BACHELOR OF SCIENCE IN
COMPUTER SCIENCE

Bachelor of Science in Computer Science
with Threads

Focus: building on a base of fundamentals in
programming and computational theory to provide a
solid foundation of knowledge and skills for applying
digital processes effectively to issues of broad interest
in a global society.

The undergraduate degree in computer science (CS)
offered by the College of Computing provides a solid
foundation of knowledge and skills for applying digital
processes effectively to issues of broad interest in
a global society. Our program is based on a unique
concept, Threads™, a significant College of Computing
innovation in undergraduate
CS education. The curriculum builds on a base of
fundamentals in programming and computational theory
to allow each student the
opportunity to explore a variety of computing paths in
depth. There are eight Threads, each providing a focused
journey through a broad
spectrum of course offerings at Georgia Tech in preparation
for a
distinctive future in a changing and interconnected
world. Each student
selects two Threads to fulfill the requirements for an accredited
Bachelor of
Science degree in computer science. It is at the intersection of the
two
paths that the unique synergistic value of this educational experience
is
realized. Graduates will leave the College of Computing fully aware of the
limitless potential of their dynamic discipline and be able to adapt and
continuously add value to society throughout their careers.

The Threads™ represent partial paths through the curriculum. Thus, a
student weaves a degree from these Threads. Students are not forced
to make Thread decisions very early in their academic careers; however,
they may if they want. We define the Threads so they are flexible enough
to allow for a variety of technical and creative experiences. Threads are
coherent enough that students develop computing skills even if their
focus shifts as they go along.

The CS curriculum also offers opportunities in undergraduate
research and international study. In addition to the standard four-year
plan, a five-
year cooperative plan is offered for students who wish to combine their
academic education with industry experience.

The undergraduate program requires:

• a total of 124 credit hours for graduation, plus
• a two-hour Wellness course.
• With the exception of free electives, all Bachelor of Science degree
coursework must be taken on a letter-grade basis.
• Up to six hours of free electives may be taken on a pass/fail basis.
• No 1000- or 2000-level HPS hours or precalculus hours (currently
MATH 1113) may be used as free electives.
• No course that covers the same material as other courses in a
student’s plan of study can be used as a free elective.
• All required CS courses, whether Thread or non-Thread, must
be completed with a C or better to be counted toward degree
requirements.
• All courses listed as required for a Thread, whether CS or non-CS,
must be completed with a C or better to be counted toward degree
requirements.

The College of Computing Defines Eight
Threads

A Thread provides an intuitive, flexible, and mutually strengthening set of
courses that allows a student to craft a distinctive future in an area that
is certain to have societal value in the emerging world. A Thread provides
a skill and credential basis that allows graduates to create value in ways
beyond what would be possible with only a narrowly focused tool set.

Choose any two threads to create your own path and special variation on
an area of study.

1. Computing and Devices: creating devices embedded in physical
objects that interact in the physical world
2. Computing and Information Internetworks: representing,
transforming, transmitting, and presenting information
3. Computing and Intelligence: building top-to-bottom models of human-
level intelligence
4. Computing and Media: building systems in order to exploit
computing’s abilities to provide creative outlets
5. Computing and Modeling - Simulation: representing natural and
physical processes
6. Computing and People: designing, building, and evaluating systems
that treat the human as a central component
7. Computing and Systems and Architecture: creating computer
architectures, systems, and languages
8. Computing and Theory: theoretical foundations underlying a wide
range of computing disciplines

Threads™ are defined as partial paths through the course offerings of the
Institute. Students constructs their own personalized computer science
degree by weaving through two Threads™. Each Thread™ is about 2/3 of a
degree, but with Thread™ arithmetic, since there's so much overlap, 2/3 +
2/3 = 1. Each pair of Threads™ fulfills the requirements for an accredited
Bachelor of Science degree in computer science.

The Power of One Thread

Are you a computationalist who is interested in the expressive arts
(telling stories, making games, creating emotional experiences)? Join
the Computing and Media Thread. Here you’ll see courses on topics
ranging from computational graphics to Hamlet, from human perception
to interactive fiction engines.

