of mechanics, electricity and magnetism, thermodynamics, and the quantum theory that governs physical phenomena at the microscopic level of molecules, atoms, and nuclei; c) technical electives that enable the student to explore areas of their choice in greater depth; d) courses involving undergraduate research, and e) free electives, about fifteen percent of the total hours, which may be employed to schedule additional technical or nontechnical courses.

The considerable flexibility inherent in the physics curricula is advantageous to students who wish to work out individual programs of study. At the same time, this flexibility suggests the need for consultation with advisors so students can make the best use of elective hours and avoid scheduling difficulties that may arise in later semesters. Students may utilize their elective freedom in the physics curricula to specialize in particular areas of physics, to prepare for careers in interdisciplinary areas of science, to compose a preprofessional program, or to gain a background in other technical or nontechnical disciplines. Students should contact their academic advisor for assistance in planning programs of study with emphasis directed toward a particular objective.

Since some students who earn a degree in physics have transferred from other disciplines, the School has planned its degree programs to enable most students to transfer into physics with little or no loss of credit.

A total of 120 credit hours (exclusive of wellness) and a grade-point average of at least 2.0 in physics courses numbered 3000 and higher are requisites for the bachelor's degree in physics.

Physics: Undergraduate Information

Undergraduate Admissions

- Bachelor of Science in Applied Physics - General
- Bachelor of Science in Applied Physics - Business Option
- Bachelor of Science in Applied Physics - Physics of Living Systems

BS/MS OPTION

The BSMS Option allows eligible students to double count a maximum of 6 credit hours toward undergraduate and graduate requirements while still completing all other program requirements to earn both degrees.

To apply for the option, undergraduate Physics students (BS in Applied Physics or BS in Physics) must have at least 30 credit hours earned at Georgia Tech with an undergraduate GPA of 3.3 or higher, and fewer than 90 credits overall (including transfer credit).

The minimum GPA to graduate with an undergraduate degree in Applied Physics/Physics to continue to the MS in Physics program is 3.0. The minimum GPA for graduation with the MS in 2.7.

Students will need to consult with an advisor to indicate which courses are sharing with the graduate degree in DegreeWorks.

BACHELOR OF SCIENCE IN ARCHITECTURE

The Bachelor of Science in Architecture (B.S. Arch) offers a rigorous and distinguished architectural education profile for our students around technology in all areas – design, history, theory, and communication. It is defined by a knowledge of how to think about and apply technology in architecture. Our program offers flexibility in the design studio sequence to allow coordinated interdisciplinary work with other schools at Georgia Tech. We build our academic foundation on studio classes, history and theory, and a deliberate blend of technology and design. We offer incubator workshops to all our students, from Freshmen through Seniors, which allow them to follow their intellectual passions and hone in-demand skills. Our students graduate with a broad-based undergraduate education grounded in design, science, and technology.

The Bachelor of Science in Architecture program prepares students for graduate-level studies in architecture, for graduate study in related fields, or a variety of careers related to architecture, the building industry, or government service.

Grade Requirements

Students must pass all architecture undergraduate studios with a grade of C or above in order to move forward to the next studio in the sequence.

A maximum of 9 credit hours may be taken on a pass/fail basis. Only courses taken as free electives within the undergraduate curriculum are eligible for pass/fail credit. See Institute regulations regarding pass/fail courses.

Students who complete both the Bachelor of Science in Architecture (BS Arch) and Master of Architecture (M.Arch.) in the Georgia Tech School of Architecture may apply up to 6 credit hours of graduate coursework toward both degrees. In order to qualify for this option, the student must complete the undergraduate degree with a cumulative grade-point average of 3.5 or higher and enter the Masters program in the following fall term.

International Plan

The International Plan (IP) in the School of Architecture is a challenging and coherent academic program for undergraduate students who will develop an introductory level of global competence within the study of architecture. The International Plan is an intensive degree-long program designed to prepare students with the ability to:

1. assimilate comfortably in a constantly evolving international context within the profession of architecture,
2. value how architecture is practiced in different global contexts,

3. function effectively in a multi-national academic and work environment, and
4. understand the complexity of the global economy and the importance of developing a sensibility to international relations.

While many students gain some exposure to these aspects of today's world through the patchwork of traditional international opportunities such as study abroad and international internships, IP is designed to develop a deeper level of competency in these areas within the study of architecture.

The requirements of IP are:

1. Proficiency in a Foreign Language
2. Globally Focused Courses
3. International Experience, and
4. A Capstone Course

IP students in the School or Architecture can fulfill the International Experience requirement of the International Plan by participation in a university-approved international program with the approval of the School of Architecture.

Undergraduate students in the School of Architecture must hold a minimum 2.5 GPA at the time of application to be eligible for the International Plan . Students must complete each architectural design studio with a grade of C or above in order to move forward in the sequence and maintain eligibility for IP. Students will not be allowed to study abroad until they have completed the first four foundational studios.

For more information on IP, visit www.arch.gatech.edu/international-education.

2. Nine (9) hours must be 3000-4000-level. Students must complete at least 39 hours of 3000-4000 level coursework.

BACHELOR OF SCIENCE IN BIOCHEMISTRY

The Bachelor of Science in Biochemistry degree program includes a combination of requirements and electives that ensure a strong foundation in the chemical and biological sciences, while providing the flexibility to tailor the curriculum to satisfy specific interests or career goals. This program may be of interest to students who aspire to careers in research, teaching, or in a life/health science profession (medicine, pharmacy, dentistry). The judicious use of free electives also enables the student to achieve considerable knowledge of other disciplines at Georgia Tech, such as chemical and biomolecular engineering, bioinformatics (computing), biomedical engineering, and biology. The biochemistry curriculum enables majors who are interested in medical, dental, or law school to meet admission requirements of these schools.

Chemistry Website

- Bachelor of Science in Biochemistry - General
- Bachelor of Science in Biochemistry - Business Option
- Bachelor of Science in Biochemistry - Pre-health Option

International Plan

The BS in Chemistry (International Plan) and BS in Biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate in a study or research abroad experience (usually in the junior year). If a student is pursuing a research abroad experience, they are required to complete a supervised research experience with a faculty member in chemistry or biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the diploma. If interested in participating in the International Plan as part of the BS in Chemistry or BS in Biochemistry, students should visit: www.internationalplan.gatech.edu.

Chemistry Website

Research Option

The BS in Chemistry (Research Option) and BS in Biochemistry (Research Option) are offered for students who wish to participate in a research project under the supervision of one of the fifty members of faculty and adjunct faculty in the School. Participants in the Research Option learn how to address a research problem from experiment design and execution to interpretation of results. There is an expectation that undergraduates who contribute to completed studies will be co-authors on submissions to high-quality scholarly journals. Research projects are available in the traditional areas of chemistry (analytical, biological, inorganic, organic, and physical chemistry) as well as highly interdisciplinary research areas, such as nanochemistry, polymer and materials chemistry, environmental chemistry and sensors, medicinal chemistry, molecular biophysics, and computational chemistry.

To pursue the Research Option in the School of Chemistry and Biochemistry, students should obtain a research project with a faculty member in the department and apply online via www.undergradresearch.gatech.edu. Successful completion of the Research Option requires the following:

Code	Title	Credit Hours
Select one of the following research options: [1]		9
CHEM 4698/4699	Undergraduate Research Assistantship	
LMC 4701	Undergraduate Research Proposal Writing (complete during the first or second semester of research) [2]	1
LMC 4702	Undergraduate Research Thesis Writing (take during the term in which students complete their thesis) [3]	1
Total Credit Hours		**11**

[1] supervised research with faculty over three or more semesters
[2] approval of proposal on project by a committee of two or more faculty
[3] submission of an approved thesis

Successful completion of the Research Option is noted on the student's transcript. Students completing this option often pursue graduate studies in the chemical or biological sciences or research careers in industrial or governmental laboratories.

Chemistry Website

BSMS Option

The BSMS Option allows eligible students to double count a maximum of 6 credit hours toward undergraduate and graduate requirements while still completing all other program requirements to earn both degrees. The credit must be approved coursework (4000-level or higher; not seminar or research credit) completed with a grade of 'B' or higher. The allowable courses are: CHEM 4113, CHEM 4311, CHEM 4341, CHEM 4401, CHEM 4452, CHEM 4485, CHEM 4521,
CHEM 4740, CHEM 4759, CHEM 4760, CHEM 4762, CHEM 4765, CHEM 4775, CHEM 4776, CHEM 4785. Special Topics will be considered on a case by case basis.

To apply for the option, undergraduate Biochemistry students must have at least 30 credit hours earned at Georgia Tech with an undergraduate GPA of 3.3 or higher, and fewer than 90 credits overall (including transfer credit).

The minimum GPA to graduate with an undergraduate degree in Biochemistry to continue to the MS in Chemistry program is 3.0. The minimum GPA for graduation with the MS in 2.7.

Students will need to consult with an advisor to indicate which courses are sharing with the graduate degree in DegreeWorks.

BACHELOR OF SCIENCE IN BIOLOGY

Faculty in the School of Biological Sciences believe that one learns science best by doing science. Many Biology courses feature authentic, student-driven research projects, and all Biology majors participate in research through undergraduate research courses. The School also offers many interdisciplinary courses, including bio-inspired design, bioethics, biophysics, mathematical models in biology, genomics and applied bioinformatics, signaling molecules, macromolecular modeling, aquatic chemical ecology, and experimental design and statistics. The Biology degree includes 21 hours of customizable technical electives and offers multiple options for students to tailor the degree for individual career goals, including the Research Option, Business Option, Pre-Health focus, Internships, Research, Teaching Assistant (TA) experience, Study Abroad & International Plan, Biology certificates and BS/MS options in Biology and Bioinformatics.

Biology graduates of Georgia Tech are expert, quantitative problem solvers ready to apply their skills in many different career paths. The undergraduate curriculum for the Bachelor of Science in Biology degree is designed to prepare students for employment in academia, government, or industry; for graduate studies in the biological sciences or science teaching; or for admission to medical, dental, or veterinary schools.

Biology Undergraduate Programs

- Bachelor of Science in Biology - General
- Bachelor of Science in Biology - Business Option

International Plan

Georgia Tech's International Plan, through the Office of International Education (www.oie.gatech.edu/), involves two study abroad experiences and coursework in global studies. The plan offers a challenging and coherent academic program for students to develop global competence within the context of a Biology degree. The requirements include: language proficiency equivalent to two years of college coursework (twelve hours), one course in international relations (three hours), global economy (three hours), focused study of a region (three hours), an integrative course synthesizing the international experience (three hours), and two semesters (minimum of 26 weeks) in residence abroad. Georgia Tech biological sciences (BIOS) courses are taught in several Study Abroad programs such as the Pacific program, the BEST-Lyon program, and the Barcelona program. In addition, many biological sciences (BIOS)-equivalent courses are available through Georgia Tech partner universities abroad (www.oie.gatech.edu/sa/programs/). Some of these universities teach biology courses in English, such as Hong Kong University, Tokyo Technological University, University of Victoria (New Zealand), National University of Singapore, University of Strathclyde (Scotland), and Bilkent University (Turkey). Successful completion of this plan earns students an international designation on their Georgia Tech degree.

Research Option

This Research Option enables students to complete nine credit hours of supervised research with a Biology faculty member over multiple semesters. With faculty guidance, students write a brief proposal, perform independent, original research, and write a thesis about their work. The thesis is evaluated by two Biology Faculty members. The first six credit hours of the research option are taken as BIOS 4699 (research for credit) or BIOS 4698 (research for pay). Students then take either BIOS 4690 in their final semester and two, one credit-hour writing courses, LMC 4701 and LMC 4702. These writing courses can be counted as Biology electives for Research Option students. Note that LMC 4701 should be taken in the semester prior to enrolling in BIOS 4690. The student's research is presented in BIOS 4460.

Code	Title	Credit Hours
Select one of the following research options:		6
BIOS 4699	Undergraduate Research	
BIOS 4698	Research Assistantship	
In the final semester of study, select the following courses:		
BIOS 4690	Independent Research Project	3
LMC 4701 & LMC 4702	Undergraduate Research Proposal Writing and Undergraduate Research Thesis Writing [1]	2
Total Credit Hours		**11**

[1] These writing courses can be counted as Biology electives for Research Option students. Note that LMC 4701 should be taken in the semester prior to enrolling in BIOS 4690.

Successful completion of this option earns students a "Research Option in Biology" designation on their Georgia Tech transcripts.

BS/MS Programs

The School of Biological Sciences offers two BS/MS Options:

BS in Biology/MS in Biology

BS in Biology/MS in Bioinformatics

Bachelor of Science in Biology - Business Option

Effective Spring 2020: The School of Biological Sciences has transitioned all undergraduate Biology (BIOL) and Applied Physiology (APPH) courses to Biological Sciences (BIOS) to reflect the merger of the two Schools. Courses under the BIOL- and APPH- may still apply to these requirements. Students should consult with advisors to determine which requirements have been met.

Free Electives		
Free Electives [3,4]		5
Total Credit Hours		**122**

[1] Students must complete two of the three lab categories listed below. Each lab should be taken concurrently with the associated lecture course when possible. If you choose to take all three lab courses, then the 3000-level course may count toward Biology Electives instead of the Core Lab requirement.

- Ecology or Problem-based Ecology lab: BIOS 2301 or BIOS 2311
- Genetics or Integrative Genetics lab: BIOS 2601 or BIOS 2611
- Cell and Molecular Biology lab: BIOS 3451

[2] Students are required to complete 21 credit hours of Biology electives defined as follows:

- 12 'depth' credit hours must be 3000-level or higher courses with 'BIOS' prefix, excluding BIOS 4694-BIOS 4699. BIOS courses that are cross-listed with other departments are included in these 12 depth credit hours.
- The remaining 3 'breadth' credit hours can be selected from: other BIOS 3000-level or higher courses, BIOS experiential learning courses*, and/or the list of approved courses offered in other departments**.
  - **Experiential learning courses include: BIOS 4695, BIOS 4697, BIOS 4699, and VIP courses (VIP courses must have a

Biological Sciences instructor). Additional experiential learning coursework may be used to fulfill Free Electives.

- **Approved breadth elective courses in other departments include 3000-level or higher BMED, CHEM, EAS, NEUR, MATH, PHYS, PSYC; EXCEPT the following: BMED 4699, BMED 4900-BMED 4903, CHEM 4601, CHEM 4699,CHEM 4901-CHEM 4903, EAS 4651, EAS 4699, EAS 4900, MATH 4080, MATH 4090, MATH 4699, MATH 4999, NEUR 4699, NEUR 4901, PHYS 4601, PHYS 4602, PHYS 4699, PSYC 4600, PSYC 4601, PSYC 4699, PSYC 4900-PSYC 4910.

[3] CETL 2000 may apply toward free electives.

[4] Pass-Fail allowed for Free Electives only. Refer to Institute Rules for maximum Pass-Fail Credits allowed.

Biology Lab [1]		2
BIOS 3600	Evolutionary Biology	3
BIOS 4460	Communicating Biological Research	1
Select one of the following:		3
BIOS 4590	Research Project Lab	
BIOS 4690	Independent Research Project	
Non-Biology Courses		
CHEM 2380	Synthesis Laboratory I	2
or CHEM 2380H	Synthesis Laboratory I	
Select one of the following:		3
BIOS 3400	Mathematical Models in Biology	
BIOS 4150	Genomics and Applied Bioinformatics	
BIOS 4401	Experimental Design and Statistical Methods in Biological Sciences	
Biology Electives		
Biology Electives 3000-level or higher [2]		21
Free Electives		
Free Electives [3,4]		11
Total Credit Hours		**122**

[1] Students must complete two of the three lab categories listed below. Each lab should be taken concurrently with the associated lecture course when possible. If you choose to take all three lab courses, then the 3000-level course may count toward Biology Electives instead of the Core Lab requirement.

- Ecology or Problem-based Ecology lab: BIOS 2301 or BIOS 2311
- Genetics or Integrative Genetics lab: BIOS 2601 or BIOS 2611
- Cell and Molecular Biology lab: BIOS 3451

[2] Students are required to complete 21 credit hours of Biology electives defined as follows:

- 12 'depth' credit hours must be 3000-level or higher courses with 'BIOS' prefix, excluding BIOS 4694-BIOS 4699. BIOS courses that are

cross-listed with other departments are included in these 12 depth credit hours.

- The remaining 9 'breadth' credit hours can be selected from: other BIOS 3000-level or higher courses, BIOS experiential learning courses*, and/or the list of approved courses offered in other departments**.
  - **Experiential learning courses include: BIOS 4695, BIOS 4697, BIOS 4699, and VIP courses (VIP courses must have a Biological Sciences instructor). A maximum of 6 credits of each experiential learning course may be used to fulfill 'breadth' credit hours. Additional experiential learning coursework may be used to fulfill Free Electives.
  - **Approved breadth elective courses in other departments include 3000-level or higher BMED, CHEM, EAS, NEUR, MATH, PHYS, PSYC; EXCEPT the following: BMED 4699, BMED 4900-BMED 4903, CHEM 4601, CHEM 4699,CHEM 4901-CHEM 4903, EAS 4651, EAS 4699, EAS 4900, MATH 4080, MATH 4090, MATH 4699, MATH 4999, NEUR 4699, NEUR 4901, PHYS 4601, PHYS 4602, PHYS 4699, PSYC 4600, PSYC 4601, PSYC 4699, PSYC 4900-PSYC 4910.

[3] CETL 2000 may be applied to free electives.
[4] Pass-Fail allowed for Free Electives only. Refer to Institute Rules for maximum Pass-Fail Credits allowed.

BACHELOR OF SCIENCE IN BIOMEDICAL ENGINEERING

The true integration of the life sciences and engineering is essential in educating a substantial percentage of the next generation of biomedical engineers in order to benefit from the biological revolution and its applications to medicine. This degree program attracts outstanding students who wish to have that integration in their undergraduate education, so that they may be equipped with the tools to be leaders in this field in the 21st Century.

The curriculum includes a solid foundation in fundamental engineering, mathematics, and sciences - biology, chemistry, and physics - as well as grounding in humanities, social sciences, and communication skills. A unique aspect of the curriculum is the incorporation of problem-based learning (PBL) methodologies to foster development of both self-directed learning skills and problem-solving skills in a team-based environment.

Program Educational Objectives

The program strives to produce graduates who are expected to demonstrate the following during the first few years after graduation:

1. mathematics, science, and engineering fundamentals expertise at the interface of engineering and the life sciences which enables them to take leadership roles in the field of biomedical engineering;
2. an ability to use their multidisciplinary background to foster communication across professional and disciplinary boundaries with the highest professional and ethical standards; and
3. the ability to recognize the limits of their knowledge and initiate self-directed learning opportunities to be able to continue to identify and create professional opportunities for themselves in the field of biomedical engineering.

BMED Breadth Electives [4]		15
Total Credit Hours		**131**

Pass-fail only allowed for Free Electives, Humanities, and Social Sciences.

Students must average a 2.0 for all BMED coursework required by name and number (includes BMED 1000 and BMED 2110)

Student must earn a 2.0 average
in MATH 1551, MATH 1552, MATH 1553, MATH 2551, and MATH 2552.

[1] If PHYS 2231 is taken, extra hour goes to Free Electives.

[2] If PHYS 2232 is taken, extra hour goes to Free Electives.
[3] BMED 2699, any 3000- or 4000-level BMED course. Maximum of six credit hours of undergraduate research.
[4] Breadth Electives can be satisfied with a minor, certificate, or other coursework. Please consult with advisor on course selection.

Cooperative Plan

The Georgia Tech Undergrad Co-op Program is a five-year, academic program designed to complement a student's formal education with paid practical work experience directly related to the student's academic major. It is available in all engineering majors, as well as in many majors in other colleges at Georgia Tech.

Co-ops alternate semesters of on-campus study with semesters of full-time employment through their junior year, then continue in school through their senior year. Co-ops are classified as full-time students during each term, regardless of whether they are attending classes on campus or working full-time at an employer location. Most undergrad Co-op students begin the program as freshmen or sophomores. With more than 2,700 students participating, Georgia Tech's program is currently the largest optional co-op program in the United States and has perennially been listed in U.S. News & World Report as one of the "Top Ten" co-op programs in America.

As an integral part of the overall education experience, the co-op program allows students to take on increasing levels of responsibility and to use their job knowledge and classroom learning to make meaningful contributions to the organizations in which they work. Many co-op graduates are hired by their co-op employer, and more than 700 companies or government organizations throughout the United States and abroad currently employ Georgia Tech Undergrad Co-op Program students.

To learn more about Biomedical Engineering Co-op opportunities at Georgia Tech, contact Rob Rogers. Rob is a Development Co-op Advisor with the Georgia Tech Center for Career Discovery and Development, and the point person for BME students. Rob is located in the Bill Moore Student Success Center, 1st Floor. His phone number is (404) 894-1348

International Plan

The International Plan is a challenging and coherent academic program for undergraduates that develops global competence within the context of a student's major. It is a degree-long program that integrates international studies and experiences into any participating major at Georgia Tech. It helps to prepare Georgia Tech graduates professionally and personally for successful lives in the twenty-first century.

The International Plan is not intended to replace current international programs; it supplements them. Existing study abroad opportunities continue to be offered. It is also not intended to be an add-on to the current degree programs. It is intended to be another curriculum path to earn a degree in which international competence is integrated into the program of study. The Plan can be completed within the normal timeframe of four years of undergraduate study.

The overarching model for the International Plan has four components:

1. International coursework: Three courses to include one from each of the following categories:
    a. International relations
    b. Global economics
    c. A course about a specific country or region
2. International experience: Two terms abroad (not less than 26 weeks) engaged in any combination of study abroad, research, or internship
3. Second language proficiency: All students in the program are expected to reach at least the proficiency level equivalent to two years of college-level language study. Students who use the language to study, conduct research, or participate in an internship during their international experience are expected to attain a higher level of proficiency. Language proficiency is determined by testing (not course credits).
4. Culminating course: A capstone course in the major designed to tie the international studies and experiences together with the student's major. The senior design project (i.e. BMED) will be used to satisfy this requirement. The design project must incorporate a significant element of the international experience (e.g. foreign client, location of work, project customers, motivation, regulatory issues, etc).

Completion of the International Plan is recognized by a designation on the student's diploma indicating completion of the degree with global competence.

For additional information about the International Plan visit www.oie.gatech.edu/internationalplan.

Research Option

The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in biomedical engineering. Students are strongly encouraged at the end of their experience to work with their faculty mentor to develop a journal publication or conference presentation on the research in addition to the actual thesis. Students who complete this option receive a designation on their transcript.

Students may be able to satisfy the additional requirements imposed for the Research Option designation through appropriate choices of electives without additional credit hours to complete the degree. The Research Option designation may be pursued separately, or in combination with the Cooperative Plan and/or the International Plan.

Research Option Requirements

1. Complete at least nine credit hours of undergraduate research (i.e. BMED 2698, BMED 2699, BMED 4698, or BMED 4699) spanning typically at least three terms. The research may be for either pay or credit, and at least six credit hours must be on the same research project, broadly defined.
2. Take the course LMC 4701, typically in the second semester of research. The research proposal outlining the research topic and project for the thesis will be written for this course. The proposal must be approved by a faculty advisor and one other faculty member.
3. Take the course LMC 4702 during the thesis-writing semester. The thesis documenting the results of the research will be written as part of this course. It must be approved by two faculty members and will be archived in the Georgia Tech Library.

BS/MS Option

Students completing both a bachelor's and master's in biomedical engineering at Georgia Tech may use up to six credit hours of graduate-

level coursework in the major discipline for both degrees. Students still must complete all other course requirements for both degrees.

Once admitted, a GPA of at least 3.0 must be maintained to remain in the program.

