MASTER OF CITY AND REGIONAL PLANNING

The Master of City and Regional Planning (MCRP) degree program prepares students to excel as professionals capable of understanding and resolving complex urban planning problems. The curriculum gives students both a broad understanding of the urban and regional environment and a foundation of skills needed to plan for this environment.

The MCRP program strives for a careful balance between the theoretical, historical, and conceptual knowledge about urban and regional development on the one hand, and the acquisition of practical skills and methods of analysis on the other. The program offers six specializations as well as dual degree program options with architecture, civil engineering, law, and public policy.

The curriculum is a two-year, fifty-five-semester-hour program. The curriculum requirements include seven core courses, a specialization, electives, and an internship. Two options exist for completing the curriculum: the thesis or the applied research option paper.

The core courses are designed to impart fundamental planning knowledge applicable to wide sectors of the discipline. These include courses examining planning theory, planning methods, planning law, economic analysis, and planning practice. Students must earn a grade of C or better in all core courses to meet the core course requirements.

In the specialization coursework and the internship, the student develops skills focused on a particular aspect of city and regional planning. To enable students to focus their education on a consistent and cumulative body of knowledge, the program offers six specializations: economic development, environment and health planning management, housing and community development, land use planning, transportation planning, and urban design.

In addition to the core and specialization areas, the curriculum includes electives that can be used to deepen the student’s knowledge in a specialization or to broaden exposure to additional areas of planning. Students may take electives within the school, within the College of Design, in other schools at Georgia Tech (e.g. Architecture, Civil and Environmental Engineering, Public Policy, Information Systems, Earth and Atmospheric Sciences), or at other area universities such as Georgia State University or Emory University. Through the cross-registration system, students are allowed to enroll in a number of courses that are not offered at Georgia Tech.

The applied studio course allows students to synthesize their planning knowledge and skills in a real-world situation ranging from neighborhood to metropolitan regions. Our studios are conducted locally throughout Atlanta, which provides an excellent laboratory, as well as nationally and internationally. Finally, a thesis or applied research paper provides an opportunity for focused study in the student’s major area of specialization.

Students are admitted to the MCRP program to begin studies in the fall term only. With rare exceptions, involving transfer students and dual degree students, applicants will be considered for spring term admission. Applications must be completed by January 15 to ensure consideration for merit-based financial aid, and by February 15 if no financial aid is sought.

Master of City and Regional Planning

Students pursuing the Master of City and Regional Planning have options to pursue other degrees by sharing coursework credit. The following programs have agreements:

Master of City and Regional Planning and Master of Architecture

The curriculum consists of the core requirements for each of the two professional programs and, in addition, a set of dual requirements that focus upon urban design as a common ground linking the theory and practice of the two disciplines. The dual curriculum builds upon five major bodies of material:

• Design studios as a basis for exploring architectural, urban design and development issues utilizing theory, method and professional practice paradigms
• Urban history and design theory as a way of understanding the formal and architectural order of the city
• Economics and development methods as a basis for formulating development projects
• Process and methods as a means of understanding professional practice and of designing policies and strategies that can be implemented in a private market regulated by public bodies
• The performance of design interventions in achieving specified economic, social, and environmental objectives

Master of City and Regional Planning and Master of Science in Civil Engineering

The program in City and Regional Planning and Civil Engineering [Transportation Systems Engineering (TSE)] prepares students for careers influencing public policy and private investment in transportation systems. Such systems (including urban, suburban, ex-urban and rural highways, railways, public transit, pedestrian and bicycle facilities, rights-of-way, ports, terminals, parking and intermodal linkages) involve design and policy coordination that benefits from both engineering and planning. Graduates from this program become instrumental in bringing perspectives from one profession into the lexicon and tools of the other profession.

Master of City and Regional Planning and Master of Science in Public Policy

The degree programs in Public Policy and City and Regional Planning prepares students for policy analysis and planning work at the national, state, and local levels. Graduates work in public, private, and non-profit settings building on the complementary perspectives and skills of the two professions.

In addition to providing interdisciplinary professional training, the dual degree also provides the opportunity to step toward Ph.D.
programs in either Public Policy or Planning with an emphasis on Urban,
Environmental, or Economic Development Policy.

All students must complete a minimum combined requirement of 75
credit hours for the dual degree program. Students receive both degrees.

**Master of City and Regional Planning and Juris Doctor Program**
**(Cooperative Agreement with Georgia State University)**

The cooperative J.D./MCRP program supports the interests of students
who wish to pursue study in the fields of both law and city and regional
planning, provides a focal point for exploring the connections between
the two disciplines through the research and instruction between the two
programs; and provides an educational opportunity that reflects the fact
that land management law and city and regional planning have become
increasingly integrated and interdisciplinary in nature. The program
promotes a broader educational experience for today’s land use law or
planning professionals, by providing expertise in both disciplines.

The cooperative J.D./MCRP program will permit students to use credit
hours earned in one program to satisfy some of the elective course
requirements of the other program, thus permitting them to earn both
degrees in a shorter time than would be possible pursuing both degrees
separately.