Are you a computationalist who is interested in placing intelligence
in physical objects like robots, airplanes, or cell phones? Join the
Computing and Devices Thread. Here you’ll see courses on everything
from computational sensors to dealing with noisy data, from real-time
operating systems to mobile power issues and computational autonomy.

Weaving Two Threads Together - A Leap

Are you interested in computer security? Then perhaps choose
Computing and Information to learn how data is stored, retrieved,
encoded, transmitted, etc. And perhaps also choose Computing and
People to learn how people use technology, how to run experiments with
human subjects, etc. The kind of person you will become is the kind
of person who will be able to invent and build secure systems that are
usable by people.

For more information about the BS CS undergraduate program or the
College of Computing, visit The College of Computing website.
Bachelor of Science in Computer Science

Threads

Devices
The Devices thread is concerned with embedded computational artifacts that interact with people or the physical world. In this thread, one learns how to create and evaluate devices that operate under physical constraints such as size, power, and bandwidth. Examples include PDAs, cell phones, robots, jet engines, and intelligent appliances.

- Modeling and Simulation & Devices
- Theory & Devices
- Information Internetworks & Devices
- Intelligence & Devices
- Media & Devices
- People & Devices
- Systems and Architecture & Devices

Information Internetworks
The Information Internetworks thread is where computing meets the data enterprise and all that this implies. The thread prepares students for all levels of information management by helping them to capture, represent, organize, transform, communicate, and present data so that it becomes information.

- Modeling and Simulation & Information Internetworks
- Devices & Information Internetworks
- Theory & Information Internetworks
- Intelligence & Information Internetworks
- Media & Information Internetworks
- People & Information Internetworks
- Systems and Architecture & Information Internetworks

Intelligence
The Intelligence thread is where computing models intelligence. This thread is concerned with computational models of intelligence from top to bottom. To this end, we emphasize designing and implementing artifacts that exhibit various levels of intelligence as well as understanding and modeling natural cognitive agents such as humans, ants, or bees. Students acquire the technical knowledge and skills necessary for expressing, specifying, understanding, creating, and exploiting computational models that represent cognitive processes. It prepares students for fields as diverse as artificial intelligence, machine learning, perception, and cognitive science, as well as for fields that benefit from applications of techniques from those fields.

- Modeling and Simulation & Intelligence
- Devices & Intelligence
- Theory & Intelligence
- Information Internetworks & Intelligence
- Media & Intelligence
- People & Intelligence
- Systems and Architecture & Intelligence

Media
The Media thread is where computing meets design. This thread prepares students by helping them to understand the technical and computational capabilities of systems in order to exploit their abilities to provide creative outlets.

- Modeling and Simulation & Media
- Devices & Media
- Theory & Media
- Information Internetworks & Media
- Intelligence & Media
- People & Media
- Systems and Architecture & Media

Modeling and Simulation
The Modeling - Simulation thread is intended for students interested in developing a deep understanding and appreciation of how natural and human-generated systems such as weather, biological processes, supply chains, or computers can be represented by mathematical models and computer software. Such models are widely used today to better understand and predict the behavior of such systems. Because these models are often described and represented by mathematical expressions, and the models themselves often deal with physical phenomena, a background in mathematics and the sciences is required. Combining this background with a deep knowledge in computer science will yield the basic tools necessary to transform abstract conceptual models to computer programs that execute efficiently on digital machines. The required coursework in this thread includes topics in continuous and discrete mathematics, the sciences, and computing. Elective courses enable students to further develop and apply their knowledge and skills to a specific discipline where Modeling - Simulation plays an important role.

- Devices & Modeling and Simulation
- Theory & Modeling and Simulation
- Information Internetworks & Modeling and Simulation
- Intelligence & Modeling and Simulation
- Media & Modeling and Simulation
- People & Modeling and Simulation
- Systems and Architecture & Modeling and Simulation

People
The People thread is where computing meets users. This thread prepares students by helping them to understand the theoretical and computational foundations for designing, building, and evaluating systems that treat the human as a central component.