Up to six credit hours of engineering and data science courses from the approved lists for the MS BMED Program may be shared as depth electives with the BS BMED Program

BACHELOR OF SCIENCE IN BUILDING CONSTRUCTION

The Bachelor of Science in Building Construction (BSBC) gives students a complete view of the building life cycle, including design, construction and operation. Students learn technology-driven methods of construction management and critical leadership skills. The curriculum shows students how prefabrication, 3D printing, virtual and augmented reality, drones, and robotics can impact safety, profitability, and sustainability. It's the major for students who prefer the practical and tangible aspects of the built environment, incorporating perspectives of construction contractors, owners, and facility managers.

Curriculum

The BSBC program consists of 120 credit hours plus wellness. It includes five free electives that can be used for a minor, three professional electives, and a Capstone project. An entrepreneurial component to the curriculum teaches students business concepts and communication skills, preparing them for business ventures in construction or technologies.

BACHELOR OF SCIENCE IN BUSINESS ADMINISTRATION

Students with an interest in business and management would profit from the Bachelor of Science in Business Administration (BSBA) degree program. The program builds upon knowledge of the functional, environmental, behavioral, and legal aspects of business and provides analytical and conceptual tools for analyzing complicated problems in the technological age. It prepares the student for business and managerial responsibilities and decision making. The large number of elective hours allows the student to tailor a program to their individual educational objectives.

Unlike other Colleges which require two years prior to declaring a major, Scheller College Undergraduate Program allows a student to selected a concentration (or have a very strong idea of which concentration you would like to pursue) by the end of their sophomore year. During their freshman and sophomore years, there are several resources available to aid in a concentration selection.

Students must complete a concentration of electives in one of the following areas:

Accounting

Finance

General Management

Information Technology Management

Leadership and Organizational Change

Marketing

Operations and Supply Chain Management

Strategy and Innovation

- Bachelor of Science in Business Administration - Accounting
- Bachelor of Science in Business Administration - Finance
- Bachelor of Science in Business Administration - General Management
- Bachelor of Science in Business Administration - IT Management
- Bachelor of Science in Business Administration - Leadership and Organizational Change
- Bachelor of Science in Business Administration - Marketing

Free Electives [7]		
Free Electives		6
Total Credit Hours		**129**

Pass-fail only allowed for Free Electives, Humanities Electives, and undesignated Social Sciences Electives.

1 If PHYS 2231 is taken, extra hour goes to Free Electives.

2 If PHYS 2232 is taken, extra hour goes to Free Electives.

3 Minimum grade of C required

4 CHBE Electives must be chosen from the following list: CHBE 4020, CHBE 4030, CHBE 4050, CHBE 4310, CHBE 4535, CHBE 4610, CHBE 4710, CHBE 4720, CHBE 4730, CHBE 4743, CHBE 4745, CHBE 4746, CHBE 4757, CHBE 4759, CHBE 4760, CHBE 4762, CHBE 4765, CHBE 4775, CHBE 4776, CHBE 4782, CHBE 4791, CHBE 4793 or any 6000-level CHBE course or higher. Special Topics or

Special Problems courses must be approved by the ChBE Academic Committee.

5 Students should consult with their advisor regarding Engineering Elective options. Engineering electives must be chosen from the following list: AE 4699, AE 4883, BMED 2400, BMED 3400, BMED 3510, BMED 4699, BMED 4751, CEE 2040, CEE 2300, CEE 4330, CEE 4620, CEE 4699, CHBE 2699, CHBE 4020, CHBE 4030, CHBE 4050, CHBE 4310, CHBE 4535, CHBE 4610, CHBE 4699, CHBE 4710, CHBE 4720, CHBE 4730, CHBE 4743, CHBE 4745, CHBE 4746 CHBE 4757, CHBE 4759, CHBE 4760, CHBE 4762, CHBE 4765, CHBE 4767, CHBE 4775, CHBE 4776, CHBE 4782, CHBE 4791, CHBE 4793, CHBE 6120, CHBE 6794, COE 2001, COE 3001, COE 3002, ECE 2020, ECE 2026, ECE 3025, ECE 3040, ECE 3043, ECE 3072, ECE 3080, ECE 3710, ECE 3741, ECE 4350, ECE 4699, ISYE 2027, ISYE 2028, ISYE 3025, ISYE 3039, ISYE 3232, ME 2202, ME 3210, ME 4699, MSE 2021, MSE 3005, MSE 3720, MSE 4140, MSE 4751, MSE 4330, MSE 4740, MSE 4699, NRE 3301, NRE 4610, NRE 4699. Special Topics or Special Problems courses must be approved by the ChBE Academic Committee.

6 PHYS 2XXX (AP credit) not allowed.

7 Five or fewer VIP credits can be applied as Free Electives. For Six or more VIP credits, approval must be granted by the ChBE Academic Committee to apply up to 3 hours as Engineering Electives; the balance will be applied as Free Electives. Please consult with your academic advisor for more details.

BACHELOR OF SCIENCE IN CHEMISTRY

The School of Chemistry and Biochemistry has a vibrant program of study leading to a Bachelor of Science in Chemistry. The flexibility of the curriculum allows students to study fundamental areas of chemistry while tailoring their degree with technical and free electives to produce a well-rounded experience in preparation for a variety of career opportunities. Students may pursue tailored tracks towards the B.S. in Chemistry, including those allowing specialization in: pre-health science, biochemistry, business, and a polymers and materials option. There are also many opportunities to gain research experience while working with world class research groups. In addition to coursework, students in the program often participate in a variety of experiential programs, including: undergraduate research, cooperative work, study abroad, summer internships, and serving as an undergraduate teaching assistant.

Faculty in the school are committed to undergraduate education and several have won awards for excellence in teaching. With a faculty to undergraduate student ratio of approximately 1:9, the School prides itself on the close contact that it maintains with its undergraduate students. The high quality of the curriculum and faculty is part of the reason chemistry graduates receive job offers at the highest salary levels for B.S. chemists. Graduates with a B.S. in Chemistry pursue careers such diverse field as forensics, environmental science, biotechnology, and pharmaceuticals in industry or governmental organizations; or they may continue their education in the chemical or biological sciences, or in medicine, pharmacy, dentistry, and law. Chemistry, especially with the biochemistry option (or the stand-alone Bachelor of Science in Biochemistry degree), is a superb preparation for medical school.

- Bachelor of Science in Chemistry - Pre-health Option

International Plan

The BS in Chemistry (International Plan) and BS in Biochemistry (International Plan) are offered to undergraduate students seeking to understand their majors in a global perspective. Students in this program must demonstrate proficiency in a foreign language; complete coursework in a country/regional elective, international relations, and global economics; and participate in a study or research abroad experience (usually in the junior year). If a student is pursuing a research abroad experience, they are required to complete a supervised research experience with a faculty member in chemistry or biochemistry at the host institution. Upon successful completion of degree requirements for the International Plan, a "International Plan" designator is indicated on the diploma. If interested in participating in the International Plan as part of the BS in Chemistry or BS in Biochemistry, students should visit: www.internationalplan.gatech.edu.

Chemistry Website

Research Option

The BS in Chemistry (Research Option) and BS in Biochemistry (Research Option) are offered for students who wish to participate in a research project under the supervision of one of the fifty members of faculty and adjunct faculty in the School. Participants in the Research Option learn how to address a research problem from experiment design and execution to interpretation of results. There is an expectation that undergraduates who contribute to completed studies will be co-authors on submissions to high-quality scholarly journals. Research projects are available in the traditional areas of chemistry (analytical, biological, inorganic, organic, and physical chemistry) as well as highly interdisciplinary research areas, such as nanochemistry, polymer and materials chemistry, environmental chemistry and sensors, medicinal chemistry, molecular biophysics, and computational chemistry.

To pursue the Research Option in the School of Chemistry and Biochemistry, students should obtain a research project with a faculty member in the department and apply online via www.undergradresearch.gatech.edu. Successful completion of the Research Option requires the following:

Code	Title	Credit Hours
Select one of the following research options: [1]		9
CHEM 4698/4699	Undergraduate Research Assistantship	
LMC 4701	Undergraduate Research Proposal Writing (complete during the first or second semester of research) [2]	1
LMC 4702	Undergraduate Research Thesis Writing (take during the term in which students complete their thesis) [3]	1
Total Credit Hours		**11**

1 supervised research with faculty over three or more semesters
2 approval of proposal on project by a committee of two or more faculty
3 submission of an approved thesis

Successful completion of the Research Option is noted on the student's transcript. Students completing this option often pursue graduate studies in the chemical or biological sciences or research careers in industrial or governmental laboratories.

Chemistry Website

BSMS Option

The BSMS Option allows eligible students to double count a maximum of 6 credit hours toward undergraduate and graduate requirements while still completing all other program requirements to earn both degrees. The credit must be approved coursework (4000-level or higher; not seminar or research credit) completed with a grade of 'B' or higher. The allowable courses are: CHEM 4113, CHEM 4311, CHEM 4341, CHEM 4401, CHEM 4452, CHEM 4485, CHEM 4521, CHEM 4740, CHEM 4759, CHEM 4760, CHEM 4762, CHEM 4765, CHEM Special Topics will be considered on a case by case basis.

To apply for the option, undergraduate Biochemistry students must have at least 30 credit hours earned at Georgia Tech with an undergraduate

GPA of 3.3 or higher, and fewer than 90 credits overall (including transfer credit).

The minimum GPA to graduate with an undergraduate degree in Biochemistry to continue to the MS in Chemistry program is 3.0. The minimum GPA for graduation with the MS in 2.7.

Students will need to consult with an advisor to indicate which courses are sharing with the graduate degree in DegreeWorks.

Free Electives		
Free Electives [1,4,5,6,7,9,10]		10
Total Credit Hours		**122**

1 Lab Electives:
Select two of three lab courses. The lab elective may be fulfilled with either CHEM 3380 (3 credits) or CHEM 3481 (2 credits) or one of the following [CHEM 4695 (3 credits) or CHEM 4699 (3 credits) or CHEM 4694 (no credit) or CHEM 4698 (no credit)].
Research or Internship Experience:
Either Undergraduate Research CHEM 4699 (3) or Undergraduate Internship CHEM 4695 (3) are acceptable. If research or an internship is conducted for pay / audit rather than credit (e.g., CHEM 4698 or CHEM 4694) , then additional free elective(s) may be substituted to achieve the required earned hours to graduate. The research or internship experience must include a final comprehensive laboratory report. Only one Research or Internship course may be used for the Lab elective requirement. If CHEM 3481 is used, add one free elective.

2 The technical elective requirement may be fulfilled by coursework in Science, Engineering, and Computing at the 3000 level or higher. MATH 2551, MATH 2552, SLS 3110, or SLS 3120 may also be used for a Technical Elective. If a 4 credit hour course is used, one less free elective credit is required

3 It is suggested students select pre-health preparation courses (SOC or PSYC).

4 It is suggested students select pre-health preparation courses (BIOS, HTS, LMC, PSYC).

5 Courses may be applied toward completion of a minor.

6 VIP courses may be used only as free electives or in place of CHEM 4699 with pre-approval from the Associate Chair for Academic Programs or their designate

7 Courses taken as pass-fail may only be used in free electives.

8 MATH 1554 or MATH 1564 may be used in place of MATH 1553.

9 A maximum of twelve credit hours of CHEM 4699 taken on a letter-grade basis are permitted for the degree program

10 Up to six hours of CHEM 2699 taken on a letter-grade basis may be used as free electives

11 CS 1371 may be used with approval of the Associate Chair for Academic Programs or their designate

BACHELOR OF SCIENCE IN CIVIL ENGINEERING

The four-year curriculum leading to the Bachelor of Science in Civil Engineering (BS CE) enables the graduate to enter professional practice as an engineer or to continue their studies in programs leading to advanced degrees in the following broad fields of specialization:

- Construction Engineering,
- Environmental and Water Systems,
- Geotechnical Systems,
- Structural Systems,
- Transportation Systems.

The BS CE degree program is designed to offer depth in course material considered essential for all civil engineers, as well as flexibility in selecting elective courses that offer breadth of topic exposure. Civil engineers contribute to society in numerous ways; thus, the School's philosophy is to provide the student with a range of electives that meet student interests. Civil engineers must not only be technically proficient, but also must be effective in working with people and with professionals in other disciplines.

Prerequisites and Other Requirements

Students must satisfy all prerequisites for a particular course. In addition to campus-wide academic requirements for graduation with a bachelor's degree, the following are also required for the BSCE degree:

A **C** or better must have been earned in the following:

Code	Title	Credit Hours
MATH 1551	Differential Calculus	2
MATH 1552	Integral Calculus	4
MATH 1553	Introduction to Linear Algebra	2
MATH 2552	Differential Equations	4
PHYS 2211	Introductory Physics I	4
CHEM 1310	Principles of General Chemistry for Engineers	4
COE 2001	Statics	2

The number of quality points earned in CEE courses taken toward the degree must be at least twice the number of credit hours in those courses. If a course is repeated, the latest grade will be included in applying this rule. No CEE course may be repeated for the purpose of satisfying this rule if the original grade was a **C** or higher.

Program Educational Objectives

Graduates will pursue a diverse range of careers that build on their engineering education. During the initial years of their careers, graduates will:

1. be successfully employed in civil- and environmental-related fields, or other career paths, with prominent companies and organizations in industry, government, non-governmental organizations, and entrepreneurial ventures;
2. pursue graduate education and research in civil and environmental engineering, and other fields;
3. be global collaborators, participating in interdisciplinary and culturally diverse teams, and advancing in leadership positions in the profession;
4. continue professional development by obtaining professional licensure or certifications, continuing education credits, or post-graduate study;
5. be active in service to the profession and to the State of Georgia, the nation, and the world.

The School of Civil and Environmental Engineering has established an optional concentration area for the Bachelor of Science Civil Engineering degree in the area of Construction and Infrastructure Systems Engineering.

Bachelor of Science in Civil Engineering - Standard Option

Bachelor of Science in Civil Engineering - Construction and Infrastructure Systems Engineering

Cooperative Plan

Since 1912, Georgia Tech has offered a five-year Undergraduate Cooperative Program to those students who wish to combine career-related experience with classroom studies. The program is the fourth oldest of its kind in the world and the largest optional co-op program in the country.

Students alternate between work assignments and classroom studies until they complete four or five semesters of work. Co-op students with a civil engineering major complete the same coursework on campus that is completed by regular four-year students. Most co-op students begin the program as freshmen or sophomores and are classified as full-time students regardless of whether they are attending classes on campus or are full time at an employer's location.

Students who participate in the program have the opportunity to develop career interests, become more confident in their career choices, and develop human relations skills through their work experience. Graduates of the program receive a bachelor's degree with a Cooperative Plan Designation.

The Georgia Tech Internship Program is for civil engineering students who do not participate in the Cooperative Program, but want some career-related experience before graduation. Students generally work for one semester, usually in the summer, with an option for more work experiences. Students must have completed at least 30 hours of coursework at Georgia Tech before they can participate in the program. For more details, visit www.gtip.gatech.edu/.

In addition, there is the Work Abroad Program (www.workabroad.gatech.edu), which complements a student's formal education with paid international work experience directly related to civil engineering. Participating students typically are juniors and seniors. The international work assignments are designed to include practical training, cross-cultural exposure and learning, and the acquisition of needed skills. This program satisfies requirements for the International Plan, which is available to civil engineering students.

For more information about all of the programs in the Center for Career Discovery and Development, visit www.careerdiscovery.gatech.edu.

International Plan

The International Plan is a challenging and coherent academic program for undergraduates that develops global competence within the context of a student's major. It is a degree-long program that integrates international studies and experiences into any participating major at Georgia Tech. It helps to prepare Georgia Tech graduates professionally and personally for successful lives in the twenty-first century.

The International Plan is not intended to replace current international programs; it supplements them. Existing study abroad opportunities continue to be offered. It is also not intended to be an add-on to the current degree programs. It is intended to be another curriculum path to earn a degree in which international competence is integrated into the program of study. The plan can be completed within the normal timeframe of four years of undergraduate study.

The overarching model for the International Plan has four components:

1. International coursework: Three courses to include one from each of the following categories:
   a. International relations
   b. Global economics
   c. A course about a specific country or region
2. International experience: Two terms abroad (not less than 26 weeks) engaged in any combination of study abroad, research, or internship
3. Second language proficiency: All students in the program are expected to reach at least the proficiency level equivalent to two years of college-level language study. Students who use the language to study, conduct research, or participate in an internship during their international experience are expected to attain a higher level of proficiency. Language proficiency is determined by testing (not course credits).
4. Culminating course: A capstone course in the major designed to tie the international studies and experiences together with the student's major

Completion of the International Plan is recognized by a designation on the student's diploma indicating completion of the degree with global competence.

For additional information about the International Plan visit www.oie.gatech.edu/internationalplan.

Research Option

The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in civil engineering. In order to graduate with a BSC.E – Research Option degree, the students must:

Complete at least nine units of undergraduate research (over at least two, preferably three terms). Research may be for either pay (CEE 2698 or CEE 4698) or credit (CEE 2699 or CEE 4699). Research for credit may be used towards the BS CE approved elective requirements.

Write an undergraduate thesis/report of research on their findings. This is usually done during the graduating term. The thesis will be published in the Georgia Tech Library.

Take two 1-hour classes: LMC 4701 (typically taken during the first or second semester of research) and LMC 4702 (taken during the thesis-writing semester).

At least six of the nine required credit hours of research should be on the same topic. A research proposal must be approved by a faculty advisor and one other faculty member. This proposal will be completed in LMC 4701 which serves as a prerequisite for LMC 4702. Completion of Research Option is noted on the student's transcript.

BS/MS Option - Civil Engineering

The BS/MS Option is designed to attract the best-of-the-best undergraduate students and is especially intended for students who demonstrate an interest in, and ability for, additional education beyond the bachelor's degree.

Students will be eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech and appropriate progress in their degree program. As a practical matter, students should apply for the program at least three semesters prior to graduation in order to take graduate-level courses prior to receiving their BS degree. Students must have a Georgia Tech GPA of 3.5 or higher for admission into the BS/MS Program in Civil Engineering.

This program is available only to those completing a Bachelor's degree with the School of Civil and Environmental Engineering

Students in the BS/MS Option remain undergraduates until they meet the requirements for the bachelor's degree, at which point they will receive the BSCE or BSEnvE degree. Their status will then be changed to graduate status. Graduate school application fees and the GRE requirements are waived.

Once admitted, a GPA of at least 3.0 must be maintained to remain in the program. Additionally, students in the BS/MS program are eligible to use the Graduate Course Option even if their cumulative grade-point average is below 3.5 at the time they complete their bachelor's degree.

BACHELOR OF SCIENCE IN COMPUTATIONAL MEDIA

The Bachelor of Science in Computational Media is a collaborative effort by the College of Computing, the School of Literature, Media, and Communication (LMC), and the School of Music. The program offers a thorough education in all aspects of the computer as a medium: the technical, the historical-critical, and the applied. Program graduates will have both significant hands-on and theoretical knowledge of computing and an understanding of visual design and the history of media. Graduates will be uniquely positioned to plan, create, and critique new digital media forms for entertainment, education, and business communication.

The program requires 36 credit hours of courses in computer science and 30 credit hours of courses in Music Technology or LMC (in addition to the humanities requirement). A substantial number of required courses in each unit ensures that every student has basic competence in:

- computational principles;
- the representation and manipulation of digital media, including graphics and sound;
- software design;
- visual and interactive design;
- digital arts; and
- media theory and history.

After completing required courses, students specialize in a specific area of media computing. Typical specialty areas include:

- Interactive games design: This is one of the fastest growing areas of digital media production and is already a $7 billion industry.
- Special effects: As special effects become more complex and focused on computer-generated imagery, employment in this area will increasingly require expertise in both media and computer science.
- Culturally informed program design: As programming work is increasingly outsourced to nations offering lower labor costs, programming that adds value through a sophisticated response to the needs of specific corporate and group cultures will offer job security to American programmers.

Depending on their coursework within the BS program, students will also be qualified to enter graduate studies in computer science, digital arts, digital media studies, and human-computer interface.

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs.

See links below for further Information.

Undergraduate Cooperative Plan

Graduate Cooperative Plan

International Plan

The Computational Media (CM) International Plan follows the Institute model to develop a global competence within the student's major program of study. It thus integrates international studies and experiences with work in all aspects of the computer as a medium, preparing graduates to plan, create, and critique new digital media forms within an international professional environment.

As in the basic CM program, students following the International Plan will take credit 36 hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). Students will also:

1. take three international courses, including one from each of the following categories: International Relations, Global Economics, and a course on a specific country or region;
2. spend two terms abroad engaged in any combination of study abroad, research, or internship;
3. demonstrate language proficiency equivalent to two years of college-level language study (to be determined by testing); and
4. complete a CM capstone course that links international studies with the major.

Research Option

The CM Research Plan follows the Institute model to allow students to incorporate research experiences into the major program of study. Students will complete nine hours of credit research work on various aspects of the computer as a medium, working in such areas as computational principles, the representation and manipulation of digital media, software design, visual and interactive design, digital art, and media theory and history.

As in the basic CM program, students following the Research Plan will take 36 credit hours of courses in CS and 30 credit hours of courses in LMC (in addition to the basic humanities requirement). CM students can complete the Research Option with nine CS or LMC research hours. Students cannot have a mix of both count towards the Research Option. The breakdown of hours is as follows:

Code	Title	Credit Hours
Undergradate Research		9
LMC 4701	Undergraduate Research Proposal Writing	1

LMC 4702	Undergraduate Research Thesis Writing	1
Total Credit Hours		**11**

BS/MS Computational Media and Digital Media

Students who want to pursue the five-year BS/MS combination in CM and DM must apply to the school of LMC after completing at least 75 hours of work towards the CM degree. Applicants should have a cumulative GPA of at least 3.5. This GPA must be maintained for the student to take graduate level courses. Students must start the program in the Fall to be on track with other MS students.

Students admitted to the program will take a total of twelve credit hours of graduate course work during their final undergraduate year; six credit hours of that work, in DM courses, will count towards two 4000 level LMC courses (6 hours) and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During their fifth year, students will take a total of 24 credit hours, including either LMC 6800 or LMC 7000, and with no more than three courses taken outside of the DM program.

CM or Media Courses (LMC 2XXX, 3XXX, 4XXX courses) [1]	9
Total Credit Hours	**122**

Pass-Fail is allowed for courses in core areas C, D, E and Free.

1 Minimum grade of C required.

3 Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311,CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4- CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699- I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit. Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4 Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Pass Fail is allowed for courses in core areas C, D, E and Free.

[1] Minimum grade of C required.

[3] Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311CS 3311,CS 3312CS 3312.
- Option 2 - ECE VIP courses and LMC 3403LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option
- Option 4- CS 2701CS 2701 (3 hours), CS 4699CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699CS 4699- I2P (6 hours), LMC 3403LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit. Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

[4] Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

BACHELOR OF SCIENCE IN COMPUTER ENGINEERING

The School of Electrical and Computer Engineering offers two undergraduate degree programs: electrical engineering (EE) and computer engineering (CmpE). Both programs include elective hours, enabling students to individually tailor their programs to provide emphasis in a particular specialization or exposure to a broad range of subjects. Engineering analysis and design concepts are integrated throughout both programs, culminating in a common major design experience involving a broad range of issues including economic and societal considerations.

The field of computer engineering is centered in digital design, computer architecture, computer networks and internetworking, and computer applications. The BS CmpE program offers elective courses in a wide variety of specializations, including computer architecture; embedded systems and software; design tools, test, and verification; computer networks and internetworking; distributed systems and software; and VLSI design. Additionally, students may elect to take advanced courses in other EE specializations, computer science, or programs, such as mathematics, physics, or management. As an alternative to the BS CmpE degree, students may choose a computer engineering specialization within the BS EE degree program.

Program Educational Objectives

Within five years after graduating, the Georgia Institute of Technology School of Electrical and Computer Engineering graduates will have the skills, knowledge, and choices to:

- Be successful and recognized **leaders** in professional practice in electrical and computer engineering or in related fields.
- Be adaptive-learners and life-long **innovators** through advanced education/degrees, strategic professional development, and entrepreneurship that focuses on the needs of stakeholders.
- Be **problem solvers** who consider global, societal, and environmental impact and are prepared to address problems that are beyond conventional technical understanding and knowledge. Graduates will demonstrate technical competence, ethical reasoning, and creativity in identifying, formulating, analyzing, and developing solutions using appropriate techniques, skills, and tools.
- Be **team builders**, who lead and participate in culturally diverse teams and promote breadth of perspectives in developing, communicating, and executing solutions.

Cooperative Plan

The Georgia Tech Undergraduate Cooperative Education Program allows students to combine classroom study with paid practical work experience directly related to the academic major. Co-ops alternate semesters of on-campus study with semesters of full-time employment, normally beginning the program as freshmen or sophomores. Over 30 percent of ECE undergraduates participate in the co-op program.

The degree requirements for students in the co-op program are the same as those for other students in the major. The Cooperative Plan designation may be pursued separately or in combination with the International Plan and/or the Research Option.

Begun in 1912, Georgia Tech's program is currently the largest optional co-op program in the United States and has perennially been listed in U.S. News & World Report as one of the top ten co-op programs in America. As an integral part of the overall education experience, the co-op program allows students to take on increasing levels of responsibility and to use their job knowledge and classroom learning to make meaningful contributions to the organizations in which they work. Many co-op graduates are hired by their co-op employer, and more than 700 companies or government organizations throughout the United States and abroad currently employ Georgia Tech Undergrad Co-op Program students.

Because the School of ECE in Atlanta offers a wide range of electives and almost all required courses every term, including summer, co-op students have substantial flexibility in completing their degree requirements. Many students continue their co-op work assignments through the senior year. Additionally, co-op students working in the Atlanta area may be able to take certain ECE courses, particularly laboratories offered in the evening, during the work term.

In addition to the co-op program, the Center for Career Discovery and Development also offers the Undergraduate Professional Internship and Work Abroad programs. These programs also provide opportunities for students to gain practical work experience, without the long-term commitment of the co-op program.

Center for Career Discovery and Development

International Plan

The International Plan is intended for students who seek an intensive international experience integrated into their undergraduate studies in computer engineering. The International Plan develops global competence through a combination of coursework, language study, and residential overseas experience. Students who complete this option receive a designation on their transcript and diploma.

The computer engineering aspects of the BS CmpE - International Plan degree requirements are identical to those for the regular BS CmpE . Please refer to the BS CmpE catalog description for general information about the degree program. Students may be able to satisfy the additional requirements imposed for the International Plan designation through appropriate choices of electives without additional credit hours to complete the degree. The International Plan designation may be pursued separately, or in combination with the Cooperative Plan and/or the Research Option.

The School of Electrical and Computer Engineering offers a junior-year program at the Georgia Tech-Europe campus in Metz, France, that is designed to facilitate participation in the International Plan. However, computer engineering majors are not restricted to this option and may complete any allowable courses, languages, and overseas experiences that satisfy the International Plan requirements.

Research Option

The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in computer engineering. This option includes three or four semesters of structured research and provides an open evaluation of a student's research capabilities, viewable by the public via a required Web-based research portfolio. Students who complete this option receive a designation on their transcript.

The computer engineering aspects of the BS CmpE-Research Option degree requirements are identical to those for the regular BS CmpE . Please refer to the BS CmpE catalog description for general information about the degree program. Students may be able to satisfy the additional requirements imposed for the Research Option designation through appropriate choices of electives without additional credit hours to complete the degree. The Research Option designation may be pursued separately, or in combination with the Cooperative Plan and/or the International Plan.

The School of Electrical and Computer Engineering (ECE) offers a two-semester Undergraduate Research Opportunity Program (UROP), which may be completed to provide a less-intensive research experience or as the initial phase of the Research Option. Contact the ECE Academic Office for additional information about the Research Option, including specific Institute and ECE requirements, and assistance in planning your schedule to allow participation in this program.

BS/MS Electrical and Computer Engineering

This program allows highly qualified students to receive the Bachelor of Science in either Electrical Engineering or Computer Engineering and a master's degree in Electrical and Computer Engineering. The joint BS/MS degree program affords undergraduate electrical or computer engineering majors the opportunity to broaden their studies and improve their career prospects.

Eligible Georgia Tech undergraduates normally apply for this program during their junior year. Contact the Electrical and Computer Engineering Graduate Affairs Office for program information, eligibility requirements, and applications.

BSMS Information

Dual BS in Computer Engineering

Georgia Tech & Korea Advanced Institute of Science & Tech

Students may pursue the BSEE degree from the Korea Advanced Institute of Science and Technology (KAIST) as they earn the BSEE or BSCmpE from Georgia Tech. KAIST offers one of the top engineering programs in Korea and the Far East. All lectures at KAIST are given in English to better serve a growing number of students from overseas. While earning their dual degrees, students spend two years each at both Georgia Tech and KAIST.

Culminating Senior Design Options (Capstone)		
Culminating Senior Design [5]		3
Free Electives [3,7]		**7**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005

Courses that are cross-listed with ECE must be taken under the ECE number.

[1] Student must complete one Ethics course during their program. For a complete list of Ethics courses, please see the Ethics Catalog page.

[2] Minimum grade of C required

[3] The following courses are not allowed: HPS 1XXX, PHYS 2XXX (AP Credit), ECE 3710, ECE 3741, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113. Maximum of six credit hours of Special Problems or research may be applied toward the degree

[4] CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (Must be taken on Letter/Grade basis)

[5] Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[6] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE/CS 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[7] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (5)

[8] ECE electives are subject to School approval and must satisfy the following constraints:

1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals

Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).

2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

[9] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

ECE 2031	Digital Design Laboratory [2]	2
ECE 2035	Programming for Hardware/Software Systems [2]	4
ECE 2040	Circuit Analysis [2]	3
ECE 3058	Architecture, Systems, Concurrency, and Energy in Computation [2]	4
Computing Hardware & Emerging Architectures [2,6,9]		
ECE 3150	VLSI and Advanced Digital Design	4
ECE 3030	Physical Foundations of Computer Engineering	3
Select three of the following: [2,6]		9
CS 4220	Programming Embedded Systems	
ECE 4180	Embedded Systems Design	
ECE 4181	Embedded Computing Systems	
ECE 4130	Advanced VLSI Systems	
ECE 4420	Digital Integrated Circuits	
ECE 4452	IC Fabrication	
ECE 4460	Introduction to Electronic Systems Packaging	
ECE 4100	Advanced Computer Architecture	
ECE 4150	Cloud Computing	
Information Internetworks [2,6,9]		
CS 2340	Objects and Design	3
CS 3510	Design and Analysis of Algorithms	3
or CS 3511	Design and Analysis of Algorithms, Honors	
Select two of the following (Introduction to Information Management): [2,6]		6
CS 4235	Introduction to Information Security	
CS 3251	Computer Networking I	
CS 4400	Introduction to Database Systems	
Select one of the following (Advanced Information Management): [2,6]		3
CS 4237	Computer and Network Security	
CS 4251	Computer Networking II	
CS 4255	Introduction to Network Management	
CS 4261	Mobile Applications and Services for Converged Networks	
CS 4270	Data Communications Laboratory	
CS 4365	Introduction to Enterprise Computing	
CS 4420	Database System Implementation	

CS 4440	Emerging Database Technologies and Applications	
CS 4675	Internet Computing Systems, Services and Applications	
Culminating Senior Design Options (Capstone)		
Culminating Senior Design [5]		3
Free Electives [3,7]		**8**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005

Courses that are cross-listed with ECE must be taken under the ECE number.

[1] Student must complete one Ethics course during their program. For a complete list of Ethics courses, please see the Ethics Catalog page.

[2] Minimum grade of C required

[3] The following courses are not allowed: HPS 1XXX, PHYS 2XXX (AP Credit), ECE 3710, ECE 3741, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113. Maximum of six credit hours of Special Problems or research may be applied toward the degree

[4] CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (Must be taken on Letter/Grade basis)

[5] Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[6] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE/CS 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[7] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (5)

[8] ECE electives are subject to School approval and must satisfy the following constraints:

1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

[9] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

ECE 3084	Signals and Systems	
ECE 4350	Electromagnetic and Microwave Applications	
ECE 4370	Antenna Engineering	
ECE 4500	Optical Engineering	
ECE 4601	Communication Systems	
ECE 4605	Topics in Networks	
ECE 4606	Wireless Communications	
ECE 4607	Mobile and Wireless Networks	
Telecommunication Electives [2,6]		
ECE 3000/4000-level Elective [8]		3
Culminating Senior Design Options (Capstone)		
Culminating Senior Design [5]		3
Free Electives [3,7]		**8**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005

Courses that are cross-listed with ECE must be taken under the ECE number.

1. Student must complete one Ethics course during their program. For a complete list of Ethics courses, please see the Ethics Catalog page.
2. Minimum grade of C required
3. The following courses are not allowed: HPS 1XXX, PHYS 2XXX (AP Credit), ECE 3710, ECE 3741, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113. Maximum of six credit hours of Special Problems or research may be applied toward the degree
4. CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (Must be taken on Letter/Grade basis)
5. Senior Design requirements may be satisfied in the following ways:
   1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II

2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[6] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE/CS 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[7] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (5)

[8] ECE electives are subject to School approval and must satisfy the following constraints:

1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

[9] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[6] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE/CS 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[7] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (5)

[8] ECE electives are subject to School approval and must satisfy the following constraints:

1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

[9] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

Culminating Senior Design [5]		3
Free Electives [3,7]		**9**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005

Courses that are cross-listed with ECE must be taken under the ECE number.

1 Student must complete one Ethics course during their program. For a complete list of Ethics courses, please see the Ethics Catalog page.

2 Minimum grade of C required

3 The following courses are not allowed: HPS 1XXX, PHYS 2XXX (AP Credit), ECE 3710, ECE 3741, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113. Maximum of six credit hours of Special Problems or research may be applied toward the degree

4 CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (Must be taken on Letter/Grade basis)

5 Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

6 No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE/CS 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).

2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.

Culminating Senior Design Options (Capstone)		
Culminating Senior Design [5]		3
Free Electives [3,7]		**11**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005

Courses that are cross-listed with ECE must be taken under the ECE number.

[1] Student must complete one Ethics course during their program. For a complete list of Ethics courses, please see the Ethics Catalog page.

[2] Minimum grade of C required

[3] The following courses are not allowed: HPS 1XXX, PHYS 2XXX (AP Credit), ECE 3710, ECE 3741, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113. Maximum of six credit hours of Special Problems or research may be applied toward the degree

[4] CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (Must be taken on Letter/Grade basis)

[5] Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[6] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE/CS 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[7] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (5)

[8] ECE electives are subject to School approval and must satisfy the following constraints:

1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

[9] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

Culminating Senior Design Options (Capstone)		
Culminating Senior Design [5]		3
Free Electives [3,7]		**9**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005

Courses that are cross-listed with ECE must be taken under the ECE number.

1. Student must complete one Ethics course during their program. For a complete list of Ethics courses, please see the Ethics Catalog page.
2. Minimum grade of C required
3. The following courses are not allowed: HPS 1XXX, PHYS 2XXX (AP Credit), ECE 3710, ECE 3741, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113. Maximum of six credit hours of Special Problems or research may be applied toward the degree

[4] CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (Must be taken on Letter/Grade basis)

[5] Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[6] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE/CS 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[7] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (5)

[8] ECE electives are subject to School approval and must satisfy the following constraints:

1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

[9] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

[9] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

BACHELOR OF SCIENCE IN COMPUTER SCIENCE

Bachelor of Science in Computer Science with Threads

Focus: building on a base of fundamentals in programming and computational theory to provide a solid foundation of knowledge and skills for applying digital processes effectively to issues of broad interest in a global society.

The undergraduate degree in computer science (CS) offered by the College of Computing provides a solid foundation of knowledge and skills for applying digital processes effectively to issues of broad interest in a global society. Our program is based on a unique concept, Threads™ , a significant College of Computing innovation in undergraduate CS education. The curriculum builds on a base of fundamentals in programming and computational theory to allow each student the opportunity to explore a variety of computing paths in depth. There are eight Threads, each providing a focused journey through a broad spectrum of course offerings at Georgia Tech in preparation for a distinctive future in a changing and interconnected world. Each student selects two Threads to fulfill the requirements for an accredited Bachelor of Science degree in computer science. It is at the intersection of the two paths that the unique synergistic value of this educational experience is realized. Graduates will leave the College of Computing fully aware of the limitless potential of their dynamic discipline and be able to adapt and continuously add value to society throughout their careers.

The Threads™ represent partial paths through the curriculum. Thus, a student weaves a degree from these Threads. Students are not forced to make Thread decisions very early in their academic careers; however, they may if they want. We define the Threads so they are flexible enough to allow for a variety of technical and creative experiences. Threads are coherent enough that students develop computing skills even if their focus shifts as they go along.

The CS curriculum also offers opportunities in undergraduate research and international study. In addition to the standard four-year plan, a five-year cooperative plan is offered for students who wish to combine their academic education with industry experience.

The undergraduate program requires:

- a total of 124 credit hours for graduation, plus
- a two-hour Wellness course.
- With the exception of free electives, all Bachelor of Science degree coursework must be taken on a letter-grade basis.
- Up to six hours of free electives may be taken on a pass/fail basis.
- No 1000- or 2000-level HPS hours or precalculus hours (currently MATH 1113) may be used as free electives.
- No course that covers the same material as other courses in a student's plan of study can be used as a free elective.
- All required CS courses, whether Thread or non-Thread, must be completed with a C or better to be counted toward degree requirements.
- All courses listed as required for a Thread, whether CS or non-CS, must be completed with a C or better to be counted toward degree requirements.

The College of Computing Defines Eight Threads

A Thread provides an intuitive, flexible, and mutually strengthening set of courses that allows a student to craft a distinctive future in an area that is certain to have societal value in the emerging world. A Thread provides a skill and credential basis that allows graduates to create value in ways beyond what would be possible with only a narrowly focused tool set.

Choose any two threads to create your own path and special variation on an area of study.

1. Computing and Devices: creating devices embedded in physical objects that interact in the physical world
2. Computing and Information Internetworks: representing, transforming, transmitting, and presenting information
3. Computing and Intelligence: building top-to-bottom models of human-level intelligence
4. Computing and Media: building systems in order to exploit computing's abilities to provide creative outlets
5. Computing and Modeling - Simulation: representing natural and physical processes
6. Computing and People: designing, building, and evaluating systems that treat the human as a central component
7. Computing and Systems and Architecture : creating computer architectures, systems, and languages
8. Computing and Theory: theoretical foundations underlying a wide range of computing disciplines

Threads™ are defined as partial paths through the course offerings of the Institute. Students constructs their own personalized computer science degree by weaving through two Threads™. Each Thread™ is about 2/3 of a degree, but with Thread™ arithmetic, since there's so much overlap, 2/3 + 2/3 = 1. Each pair of Threads™ fulfills the requirements for an accredited Bachelor of Science degree in computer science.

The Power of One Thread

Are you a computationalist who is interested in the expressive arts (telling stories, making games, creating emotional experiences)? Join the Computing and Media Thread. Here you'll see courses on topics ranging from computational graphics to Hamlet, from human perception to interactive fiction engines.

Are you a computationalist who is interested in placing intelligence in physical objects like robots, airplanes, or cell phones? Join the Computing and Devices Thread. Here you'll see courses on everything from computational sensors to dealing with noisy data, from real-time operating systems to mobile power issues and computational autonomy.

Weaving Two Threads Together - A Leap

Are you interested in computer security? Then perhaps choose Computing and Information to learn how data is stored, retrieved, encoded, transmitted, etc. And perhaps also choose Computing and People to learn how people use technology, how to run experiments with human subjects, etc. The kind of person you will become is the kind of person who will be able to invent and build secure systems that are usable by people.

For more information about the BS CS undergraduate program or the College of Computing, visit The College of Computing website.

Bachelor of Science in Computer Science Threads

Devices

The Devices thread is concerned with embedded computational artifacts that interact with people or the physical world. In this thread, one learns how to create and evaluate devices that operate under physical constraints such as size, power, and bandwidth. Examples include PDAs, cell phones, robots, jet engines, and intelligent appliances.

- Modeling and Simulation & Devices
- Theory & Devices
- Information Internetworks & Devices
- Intelligence & Devices
- Media & Devices
- People & Devices
- Systems and Architecture & Devices

Information Internetworks

The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

- Modeling and Simulation & Information Internetworks
- Devices & Information Internetworks
- Theory & Information Internetworks
- Intelligence & Information Internetworks
- Media & Information Internetworks
- People & Information Internetworks
- Systems and Architecture & Information Internetworks

Intelligence

The Intelligence thread is where computing models intelligence. This thread is concerned with computational models of intelligence from top to bottom. To this end, we emphasize designing and implementing artifacts that exhibit various levels of intelligence as well as understanding and modeling natural cognitive agents such as humans, ants, or bees. Students acquire the technical knowledge and skills necessary for expressing, specifying, understanding, creating, and exploiting computational models that represent cognitive processes. It prepares students for fields as diverse as artificial intelligence, machine learning, perception, and cognitive science, as well as for fields that benefit from applications of techniques from those fields.

- Modeling and Simulation & Intelligence
- Devices & Intelligence
- Theory & Intelligence
- Information Internetworks & Intelligence
- Media & Intelligence
- People & Intelligence
- Systems and Architecture & Intelligence

Media

The Media thread is where computing meets design. This thread prepares students by helping them to understand the technical and computational capabilities of systems in order to exploit their abilities to provide creative outlets.

- Modeling and Simulation & Media
- Devices & Media
- Theory & Media
- Information Internetworks & Media
- Intelligence & Media
- People & Media
- Systems and Architecture & Media

Modeling and Simulation

The Modeling - Simulation thread is intended for students interested in developing a deep understanding and appreciation of how natural and human-generated systems such as weather, biological processes, supply chains, or computers can be represented by mathematical models and computer software. Such models are widely used today to better understand and predict the behavior of such systems. Because these models are often described and represented by mathematical expressions, and the models themselves often deal with physical phenomena, a background in mathematics and the sciences is required. Combining this background with a deep knowledge in computer science will yield the basic tools necessary to transform abstract conceptual models to computer programs that execute efficiently on digital machines. The required coursework in this thread includes topics in continuous and discrete mathematics, the sciences, and computing. Elective courses enable students to further develop and apply their knowledge and skills to a specific discipline where Modeling - Simulation plays an important role.

- Devices & Modeling and Simulation
- Theory & Modeling and Simulation
- Information Internetworks & Modeling and Simulation
- Intelligence & Modeling and Simulation
- Media & Modeling and Simulation
- People & Modeling and Simulation
- Systems and Architecture & Modeling and Simulation

People

The People thread is where computing meets users. This thread prepares students by helping them to understand the theoretical and computational foundations for designing, building, and evaluating systems that treat the human as a central component.

- Modeling and Simulation & People
- Devices & People
- Theory & People
- Information Internetworks & People
- Intelligence & People
- Media & People
- Systems and Architecture & People

Systems and Architecture

The Systems and Architecture thread is where many of the practical skills of computing are learned. Like Theory, Systems and Architecture lies at the center of computing. It prepares students to create and evaluate computer architectures, systems, and languages across a variety of paradigms and approaches.

- Modeling and Simulation & Systems and Architecture
- Devices & Systems and Architecture
- Theory & Systems and Architecture
- Information Internetworks & Systems and Architecture
- Intelligence & Systems and Architecture
- Media & Systems and Architecture
- People & Systems and Architecture

Theory

The Theory thread is where computing meets itself. Theory teaches students the theoretical and mathematical foundations underlying a wide range of computational disciplines. Early preparation includes discrete mathematics, algorithms, and complexity. Knowledge goals are for students to mature in development and analysis of abstract models for applications ranging from theoretical computer science to computational physics, biology, mathematics, economics, and optimization.

- Modeling and Simulation & Theory
- Devices & Theory
- Information Internetworks & Theory
- Intelligence & Theory
- Media & Theory
- People & Theory
- Systems and Architecture & Theory

Cooperative Programs

The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further Information:

- Undergraduate Cooperative Plan
- Graduate Cooperative Plan

International Plan

The College of Computing has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog.

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

Research Option

To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report of research on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

Research Classes

The following classes count toward fulfillment of the Research Option:

Research for Credit

Code	Title	Credit Hours
CS 2699	Undergraduate Research (Freshman and Sophomore)	1-12
CS 4699	Undergraduate Research (Junior and Senior)	1-12
CS 4980	Research Capstone Project	1-21

Research for Pay (Audit only)

Code	Title	Credit Hours
CS 2698	Undergraduate Research Assistantship (Freshman and Sophomore)	1-12
CS 4698	Undergraduate Research Assistantship (Junior and Senior)	1-12

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only, research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student's transcript. For more information, see www.urop.gatech.edu.

General Research Option Information

BS/MS in Computer Science

Students who want to pursue

the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing for more information.

Total Credit Hours		**126**

Pass-fail only allowed for Free Electives (max 6 credit hours) and CS 1100.

1 Minimum grade of C required.

2 Two of three labs MUST be a sequence.

3 If CS 4261 is successfully completed, an additional 3 credit hour Thread Elective is required. Thread Electives must be chosen from the following list: CS 3220, CS 3240 , CS 3600, CS 3630, CS 3651, CS 4210, CS 4220, CS 4235, CS 4237, CS 4251, CS 4255, CS 4270, CS 4365, CS 4400, CS 4420, CS 4440, CS 4470, CS 4495, CS 4605, CS 4616, CS 4632, CS 4641, CS 4649, CS 4675, CS 4685, or ECE 4180.

4 Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311,CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4 - CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699- I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit. Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

5 Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Free Electives		
Free Electives		10
Total Credit Hours		**126**

Pass-fail only allowed for Free Electives (max 6 credit hours) and CS 1100.

1 Minimum grade of C required.
2 Two of three labs MUST be a sequence.
3 Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311,CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4- CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699- I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.
Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4 Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Free Electives		
Free Electives		14
Total Credit Hours		**126**

Pass-fail only allowed for Free Electives (max 6 credit hours) and CS 1100..

1 Minimum grade of C required.

2 Two of three lab sciences MUST be a sequence.

3 Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311,CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4- CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699- I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.
Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4 Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Free Electives		
Free Electives		11
Total Credit Hours		**126**

Pass-fail only allowed for Free Electives (max six credit hours) and CS 1100.

1 Minimum grade of C required.

2 Two of three lab sciences MUST be a sequence.

3 Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311,CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4- CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699- I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.
Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4 Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

or ISYE 2027 & ISYE 2028	Probability with Applications and Basic Statistical Methods	
Free Electives		
Free Electives		12
Total Credit Hours		**126**

Pass-fail only allowed for Free Electives (max 6 hours) and CS 1100.

1 Minimum grade of C required.

2 Two of three lab sciences MUST be a sequence.

3 Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311,CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4- CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699- I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.

Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4 Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

Free Electives		
Free Electives		14
Total Credit Hours		**126**

Pass-fail only allowed for Free Electives (max 6 credit hours) and CS 1100.

1 Minimum grade of C required.

2 Two of three lab sciences MUST be a sequence.

3 Junior Design Options are as follows (students must pick one option and may not change):

- Option 1 - LMC 3432, LMC 3431, CS 3311,CS 3312.
- Option 2 - ECE VIP courses and LMC 3403.
- Option 3 - Satisfy Georgia Tech Research Option.
- Option 4- CS 2701 (3 hours), CS 4699-I2P (3 hours), LMC 3403 (3 hours) = 9 hours OR CS 4699- I2P (6 hours), LMC 3403 (3 hours) = 9 hours

Six credits of the Junior Design option are used as Major Requirements and the overage credits of research/VIP (5 credit hours/2 credit hours) may be used as free electives. Students completing VIP for their junior design requirement will be required to complete at least three semesters of VIP. (VIP 1 + VIP 2 + VIP 3) (for a total of 5 credit hours) + LMC 3403 = 8 hours of VIP credit.