- Modeling and Simulation & People
- Devices & People
- Theory & People
- Information Internetworks & People
- Intelligence & People
- Media & People
- Systems and Architecture & People

Systems and Architecture
The Systems and Architecture thread is where many of the practical skills of computing are learned. Like Theory, Systems and Architecture lies at the center of computing. It prepares students to create and evaluate computer architectures, systems, and languages across a variety of paradigms and approaches.
• Modeling and Simulation & Systems and Architecture
• Devices & Systems and Architecture
• Theory & Systems and Architecture
• Information Internetworks & Systems and Architecture
• Intelligence & Systems and Architecture
• Media & Systems and Architecture
• People & Systems and Architecture

**Theory**
The Theory thread is where computing meets itself. Theory teaches students the theoretical and mathematical foundations underlying a wide range of computational disciplines. Early preparation includes discrete mathematics, algorithms, and complexity. Knowledge goals are for students to mature in development and analysis of abstract models for applications ranging from theoretical computer science to computational physics, biology, mathematics, economics, and optimization.

• Modeling and Simulation & Theory
• Devices & Theory
• Information Internetworks & Theory
• Intelligence & Theory
• Media & Theory
• People & Theory
• Systems and Architecture & Theory

**Cooperative Programs**
The College of Computing participates in the undergraduate and graduate Cooperative Programs. See links below for further information:

• Undergraduate Cooperative Plan
• Graduate Cooperative Plan

**International Plan**
The College of Computing has an approved BS CS International Plan that accommodates the unique requirements of this option discussed in the International Plan section of the catalog.

However, due to the flexible nature of the Threads curriculum, the International Plan designation may not be available with all of the Thread combinations. Efforts will be made to work with interested students to accommodate their individual circumstances with regard to the International Plan designator for the Bachelor of Science in Computer Science.

**Research Option**
To complete the Research Option in the College of Computing, students must:

1. Complete at least nine units of undergraduate research
   a. Over at least two, preferably three terms
   b. Research may be for either pay or credit;
2. Write an undergraduate thesis/report on their findings;
3. Take
   a. LMC 4701: Undergraduate Research Proposal Writing (taken during the first or second semester of research)
   b. LMC 4702: Undergraduate Research Thesis Writing (taken during the thesis writing semester).

**Research Classes**
The following classes count toward fulfillment of the Research Option:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research (Freshman and Sophomore)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research (Junior and Senior)</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4980</td>
<td>Research Capstone Project</td>
<td>1-21</td>
</tr>
</tbody>
</table>

**Research for Credit**

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credit Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 2699</td>
<td>Undergraduate Research Assistantship</td>
<td>1-12</td>
</tr>
<tr>
<td>CS 4699</td>
<td>Undergraduate Research Assistantship (Junior and Senior)</td>
<td>1-12</td>
</tr>
</tbody>
</table>

To get credit toward completion of the Research Option for research for pay, students must be registered for the appropriate audit-only research for pay class (CS 2698 or 4698). If work on research for pay begins after the close of registration and the student has not signed up for the appropriate class, unfortunately it is not possible to get credit toward the Research Option for work that term.

A research project will also fulfill the capstone design requirement if the student registers for CS 4980 for one of the research terms. This is typically done the last semester of research, while taking LMC 4702.

Completion of the Research Option is noted on the student’s transcript. For more information, see www.urop.gatech.edu.

**General Research Option Information**

**BS/MS in Computer Science**
Students who want to pursue the BS/MS option must apply to the MSCS program after completing at least 60 hours of work towards the BSCS degree. Applicants should have a cumulative GPA of at least 3.4. This GPA must be maintained for the student to take graduate level courses.

Students admitted to the program will take 6 hours during their final undergraduate year to double count in both their BSCS and MSCS degrees; they should choose 3 hours of MS Core or Elective hours their fall semester and 3 hours of MS Core or Elective hours their spring semester that can count toward their thread hours and CS Specialization hours.

Visit College of Computing for more information.