Students using CREATE-X for junior design take at least 6 hours of CREATE-X Start-ip Lab and Idea 2 Prototype (I2P) and 3 of the 6 hours must be I2P. Students take these 6 hours with LMC 3403 (3 hours) for a total of 9 hours. Extra three hours for CREATE-X option can be used in free electives.

4 Two credit hours of MATH 1554 may count along with MATH 2550 to give Area F 18 credit hours.

BACHELOR OF SCIENCE IN EARTH AND ATMOSPHERIC SCIENCES

The EAS degree is comparable to traditional degrees in meteorology and environmental sciences, but the program has several unique attributes. EAS courses provide "hands-on" experiences in collection and interpretation of environmental data and in predictive modeling. The integrated approach of the program gives a broad environmental background while still allowing students to specialize in meteorology, earth science, education, or a business option. The program prepares students for graduate study or immediate employment in fields such as meteorology, air quality, environmental chemistry, exploration geophysics, geological engineering, geological hazards, impact assessment, and environmental policy. Electives (30 hours), both within the School and in other units of Georgia Tech, allow students considerable flexibility in tailoring their degree programs according to individual career goals. The School provides incentives and encouragement for undergraduate students to participate in ongoing research with the faculty.

EAS Undergraduate Information

- Bachelor of Science in Earth and Atmospheric Sciences - General
- Bachelor of Science in Earth and Atmospheric Sciences - Business Option

International Plan

The EAS with International Plan (EAS-IP) is designed to give a student a solid, global competence within the context of an Earth and Atmospheric Science degree.

The major course requirements are the same for both EAS and EAS-IP. Where they differ is that for the EAS-IP degree, a student:

1. Spends 26 weeks abroad engaged in any combination of study abroad, research, or internship.
2. Takes their Social Science/Humanities electives in targeted areas:
   a. International relations
   b. Global economics
   c. A course about a particular country or region
3. Complete the equivalent to two years of college-level language study. See Georgia IP requirements for the different options: www.internationalplan.gatech.edu/
4. Complete a capstone course that combines their global experience with their EAS degree.

EAS Undergraduate Information

Research Option

The BS in Earth and Atmospheric Sciences with Research Option allows students to emphasize their interest in research. To complete the Research Option in the School of Earth and Atmospheric Sciences students must:

1. Complete at least nine units of undergraduate research
   a. Courses should span at least two, preferably three terms (note there is also a two semester sequence of proposal and thesis writing courses - see below)
   b. Research may be for either pay (EAS 4698) or credit (EAS 4699)
   c. At least six of the nine required credit hours should be on the same topic
2. Complete a research proposal outlining their research topic and project for the thesis while taking LMC 4701.
3. Write an undergraduate thesis/report of research on their findings while taking LMC 4702.

To submit your intent form to Undergraduate Research Opportunities Program (UROP), please go to the web form at http://undergradresearch.gatech.edu/ This form must be completed and can also be reached from the main UROP webpage.

For further information, consult the EAS Undergraduate Coordinator.

General Research Option Information

BS/MS Earth and Atmospheric Sciences

EAS offers a BS/MS Program. EAS majors may apply to the BS/MS program after completing at least thirty semester credit hours at Georgia Tech with a GPA of at least 3.5.

Students admitted to the program must maintain a cumulative GPA of at least 3.0.

As part of the program, students may use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

To apply, complete the BS/MS application form, a biographical statement, and two letters of recommendation.

Research Option		
EAS Technical Electives		
Select 14 credit hours from the following: [1]		14
CEE 4210	Hydrology	
CEE 4300	Environmental Engineering Systems	
CEE 4330	Air Pollution Engineering	
EAS 1601	Habitable Planet	
EAS 2420	Environmental Measures of Urban and Regional Change	
EAS 2551	Introduction to Meteorological Analysis	
EAS 2750	Physics of the Weather	
EAS 3000-level or higher		
Free Electives		
Free Electives [3]		18
Total Credit Hours		**122**

Pass/fail allowed only for Humanities, Social Sciences, and Free Electives.

1. Limit six credit hours total of EAS 4699 and EAS 4651 towards Technical Electives.
2. Minimum grade of C required.
3. GT 1000 recommended
4. If EAS 4200 is completed, then 1-credit hour may be applied to satisfy the EAS Breadth Lab Elective requirement.
5. Students must pick 2 of 3 to complete EAS Capstone.

BACHELOR OF SCIENCE IN ECONOMICS

The economics major provides in depth exposure to the fundamental economic way of thinking and approaching a multitude of complex problems. Students will be exposed to micro and macro-economic theory, data science and analysis (econometrics), and relevant field courses throughout the program of study. Field courses cover a variety of topics such as Health Economics, Economics of Trade, Development Economics, and Environmental Economics.

The courses included in the major allow students to diversify their analytical skill sets with practice in computation and data analysis, fundamental economic theory, and empirical methods. The economics minor provides excellent concrete data science skills directly applicable for pursuing careers in multiple sectors.

Pass-fail only allowed for Free Electives.

Students must complete 39 hours of upper level (3000-/4000-level) courses. This requirement may be satisfied with a combination of major requirements, ECON electives, Non-Major Cluster courses and/or free electives.

1. 1000- or 2000-level course from the College of Engineering or College of Sciences. Please consult with advisor.
2. Must be selected from: CEE 1770 or CS 1316 or CS 1331 or CS 1332 or ECE 2030 or ME 1770 or ME 2016 or MGT 2210
3. Minimum grade of C required.
4. All twelve credit hours must come from the same discipline, or be part of a coherent theme. Please consult with advisor on course selection.
5. Courses may be applied toward completion of a minor.

International Plan

All degree programs offered by the School of Economics including the BS degree in Economics offer an International Plan (IP) Designation. In general the IP designation can be obtained by completing courses in three specified area:

1. Students are required to complete a general course in Global Economics.
2. Students are also required to complete a region specific course. Any number of International Affairs course can be used to fulfill this requirement
3. Student are also required to complete a capstone course rounding out the international experience. The IP designation also requires students to become proficient in a language as well as spending at least twenty-six weeks in a foreign culture enrolled in school and/or participating in an internship experience.

Research Option

The School of Economics also participates in the Research Option plan offered by the Undergraduate Research Opportunities Program (UROP). The Research Option offers students the opportunity for in-depth research experience working under the guidance of a faculty mentor. Requirements for participation in the Research Option include completing nine hours of undergraduate research, at least six of which are on the same topic, writing a research proposal, taking two 1-hour courses: LMC 4701 (typically taken during the first or second semester of research) and LMC 4702 (taken during the term in which the thesis is written), and completing the thesis.

BS/MS in Economics

Students with a GPA of 3.25 or higher in ECON courses are eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech, but before the completion of 75 semester credit hours, including transfer and advanced placement credits. Students who have more than 75 credit hours will be considered for the program on a case-by-case basis. Admissions decisions will be based on GPA and judgments of the Graduate Committee and faculty who have served as advisors or instructors. Continuation in the program will require the B.S. student to maintain a GPA of 3.25 or higher in their ECON courses. The program will not penalize students who opt out after the bachelor's degree.

Students in the BS-MS ECON program will take 6 hours of ECON electives at the 6000 level which will be used toward ECON electives in the BS in Economics program and may be used toward core requirements or electives in the MS in Economics program. Prior to enrolling in 6000-level ECON courses, students will be required to complete ECON 3110 Advanced Microeconomics, ECON 3120 Advanced Macroeconomics, and ECON 3161 Econometrics.

Students are encouraged to take 6 credit hours from the MSECON core courses (ECON 6105, ECON 6106, ECON 6140, or ECON 6160) during enrollment as a BS student. However, they will have flexibility to enroll in any 6000 ECON course whose prerequisite requirements they have met.

BACHELOR OF SCIENCE IN ECONOMICS AND INTERNATIONAL AFFAIRS

The primary objectives of the Bachelor of Science degree in Economics and International Affairs are to provide students with:

1. a detailed understanding of economic theory and practice in the contemporary world;
2. an understanding of the global, interdependent, and multicultural environment in which they live; and
3. a set of quantitative and qualitative analytical skills centered around policy-oriented issue areas in economics and international affairs. These skills will provide graduates with the capabilities to engage in strategic planning and analysis efforts in economic and international contexts.

Free Electives		
Free Electives		10
Total Credit Hours		**122**

Pass-fail only allowed for Free Electives.

39 hours of the degree must be upper division coursework. 15 hours of the Cluster, Free electives, ECON/INTA electives, or Technology requirement must be upper division (3000/4000 level).

[1] Modern Language courses must be in the same language as used in Core IMPACTS Arts, Humanities, and Ethics area.
[2] All nine credit hours must come from the same discipline, or be part of a coherent theme. Please consult with advisor on course selection.
[3] Minimum grade of C required.
[4] Approved instances of CS 2803 may be applied by advisor.
[5] Must be 3000-level or higher

Research Option

The Sam Nunn School of International Affairs also participates in the Research Option plan offered by the Undergraduate Research Opportunities Program (UROP). The Research Option offers students the opportunity for in-depth research experience working under the guidance of a faculty mentor. Requirements for participation in the Research Option include completing nine hours of undergraduate research, at least six of which are on the same topic, writing a research proposal, taking two 1-hour courses: LMC 4701 Undergraduate Research Proposal Writing (typically taken during the first or second semester of research) and LMC 4702 Undergraduate Research Thesis Writing (taken during the term in which the thesis is written), and completing the thesis. Students are also required to send a weekly update of progress of research to the faculty mentor. Along with their application, students must explain how the faculty mentor's research experience will benefit the student's research.

International Plan

The BS degree in Economics and International Affairs with the International Plan designator provide students with:

1. a detailed understanding of economic theory and practice in the contemporary world;
2. an understanding of the global, interdependent, and multicultural environment in which they live; and
3. a set of quantitative and qualitative analytical skills centered around policy-oriented issue areas in economics and international affairs. These skills will provide graduates with the capabilities to engage in strategic planning and analysis efforts in economic and international contexts

All degree programs offered by the School of Economics including the BS Degree Economics International Affairs offer an International Plan (IP) Designation. In general the IP designation can be obtained by completing courses in three specified area:

1. Students are required to complete a general course in Global Economics. Economics 2101 has been approved by the IP committee to fulfill this requirement
2. Students are also required to complete a region specific course. Any number of International Affairs course can be used to fulfill this requirement
3. Student are also required to complete are capstone course rounding out the international experience. The IP designation also requires students to become proficient in a language as well as spending at least twenty-six week in a foreign culture enrolled School and/or participating in an internship experience

Bachelor of Science in Economics & International Affairs/Master of Science in Economics (BSMS Option)

Students with a GPA of 3.5 or higher in EIA courses are eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech, but before the completion of 75 semester credit hours, including transfer and advanced placement credits. Students who have more than 75 credit hours will be considered for the program on a case-by-case basis. Depending on demand, the required minimum GPA may be higher. Admissions decisions will be based on GPA and judgments of the Graduate Committee and faculty who have served as advisors or instructors. Continuation in the program will require the B.S. student to maintain a GPA of 3.5 or higher in their EIA courses. The program will not penalize students who opt out after the bachelor's degree.

Students pursuing the BSEIA/MSECON option will be required to take six (6) hours of ECON electives at the 6000 level while enrolled as an undergraduate student. Prior to enrolling in 6000-level ECON courses, students will be required to complete ECON 3110, ECON 3120, and ECON 3161. The 6000-level ECON courses will be used toward the BSEIA requirements as the required ECON electives.

Students are encouraged to take six (6) credit hours from ECON 6105, ECON 6106, ECON 6140, or ECON 6160 (the "core" MS ECON courses) during enrollment as an undergraduate student. However, there will be flexibility to enroll in any 6000 ECON course as long as pre-requisites are met. Currently, there are over a dozen ECON courses offered at the 6000-level which only have 4000-level prerequisite courses that an undergraduate student is likely to be able to meet.

Bachelor of Science in Economics & International Affairs/Master of Science in International Affairs (BS/MS Option)

The Sam Nunn School of International Affairs offers a BS/MS program for students enrolled in the Economics and International Affairs

undergraduate program who demonstrate an interest in and ability for additional education beyond the BS degree.

Students in the BS/MS program will remain undergraduates until they meet requirements for the undergraduate degree, at which point they will receive their BS degree and be changed to graduate status. Students will be eligible to apply for the program after completion of 45 semester credit hours at Georgia Tech (i.e., at the end of their third semester), and if they show appropriate progress in their degree program thereafter. Any student in good standing in the BS EIA program is eligible to apply to the program. Admissions decisions will be based on GPA and judgments of the faculty who have served as advisors or instructors. Continuation in the program will require the student to maintain a GPA of 3.5 or higher in Ivan Allen College courses. The program will not penalize students who opt out after the bachelor's degree. Students participating in this program will be eligible for the six-semester credit-hour Graduate Course Option, which allows students completing both the bachelor's and master's in the same discipline to use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

Contact the BS/MS International Affairs program director for further information.
https://inta.gatech.edu/programs/graduate/five-year-bsms-inta

BACHELOR OF SCIENCE IN ELECTRICAL ENGINEERING

The School of Electrical and Computer Engineering offers two undergraduate degree programs:

- electrical engineering (EE) and
- computer engineering (CmpE).

Both programs include elective hours, enabling students to individually tailor their programs to provide emphasis in a particular specialization or exposure to a broad range of subjects. Engineering analysis and design concepts are integrated throughout both programs, culminating in a common major design experience involving a broad range of issues including economic and societal considerations.

The EE program offers elective courses in a wide variety of specializations including analog electronics, bioengineering, computer engineering, systems and controls, microsystems and nanosystems, electronics packaging, digital signal processing, optics and photonics, electrical energy, electromagnetics, and telecommunications. Additionally, students may elect to take advanced courses in other programs such as computer science, mathematics, physics, or management.

Program Educational Objectives

Within five years after graduating, the Georgia Institute of Technology School of Electrical and Computer Engineering graduates will have the skills, knowledge, and choices to:

- Be successful and recognized **leaders** in professional practice in electrical and computer engineering or in related fields.
- Be adaptive-learners and life-long **innovators** through advanced education/degrees, strategic professional development, and entrepreneurship that focuses on the needs of stakeholders.
- Be **problem solvers** who consider global, societal, and environmental impact and are prepared to address problems that are beyond conventional technical understanding and knowledge. Graduates will demonstrate technical competence, ethical reasoning, and creativity in identifying, formulating, analyzing, and developing solutions using appropriate techniques, skills, and tools.
- Be **team builders**, who lead and participate in culturally diverse teams and promote breadth of perspectives in developing, communicating, and executing solutions.

Cooperative Plan

The Georgia Tech Undergraduate Cooperative Education Program allows students to combine classroom study with paid practical work experience directly related to the academic major. Co-ops alternate semesters of on-campus study with semesters of full-time employment, normally beginning the program as freshmen or sophomores. Over 30 percent of ECE undergraduates participate in the co-op program.

The degree requirements for students in the co-op program are the same as those for other students in the major. The Cooperative Plan designation may be pursued separately or in combination with the International Plan and/or the Research Option.

Begun in 1912, Georgia Tech's program is currently the largest optional co-op program in the United States and has perennially been listed in U.S. News & World Report as one of the top ten co-op programs in America. As an integral part of the overall education experience, the co-op program allows students to take on increasing levels of responsibility and to use their job knowledge and classroom learning to make meaningful contributions to the organizations in which they work. Many co-op graduates are hired by their co-op employer, and more than 700 companies or government organizations throughout the United States and abroad currently employ Georgia Tech Undergrad Co-op Program students.

Because the School of ECE in Atlanta offers a wide range of electives and almost all required courses every term, including summer, co-op students

have substantial flexibility in completing their degree requirements. Many students continue their co-op work assignments through the senior year. Additionally, co-op students working in the Atlanta area may be able to take certain ECE courses, particularly laboratories offered in the evening, during the work term.

In addition to the co-op program, the Center for Career Discovery and Development also offers the Undergraduate Professional Internship and Work Abroad programs. These programs also provide opportunities for students to gain practical work experience, without the long-term commitment of the co-op program.

Center for Career Discovery and Development

International Plan

The International Plan is intended for students who seek an intensive international experience integrated into their undergraduate studies in electrical engineering. The International Plan develops global competence through a combination of coursework, language study, and residential overseas experience. Students who complete this option receive a designation on their transcript and diploma.

The electrical engineering aspects of the BS EE - International Plan degree requirements are identical to those for the regular BS EE. Please refer to the BS EE catalog description for general information about the degree program. Students may be able to satisfy the additional requirements imposed for the International Plan designation through appropriate choices of electives without additional credit hours to complete the degree. The International Plan designation may be pursued separately or in combination with the Cooperative Plan and/or the Research Option.

The School of Electrical and Computer Engineering offers a junior-year program at the Georgia Tech-Lorraine campus in Metz, France, that is designed to facilitate participation in the International Plan. However, electrical engineering majors are not restricted to this option and may complete any allowable courses, languages, and overseas experiences that satisfy the International Plan requirements.

BS EE Description
International Plan

Research Option

The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in electrical engineering. This option includes three or four semesters of structured research and provides an open evaluation of a student's research capabilities, viewable by the public via a required Web-based research portfolio. Students who complete this option receive a designation on their transcript.

The electrical engineering aspects of the BS EE - Research Option degree requirements are identical to those for the regular BS EE. Please refer to the BS EE catalog description for general information about the degree program. Students may be able to satisfy the additional requirements imposed for the Research Option designation through appropriate choices of electives without additional credit hours to complete the degree. The Research Option designation may be pursued separately, or in combination with the Cooperative Plan and/or the International Plan.

The School of Electrical and Computer Engineering (ECE) offers a two-semester Undergraduate Research Opportunity Program (UROP), which may be completed to provide a less-intensive research experience or as the initial phase of the Research Option. Contact the ECE Academic Office for additional information about the Research Option, including specific Institute and ECE requirements, and assistance in planning your schedule to allow participation in this program.

BS/MS Electrical and Computer Engineering

This program allows highly qualified students to receive the Bachelor of Science in either Electrical Engineering or Computer Engineering and a master's degree in Electrical and Computer Engineering. The joint BS/MS degree program affords undergraduate electrical or computer engineering majors the opportunity to broaden their studies and improve their career prospects.

Eligible Georgia Tech undergraduates normally apply for this program during their junior year. Contact the Electrical and Computer Engineering Graduate Affairs Office for program information, eligibility requirements, and applications.

BS/MS Information (5 Year)

Dual BS in Electrical Engineering

Georgia Tech & Korea Advanced Institute of Science and Tech

Students may pursue the BSEE degree from the Korea Advanced Institute of Science and Technology (KAIST) as they earn the BSEE or BSCmpE from Georgia Tech. KAIST offers one of the top engineering programs in Korea and the Far East. All lectures at KAIST are given in English to better serve a growing number of students from overseas. While earning their dual degrees, students spend two years each at both Georgia Tech and KAIST.

1. Students must complete one Ethics course during their program. For a complete list of Ethics courses, please click here.
2. Minimum grade of C required.
3. Please select any academic course from the Schools of Biological Sciences, Chemistry, Earth and Atmospheric Sciences, or Physics. Research credits may not apply to this requirement.
4. ECE electives are subject to School approval and must satisfy the following constraints:
   1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
   2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.
5. The following courses are not allowed: ECE 3710, ECE 3741, HPS 1XXX, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113, and PHYS 2XXX (AP Credit). Maximum of six credit hours of Special Problems or research may be applied toward the degree
6. CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (must be taken for Letter Grade basis)
7. Senior Design requirements may be satisfied in the following ways:
   1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II

2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[8] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[9] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (7)

[10] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

[5] The following courses are not allowed: ECE 3710, ECE 3741, HPS 1XXX, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113, and PHYS 2XXX (AP Credit). Maximum of six credit hours of Special Problems or research may be applied toward the degree

[6] CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (must be taken for Letter Grade basis)

[7] Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[8] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[9] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (7)

[10] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

8 No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

9 The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (7)

10 Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

Culminating Senior Design Options (Capstone)		
Culminating Senior Design [7]		3
Free Electives [5,9]		**10**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005.

Courses that are cross-listed with ECE must be taken under the ECE number.

1 Students must complete one Ethics course during their program. For a complete list of Ethics courses, please click here.

2 Minimum grade of C required.

3 Please select any academic course from the Schools of Biological Sciences, Chemistry, Earth and Atmospheric Sciences, or Physics. Research credits may not apply to this requirement.

4 ECE electives are subject to School approval and must satisfy the following constraints:

1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

5 The following courses are not allowed: ECE 3710, ECE 3741, HPS 1XXX, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113, and PHYS 2XXX (AP Credit). Maximum of six credit hours of Special Problems or research may be applied toward the degree

6 CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (must be taken for Letter Grade basis)

7 Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

8 No single course may be used to satisfy requirements in both selected threads.

ECE 3000/4000-level Elective [4]		3
Culminating Senior Design Options (Capstone)		
Culminating Senior Design [7]		3
Free Electives [5,9]		**11**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005.

Courses that are cross-listed with ECE must be taken under the ECE number.

1 Students must complete one Ethics course during their program. For a complete list of Ethics courses, please click here.

2 Minimum grade of C required.

3 Please select any academic course from the Schools of Biological Sciences, Chemistry, Earth and Atmospheric Sciences, or Physics. Research credits may not apply to this requirement.

4 ECE electives are subject to School approval and must satisfy the following constraints:

1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

5 The following courses are not allowed: ECE 3710, ECE 3741, HPS 1XXX, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113, and PHYS 2XXX (AP Credit). Maximum of six credit hours of Special Problems or research may be applied toward the degree

6 CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (must be taken for Letter Grade basis)

7 Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

8 No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

9 The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (7)

10 Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

ECE 3000/4000-level Elective [4]		3
Culminating Senior Design Options (Capstone)		
Culminating Senior Design [7]		3
Free Electives [5,9]		**11**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005.

Courses that are cross-listed with ECE must be taken under the ECE number.

1. Students must complete one Ethics course during their program. For a complete list of Ethics courses, please click here.
2. Minimum grade of C required.
3. Please select any academic course from the Schools of Biological Sciences, Chemistry, Earth and Atmospheric Sciences, or Physics. Research credits may not apply to this requirement.
4. ECE electives are subject to School approval and must satisfy the following constraints:
   1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals

Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).

2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

[5] The following courses are not allowed: ECE 3710, ECE 3741, HPS 1XXX, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113, and PHYS 2XXX (AP Credit). Maximum of six credit hours of Special Problems or research may be applied toward the degree

[6] CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (must be taken for Letter Grade basis)

[7] Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[8] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[9] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (7)

[10] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

ECE 4784	Engineering Electrophysiology	
Bioengineering Electives		
ECE 3000/4000-level Elective [4]		3
Circuit Technology [2,10]		
ECE 3400	Analog Electronics	3
ECE 4452	IC Fabrication	3
Select one of the following: [2,8]		3
ECE 4043	Senior Analog Electronics Laboratory	
ECE 4415	RF Engineering I	
ECE 4420	Digital Integrated Circuits	
ECE 4430	Analog Integrated Circuits	
ECE 4435	Operational Amplifier Design	
ECE 4502	Optical Fiber Communications	
ECE 4370	Antenna Engineering	
ECE 4391	Electromagnetic Compatibility	
Circuit Technology Electives		
ECE 3000/4000-level Elective [4]		3
Culminating Senior Design Options (Capstone)		
Culminating Senior Design [7]		3
Free Electives [5,9]		**11**
Total Credit Hours		**129**

Pass-fail only allowed for Humanities Electives, Social Sciences Electives, Free Electives, ECE 1100, and ECE 3005.

Courses that are cross-listed with ECE must be taken under the ECE number.

1. Students must complete one Ethics course during their program. For a complete list of Ethics courses, please click here.
2. Minimum grade of C required.
3. Please select any academic course from the Schools of Biological Sciences, Chemistry, Earth and Atmospheric Sciences, or Physics. Research credits may not apply to this requirement.
4. ECE electives are subject to School approval and must satisfy the following constraints:
   1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
   2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.
5. The following courses are not allowed: ECE 3710, ECE 3741, HPS 1XXX, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113, and PHYS 2XXX (AP Credit). Maximum of six credit hours of Special Problems or research may be applied toward the degree
6. CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (must be taken for Letter Grade basis)
7. Senior Design requirements may be satisfied in the following ways:
   1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
   2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

   NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)
8. No single course may be used to satisfy requirements in both selected threads.
   1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
   2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
   3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.
9. The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (7)
10. Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

3. Please select any academic course from the Schools of Biological Sciences, Chemistry, Earth and Atmospheric Sciences, or Physics. Research credits may not apply to this requirement.
4. ECE electives are subject to School approval and must satisfy the following constraints:

1. All ECE courses at the 3000-level or higher, including approved special topics course. Exclusions: Junior Design Fundamentals Course (prerequisite for single-semester capstone) and ECE 3077 (used to satisfy Probability and Statistics requirement).
2. Special problems, undergraduate research, and similar courses may not be included, except for three credit hours for one ECE Undergraduate Research sequence, either ECE 3951+ ECE 3952 or ECE 4951+ ECE 4952. For students completing the Research Option but not an ECE UROP sequence, three credit hours for ECE 4699 may be included.

[5] The following courses are not allowed: ECE 3710, ECE 3741, HPS 1XXX, LMC 2661, LMC 2662, LMC 3661, LMC 3662, MATH 1113, and PHYS 2XXX (AP Credit). Maximum of six credit hours of Special Problems or research may be applied toward the degree

[6] CEE 3770 or ISYE 3770 or MATH 3670 or ECE 3077 (must be taken for Letter Grade basis)

[7] Senior Design requirements may be satisfied in the following ways:

1. ECE two semester 4000 level ECE Culminating Design I + ECE Culminating Design II
2. Approved single-semester capstone (requires completion of the prerequisite ECE Design Fundamentals junior course, which counts as a free elective)

NOTE: Students may be able to use a VIP project in one of the above options to satisfy Senior Design provided they meet the requirements as outlined at the following VIP page. (see https://vip.gatech.edu/how-vip-credits-count)

[8] No single course may be used to satisfy requirements in both selected threads.

1. If a course is **required** in both threads, it must be satisfactorily completed once and the second occurrence shall be replaced by an equivalent number of ECE 3000/4000 elective hours (excluding courses used to satisfy senior design or probability & statistics requirements).
2. If a course is **required** in one thread and **optional** (elective or pick list) in the second thread, it must be completed as required and may not be used to satisfy any element of the second thread.
3. If a course is **optional** (elective or pick list) in both threads, it may be counted once toward either thread, but not toward both.

[9] The total number of available free elective hours will depend on choices made in the thread as well as the choice to fulfill Senior Design requirements according to note (7)

[10] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

[10] Hours satisfying Probability & Statistics requirement and threads requirements may share with minor requirements.

BACHELOR OF SCIENCE IN ENVIRONMENTAL ENGINEERING

The School of Civil and Environmental Engineering (CEE) offers a BS degree in Environmental Engineering (BS EnvE). The curriculum is designed to provide students with fundamental knowledge of scientific disciplines and engineering principles that are used to address emerging environmental issues such as sustainable air, water, and land resources; human health; and environmental restoration. In the first and second years, students take courses in physics, chemistry, biology, mathematics, English composition, and introductory engineering. The third year incorporates advanced engineering topics, including solid and fluid mechanics, thermodynamics, and laboratories in engineering materials, hydraulic engineering, and environmental monitoring and process engineering. The fourth year is elective based, allowing students to select courses from specific focus areas, including biological processes, sustainability, air pollution, and water resources, in addition to technical and design electives. A senior-level capstone design course serves to integrate principles from a range of disciplines. The curriculum is intended to provide students with the flexibility to develop tailored sequences of electives to meet individual education and career objectives, while ensuring a comprehensive engineering design experience.

Prerequisites and Other Requirements

Students must satisfy all prerequisites for a particular course. In addition to Institute academic requirements for graduation with a BS degree, the following requirements must be satisfied for the BS EnvE:

1. A letter grade of **C** or better must be earned in

Code	Title	Credit Hours
PHYS 2211	Introductory Physics I	4
MATH 1551	Differential Calculus	2
MATH 1552	Integral Calculus	4
MATH 1553	Introduction to Linear Algebra	2
MATH 1554	Linear Algebra	4
MATH 2552	Differential Equations	4
CHEM 1310	Principles of General Chemistry for Engineers	4
COE 2001	Statics	2

2. The total number of quality points earned in CEE courses used to satisfy degree requirements must be at least twice the number of credit hours in those courses. If a course is repeated, the most recent grade will be used in applying this rule. No CEE courses may be repeated for the purpose of satisfying this rule if the original grade was a **C** or higher.

Program Educational Objectives

Graduates will pursue a diverse range of careers that build on their engineering education. During the initial years of their careers, graduates will:

1. be successfully employed in civil- and environmental-related fields, or other career paths, with prominent companies and organizations in industry, government, non-governmental organizations, and entrepreneurial ventures;
2. pursue graduate education and research in civil and environmental engineering, and other fields;
3. be global collaborators, participating in interdisciplinary and culturally diverse teams, and advancing in leadership positions in the profession;
4. continue professional development by obtaining professional licensure or certifications, continuing education credits, or post-graduate study;
5. be active in service to the profession and to the State of Georgia, the nation, and the world.

Total Credit Hours		**129**

No pass-fail allowed, except for CS 1171**.** CEE 4801 **not allowed toward degree.**

Students must earn a 2.0 average in all CEE courses.

Students must earn a minimum of 52 credit hours from the College of Engineering. (40 credit hours of required courses plus a minimum of twelve credit hours from electives.)

1 Students must complete one Ethics course during their program. For a complete list of Ethics courses, please see: Ethics

2 If PHYS 2231 is taken, extra credit hour goes to Free Electives.

3 Minimum grade of C required.

4 Technical Electives Focus may be chosen from the following list: BIOL 2335, BIOL 3380, BMED 3400, BMED 4757, BMED 4758, CEE 3010, CEE 4100, CEE 4210, CEE 4225, CEE 4230, CEE 4300, CEE 4310, CEE 4320, CEE 4330, CEE 4340, CEE 4350, CEE 4405, CEE 4420, CEE 4600, CEE 4620, CEE 4795, CHBE 3200, CHEM 3281, CHEM 3511, CHEM 4740, CP 4210, CP 4510, EAS 4110, EAS 4300, EAS 4410, EAS 4420, EAS 4430, EAS 4480, EAS 4610, EAS 4625, EAS 4740, ECE 3710, ECE 3741, ME 4171, ME 4172 or ME 4782. A maximum of 3 credit hours of CEE 4699 and CEE 4900.

5 Maximum 3 credit hours CEE 2699. MATH 1113, PHYS 2XXX (AP Credit), PHYS 2802, one-credit-hour MUSI courses, GT 1000, and FREE XXXX are not allowed.

Cooperative Plan

Since 1912, Georgia Tech has offered a five-year Undergraduate Cooperative Program to those students who wish to combine career-related experience with classroom studies. The program is the fourth oldest of its kind in the world and the largest optional co-op program in the country.

Students alternate between work assignments and classroom studies until they complete four or five semesters of work. Co-op students with an environmental engineering major complete the same coursework on campus that is completed by regular four-year students. Most co-op students begin the program as freshmen or sophomores and are classified as full time students regardless of whether they are attending classes on campus or are full time at an employer's location.

Students who participate in the program have the opportunity to develop career interests, become more confident in their career choices, and develop human relations skills through their work experience. Graduates of the program receive a bachelor's degree with a Cooperative Plan Designation.

The Undergraduate Professional Internship Program is for environmental engineering students who do not participate in the Cooperative Program, but want some career-related experience before graduation. Students generally work for one semester, usually in the summer, with an option for more work experiences. Students must have completed at least 30 hours of coursework at Georgia Tech before they can participate in the program. For more details, see: http://career.gatech.edu/internships.

In addition, there is a Work Abroad Program (www.workabroad.gatech.edu), which complements a student's formal education with paid international work experience directly related to environmental engineering. Participating students typically are juniors and seniors. The international work assignments are designed to include practical training, cross-cultural exposure and learning, and the acquisition of needed skills. This program satisfies requirements for the International Plan, which is available to environmental engineering students.

For more information about all of the programs in the Center for Career Discovery and Development, visit www.careerdiscovery.gatech.edu.

International Plan

The International Plan is a challenging and coherent academic program for undergraduates that develops global competence within the context of a student's major. It is a degree-long program that integrates international studies and experiences into any participating major at

Georgia Tech. It helps to prepare Georgia Tech graduates professionally and personally for successful lives in the twenty-first century.

The International Plan is not intended to replace current international programs; it supplements them. Existing study abroad opportunities continue to be offered. It is also not intended to be an add-on to the current degree programs. It is intended to be another curriculum path to earn a degree in which international competence is integrated into the program of study. The plan can be completed within the normal timeframe of four years of undergraduate study.

The overarching model for the International Plan has four components:

1. International coursework: Three courses to include one from each of the following categories:
   a. International relations
   b. Global economics
   c. A course about a specific country or region
2. International experience: Two terms abroad (not less than 26 weeks) engaged in any combination of study abroad, research, or internship
3. Second language proficiency: All students in the program are expected to reach at least the proficiency level equivalent to two years of college-level language study. Students who use the language to study, conduct research, or participate in an internship during their international experience are expected to attain a higher level of proficiency. Language proficiency is determined by testing (not course credits).
4. Culminating course: A capstone course in the major designed to tie the international studies and experiences together with the student's major

Completion of the International Plan is recognized by a designation on the student's diploma indicating completion of the degree with global competence.

For additional information about the International Plan visit www.oie.gatech.edu/internationalplan.

Research Option

The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in environmental engineering. In order to graduate with a BS EnvE – Research Option degree, the students must:

Complete at least nine units of undergraduate research (over at least two, preferably three terms). Research may be for either pay (CEE 2698 or CEE 4698) or credit (CEE 2699 or CEE 4699). Research for credit may be used towards the BS EnvE approved elective requirements. Write an undergraduate thesis/report of research on their findings. This is usually done during the graduating term. The thesis will be published in the Georgia Tech Library.

Take two 1-hour classes: LMC 4701 (typically taken during the first or second semester of research) and LMC 4702 (taken during the thesis-writing semester).

At least six of the nine required credit hours of research should be on the same topic. A research proposal must be approved by a faculty advisor and one other faculty member. This proposal will be completed in LMC 4701 which serves as a prerequisite for LMC 4702. Completion of Research Option is noted on the student's transcript.

Joint BS/MS Degree Program

The joint BS/MS program is designed to attract the best-of-the-best undergraduate students and is especially intended for students who demonstrate an interest in, and ability for, additional education beyond the bachelor's degree.

Students will be eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech and appropriate progress in their degree program. As a practical matter, students should apply for the program at least three semesters prior to graduation in order to take graduate-level courses prior to receiving their BS degree. Students must have a Georgia Tech GPA of 3.5 or higher for admission into the BS/MS Program in Environmental Engineering.

This program is available only to those completing a Bachelor's degree with majors of Civil Engineering or Environmental Engineering.

The key components of this program are intense interaction among students and faculty, including mentoring and undergraduate research, and careful advising and course planning to enable students to begin challenging coursework in their fourth year of study.

Students in the joint BS/MS program remain undergraduates until they meet the requirements for the bachelor's degree, at which point they will receive the BSEnvE degree. Their status will then be changed to graduate status. Graduate school application fees and the GRE requirements are waived.

Once admitted, a GPA of at least 3.0 must be maintained to remain in the program. Additionally, students in the BS/MS program are eligible to use the Graduate Course Option even if their cumulative grade-point average is below 3.5 at the time they complete their bachelor's degree.

BACHELOR OF SCIENCE IN ENVIRONMENTAL SCIENCE

The Bachelor of Science in Environmental Science encompasses the study of natural environmental systems and the interaction of humans with these systems. It includes a strong foundation in the basic sciences, requiring core content in mathematics, physics, chemistry, biology, Earth sciences, and environmental policy. Upper-level coursework builds lab, field, communication, and computational skills. Students will be encouraged to create a focused pathway of electives that matches their interests and career goals. This degree program will prepare students for careers in environmental consulting, conservation, environmental sustainability, and environmental education. #It will also provide a strong base for students interested in pursuing graduate programs and careers in environmental policy, environmental law, medicine, and other master's and Ph.D. programs in environmentally related disciplines.

Total Credit Hours		**122**

Students must complete a minimum of 39-hours of 3000/4000-level coursework.

[1] Pass/Fail allowed only for Humanities, Social Sciences, and Free electives

[2] 3000/4000-level courses in any field chosen by the student

BACHELOR OF SCIENCE IN GLOBAL ECONOMICS AND MODERN LANGUAGES

In partnership with the School of Modern Languages, the School of Economics offers a Bachelor of Science in Global Economics and Modern Languages with language concentrations in Chinese, French, German, Japanese, Korean, Russian, or Spanish. Global Economics and Modern Language graduates are especially attractive to employers with long-term interests outside the United States who demand employees prepared to successfully navigate the challenges and opportunities presented by global, economically interdependent, multilingual, and multicultural environments. Through a variety of coursework and the opportunity to spend a semester abroad, students have in-depth knowledge not only of their own cultures but also have the capacity to function effectively in a second culture. Coursework focuses on rigorous training in economics combined with extensive foreign language study. Students are expected to develop advanced communication skills and professional competency in the language of choice through courses and extracurricular opportunities that focus on current issues, classic literature, business applications, and cross-cultural perspectives.

- Bachelor of Science in Global Economics and Modern Languages - Chinese
- Bachelor of Science in Global Economics and Modern Languages - French
- Bachelor of Science in Global Economics and Modern Languages - German
- Bachelor of Science in Global Economics and Modern Languages - Japanese
- Bachelor of Science in Global Economics and Modern Languages - Korean
- Bachelor of Science in Global Economics and Modern Languages - Russian
- Bachelor of Science in Global Economics and Modern Languages - Spanish

International Plan

The degree requirements for the Global Economics and Modern Languages (Chinese, French, German, Japanese, Korean, Russian and Spanish)-International Plan are basically the same as for the GEML degree, except that students are required to spend two terms abroad and then achieve Intermediate High (for Chinese, Japanese or Russian: Intermediate Low) on the standardized ACTFL testing scale during an oral interview. The costs of the test will be paid for by the School of Modern Languages for each student. The terms abroad may typically consist of one semester of study plus a significant amount of time spent with a research or work project abroad. Students may also opt for a second semester. GEML-IP majors are also strongly encouraged to enroll in the LBAT intensive summer programs offered by the School of Modern Languages.

In addition to gaining advanced global competence, the International Plan designation will set you apart from other applicants with recruiters from top companies and governmental agencies.

Other Required Courses include the following, and these can easily be obtained within the regular required curriculum offerings of ECON and Modern Languages. These requirements can also be met with courses taken abroad, upon consultation with ECON degree advisors.

1. At least one course focused on international relations historically and theoretically, including topics such as
   a. the role of state sovereignty and nationalism and non-state actors in the international system;
   b. international conflict, peace, security, intervention, and nation-building;
   c. international organizations, law, and ethics;
   d. transnational problems of the environment, terrorism, health, and migration;
   e. among other issues (see INTA courses).
2. At least one course that provides a historical and theoretical understanding of the global economy, including topics such as
   a. international trade, finance, investment, and production;
   b. regional economic integration (such as the EU);
   c. economic development and modernization; and
   d. questions of natural resource sustainability.
3. At least one course that provides familiarity with an area of the world or a country that allows them to make systematic comparisons with their own society and culture. This course could come from various disciplinary perspectives, including history, public policy, philosophy, international affairs, literature, economics, management, architecture, among others. Upper division Modern Language course will count here.
4. A culminating course, occurring either at the end of or after the international experience that integrates knowledge of the discipline and the international experience in a global context.

BACHELOR OF SCIENCE IN HISTORY, TECHNOLOGY, AND SOCIETY

The bachelor's degree in History, Technology, and Society (BS-HTS) is comparable to traditional degrees in history and sociology, but has several attributes that make it unique and give our students an edge over other liberal arts majors. A degree in HTS requires broad-based training in humanities, mathematics, computing, science, and social sciences, giving our majors a truly rigorous and broad education. The program's focus on global issues related to the origin and impact of technology and science is also distinctive, providing students with the critical tools needed to understand the development of the modern world. Students earning a degree in HTS may participate in both the International Plan and the Research Option, which enhance the undergraduate experience. Finally, the HTS curriculum allows one of the largest numbers of free electives of any major at Georgia Tech, giving our students a chance to pursue minor degrees, certificates, and other interests that prepare them for the broadest possible range of careers, from government and politics to law and medicine to journalism and business.

Custom Specialization [6]	
Non-Major Cluster	
Non-Major Cluster [4,5]	12
Free Electives	
Free Electives [5]	18
Total Credit Hours	**122**

Pass/fail: Students can do pass/fail for HTS electives, non-major cluster, and free electives. However, students who complete at least 91 credit hours at Georgia Tech are limited to 6 pass/fail credit hours in HTS electives and students who complete less than 90 credit hours at Tech are limited to 3 pass/fail credit hours in HTS electives.

All courses in the HTS core must be taken for a letter grade and the student must earn a C or better.

One grade of D (three credits) is allowed in HTS electives.

1. This must be a different class from that used to satisfy the Legislative Requirement.
2. Any HTS course that carries a Social Science attribute.
3. Minimum grade of C required.
4. 12 credits required in either the same prefix or part of a coherent theme. Please consult with advisor on course selection.
5. Free Electives and Non-Major Cluster electives can be satisfied with a minor, certificate, or other coursework. Please consult with the advisor on course selection.
6. In consultation with an advisor, students choose three HTS classes with a coherent theme that is not reflected in the other seven pre-approved areas of specialization.
7. Please see an advisor for additional Math sequence options for Core D Math requirement.
8. Sequence of two classes in the same language. Classes must be taught in a language other than English.

International Plan

This degree program combines the traditional benefits of an HTS degree with the additional benefits of international education. The School of History and Sociology strongly encourages study abroad programs and believes that international experiences greatly enhance one's undergraduate education.

The number of credit hours needed for this degree (BS in History, Technology, and Society-International Plan, or BSHTS-IP) is the same as for the traditional bachelor's degree in HTS. However, the International Plan (IP) degree has different requirements. These requirements are discussed briefly in the next paragraph. In most cases, HTS majors will be able to use their non-major cluster and free-elective hours to fulfill the HTS-IP requirements.

There are two IP tracks:

- the English Language Option and
- the Foreign Language Option.

The HTS degree supports both options, which the Institute deems to be equal in difficulty and value. Both tracks require a total of twenty-six weeks in residence in a specific foreign country or region. These weeks must be accumulated in one or two trips abroad; any combination of coursework, research, internship, or work may apply to this twenty-six week total, given the approval of the advisor. Both IP tracks require a minimum of twelve credit hours in one foreign language and demonstration of proficiency in that language. Both require participants to take a cluster of courses from a menu of IP-designated electives; both require completion of a capstone course, which will be offered through the HTS degree program.

Visit the School of History and Sociology website here for additional information.

For more complete information, see the official Institute IP website through Georgia Tech's Office of International Education.

Office of International Education

Research Option

The School of History and Sociology Research Option allows students to incorporate additional research, writing, and presentation experiences into the HTS major program of study. Students interested in going on to graduate or professional school are encouraged to consider the research option, which allows a student to complete a significant scholarly work for presentation at a professional conference and/or publication.

In addition to the courses required of all HTS majors, including eight credit hours of research seminars and the three-credit HTS research methods course, students enrolled in the Research Option will also complete six hours of supervised individual undergraduate research and two 1-hour writing courses: LMC 4701 (typically taken during the first or second semester of research) and LMC 4702 (taken during the term in which the thesis is written).

Visit the School of History and Sociology website here for additional information.

BACHELOR OF SCIENCE IN INDUSTRIAL DESIGN

Undergraduate education in industrial design at Georgia Tech leads to the Bachelor of Science Degree in Industrial Design that is accredited by the National Association of Schools of Art and Design (NASAD). The undergraduate program prepares students for a career in design practice as well as for graduate education in industrial design and in other related fields. The School of Industrial Design at Georgia Tech offers the only industrial design degree program in the University System of Georgia.

Industrial design is the professional practice of creating products that enhance the function, usability, value, and appearance of products, services, systems, and experiences with the goal of benefiting the user, manufacturer, community, and the environment. Industrial design education prepares students to design systems and tangible artifacts including, consumer and recreational products, business and industrial products, medical and computer equipment, transportation and environments, as well as user experience and interfaces. Both generalist and specialist, industrial designers tend to be part artist, part entrepreneur, and part engineer.

Cross-disciplinary education is the primary focus of the four-year industrial design program. The university education provides:

1. an understanding of the arts (liberal and visual arts), technology (engineering and sciences), humanities (sociology and psychology), and management (marketing and branding),
2. a collaborative and shared education through an emphasis on the design studio, and
3. an opportunity to periodically participate in real-life design projects through sponsored studio projects.

The undergraduate program offers a well-rounded course of study with an emphasis on critical thinking, basic design, design skills, and design communication. There are 6 industrial design studios after the first-year suite of introductory design classes. The industrial design studios focus on a sequential learning path which begins with form making to product design to post design that involves development and manufacturing. Design projects stress developing a broad education through an exposure to academic and professional considerations. The School encourages students to develop a diverse background in order to expand individual talents and respond to emerging opportunities in the field. Faculty members are scholars and design practitioners, giving students the opportunity to learn about both.

The faculty reserves the right to refuse credit for any project executed outside the precincts of the College or otherwise executed without proper coordination with the instructor.

Grade Requirements

All required industrial design courses must be completed with a grade of C or higher. A student may not enter a more advanced studio design course until this requirement is met; students with such academic deficiencies may be required to delay their studies for one year. Studio design courses must be taken in sequence beginning fall semester. A maximum of 9 credit hours may be taken on a pass/fail basis. Only courses taken as free electives in the undergraduate curriculum maybe taken for pass/fail credit. See "Information for Undergraduate Students" for Institute regulations regarding pass/fail courses.

International Plan

The International Plan offers a challenging academic program that develops global competence within the context of Industrial Design.

The International Plan is a four-year program that builds global competence by requiring students to spend two full terms at an Industrial Design program in another country, to develop a proficiency in a second language, and to take internationally oriented coursework. This experience provides students a deeper global competency than traditional international opportunities. The eight-semester sequence is structured to allow for the Fall and Spring third year semester to be completed at an industrial design program in another country. Students are responsible for locating those courses at the host institution that will serve as equivalents to the courses listed in the curriculum.

Degree requirements are not modified but are satisfied with specialized courses and appropriate choices of elective courses, which includes globally focused courses within the major area and a capstone Senior Studio: Global Awareness. Consult with the Industrial Design Program for the suggested curriculum.

All International Plan participants must develop proficiency in a language other than English. Unless otherwise approved, the language chosen to fulfill this requirement will have a relationship to the country or region in which the student plans to fulfill the 26 week requirement. Any variance will require approval from the IP faculty representative and the IP Committee.

Admission Requirements

- Applicants must be undergraduate degree-seeking Georgia Tech students in one of the participating majors.
- Students must submit an application via the International Plan website. Notification of acceptance will be communicated via the student's Georgia Tech e-mail address.
- There is no GPA requirement for first-semester freshmen applying to the International Plan. All other applicants must have at least a 2.5 GPA at the time of application.

International Plan

Industrial Design International Studies

BACHELOR OF SCIENCE IN INDUSTRIAL ENGINEERING

The principal strength of the academic program leading to the Bachelor of Science in Industrial Engineering (BS IE) is its blend of mathematics, physical sciences and business applications. The methodology foundation is built on probability, optimization, statistics, computing, and economics. The program features a unique concentration system that allows students to get a broad industrial engineering education and to specialize in areas such as

- Advanced Studies in Operations Research and Statistics,
- Analytics and Data Science,
- Economic and Financial Systems,
- Operations Research,
- Quality and Statistics,
- Supply Chain Engineering, and
- General Industrial Engineering.

This blend produces the flexibility that is inherent in the field of industrial and systems engineering, and that affords BSIE graduates a wide array of career options. Our graduates are constantly looking for ways to make anything in life work better, more efficiently and more productively.

Program Educational Objectives

The H. Milton Stewart School of Industrial and Systems Engineering expects our graduates (in 3 to 6 years):

- to become successful Industrial Engineers;
- to take leadership in their endeavors;
- to be self-learners and starters;
- to succeed in professional and educational advancement.

- Bachelor of Science in Industrial Engineering - Advanced Studies in Operations Research and Statistics
- Bachelor of Science in Industrial Engineering - Analytics and Data Science
- Bachelor of Science in Industrial Engineering - General
- Bachelor of Science in Industrial Engineering - Economic and Financial Systems
- Bachelor of Science in Industrial Engineering - Operations Research
- Bachelor of Science in Industrial Engineering - Quality and Statistics
- Bachelor of Science in Industrial Engineering - Supply Chain Engineering

Cooperative Plan

The Co-op Program enhances the student's education, employability and earnings potential. For more details, visit co-op pages from Georgia Tech's co-op Website.

- Co-op courses are designated in the schedule of classes as co-op. All students interested in registering for this course(s) must have been accepted into the co-op Program. Students must have met with their co-op advisor to be issued a permit to register for restricted course(s). Students must register for the co-op course every semester they are at work in order to receive credit for the work term.
- Students who are in the Co-op Program (U.S. citizens and Permanent Residents) and are returning to work should automatically receive a permit but are advised to remain in close contact with their co-op advisor.
- International students must receive work authorization from the Office of International Education prior to each work term before a course registration permit will be issued.
- Neither co-op nor internship courses count for credit towards the industrial engineering degree; however, successful completion of the Co-op Program leads to a degree designator.

For more information about all of the programs in the Center for Career Discovery and Development, visit Center for Career Discovery and Development.

International Plan

The Georgia Tech International Plan is designed to prepare graduates to develop significant global competence. Many Industrial Engineers work in consulting companies, supply chain, economic decision systems, etc. Global perspectives are very important. The significant global competence will give them an additional advantage on the job market and on the jobs.

The major components of International Plan include

1. Twenty six weeks of international experience (work, research or study)
2. Foreign language requirements. This can be satisfied by oral proficiency measured tested by an exam by the American Council for the Teaching of Foreign Languages (ACTFL). The foreign language requirement can also be satisfied by course work. It means the passing of two 2XXX level language classes.
3. Three internationally oriented courses plus an addendum in the capstone design on international perspective.

For more details of the International Plan, including application materials, visit the Office of International Education. Please also see The International Plan Option in ISyE.

BS/MS Options

The School of Industrial and Systems Engineering offers the following options for eligible students to double count a maximum of 6 credit hours toward an undergraduate degree and graduate degree:

BS in Industrial Engineering/MS in Supply Chain Engineering - contact School of more information

BS in Industrial Engineering/MS in Industrial Engineering

BS in Industrial Engineering/MS in Health Systems

BS in Industrial Engineering/MS in Operations Research

Bachelor of Science in Industrial Engineering - Analytics and Data Science

Free Electives [11]		
Free Electives		11
Total Credit Hours		**128**

Pass-fail only allowed for Free Electives, Humanities, and the Social Sciences elective.

Students must achieve a minimum GPA of 2.0 in the BSIE Major Requirements to graduate.

1 Students must earn a C or better in all required MATH courses in the BSIE curriculum.

2 Students may also complete MATH 1554 and MATH 2550 to satisfy math requirements. If MATH 1554/MATH 2550 combination is taken, then two hours from MATH 1554 may be used in Area F to give Area F 18 hours.

3 Only one EAS course can be used toward ISYE Lab Science requirements.

4 PSYC 1101 will satisfy the Ethics requirement.

5 Students must choose from the following to meet the Environmental requirement: BIOS 1107 and BIOS 1107L, BIOS 2300, CEE 2300, CEE 4300,EAS 1600, EAS 1601, EAS 2600, EAS 2750, EAS 3110, EAS 4480,ECON 4440, ISYE 4803 titled "Energy and Environmental Analysis," ISYE 4501, SLS 3120, or PHYS 2750.

6 Students must take at least nine credits of engineering electives. Three credits must be chosen from ECE 2020, ECE 2026, or ECE 3710 AND ECE 3741. Students must complete courses from two different eligible engineering elective subjects. Engineering elective credits taken in excess of the nine required may count toward free electives.

7 At most, one computing course (CS or CX) is allowed, including courses cross-listed with CS or CX courses.

8 In addition to the ECE requirement, take at least two additional credits from Group 1 and no more than four credits from Group 2.

9 To count as Group 2 Engineering Elective credit, all Vertically-Integrated Projects (VIP) courses must be approved by the ISyE Associate Undergraduate Chair, and at least three but no more than four credits of VIP coursework may count toward the Engineering Elective requirement.

10 Students must complete five concentration courses: one from Group A, two from Group B, and two as listed from any other concentration. A minimum of four of the five concentration courses must be ISYE

[11] courses. If ISYE 3106 Cornerstone Design is taken as a breadth elective, it must be taken prior to ISYE 4106 Senior Design.
MATH 1113, MGT 2250, ISYE 3770, and PHYS 2XXX (AP credit) not allowed.

Free Electives [14]		
Free Electives		11
Total Credit Hours		**128**

Pass-fail only allowed for Free Electives, Humanities, and the Social Sciences elective.

Students must achieve a minimum GPA of 3.3 in the BSIE Major Requirements to graduate (Math beyond Calculus, BSIE required courses and concentration electives).

1. Students must earn a C or better in all required MATH courses in the BSIE curriculum.
2. MATH 1564 is preferred, but not required.
3. Students may also complete MATH 1554 or MATH 1564 and MATH 2550 to satisfy math requirements. If MATH 1554 or MATH 1564/MATH 2550 combination is taken, then two hours from MATH 1554 may be used in Area F to give Area F 18 hours.
4. Minimum grade of B in MATH 2106 is required to pursue the Advanced Studies for OR & Stat Concentration.
5. Only one EAS course can be used toward ISYE Lab Science Requirements.
6. PSYC 1101 will satisfy the Ethics requirement.

7 Students must choose from the following to meet the Environmental requirement: BIOS 1107 and BIOS 1107L, BIOS 2300, CEE 2300, CEE 4300,EAS 1600, EAS 1601, EAS 2600, EAS 2750, EAS 3110, EAS 4480,ECON 4440, ISYE 4803 titled "Energy and Environmental Analysis," ISYE 4501, SLS 3120, or PHYS 2750.

8 Students must complete courses from two different eligible engineering elective subjects.

9 At most, one computing course (CS or CX) is allowed, including courses cross-listed with CS or CX courses.

10 In addition to the three-credit ECE requirement, take at least one additional credit from Group 1 and no more than four credits from Group 2.

11 To count toward the Engineering Elective Group 2 requirement, all Vertically-Integrated Projects (VIPS) courses must be approved by the ISyE Associate Chair. And, at least three, but no more than four, credits of VIP coursework may count toward the Engineering Elective requirement.

12 Students must complete five concentration courses: A minimum of four of the five concentration courses must be ISYE courses. If ISYE 3106 Cornerstone Design is taken as a breadth elective, then it must be taken prior to ISYE 4106 Senior Design.

13 The 6000-level ISYE course options are preferred, but not required.

14 MATH 1113, MGT 2250, ISYE 3770, and PHYS 2XXX (AP credit) not allowed.

Free Electives [11]	
Free Electives	11
Total Credit Hours	**128**

Pass-fail only allowed for Free Electives, Humanities, and the Social Sciences elective.

Students must achieve a minimum GPA of 2.0 in the BSIE Major Requirements to graduate.

1. Students must earn a C or better in all required MATH courses in the BSIE curriculum.
2. Students may also complete MATH 1554 and MATH 2550 to satisfy math requirements. If MATH 1554/MATH 2550 combination is taken, then two hours from MATH 1554 may be used in Area F to give Area F 18 hours.
3. Only one EAS course can be used toward ISYE Lab Science requirements.
4. PSYC 1101 will satisfy the Ethics requirement.
5. Students must choose from the following to meet the Environmental requirement: BIOS 1107 and BIOS 1107L, BIOS 2300, CEE 2300, CEE 4300,EAS 1600, EAS 1601, EAS 2600, EAS 2750, EAS 3110, EAS 4480,ECON 4440, ISYE 4803 titled “Energy and Environmental Analysis,” ISYE 4501, SLS 3120, or PHYS 2750.

6 Students must complete courses from two different eligible engineering elective subjects.

7 At most, one computing course (CS or CX) is allowed, including courses cross-listed with CS or CX courses.

8 Students must take at least 9 credits of engineering electives. Three credits must be chosen from ECE 2020, ECE 2026, or ECE 3710/ECE 3741. For the remaining 6 credits, at least 2 credits must be from Group 1.

9 To count toward the Engineering Elective Group 2 requirement, all Vertically-Integrated Projects (VIP) courses must be approved by the ISyE Undergraduate Associate Chair. And, at least three, but no more than four, credits of VIP coursework may count toward the Engineering Elective Requirement.

10 Students must complete 5 concentration courses: 3 depth courses and 2 breadth courses. A minimum of 4 of the 5 required concentration courses must be ISYE courses.

11 MATH 1113, MGT 2250, ISYE 3770, and PHYS 2XXX (AP credit) not allowed.

Pass-fail only allowed for Free Electives, Humanities, and the Social Sciences elective.

Students must achieve a minimum GPA of 2.0 in the BSIE Major Requirements to graduate.

1 Students must earn a C or better in all required MATH courses in the BSIE curriculum.

2 Students may also complete MATH 1554 and MATH 2550 to satisfy math requirements. If MATH 1554/MATH 2550 combination is taken, then two hours from MATH 1554 may be used in Area F to give Area F 18 hours.

3 Only one EAS course can be used toward ISYE Lab Science requirements.

4 PSYC 1101 will satisfy the Ethics requirement.

5 Students must choose from the following to meet the Environmental requirement: BIOS 1107 and BIOS 1107L, BIOS 2300, CEE 2300, CEE 4300,EAS 1600, EAS 1601, EAS 2600, EAS 2750, EAS 3110, EAS 4480,ECON 4440, ISYE 4803 titled “Energy and Environmental Analysis,” ISYE 4501, SLS 3120, or PHYS 2750.

6 Students must complete courses from two different eligible engineering elective subjects.

7 At most, one computing course (CS or CX) is allowed, including courses cross-listed with CS or CX courses.

8 Students must take at least 9 credits of engineering electives. Three credits must be chosen from ECE 2020, ECE 2026, or ECE 3710/ECE 3741. For the remaining 6 credits, at least 2 credits must be from Group 1.

9 To count toward the Engineering Elective Group 2 requirement, all Vertically-Integrated Projects (VIP) courses must be approved by the ISyE Undergraduate Associate Chair. And, at least three, but no more than four, credits of VIP coursework may count toward the Engineering Elective Requirement.

10 Students must complete 5 concentration courses: 3 depth courses and 2 breadth courses. A minimum of 4 of the 5 required concentration courses must be ISYE courses. If ISYE 3106 Cornerstone Design is taken as a breadth elective, it must be taken prior to ISYE 4106 Senior Design.

11 MATH 1113, MGT 2250, ISYE 3770, and PHYS 2XXX (AP credit) not allowed.

BACHELOR OF SCIENCE IN INTERNATIONAL AFFAIRS AND MODERN LANGUAGE

In partnership with the Sam Nunn School of International Affairs, the School of Modern Languages offers a joint Bachelor of Science in International Affairs and Modern Language (IAML) with separate concentrations in Chinese, French, German, Japanese, Korean, Russian, and Spanish. Students in this program take the same required core courses as for the Bachelor of Science in International Affairs, but also receive intensive foreign language training and learn the fundamentals of dealing with foreign cultures and societies. IAML students learn how to formulate the policy decisions that must be made in an increasingly multilingual and multicultural global forum. Our graduates are prepared for advanced graduate and professional study and are ready for employment in a large arena of globally oriented businesses, government agencies, as well as social service and not-for-profit organizations.

- Bachelor of Science in International Affairs and Modern Language - Chinese
- Bachelor of Science in International Affairs and Modern Language - French
- Bachelor of Science in International Affairs and Modern Language - German
- Bachelor of Science in International Affairs and Modern Language - Japanese
- Bachelor of Science in International Affairs and Modern Language - Korean
- Bachelor of Science in International Affairs and Modern Language - Russian
- Bachelor of Science in International Affairs and Modern Language - Spanish

Note: Non-credit requirement

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in International Affairs and Modern Language, all IAML students are required to fulfill an International Experience as part of their graduation requirements. This requirement can be met through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a country whose primary language is in the student's language of study, the student must justify and receive prior approval.

2. Complete a 15-week internship or similar experience of at least 10 credit hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

Students must complete 39 hours of upper division (3000/4000-level courses). Fifteen hours of the free electives, language, or technology requirements must be upper division (3000/4000-level coursework).

For all language courses, the language of instruction must be the same as the language of learning. English-taught culture courses will not apply to language requirements.

1. Students must complete 21 credit hours of CHIN electives from 2002, 3000- or 4000-level courses. Six credit hours are counted in Humanities, and 15 in Modern Languages Electives.
2. Minimum grade of C required.
3. CHIN courses below 2002 may count toward the free elective courses.
4. Technical elective.
5. Approved instances of CS 2803 may be applied here by advisor.

Note: Non-credit requirement

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in International Affairs and Modern Language, all IAML students are required to fulfill an International Experience as part of their graduation requirements. This requirement can be met through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a country whose primary language is in the student's language of study, the student must justify and receive prior approval.

2. Complete a 15-week internship or similar experience of at least 10 credit hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

Students must complete 39 hours of upper division (3000/4000-level courses). Fifteen hours of the free electives, language, or technology requirements must be upper division (3000/4000-level coursework).

For all language courses, the language of instruction must be the same as the language of learning. English-taught culture courses will not apply to language requirements.

1. Students must complete 21 credit hours of FREN electives from 3000- or 4000-level courses. Six credit hours are counted in Humanities, and 15 in Modern Languages Electives.
2. Minimum grade of C required.
3. FREN courses below 3000 may count toward the free elective courses.
4. Technical elective.
5. Approved instances of CS 2803 may be applied here by advisor.

Note: Non-credit requirement

With the goal of enhanced educational and career prospects and in accordance with the pedagogical objectives of the degree in International Affairs and Modern Languages, all IAML students are required to fulfill an International Experience as part of their graduation requirements. This requirement can be met through one of two ways:

1. Complete a minimum 6-week overseas experience. If this is not a country whose primary language is in the student's language of study, the student must justify and receive prior approval.

2. Complete a 15-week internship or similar experience of at least 10 credit hours per week at an international organization such as consulate, CNN International, etc. The internship must be approved in advance.

Students must complete 39 hours of upper division coursework (3000/4000-level courses). Fifteen hours of free electives, language, or technology requirements must be upper division (3000/4000-level courses).

For all language courses, the language of instruction must be the same as the language of learning. English-taught culture courses will not apply to language requirements.

1. Students must complete 21 credit hours of SPAN electives from 3000- or 4000-level courses. Six credit hours are counted in Humanities, and 15 in Modern Languages Electives.
2. Minimum grade of C required.
3. SPAN courses below 3000-level may count toward the free elective courses.
4. Technical elective.
5. Approved instances of CS 2803 may be applied here by advisor.

BACHELOR OF SCIENCE IN INTERNATIONAL AFFAIRS

The Bachelor of Science in International Affairs (BS INTA) program includes instruction in international affairs, foreign languages, ethics and philosophy, social and natural sciences, and computer science. Upper-division coursework provides training in four substantive areas:

- technology, and scientific analysis, and ethics;
- international security and diplomacy;
- comparative politics, cultures, and societies; and
- international political economy.

Graduates of the BS INTA program are prepared for advanced graduate and professional study and are ready for employment in internationally oriented firms, government agencies, and nonprofit organizations.

International Affairs majors are expected to enhance their education through participation in the International Plan, study abroad programs, internships, and a host of on- and off-campus programs. In addition to the numerous opportunities afforded through Georgia Tech's Office of International Education, the Sam Nunn School sponsors rigorous summer study abroad programs in the European Union (GT Europe and Brussels), East Asia (Japan), South Asia (Cambodia, Singapore, Thailand), Latin America (Argentina and Brazil), and Iberia (Portugal and Spain). Recognizing the importance of professional experience in enhancing a student's education, the Sam Nunn School encourages majors to pursue an internship or participate in the Cooperative Plan in their field of interest. In addition, students are strongly encouraged to get involved in a range of extracurricular activities, including Model United Nations; AIESEC; Sigma Iota Rho (the International Affairs honor society); the Center for International Strategy, Technology, and Policy; the International Affairs Student Organization; and student conferences. Students are actively involved in the guest lecture series and participate in the biennial Sam Nunn/Bank of America Policy Forum.

Total Credit Hours		**122**

1. Students must complete twelve credit hours of the same language. Six credit hours are counted in Humanities, and six in major requirements.
2. Minimum grade of C required.
3. 15 credits required in either the same prefix or part of a coherent theme. Please consult with advisor on course selection.
4. Technical elective.

5. Students must complete 39 hours of upper division (3000/4000-level courses). Fifteen hours of the non-major cluster, free electives, language, HTS, or technical elective requirements must be upper division (3000/4000-level coursework). See https://catalog.gatech.edu/rules/13/.

For all language courses, the language of instruction must be the same as the language of learning. English-taught culture courses will not apply to language requirements.

Research Option

The Sam Nunn School of International Affairs also participates in the Research Option plan offered by the Undergraduate Research Opportunities Program (UROP). The Research Option offers students the opportunity for in-depth research experience working under the guidance of a faculty mentor. Requirements for participation in the Research Option include completing nine hours of undergraduate research, at least six of which are on the same topic, writing a research proposal, taking two 1-hour courses: LMC 4701 Undergraduate Research Proposal Writing (typically taken during the first or second semester of research) and LMC 4702 Undergraduate Research Thesis Writing (taken during the term in which the thesis is written), and completing the thesis. Students are also required to send a weekly update of progress of research to the faculty mentor. Along with their application, students must explain how the faculty mentor's research experience will benefit the student's research.

International Plan

International Affairs majors with the International Plan are engaged in a combination of study, research, or internship abroad for a total of twenty-six weeks. This overseas experience must be obtained over two terms (a summer and semester, or two semesters). In addition to gaining advanced global competence, the International Plan designation will set INTA students apart from other applicants with recruiters from top companies and governmental agencies. Required coursework for the International Plan is easily satisfied by the International Affairs core curriculum as follows:

Code	Title	Credit Hours
INTA 1110	Introduction to International Relations [1]	3
INTA 3301	International Political Economy [2]	3
Select one of the following: [3]		3
INTA 3203	Comparative Politics	
INTA approved elective or upper-division Modern Language course		
Select one of the following: [4]		3
INTA 4500	Pro-Seminar in International Affairs	
ML 4500	Intercultural Seminar	
Total Credit Hours		**12**

1. focuses on international relations historically and theoretically
2. provides a historical and theoretical understanding of the global economy, including topics such as international trade, finance, investment, and production; regional economic integration, economic development and modernization; and questions of natural resource sustainability
3. provides familiarity with an area of the world or a country that allows students to make systematic comparisons with their own society and culture
4. A culminating course, occurring either at the end of or after the international experience that integrates knowledge of the discipline and the international experience in a global context.

BS/MS International Affairs

The Sam Nunn School of International Affairs offers a BS/MS program for students enrolled in the International Affairs undergraduate program who demonstrate an interest in and ability for additional education beyond the BS degree.

Students in the BS/MS program will remain undergraduates until they meet requirements for the undergraduate degree, at which point they will

receive their BS degree and be changed to graduate status. Students will be eligible to apply for the program after completion of 45 semester credit hours at Georgia Tech (i.e., at the end of their third semester), and if they show appropriate progress in their degree program thereafter. Any student in good standing in the BS INTA program is eligible to apply to the program. Admissions decisions will be based on GPA and judgments of the faculty who have served as advisors or instructors. Continuation in the program will require the student to maintain a GPA of 3.5 or higher in Ivan Allen College courses. The program will not penalize students who opt out after the bachelor's degree. Students participating in this program will be eligible for the six semester credit-hour Graduate Course Option, which allows students completing both the bachelor's and master's in the same discipline to use up to 6 credit hours of graduate-level coursework in the major discipline for both degrees.

The Graduate-level Credits Required in the BS/MS Program are usually as follows:

Code	Title	Credit Hours
Core (includes 6 hours of shared courses)		15
Electives		24
Technical Requirement		3
Total Credit Hours		**42**

Specific Requirements for the Program

Code	Title	Credit Hours

INTA Undergraduate Information

BACHELOR OF SCIENCE IN LITERATURE, MEDIA, AND COMMUNICATION

The BS in Literature, Media, and Communication (formerly named Science, Technology, and Culture) is the oldest undergraduate degree program in the Ivan Allen College for the Liberal Arts at Georgia Tech. This program offers a thorough education in the different modes of representation that structure our increasingly technological and global world. Program graduates will have both significant theoretical and hands-on experience with novels, films, games, comic books, web pages, and scientific documents. By learning the modes of communication common to science, technology, and the humanities, LMC graduates are prepared to become leaders in education, business, professions such as medicine and law, and the arts.

LMC students take classes across six paths or "threads" of study, eventually choosing two threads as their major fields of study. These threads include Literature; Media; Communication; Social Justice; Design; and Science, Technology, and Culture. This prepares them for fields including marketing, graphic design, videography, and educational policy. Many LMC alumni go on to graduate school in literature, communication sciences, and interactive entertainment studies or professional school in law, health, and social work. Other graduates pursue careers in fields ranging from graphic art and photography to client advocacy and medical administration to arts administration.

LMC Information

- Bachelor of Science in Literature, Media, and Communication - Thread: Literature & Media
- Bachelor of Science in Literature, Media, and Communication - Thread: Literature & Communication
- Bachelor of Science in Literature, Media, and Communication - Thread: Literature & Design
- Bachelor of Science in Literature, Media, and Communication - Thread: Literature & Social Justice

- Bachelor of Science in Literature, Media, and Communication - Thread: Media & Communication
- Bachelor of Science in Literature, Media, and Communication - Thread: Media & Design
- Bachelor of Science in Literature, Media, and Communication - Thread: Media & Social Justice
- Bachelor of Science in Literature, Media, and Communication - Thread: Media & Science, Technology and Culture
- Bachelor of Science in Literature, Media, and Communication - Thread: Communication & Design
- Bachelor of Science in Literature, Media, and Communication - Thread: Communication & Social Justice
- Bachelor of Science in Literature, Media, and Communication - Thread: Communication & Science, Technology, and Culture
- Bachelor of Science in Literature, Media, and Communication - Thread: Design & Social Justice
- Bachelor of Science in Literature, Media, and Communication - Thread: Design & Science, Technology, and Culture
- Bachelor of Science in Literature, Media, and Communication - Thread: Social Justice and Science, Technology, and Culture

International Plan (All Thread Combinations)

The LMC International Plan follows the Institute model to develop a global competence connected to the student's major program of study. It thus integrates international studies and experiences with work in a broad range of cultural and media studies, preparing graduates to critique and create cultural texts within an international professional environment. All students who successfully complete this option will receive the "International Plan" designation on their transcripts.

While following the basic LMC program of instruction, requiring a total of 122 credit hours of coursework, students following the International Plan will modify their program as follows. They will:

- take three Social Science courses, one each from the following categories: international relations, global economics, and a course on a specific country or region;
- spend two terms abroad engaged in any combination of study abroad, research, or internship;
- complete twelve credit hours of language instruction (by dedicating six credit hours of humanities electives, 3 credit hours of free electives, and 3 credit hours of the LMC language requirement to language study); and
- complete a LMC capstone course that links international studies with the major.

While all of the LMC degree combinations provide students with 14 credit hours of free electives, different options provide students with different numbers of free LMC elective hours. Students should contact the LMC advisor to learn about options for particular thread combinations.
LMC **Information**

Research Option (All Thread Combinations)

This degree option offers LMC students on all degree tracks the opportunity for a substantial, in-depth research experience. Students who pursue this degree option will learn how to design and complete advanced, multi-semester research projects through a combination of independent research, group writing instruction, and one-to-one work with a faculty mentor. Students are strongly encouraged at the end of their experience to work with their faculty mentor to develop a journal publication or conference presentation on the research in addition to the actual thesis. All students who successfully complete the research thesis option will receive the "research option" designation on their transcripts.

To fulfill the requirements of the LMC Research Option, students must:

Code	Title	Credit Hours
LMC 2699/4699	Undergraduate Research [1]	6
LMC 4701	Undergraduate Research Proposal Writing	1
LMC 4702	Undergraduate Research Thesis Writing	1
LMC 4102	Senior Thesis	3

Students will meet these requirements without adding additional hours to their schedules by

- Dedicating six credit hours of undefined LMC elective and/or free elective credit hours to undergraduate research
- Dedicating two more credit hours of free elective credit to LMC 4701 and LMC 4702
- Dedicating 3 hours of capstone coursework in the LMC major to LMC 4102: Senior Thesis.

[1] Students may substitute audit hours of LMC 2698/LMC 4698 for equivalent hours of LMC 2699/LMC 4699. If they elect this option, they must add corresponding credit hours of an elective, for-credit class. While all of the LMC degree thread combinations provide students with 14 credit hours of free electives, different options provide students with different numbers of free LMC elective hours. Students should contact the LMC advisor to learn about options for particular thread combinations.

LMC Information

BS/MS Degree Program

Students who wish to pursue the BS/MS combination in LMC and DM must apply to the School after completing at least seventy-five credit hours of work toward an LMC degree that includes the Interaction Design thread. Applicants should have a 3.5 GPA.

Students admitted to the program will select the LMC 4000 seminar option and take a total of twelve credit hours of graduate coursework during their final undergraduate year. Six credit hours of that work, in DM media courses, will replace the LMC free electives and will count for both undergraduate and graduate credit. During the summer term after their fourth year, students will participate in an approved internship program. During the fifth year, students will take a total of twenty-four credit hours, including either LMC 6800 (Project) or LMC 7000 (Thesis), and with no more than three courses taken outside the DM program.

[2] Any CoS or CS course.

[3] Minimum grade of C required.

[4] Any Modern Language 2000-level or higher.

[5] Students must complete one 2000-level or higher Ethics course during their program. For a complete list of Ethics courses, please see: /academics/undergraduate/core-curriculum/ethics/

[6] Other Core D Math Options include:MATH 1551 and MATH 1554, MATH 1551 and MATH 1564, MATH 1550 and MATH 1553, MATH 1550 and MATH 1554, or MATH 1550 and MATH 1564.

[7] Classes applied here cannot double count toward any degree requirements.

BACHELOR OF SCIENCE IN MATERIALS SCIENCE AND ENGINEERING

The materials science and engineering undergraduate program offers a BS degree in Materials Science and Engineering with concentrations in Polymer and Fiber materials, Structural and Functional materials and Biomaterials. This versatile degree combines instruction in the fundamentals of ceramic, metallurgy, and polymer and fiber science and engineering with specialized knowledge and skills, including nano-, bio-, composite, electronic, and optical and magnetic materials. Freshmen and sophomores study basic chemistry, physics, mathematics, and engineering science and are introduced to the fundamental aspects of materials. Two English courses taken in the freshman year provide the foundation for further instruction in communications that is integrated throughout the curriculum. Juniors and seniors take courses in the engineering and science of materials including the details of materials processing, structure, and properties. The curriculum culminates in a two-course senior design sequence in which students work in teams to design a material, component, or process using previously learned skills and knowledge.

Five concentration related courses provide flexibility that allow students in their junior-senior years to focus in a particular area of materials. Five hours of free electives allows students to further specialize or pursue other interests. Courses in the humanities/fine arts and social sciences ensure that graduates appreciate the role of engineering in today's global society.

Mission Statement

The mission of the Bachelor of Science in Materials Science and Engineering program is to produce graduates well-rounded in the fundamentals of materials science and engineering who are prepared to meet the related needs of industry and government, and prepared for advanced academic study in materials related disciplines. This will be accomplished by providing students with up-to-date knowledge and skills through coursework, modern laboratories, opportunities to conduct cutting edge research with distinguished faculty mentors, and opportunities to participate in leadership and service activities.

Program Educational Objectives

The Program Educational Objectives of the Bachelor of Science in Materials Science and Engineering program are:

- Our graduates will rapidly rise to leadership roles in materials-related positions in industry, academia, government, and other career pursuits.
- Our graduates will be global leaders, collaborating with diverse, multi-disciplinary teams while incorporating emerging materials developments and engineering technologies that are positively changing society and the human condition.
- Our graduates will continue to grow their cumulative knowledge base by engaging in life-long learning via career-appropriate options, including post-graduate education and professional designations.
- Our graduates will be entrepreneurs, continually discovering, designing and creating new materials of all types, building on the process-structure-properties-performance paradigm to exert positive economic and social impacts across the field and society.

Grade Requirements

In order to encourage students to explore subjects of personal or professional interest without jeopardizing their GPA, the Institute has a limited pass/fail option. The policy of the School of Materials Science and Engineering regarding the use of pass/fail hours for credit is as follows: no course specifically required by name and number by the materials science and engineering curriculum may be taken on a pass/fail basis and used toward graduation, unless the course is offered only on that basis.

In cases of deficiencies obtained for the intended graduation term, refer to Section VII (on Deficiencies) of the Rules and Regulations published in the on-line General Catalog.

Transfer Students

Students transferring into Materials Science and Engineering from another university or major should meet with the Associate Chair for Undergraduate Programs to discuss possible course substitutions and plan their remaining coursework.

- Bachelor of Science in Materials Science and Engineering - Biomaterials
- Bachelor of Science in Materials Science and Engineering - Polymer and Fiber Materials
- Bachelor of Science in Materials Science and Engineering - Structural Materials
- Bachelor of Science in Materials Science and Engineering - Functional Materials

Cooperative Plan

Since 1912, Georgia Tech has offered a five-year Undergraduate Cooperative Program to those students who wish to combine career-related work experience with classroom studies. The program is the fourth oldest of its kind in the world.

Students typically alternate between industrial assignments and classroom studies until they complete at least three terms of work (two of which must be fall or spring). Co-op students complete the same coursework on campus that is completed by non-co-op students. Most co-op students begin the program as freshman or sophomores and are can be classified as full-time students regardless whether they are attending classes on campus or are full-time at an employer's location.

Participants have the opportunity to develop career interests, gain hands-on work experience, develop human relation skills and earn a paycheck. Graduates of the program receive a bachelor's degree with the Cooperative Plan Designation.

Students can also complete work assignments in a foreign country as part of the International Cooperative Program. This program is a great opportunity to utilize foreign language skills, gain a global perspective, and experience a diverse culture. Proficiency in a foreign language is necessary to earn the International Cooperative Plan degree designation. For more information on the Cooperative Program, visit: http://career.gatech.edu/co-op.

We highly recommend careful planning with your faculty research mentor and academic advisor to determine how to incorporate this option into your educational experience.

Internships

The Undergraduate Professional Internship Program is for students who do not participate in the Cooperative Program, but want some career-related work experience before graduation. Students generally work for one semester, usually in the summer, with an option for more work. Students must have completed at least thirty hours of coursework at Georgia Tech before they can participate in the program. For more details, visit: http://career.gatech.edu/internships.

In addition, there is a Work Abroad Program (www.workabroad.gatech.edu), which complements a student's formal education with paid international work experience directly related to Materials Science and Engineering. Participating students typically include juniors and seniors. The international work assignments are designed to include practical training, cross-cultural exposure and learning, and the acquisition of professional skills.

For more information about all of the programs in the Center for Career Discovery and Development, visit www.careerdiscovery.gatech.edu.

We highly recommend careful planning with your faculty research mentor and academic advisor to determine how to incorporate this option into your educational experience.

Research Option

The Materials Science and Engineering undergraduate program offers a Research Option that allows students to participate in undergraduate research in faculty laboratories. The words **"Research Option in Materials Science and Engineering"** will appear on the transcript of each student completing the requirements to indicate that the student has had a substantial, in-depth, research experience.

The requirements for the **"Research Option"** in Materials Science and Engineering are:

1. Selection of a faculty advisor and research topic in conjunction with the faculty advisor. The topic and expected scope of the project must be approved in advance by the MSE Undergraduate Curriculum Committee. A key criterion will be whether the research may lead to a publishable paper.
2. Completion of nine units (see item 3 below) of supervised research, over a period of at least two, but preferably three, terms. Research may be either for pay or credit. At least six credit hours must involve work on a single research project.
3. Registration in nine hours of undergraduate research courses MSE 2698 and MSE 4698 (for pay), or MSE 2699 and MSE 4699 (for credit). MSE 2699 or MSE 4699 can be used to satisfy the free elective requirements of the BS degree in MSE.
4. Completion of LMC 4701 Undergraduate Research Proposal Writing (one hr. credit typically taken during the first or second semester of research). The student should write a Research Proposal while taking this class.
5. Obtain approval of the Research Proposal from the MSE Undergraduate Curriculum Committee. This is required before taking LMC 4702.
6. Completion of LMC 4702 (one hr. credit). This course is taken during the term in which the thesis is written.
7. Have research thesis approved by the faculty advisor and one other MSE faculty member approved by the MSE Undergraduate Curriculum Committee. The thesis will be evaluated on the basis of publishability, originality, creativity, and clarity. The MSE Undergraduate Curriculum Committee must approve each "Research Option" awarded under the BS MSE program.

We highly recommend careful planning with your faculty research mentor and academic advisor to determine how to incorporate this option into your educational experience.

BS/MS Option

The School of Materials Science and Engineering (MSE) offers a BS/MS program for outstanding students who want to obtain a graduate degree in addition to their BS degree. The advanced degree provides the additional knowledge and specialization needed to further facilitate a technical career. As a participant in this program, students have an opportunity to work with individual faculty members on projects in one of the traditional or innovative research areas in MSE. See www.mse.gatech.edu for more details.

Current undergraduate students may participate in the BS/MS Program offered by the School. Georgia Tech undergraduate students may be admitted into the program after completing a minimum of 30 semester credit hours (and no more than 75 hours) at Georgia Tech and have a GPA of 3.5 or higher at time of application. Both the application fee and the GRE test score are waived. Students need to maintain at least a 3.0 GPA when receiving the B.S. degree in order to be converted into graduate student status and must continue immediately into the M.S. program in order to qualify for the 6 semester-hour "Graduate Course Credit" option, http://catalog.gatech.edu/academics/undergraduate/credit-tests-scores/undergraduate-students-taking-graduate-courses/.

BACHELOR OF SCIENCE IN MATHEMATICS

The School of Mathematics at Georgia Tech offers a Bachelor of Science degree in Mathematics. The B.S. in Mathematics degree provides a certification of extensive training in mathematics at one of the nation's leading scientific and technological universities. Holders of this degree are well qualified for a variety of careers in academia, business and industry, computer programming, data science, and education.

The program provides excellent preparation for graduate studies in mathematics and related fields.

Students have the option of completing the B.S. in Mathematics or completing the B.S. in Mathematics with one of the areas of concentration.

Optional concentrations

- Applied Mathematics
- Discrete Mathematics
- Mathematical Foundations in Data Science
- Probability and Statistics
- Pure Mathematics

Bachelor of Science in Mathematics with a concentration in Applied Mathematics

Bachelor of Science in Mathematics with a concentration is Discrete Mathematics

Bachelor of Science in Mathematics with a concentration in Mathematical Foundations in Data Science

Bachelor of Science in Mathematics with a concentration in Pure Mathematics

Bachelor of Science in Mathematics with a concentration in Probability and Statistics

Bachelor of Science in Mathematics - Business Option

Bachelor of Science in Mathematics - General

Business and Research Options

A student may elect to complete both the Business Option and the Research Option.

Completion of the Business and Research Options is noted by the designations "Business Option" and "Research Option" on the student's transcript.

See Concentrations for the for the Business Option requirements. See below for the Research Option requirements.

Math Undergraduate Website

Research Option

Code	Title	Credit Hours
Select one of the following Research Options: [1]		9
MATH 2698 & MATH 46	Undergraduate Research Assistantship and Undergraduate Research Assistantship (for pay)	
MATH 2699 & MATH 469	Undergraduate Research and Undergraduate Research (for credit) [2]	
LMC 4701	Undergraduate Research Proposal Writing (complete during the first or second semester of research) [3]	1
LMC 4702	Undergraduate Research Thesis Writing (take during the thesis-writing semester) [4]	1
Total Credit Hours		**11**

[1] supervised research with a faculty advisor over two or three semesters
[2] Six credit hours of MATH 4699 may be used as mathematics electives for the BS in Mathematics.
[3] a short proposal on the research project is developed
[4] prepare a research report (research paper, project report/thesis), and make an oral presentation of the project

Completion of this Research Option is noted by the designation "Research Option in Mathematics" on the student's transcript.

For more information, visit: http://www.undergradresearch.gatech.edu/research-option/.

College of Sciences B.S. in Mathematics + M.S. Degree Program in Mathematics

The Georgia Tech College of Sciences BS/MS degree program enables highly motivated students with strong academic credentials to earn a Bachelor of Science in Mathematics and a Master of Science in Mathematics. The BS/MS program prepares students for competitive career placements with higher earning potentials as well as competitive admission to Ph.D. and professional programs (including medical/law/pharmacy/dental/pharmacy schools). Thesis and non-thesis options are offered for the BS/MS program. Undergraduates with a significant amount of AP/IB/dual enrollment credits are highly encouraged to apply to the BS/MS program.

Admission and Program Requirements:

1. To apply to the program, students must have at least 30 credit hours earned at Georgia Tech with an undergraduate GPA of 3.3 or higher, and fewer than 90 credit hours overall (including transfer credit).

2. If admitted to the B.S./M.S. program, students must complete six credit hours of MATH coursework, with grades of B or higher, that can be used to fulfil the BS and MS requirements, except seminar, reading or research coursework. This coursework must be completed prior to earning the B.S. degree and proceeding to the M.S. program. These credits will be counted towards both the BS degree and MS degree. Due to the flexibility in selection of courses that may count for the BS and MS degree, MATH academic advisors will communicate with the Degree Certification Team in the Registrar's Office regarding which specific courses (i.e. six credits) are double counted for the BS and MS. This step will assure that degree audits are completed correctly

3. Students considering the M.S. Thesis Option are strongly encouraged to begin undergraduate research early in their B.S. program of study. The student must identify the M.S. thesis advisor prior to completion of the B,S, degree and proceeding to the M.S. program. Research described in an undergraduate thesis submitted as a part of the B.S. Research Option cannot be used in the M.S. thesis.

4. The minimum GPA for graduation with a B.S. in Mathematics to continue to the M.S. program is 3.00. The minimum GPA for graduation with the M.S. is 2.70.

5. The requirements for the BS can be found in https://catalog.gatech.edu/programs/mathematics-bs/ The requirements for the MS can be found in https://catalog.gatech.edu/programs/mathematics-ms/#requirementstext Both requirements are to be fulfilled by the end of the studies to be awarded the BS and MS.

Summary:

Students pursuing the BS/MS Option in Mathematics must complete all requirements for the Bachelor of Science in Mathematics program and the Master of Science in Mathematics program. Students may use a maximum of 6 credit hours of approved coursework (4000-level or higher; not seminar or research credit, MATH 6701 or MATH 6702) in Mathematics with grades of B or higher from the Bachelor of Science program of study.

Free Electives		
Free Electives [6]		5
Total Credit Hours		**122**

Pass-fail only allowed for Free Electives.

Four courses from Group A list must be completed. Student may select MATH elective from Group B if four courses from Group A are complete, otherwise, the Math elective must come from Group A. If student does not complete four courses from Group A list from concentration requirements and MATH elective, then the course(s) must be completed for free electives.

Group A list: MATH 3236, MATH 4022, MATH 4032, MATH 4108, MATH 4150, MATH 4221, MATH 4261, MATH 4318, MATH 4347, MATH 4431, MATH 4432, MATH 4441, MATH 4541, MATH 4640.

Group B list: MATH 4012, MATH 4080/MATH 4090, MATH 4222, MATH 4255, MATH 4262, MATH 4280, MATH 4348, MATH 4542, MATH 4580, MATH 4581, MATH 4641, MATH 4699, MATH 4755, MATH 4777, MATH 4782, MATH 4801, MATH 4802, CS 3510/CS 3511, CS 4510, CS 4540, CS 4530, CS 4641, CX 4140, CX 4240, ECON 3161, ECON 4180,ISYE 4031, ISYE 3133, ISYE 4133.

1 If PHYS 2231 is taken, extra hour goes toward Free Electives
2 C-minimum required
3 MATH 4699 must be an approved topic and can be used up to 6 hours.
4 CEE 3770,ISYE 3770, CS 4001, and CS 4002 are not allowed to be used here.
5 Two courses must be from the same school.
6 MATH 1113, MATH 3670, CEE 3770, and ISYE 3770 are restricted from free electives.
7 These hours may be shared with a minor.

BACHELOR OF SCIENCE IN MECHANICAL ENGINEERING

The undergraduate curriculum in mechanical engineering (ME) is very broad and flexible. The curriculum comprises a ME core of fundamental concepts, plus a design/professional-practice stem, plus 15 credit hours of free electives. The program prepares students to be problem solvers and to contribute to a wide range of industries and businesses, or to go on for further study in graduate school. There is a strong emphasis in the ME program on design, creativity, and hands-on learning. Due to the wide range of career choices open to MEs, the program incorporates courses in electronics, materials science, computer programming, and manufacturing. The large number of free elective hours allows students to pursue minors and certificates throughout the Institute, or to specialize in areas within ME. The flexibility also helps students to pursue a variety of special programs including co-op, internships, study abroad, and undergraduate research.

Program Educational Objectives

The faculty of the Woodruff School strives to continuously improve our undergraduate programs in mechanical engineering. The educational objectives reflect the needs, and have been reviewed by, among others, the Advisory Board of the Woodruff School, the faculty, and the students.

- Our graduates will be recognized leaders in ME–related fields or other career paths, including industry, academe, government, and non-governmental organizations.
- Our graduates will be global collaborators, leading and participating in culturally diverse teams, fostering inclusive environments, and acting ethically to discover and apply new knowledge and engineering practices
- Our graduates will continue to grow professionally and will strive to acquire new skills and new knowledge throughout their careers.
- Our graduates will be entrepreneurially minded innovators who have a positive economic, social, and environmental impact on their communities, the nation, and society as a whole.

The Woodruff School of Mechanical Engineering has established concentration areas in sub-fields of Mechanical Engineering. Concentrations are optional for the students; they are not required. The Concentrations are each fifteen hours of classes, and will satisfy the Design Elective, the ME Elective and nine hours of Free Electives. The current Concentrations are:

- General
- Automotive
- Automation and Robotic System
- Design
- Manufacturing
- Mechanics of Materials
- Micro- and Nano-Engineering
- Nuclear and Radiological Engineering
- Thermal, Fluid and Energy Systems

International Plan

Mechanical Engineering majors may choose to participate in the Georgia Tech International Plan. Students who complete the requirements of the International Plan have the degree designation noted on their transcripts and on their diploma. The International Plan has specific requirements which must be completed including:

1. a minimum of 26 weeks abroad in educational, research, or work internships,
2. a language requirement,
3. courses specifically designated for global economics, international affairs, and global competency, and
4. a capstone project, typically one which is based on the student's ME capstone design experience.

Complete requirements may be found at http://oie.gatech.edu/content/international-plan.

Cooperative Plan

Since 1912, Georgia Tech has offered an Undergraduate Cooperative Program to those students who wish to combine career-related experience with classroom studies. Students alternate between industrial assignments and classroom studies until they complete three semesters of work. Co-op students with mechanical engineering majors complete the same coursework on campus that is completed by non-co-op students. Most co-op students begin the program as sophomores or juniors and are classified as full-time students regardless of whether they are attending classes on campus or are full-time at an employer's location. Co-op employment opportunities exist across the USA, and even in foreign countries. Depending on the chosen country, proficiency in a foreign language is usually necessary. Mechanical engineering students have worked in countries such as Germany, China, and Japan.

Students who participate in the co-op program have the opportunity to develop career interests, become more confident in their career choices, and develop human relation skills through their work experience. Graduates of the program receive a bachelor's degree with a Cooperative Plan Designation. For more information about the Cooperative Program, go to www.coop.gatech.edu.

For more information about all of the programs in the Center for Career Discovery and Development, visit www.careerdiscovery.gatech.edu.

Research Option

The School of Mechanical Engineering offers the 'Research Option' (RO) under the BSME degree program. In order to graduate with a BSME (RO) degree, students must:

- Complete at least nine units of supervised research over at least two (preferably three) terms. The research must either be for pay (ME 4698) or credit (ME 4699). Up to six hours of research for credit may be used towards the BSME free elective requirements.
- Write an undergraduate thesis or other substantial, written report showing results of the research. This is usually done during the graduating term.
- Take both LMC 4701 (typically during the first or second semester of research) and LMC 4702 (during the thesis-writing semester).

At least six of the nine required credit hours of research should be on the same topic. A research proposal must be approved by a faculty advisor and one other faculty member. This proposal will be written in LMC 4701 which serves as a pre-requisite for LMC 4702. Completion of the Research Option is noted on students' transcripts.

The BS/MS Program

The Woodruff School offers a BS/MS program for those students who demonstrate an interest in and ability for additional education beyond the BS degree. Mechanical engineering students are eligible to apply to the program after the completion of 30 semester credit hours at Georgia Tech and appropriate progress in their degree program. One of the advantages of the program is that it allows students to use 6 hours of free-elective credit to be counted towards both the BS and the MS degree. Therefore, students should apply to the program at least three semesters prior to graduation in order to take full advantage of the Graduate Course Option. Students must have a Georgia Tech GPA of 3.5 or higher for admission into the BS/MS Program. Further information, rules, and restrictions may be found at the Woodruff School site.

Participants in the BS/MS Program in the Woodruff School can obtain a master's degree in mechanical engineering, nuclear engineering, medical physics, or in Georgia Tech's interdisciplinary bioengineering graduate program. There are two options to consider.

Non-Thesis Option

The Non-Thesis Option is completed by taking 10 classes according to the MS degree requirements. With proper planning, most MS non-thesis degrees could be completed within three semesters beyond the BS degree.

Thesis Option

The Thesis Option involves working with a faculty member on a project in a wide range of research topics being investigated by Woodruff School faculty members. This will give the student hands-on experience in working with a faculty mentor; the opportunity to work in a laboratory or a research environment; and the chance to perform cutting edge theoretical and experimental work. These efforts will foster the student's career interests and expand their job prospects with certain employers. In some cases, a student will receive a graduate research assistantship, which includes a stipend and a tuition waiver.

BS/MS Information

Bachelor of Science in Mechanical Engineering - Automation and Robotic Systems

Code	Title	Credit Hours

BACHELOR OF SCIENCE IN MUSIC TECHNOLOGY

The undergraduate program in the School of Music leads to a Bachelor of Science in Music Technology. In the program, students understand the role of technology in enabling new ways to access, consume, and create music. Students master the fundamentals of musicianship and audio technology and further develop these skills through a series of hands-on learning experiences across a spectrum of creative and technical domains. Students learn to create new music with technology, develop new technologies for making music, and conduct scientific research that expands our knowledge of how both humans and machines engage with music. Student projects span areas such as robotic musicianship, music informatics, brain music, and computational and cognitive musicology.

The program combines technical and artistic topics to produce graduates who have both a strong technical and creative portfolio. Students choose from a concentration in Mechanical Engineering (with a focus either in Acoustics and Vibrations or Controls and Robotics); a concentration in Electrical and Computer Engineering (with a focus on signal processing); or a general concentration in which they pursue a minor such as Computing and People or Industrial Design.

Please note that a portfolio is required for admission into the BSMT program. For more information, visit http://www.music.gatech.edu/bsmt

- Bachelor of Science in Music Technology - General
- Bachelor of Science in Music Technology - Electrical and Computer Engineering: Signal Processing
- Bachelor of Science in Music Technology - Mechanical Engineering: Acoustics and Vibrations
- Bachelor of Science in Music Technology - Mechanical Engineering: Controls and Robotics

BS/MS Option in Music Technology

Students will be eligible to apply for the program after completion of 30 semester credit hours at Georgia Tech and appropriate progress in their degree program. As a practical matter, students should apply for the program at least three semesters prior to graduation in order to take graduate-level courses prior to receiving their BS degree. Students must have a Georgia Tech GPA of 3.5 or higher for admission into the BS/MS Program in Music Technology. This program is available only to those completing a Bachelor's degree in music technology. Admissions decisions will be based on GPA and a portfolio review by the School of Music's Graduate Program Committee.

Students in the joint BS/MS program remain undergraduates until they meet the requirements for the bachelor's degree, at which point they will receive the BSMT degree. Their status will then be changed to graduate status. Graduate school application fees and the GRE requirements are waived. Once admitted, a GPA of at least 3.0 must be maintained to remain in the program. Additionally, students in the BS/MS program are eligible to use the Graduate Course Option even if their cumulative grade-point average is below 3.5 at the time they complete their bachelor's degree. The program will not penalize students who opt out after the bachelor's degree.

Note the following:

- BS/MS students may combine any concentration in the Bachelor of Science in Music Technology with either the project or thesis track in the Master of Science in Music Technology.
- BS/MS students will be expected to complete Intro to Audio Technology II before enrolling in any graduate-level coursework. This course is typically taken by students in their fourth semester of undergraduate study.
- Six credit hours may be counted towards both the undergraduate and graduate degrees as follows:
  - MUSI 6001 (Music Perception & Cognition), a requirement for the MS degree, can also fulfill the requirement of MUSI 4677 (Music Perception & Cognition) for the BS degree.
  - MUSI 6103 (Music Recording & Mixing), an elective for the MS degree, can also fulfill the requirement of MUSI 4630 (Music Recording & Mixing) for the BS degree.
  - Any other MUSI 6XXX course that fulfills a core or elective requirement for the MSMT can also be used to fulfill the MUSI Upper Division Elective Requirement for the BSMT.

Bachelor of Science in Music Technology - Electrical and Computer Engineering: Signal Processing

The Bachelor of Science in Music Technology teaches students the fundamentals of musicianship and audio technology. Students learn to create new music with technology, develop new technologies for making music, and conduct scientific research that expands our knowledge of how both humans and machines engage with music. Student projects span areas such as robotic musicianship, music informatics, brain music, and computational and cognitive musicology.

Bachelor of Science in Music Technology students will need to consult with the undergraduate advisor to choose a concentration or minor.

The Electrical and Computer Engineering Track allows students to develop in-depth audio engineering and/or signal processing skills as applied to music technology. The processing of analog and digital signals is one of the core areas of music technology and related to fields such as music information retrieval, audio effects, and sound synthesis. Students use their Breadth Block to take prescribed coursework in the School of Electrical and Computer Engineering.

[1] Students are required to satisfy a 4-course music ensemble requirement. Course options include any four courses from the following list: MUSI 3018 or MUSI 3019 or MUSI 3121 or MUSI 3131 or MUSI 3231 or MUSI 3241 or MUSI 3251 or MUSI 3261 or MUSI 3311 or MUSI 3321 or MUSI 3411 or MUSI 3511 or MUSI 3531 or MUSI 3541 or MUSI 3551 or MUSI 3611. The courses may be used as Humanities (if course has been approved for Humanities credit) and/or free electives.

[2] Music Technology majors can choose one pathway to use VIP participation to fulfill degree requirements.
The VIP Elective Pathway: Students participate in any VIP team to fulfill an upper-division music technology elective and free electives.

- Participating in the same VIP team for five or fewer credits results in that many free-elective credits.
- Participating in the same VIP team for 6 or more credits results in 3 credits that are counted as upper division Music Technology electives and 3 credits that are counted as free electives.
- Any additional credits count as free electives.
- Any VIP team is eligible for this pathway. No approval is required by an academic advisor in music technology.

Bachelor of Science in Music Technology - General

The Bachelor of Science in Music Technology teaches students the fundamentals of musicianship and audio technology. Students learn to create new music with technology, develop new technologies for making music, and conduct scientific research that expands our knowledge of how both humans and machines engage with music. Student projects span areas such as robotic musicianship, music informatics, brain music, and computational and cognitive musicology.

Bachelor of Science in Music Technology students will need to consult with the undergraduate advisor to choose a concentration or minor.

Students in the General Concentration follow the rigorous Bachelor of Science in Music Technology curriculum. This standard curriculum lends itself most easily to using the hours of the Breadth Block to pursue a minor in another School on campus -- and students might find these two minors to be especially interesting:

Computing and People: Allows students to gain added expertise in computing as it relates to people. The minor requires 15 credit hours of coursework in the College of Computing.

Industrial Design: Allows students to strengthen skills and understanding of creative problem solving as it relates to design. The minor requires 15 credit hours of coursework in the School of Industrial Design.

While Computing and Industrial Design are good fits for this degree, they are not the only minors possible. For example, students could also pursue a minor in Film and Media Studies or Technology and Business for their Breadth Block.

[1] Students are required to satisfy a 4-course music ensemble requirement. Course options include any four from the following list: MUSI 3018 or MUSI 3019 or MUSI 3121 or MUSI 3131 or MUSI 3231 or MUSI 3241 or MUSI 3251 or MUSI 3261 or MUSI 3311 or MUSI 3321 or MUSI 3411 or MUSI 3511 or MUSI 3531 or MUSI 3541 or MUSI 3551 or MUSI 3611. The courses may be used as Humanities (if course has been approved for Humanities credit) and/or free electives.

[2] General track students must have Non-Major Cluster courses approved by advisor. If student is completing a minor for this area and minor requires excess of 15 hours, then overage hours may be used towards free electives.

[3] Music Technology majors can choose one pathway to use VIP participation to fulfill degree requirements.

The VIP Elective Pathway: Students participate in any VIP team to fulfill an upper-division music technology elective and free electives.

- Participating in the same VIP team for five or fewer credits results in that many free-elective credits.
- Participating in the same VIP team for 6 or more credits results in 3 credits that are counted as upper division Music Technology electives and 3 credits that are counted as free electives.
- Any additional credits count as free electives.
- Any VIP team is eligible for this pathway. No approval is required by an academic advisor in music technology.

Bachelor of Science in Music Technology - Mechanical Engineering: Acoustics and Vibrations

The Bachelor of Science in Music Technology teaches students the fundamentals of musicianship and audio technology. Students learn to create new music with technology, develop new technologies for making music, and conduct scientific research that expands our knowledge of how both humans and machines engage with music. Student projects span areas such as robotic musicianship, music informatics, brain music, and computational and cognitive musicology.

Bachelor of Science in Music Technology students will need to consult with the undergraduate advisor to choose a concentration or minor.

The Mechanical Engineering Track allows students to develop in-depth mechanical engineering skills as applied to music technology. Mechanical engineering is directly related to music technology fields in the areas of robotic musicianship, acoustics, and instrument design. Students use their Breadth Block to take prescribed credit hours of coursework in the School of Mechanical Engineering focusing on one of the two options below:

Option 1: Acoustics and Vibrations

Option 2: Controls and Robotics

BACHELOR OF SCIENCE IN NEUROSCIENCE

Students majoring in neuroscience will complete a 120 credit-hour curriculum (plus a required 2-credit class in health). They will learn fundamental principles and up-to-date advances in the field of neuroscience.The program will build on a strong foundation of required courses in the physical sciences and mathematics (chemistry, computer science, calculus, statistics and physics) in order to prepare students with the analytical skills needed to address the complexity of problems in neuroscience.The program will emphasize technological methods and innovations that have been critical, as well as ones needed to continue progress in neuroscience.

Breadth Electives		**15**
Free Electives		**14**
Total Credit Hours		**122**

1 MATH 1553 (2 cr.) is preferred but MATH 1554 (Linear Algebra, 4 cr.) or MATH 1564 (Linear Algebra with Vector Spaces, 4 cr.) can satisfy this requirement with the excess 2 cr. to be applied to free electives.

2 CHEM 2311 is an approved substitution for CHEM 1315 to fulfil Area F only for students who complete a full year of organic chemistry (i.e., both CHEM 2311 and CHEM 2312 or CHEM 2313 must be completed).

3 CHEM 4511 is an approved substitution for CHEM 3511 to fulfil Area F only for students who complete a full year of biochemistry (i.e., both CHEM 4511 and CHEM 4512 must be completed.

4 Four credits of NEUR 4699 credit is only allowed to substitute for NEUR 4001 if completing the Georgia Tech Research Option. The Research Option requires an additional 6 credits of research (an additional 2 credits of NEUR 4699 may be applied to "Additional Neuroscience Electives"; the additional 3 credits of research credit will be applied to Free Electives), and LMC 4701 (1 credit) and LMC 4702 (1 credit) (applied to Free Electives). A research proposal and thesis/report is also required to complete the Research Option.

5 PSYC 2020 may be completed only for students completing the Psychology Breadth Elective option.

6 Biological Sciences, Chemistry, Mathematics, and Psychology Special Topics must be approved by Neuroscience Curriculum Committee

Research Option

BS in Neuroscience students are able to complete the Georgia Tech Research Option.

To complete the research option for Neuroscience, the student must:

- Complete ten units of supervised research, over a period of preferably three but at least two terms.
- Research may be for either pay or credit [typically 4698 or 4699]* - for BS in Neuroscience, this will be NEUR 4699.
- At least six credit hours must be on the same research project, broadly defined.
- Write an undergraduate thesis or other substantial, written report showing results of the research.
- A research proposal must be approved by a faculty advisor and one other faculty member. The proposal will normally be completed at the end of the student's first semester of research, but must be approved at latest before the start of their final term of research. An approved proposal is required for admission to the class "Writing an Undergraduate Thesis" (see below).
- The thesis/report must be approved and graded by two faculty members.
- Theses will be published in the Georgia Tech Library.
- Take the two-credit class "Writing an Undergraduate Thesis." [LMC 4701 and LMC 4702]

http://www.undergradresearch.gatech.edu/research-option/

BSMS Option

The BSMS Option allows eligible students to double count a maximum of 6 credit hours toward undergraduate and graduate requirements while still completing all other program requirements to earn both degrees. The credit must be approved coursework (4000-level or higher; not seminar or research credit) completed with a grade of 'B' or higher.

To apply for the option, undergraduate Neuroscience students must have at least 30 credit hours earned at Georgia Tech with an undergraduate GPA of 3.3 or higher, and fewer than 90 credits overall (including transfer credit).

The minimum GPA to graduate with an undergraduate degree in Neuroscience to continue to the MS in Psychology program is 3.0. The minimum GPA for graduation with the MS in 2.7.

Students will need to consult with an advisor to indicate which courses are sharing with the graduate degree in DegreeWorks.

BACHELOR OF SCIENCE IN NUCLEAR AND RADIOLOGICAL ENGINEERING

The undergraduate curriculum in nuclear and radiological engineering is structured to meet the needs of both the student who contemplates employment immediately after graduation and the student planning to pursue graduate study. It provides maximum flexibility in the form of options for each student to develop their unique interests and capabilities. The core curriculum covers the basic principles of nuclear engineering, nuclear reactor core design, reactor systems engineering, nuclear power economics, reactor operations, radiation sources and detection instruments, radiation transport, radiation protection, criticality safety, regulatory requirements, and radioactive materials management.

Program Educational Objectives

The program educational objectives reflect the needs of the program's constituencies and have been reviewed and validated by our constituents:

- NRE graduates will positively contribute to nuclear and radiological engineering and related fields.
- NRE graduates will conduct themselves with the highest professional and ethical principles that include considerations of public safety and the environment.
- NRE graduates will engage in lifelong learning through graduate and continuing education, professional development activities, or other career-appropriate options.

- Bachelor of Science in Nuclear and Radiological Engineering - Nuclear Engineering
- Bachelor of Science in Nuclear and Radiological Engineering - Radiological Science and Engineering

Cooperative Plan

Since 1912, Georgia Tech has offered a five-year **Undergraduate Cooperative Program** to those students who wish to combine career-related experience with classroom studies. The program is the fourth oldest of its kind in the world and the largest optional co-op program in the country.

Students alternate between industrial assignments and classroom studies until they complete three semesters of work. Co-op students with nuclear and radiological engineering majors complete the same coursework on campus that is completed by regular four-year students. Most co-op students begin the program as freshman or sophomores and are classified as full-time students regardless whether they are attending classes on campus or are full-time at an employer's location.

Students who participate in the program have the opportunity to develop career interests, become more confident in their career choices, and develop human relation skills through their work experience. Graduates of the program receive a bachelor's degree with a Cooperative Plan Designation. Woodruff School students have traditionally been the largest group participating in the program.

Students can also complete work assignments in a foreign country as part of the **International Cooperative Program.** This program is a great opportunity to utilize foreign language skills, gain a global perspective, and experience a diverse culture. Proficiency in a foreign language is necessary to earn the International Cooperative Plan degree designation. For more information on the Cooperative Program, go to http://career.gatech.edu/co-op.

The **Undergraduate Professional Internship Program** is for nuclear and radiological engineering students who do not participate in the Cooperative Program, but want some career-related experience before graduation. Students generally work for one semester, usually in the summer, with an option for more work. Students must have completed at least thirty hours of coursework at Georgia Tech before they can participate in the program. For more details, see: http://career.gatech.edu/internships.

In addition, there is a Work Abroad Program (www.workabroad.gatech.edu), which complements a student's formal education with paid international work experience directly related to nuclear and radiological engineering. Participating students typically include juniors and seniors. The international work assignments are designed to include practical training, cross-cultural exposure and learning, and the acquisition of needed skills.

For more information about all of the programs in the Center for Career Discovery and Development, visit www.careerdiscovery.gatech.edu.

The BS/MS Program

The Woodruff School offers a BS/MS program for those students who demonstrate an interest in and ability for additional education beyond the BS degree. Woodruff School students with a GPA of 3.5 or higher are eligible to apply for the program after completion of 30 credit hours at Georgia Tech, but before the completion of seventy-five credit hours, including transfer and advanced placement credits. Students who have more than 75 credit hours will be considered for the program on a case-by-case basis

Participants in the BS/MS Program in the Woodruff School can obtain a master's degree in mechanical engineering, nuclear engineering, medical physics, or in Georgia Tech's interdisciplinary bioengineering graduate program. There are two options to consider.

Non-Thesis Option

The Non-Thesis Option is completed by taking 10 classes according to the MS degree requirements. In many cases, two courses can be counted towards both a student's BS and MS degrees, thereby streamlining the process. With proper planning, most MS non-thesis degrees could be completed in one year.

Thesis Option

The Thesis Option involves working with a faculty member on a project in a wide range of research topics being investigated by Woodruff School faculty members. This will give you hands-on experience in working with a faculty mentor; the opportunity to work in a laboratory or a research environment; and the chance to perform theoretical and experimental work. These events will foster your career interests and expand your selection of possible employers. In some cases, a student will receive a graduate research assistantship, which includes a stipend and a tuition waiver. The time to graduation depends on your thesis project, your advisor, and your work ethic.

During the first year of your graduate studies, you will be encouraged to continue for the PhD In many cases, you might be working on an

interesting topic of study as part of your master's degree research that could provide the basis for doctoral research.

No Pass-Fail courses allowed

Students must earn a minimum Major GPA of 2.0 (truncated). Major GPA includes all required NRE and ME classes plus classes used for the concentration. If a class is repeated, only the last grade is included in the calculation.

1 Minimum grade C

2 Ethics Overlay may be Humanities or Social Sciences and can be any course from the GT-approved list: http://www.catalog.gatech.edu/academics/undergraduate/core-curriculum/ethics/.

3 Students can receive credit for only one of ECON 2100, ECON 2101, ECON 2105 and ECON 2106. The only exception is that students can receive 6 hours credit for both ECON 2105 and ECON 2106.

4 CHEM 1211K can substitute for CHEM 1310. CHEM 1211K and CHEM 1212K are recommended for pre-health students.

5 Students must satisfy the requirements of EITHER the Nuclear Engineering (NE) Concentration or the Radiological Science and Engineering (RSE) Concentration. NE Concentration requires ME 3345, NRE 4210, and NRE 4214; RSE Concentration requires NRE 4328 and two courses from the following list: NRE 4750, NRE 4803 (Nuclear Safeguards), and NRE 4407. Students may complete both Concentrations using free or engineering electives.

6 Any Math or Science at 2000 level or higher with the exception of selected 1000-level courses: BIOS 1107/BIOS 1107L, BIOS 1108/BIOS 1108, and CHEM 1212K.

7 Engineering Elective is any class from the College of Engineering at the 2000-level or higher excluding: ME 3141, ME 3700,ME 3720, ME 3743, ME 3744, ME 4741, ME 4742, and ME 4753. Also excludes project-type courses such as VIP, and 2699, 2903, 4699, 4903 classes. Cannot duplicate any other material used to satisfy the BSNRE degree requirements.

8 Free 1XXX: Cannot duplicate any other material used to satisfy the BSNRE degree requirements.

9 Free 2XXX: At least 9 hours of free electives must be at the 2000 level or above with the exception of 4 hours that may be satisfied with one of the following: BIOS 1107/BIOS 1107L, BIOS 1108/BIOS 1108L, or CHEM 1212K. Cannot duplicate any other material used to satisfy the BSNRE degree requirements

Cannot duplicate any other material used to satisfy the BSNRE degree requirements

BACHELOR OF SCIENCE IN PHYSICS

The School of Physics offers two undergraduate degrees, the Bachelor of Science in Physics and the Bachelor of Science in Applied Physics. The basis of the Bachelor of Science in Physics degree is the traditional preparation of a student for graduate study in physics.

Each of the baccalaureate programs contains the following:

1. courses needed to meet general institutional degree requirements;
2. a core of technical courses intended to give a strong background in mathematics and the physical principles of mechanics, electricity and magnetism, thermodynamics, and the quantum theory that governs physical phenomena at the microscopic level of molecules, atoms, and nuclei;
3. technical electives that enable the student to explore areas of their choice in greater depth;
4. courses involving undergraduate research, and
5. free electives, about fifteen percent of the total hours, which may be employed to schedule additional technical or nontechnical courses.

The considerable flexibility inherent in the physics curricula is advantageous to students who wish to work out individual programs of study. At the same time, this flexibility suggests the need for consultation with advisors so students can make the best use of elective hours and avoid scheduling difficulties that may arise in later semesters. Students may utilize their elective freedom in the physics curricula to specialize in particular areas of physics, to prepare for careers in interdisciplinary areas of science, to compose a preprofessional program, or to gain a background in other technical or nontechnical disciplines. Students should contact their academic advisor for assistance in planning programs of study with emphasis directed toward a particular objective. Since some students who earn a degree in physics have transferred from other disciplines, the School has planned its degree programs to enable most students to transfer into physics with little or no loss of credit.

A total of 120 credit hours (exclusive of wellness) and a grade-point average of at least 2.0 in physics courses numbered 3000 and higher are requisites for the bachelor's degree in physics.

Physics: Undergraduate Information

- Bachelor of Science in Physics - General
- Bachelor of Science in Physics - Astrophysics
- Bachelor of Science in Physics - Business Option
- Bachelor of Science in Physics - Physics of Living Systems

Research Option in Physics

The Research Option is intended for students who seek a concentrated research experience, culminating in an undergraduate thesis, integrated into their undergraduate studies in Physics. The purpose of this program is to prepare students who plan to go on to graduate research after their BS degree. This option includes three or four semesters of focused research in the student's junior and senior years. Students who complete this option receive a designation on their transcript. For an undergraduate to fulfill the Research Option in the School of Physics, the student must fulfill the following requirements:

Code	Title	Credit Hours
PHYS 4698	Undergraduate Research Assistantship [1]	9
or PHYS 4699	Undergraduate Research	
LMC 4701	Undergraduate Research Proposal Writing [2]	1
LMC 4702	Undergraduate Research Thesis Writing [3]	1
Research Thesis [4]		
Total Credit Hours		**11**

1. At least three credits must be PHYS 4699.
2. LMC 4701: Undergraduate Research Proposal Writing -typically taken during the first or second semester of research.
   LMC 4702: Undergraduate Research Thesis Writing -taken during the term in which the thesis is completed.
3. Write and submit an undergraduate research thesis to the School of Physics based on the student's research that is approved by the student's research advisor.

Course requirements are detailed in brochures available from the School of Physics. For specific questions, students should contact the Associate Chair for Undergraduate Studies in the School of Physics.

BS/MS OPTION

The BSMS Option allows eligible students to double count a maximum of 6 credit hours toward undergraduate and graduate requirements while still completing all other program requirements to earn both degrees.

To apply for the option, undergraduate Physics students (BS in Applied Physics or BS in Physics) must have at least 30 credit hours earned at Georgia Tech with an undergraduate GPA of 3.3 or higher, and fewer than 90 credits overall (including transfer credit).

The minimum GPA to graduate with an undergraduate degree in Applied Physics/Physics to continue to the MS in Physics program is 3.0. The minimum GPA for graduation with the MS in 2.7.

Students will need to consult with an advisor to indicate which courses are sharing with the graduate degree in DegreeWorks.

BACHELOR OF SCIENCE IN PSYCHOLOGY

The curriculum is technically oriented and stresses quantitative and experimental approaches to the study of behavior. The undergraduate curriculum is based on a strong emphasis in the sciences and mathematics and provides an excellent preparation for graduate school in psychology, medical school, law school, and other professional and academic graduate programs. In addition, many students with the BS degree in psychology choose to enter a variety of fields, including computer software design, human resources, marketing, human factors, system design, personnel selection and training, and management.

- Bachelor of Science in Psychology - General
- Bachelor of Science in Psychology - Business Option

International Plan

Psychology's International Plan follows the Institute model to develop a global competence within the student's major program of study. It thus integrates the student's international studies and experiences with the School's quantitative and experimental approaches to the study of behavior.

In addition to the requirements for the BS in Psychology, students must complete the following:

1. take three international courses, including one from each of the following categories: international relations, global economics, and a course on a specific country or region;
2. spend two consecutive terms abroad engaged in fulfilling psychology electives (must be approved by the School of Psychology prior to enrolling in courses), free electives, humanities, and/or social science electives;
3. demonstrate language proficiency equivalent to two years of college-level language study (to be determined by testing); and,
4. incorporate the international experience within the capstone course or the senior thesis.

Research Option

The curriculum is technically oriented and stresses quantitative and experimental approaches to the study of behavior. The undergraduate curriculum is based on a strong emphasis in the sciences and mathematics and provides an excellent preparation for graduate school in psychology, medical school, law school, and other professional and academic graduate programs. The Research Plan in the School of Psychology provides additional research experience for those students seeking to continue their education in graduate school.

BSMS Option

The BSMS Option allows eligible students to double count a maximum of 6 credit hours toward undergraduate and graduate requirements while still completing all other program requirements to earn both degrees. The credit must be approved coursework (4000-level or higher; not seminar or research credit) completed with a grade of 'B' or higher.

To apply for the option, undergraduate Psychology students must have at least 30 credit hours earned at Georgia Tech with an undergraduate GPA of 3.3 or higher, and fewer than 90 credits overall (including transfer credit).

The minimum GPA to graduate with an undergraduate degree in Psychology to continue to the MS in Psychology program is 3.0. The minimum GPA for graduation with the MS in 2.7.

Students will need to consult with an advisor to indicate which courses are sharing with the graduate degree in DegreeWorks.
